It may be useful to point out here that the sale of spot francs by the "control" was necessitated by the weakness of sterling in relation to franc. We have referred on earlier occasions to the lack of clarity in the policy of the authorities towards the question of the link between sterling and gold. It is a fact that for nearly two months the fluctuations between sterling and franc have not been wider than those between two gold currencies. Such stability of exchange with a gold currency has not obtained at any time since the abandonment of the gold standard. But the Government for various reasons have been unwilling to own that they have aimed at such stability of exchange. In an answer to a question in the House of Commons, it was stated on behalf of the Treasury that conclusions regarding the official exchange policy from the state of the exchanges are not warranted. The object of such a statement in the face of the stability referred to earlier should not be difficult to divine. The Government must have, in the first place, been anxious to give the Dominions the impression that they are not committed in any manner as regards their exchange policy. The Dominion Governments have had their way, in so far as they have prevented Great Britain from throwing in her lot with the gold *bloc* in the days when the fate of the Conference was threatened by Mr. Roosevelt's repudiation of the stabilisation agreement. But from all accounts, it would appear that the "control" has been unwilling to allow sterling to depreciate as against the franc. The sale of spot francs by the "control" was also necessitated by the emergence in the London market of a new-found interest in French Treasury Bills. The difference in the yield between the French and the British Treasuries is so marked that in spite of the uncertainties inevitable in the present position of international currencies and exchanges, the British investors of short-term funds could hardly help going in for French Treasuries. It is reported that there was an active demand for them and that the demand was heightened by the action of the French Treasury in dis-continuing the issue of the bills on tap.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

COMMUNIQUES AND RETURNS.

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months' Treasury Bills were opened on Tuesday, August 8. The total amount offered was Rs. 3,06,00,000. Tenders at Rs. 99-12-6 were accepted in full and those at Rs. 99-12-3 were allotted approximately 33 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being As. 14 pies 6 per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Tuesday, August 15. Successful tenderers should make payment on Friday, August 18. Other conditions are as usual.

STERLING TENDERS.

The Controller of the Currency notifies that on Wednesday, August 9, tenders to the amount of £2,070,000 at 1s. 6 1/16d. were received and allotted approximately 48 per cent. Lower tenders were rejected.

On Wednesday, August 16, £1,000,000 will be offered on the same conditions as previously announced.

THE GOLD STANDARD RESERVE.

The balance of the Gold Standard Reserve on the 30th June, 1933, amounted to £40,000,000 and was held in the following form:—

	£
1. Cash at short notice at the Bank of England	4,811
2. British Treasury Bills	16,628,044
3. Other British and Dominion Government Securities	11,868,811

'WHY YOU SHOULD SHOP AT CURRIMBHOY'S

There are three chief reasons why you should shop at Currimbhoy's. Firstly, you can be certain that the very best quality cloth is being supplied to you because you can rely on the famous Currimbhoy group of mills where the cloth is made. Secondly, you are supporting Indian Industries when you purchase at Currimbhoy's Cloth Depot. Thirdly, Currimbhoy's fabrics are unequalled in India for their durability and lasting colours.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE.

(From Our Correspondent).

Calcutta, August 10.

Government Securities.—Quiet conditions prevailed in this section but on Wednesday the market opened steady in sympathy with the London market when 3½ per cent. paper quoted Rs. 85-12, but receded later on to Rs. 85-6. 4 per cent. 1960-70 Loan came to business at Rs. 98, 6½ per cent. Treasury Bonds were dealt in at Rs. 107-8, 3½ per cent. 1947-50 had buyers at Rs. 94-13, 4 per cent. 1943, quoted Rs. 101-14, 5 per cent. 1945-55 Rs. 113-3 and the 6½ per cent. 1935 Rs. 107-8.

Banks and Railways.—Imperial Banks fully paids quoted Rs. 1,206, the Contributories Rs. 296½, Central Banks Rs. 23½, Allahabad Bank Rs. 327 and Rs. 160 respectively. In Railway shares, Hoshiarpur-Doab Branch Railway quoted Rs. 84, Mymensingh Bhairab Bazar Rs. 83-8, Kalighat Falta Rs. 76, Burdwan-Cutwa Rs. 76, Sara-Sirajgunj Rs. 85.

Jutes.—This section continued to be quiet during this week also, Howrahs falling back from Rs. 50-10 to Rs. 50-7; Kamarhattys were marked at Rs. 480 ex-dividend, Bally quoted Rs. 154, Champdany Rs. 135, Lansdowne Rs. 138, Lothians Rs. 290, Alliance Rs. 298-8, Kanknarrahs Rs. 445-8, Gondalpara Rs. 799 small lots, Barnagores Rs. 135 small lots, Kinnison Rs. 650-8, Clives Rs. 27-10, Anglo-Indias Rs. 357, Gourepores Rs. 361, Naihati Rs. 400, Orient Rs. 213-4 and Presidency Rs. 5-12.

Coal.—Early in the week a fair amount of business was completed in this section but prices, however, showed little or no change. Bengals were on offer at Rs. 210, Burrakurs recorded a deal at Rs. 10-14, Raneegunge changed hands at Rs. 31-8, Amalgamateds ruled steady at Rs. 13-8, Equitables were easier at Rs. 17-4, Pench Valley had buyers up to Rs. 32-8 and Standards were steadier at Rs. 24-10.

Cotton.—This section has remained dull throughout this week, Kesorams quoting Rs. 3-4.

Tea.—There was a fair volume of business put through in this section during the week and, in some instances, prices were inclined to be higher. Betjans had good buyers at Rs. 25-4, Banarhat improved to Rs. 352, Dessai and Parbuttia at Rs. 372, Hasimaras were marked up sharply to Rs. 38-8, Huldibaris improved to Rs. 25, Ledos came to business at Rs. 194, Patrakolas moved further up to Rs. 909, Rydaks were in request at Rs. 47, Teesta Valley quoted Rs. 36, and Gillapukri Rs. 28.

Miscellaneous.—There was hardly any notable change in this section, Engineering shares, however, were quiet with the exception of Indian Standard Wagon which moved up to Rs. 42-4, British India Corporation (Ordy.) kept steady at As. 14, in Mining shares Tavoy Tin quoted Rs. 3-10, Indo-Burma Petroleum (Pref.) Rs. 106, Calcutta Ice Rs. 6-12, Indian Wood Products Rs. 32-8, Upper Ganges Valley Rs. 7, Titaghur Paper (Ordy.) Rs. 14-12, Midnapore Zemindary Rs. 67, among sugar shares Carew & Co., were dealt in at Rs. 15-6, New Savan Rs. 16 cum dividend, Cawnpores Rs. 36-12 and Ryams Rs. 46-2. Madan Theatres As. 8, Bengal Telephone (Ordy.) 15-10 Bengal Chemical (Ordy.) Rs. 295 cum dividend.

BOMBAY STOCK EXCHANGE

(By Wire.)

(From Our Correspondent).

Bombay, August 10.

Giltedge Securities altogether ruled steady though the enthusiasm of Bulls has considerably subsided and a quiet tone prevailed. 3½ per cent. rupee paper which closed on the 3rd inst. at Rs. 85-13, touched lowest at Rs. 85-4 and closed yesterday at Rs. 85-7.

Today shares and securities market were kept closed due to failure of a big party involving many brokers. The share market remained closed yesterday also due to the Settlement.

Mill Shares firmed up on Monday, but again receded on Tuesday. Bombay Dyeing, Fazulbhoy, Pearl, and Century after touching Rs. 795, Rs. 332-8, Rs. 226-4 and Rs. 238-2 closed at Rs. 790, Rs. 328-2, Rs. 220 and Rs. 236-4 respectively. Imperial Banks and Tata Hydro ordinaries were in keen demand improving to Rs. 1,212-8 and 163-7. Cement group was quietly steady, Indian Cements and Bundis standing at Rs. 296-4 and Rs. 26-10. Burma old spurted up to Rs. 403-12 to fall back to Rs. 392-8. Tata Steel ordinaries and Deferreds slightly eased to Rs. 56-12 and Rs. 219-6, but Second Preference improved to Rs. 95-12 due to announcement of dividend. Andhra Valley and Tata Power ordinaries underwent but narrow fluctuations and closed steady at Rs. 1,477-8 and 1,043-12. Bombay Trams remained firm at 139-6. The future trend is uncertain but no big movement either way is expected.

JUTE AND JUTE GOODS

JUTE.

Ruling very steady during the earlier part of the week the jute market has ruled quieter towards the close. The highest and lowest for October Futures were Rs. 32-14 and Rs. 30-8-0 respectively. Towards the close of the previous week due to various causes already reported in the last report, there was a long liquidation and the technical position of the market thus created was bull. Information available from the mofussil was for higher prices, sellers there were not willing to discount values in sympathy with Calcutta. Weather conditions were also less satisfactory. River levels were lower than necessary, thus rendering the washing and cutting operations of jute more difficult.

The opinion of the dealers in the mofussil were for higher prices. Their anticipation of the current crop are for a poorer yield per acre as compared with the yield of the previous season. These were all encouraging factors in the market, and led a couple of operators to buy futures in absence of decent purchases in the mofussil, buying at Calcutta parity there being more difficult. The result was that the futures market suddenly rose from Rs. 29-12 to Rs. 32-12. Jute goods market at the same time showed considerable strength and had sympathetic effect on raw jute. The rise, however, was not supported by the trade. Mills were apathetic and would not offer any price over and above their last purchase. Likewise oversea buyers also, having bought fairly large quantities at lower levels, did not think it worth their while to follow the rise. Consequently they were also out of the market. The natural result was that there was a decline from last week's levels. The immediate trend of the market is easy. But it is very difficult to say as to what the future trend of the market would be. It will be very much determined by the arrivals of new crop and the attitude of the mills here, which, for the time being, are well stocked and in absence of better enquiry for heavy goods are not willing to pay more for raw jute.

Imports and exports in Calcutta remain very much at the same amounts as in the previous week without any appreciable change in the stock position.

London market in sympathy with Calcutta again showed an appreciation. Values for September-October Firsts rising again to £17-2-6 from £16-10. However, the business at rise as well as decline was very poor. Spinners who had met their requirements for the time being were not willing to buy at a rise. The result was that towards the close the market has again shown weakness, and values have once again dropped down to last week's opening levels.

JUTE MANUFACTURES.

During the week under review hessians market in Calcutta had ruled very steady at the beginning of the week, the values towards the close being, however, easy. The highest and lowest of the week for ready nine porters were Rs. 11-8 and Rs. 11-2, while for October-December the quotations were Rs. 10-10 and Rs. 10-6 respectively.

The rise during the earlier part of the week was due to a reserve of sellers, and steadier tone of raw jute. Later in the week the unfavourable cotton figures of American production had an adverse effect on the market. Heavy goods market also, which was showing some strength in the beginning has once again fallen down for want of support from the trade, and consequently the hedges against the heavy goods holding that were withdrawn from the futures market, have once again been fully availed of. Towards the close there has been some enquiry noticeable for cornsacks and the general tone of the market is quiet but steady.

The total reported sales of Indian Jute Mills Association for the week ending Saturday, the 5th August, 1933, were as follows:—

	This and next month. Yds.	Forward. Yds.

COTTON AND COTTON GOODS

COTTON.

(By Wire.)

(From our correspondent).

Bombay, August 10.

A four days continuous decline was topped by Tuesday's bearish Burman report in America. New York, October came down from 10.42 to 9.48, but closed steady at 9.96. Under 'Wallace' plan reduction exceeding eleven million acres occured there, but owing to ideal weather conditions yield per acre is estimated to be very splendid, being 198.41 lb. However, in view of the avowed policy of the Government there, it is thought that inflationary measures would be soon adopted, and hence bears did not unduly force prices down. Locally Broach July-August and April-May rates have come down more heavily from Rs. 207 and Rs. 225-12 to Rs. 193 and Rs. 211-8, a drop of fourteen rupees. To-day's Bear onslaught was very remarkable, on news that inflation would not be yet resorted to by U. S. Government. Indian crop prospects have also improved. The trend at present is decidedly bearish.

During the week the cotton market remained almost unchanged without any appreciable fluctuations except towards the close, when there was a sudden drop of ten points following the receipt of American cotton report.

According to the forecast announced by the Board, a total production of 12.31 million bales is anticipated against 12.99 million bales in 1932 ; 17.09 million bales in 1931 ; 13.93 million bales in 1930.

The condition of the crop on August 1, was 74.2 per cent. of normal compared with 65.6 per cent. in 1932 and 74.9 per cent. in 1931. The area under cultivation is 29.7 million acres which is inclusive of acreage reduction.

The report was very bearish and there was an allround selling by long holders. Liquidation is not fully over and it seems that a further decline may take place. Technically the position then becomes favourable for purchases. According to Col. Heste the worlds commercial crop consumption and carry over on July 31 were.

	Million Bales. 1933.	1932.

GOLD.

(From our correspondent).

Bombay, August 3.

There have been very minor fluctuations in the Gold market in Bombay during the week under review. The London market was closed on Saturday and Monday due to holidays and Bombay markets were also closed. Quotations have remained in the vicinity of Rs. 30-12 going two annas up and down. Stock position in Bombay and Calcutta remain unchanged, the flow of distress gold continuing as usual.

London—(Air Mail Week).—

The Bank of England Gold reserve against notes amounted to £189,695,939 on the 19th July as compared with £189,694,971 on the 12th July showing an increase of £968.

The Bank announced a purchase of Bar Gold to the extent of £358,180 during the week.

Substantial amounts of Gold were available in the open market. Most of the offerings were secured for destinations not disclosed though purchases have been made for the continent also.

The keenness in the demand for spot gold continued, —in consequence, the premium over franc parity has been maintained.

The following were the United Kingdom Imports and Exports of Gold registered from mid-day on the 17th instant to mid-day on the 24th instant:—

Imports.

	£
Germany	14,990
Netherlands	26.982

	£300,380

SILVER.

(From our correspondent)

By Wire.

Bombay, August 10.

Silver remained very quiet but to-day has given way by almost eight annas.

London and New York silver markets have remained featureless, values remaining at 17⅜d. and 35⅛ cents respectively. Local market likewise has remained unchanged with a weaker undertone. Quotations have ruled near Rs. 56-4 with a very poor demand. Stocks in Bombay and Calcutta are estimated at 9,000 and 2,000 bars respectively, daily offtake being at 30 bars at both the places taken together.

London.—(Air Mail Week.)

A notable feature of this week was the announcement of the Silver Agreement that had been signed on the 22nd inst. by the World Economic Conference delegates of India, China and Spain as the most important holders of Silver and Australia, Canada, the United States, Mexico and Peru as principal producers.

It is understood, that for 4 years from 1st January, 1934, under this agreement, the Indian Government will not sell more than 140,000,000 fine ounces of silver, based on an average of 35,000,000 fine ounces of silver a year and the Spanish Government not more than 20,000,000 five ounces, or an average of 5,000,000 fine ounces a year, whilst the Chinese Government will not sell silver derived from demonetized coins.

The Governments of producing countries, on the other hand, have undertaken not only not to sell silver but to buy or withdraw a total of 35,000,000 fine ounces each year, from the market, from the silver mined in their countries.

The market experienced no additional strength as a result of this agreement, which by the way, is yet to be ratified.

For though there has been wide fluctations in the prices the tendency has always been downward. With the support given by India and China, there was some speculative enquiry, but buying has been limited. Sales were steady from the continent and the speculators, while the offering from New York gave an easy tone to the market.

Further speculative activity seems now to be checked by the large bull position, and a further rise in prices is also for the time being not likely.

The following were the United Kingdom Imports and Exports of Silver registered from mid-day on the 17th inst. to mid-day on the 24th inst.:—

Imports.

	£

TEA

Sale No. 9 was held on 7th and 8th August, 1933. The quantities sold with export rights were 17,000 packages and those for internal consumption were 4,500 chests leaf and 7,200 packages dust. The average price obtained were annas 10-9, 5-2 and 4-0 respectively.

There was a good selection from all districts. Comparing with the previous week demand for export was rather poor and the market was easier for all grades. Leaf teas were however fully firm.

Offerings for internal consumption were considerably larger and there was an all round decline in values from three to six pies. Demand for well made leaf was however quite good. Dusts were irregular and tended to be easier.

The official estimated crop figure for July shows a decrease of 31-4 million lbs. making a total decrease of 13¾ million lbs.

The following are full particulars of sale No. 9:—

Teas with Export Rights.

	1933.	1932.	1931.

TEA CROP PROSPECTS.

The following telegram has been sent by the Indian Tea Association, Calcutta, to the Association in London on August regarding the prospects of crop:—

Upper Assam.—Outturn last month about normal. Immediate prospects fair. Weather seasonable.

Central Assam.—Outturn last month about normal. Immediate prospects fair. Weather hot.

Lower Assam.—Outturn last month about normal. Immediate prospects fair. Weather seasonable.

North Cachar.—Outturn last month about normal. Immediate prospects uncertain. Weather seasonable.

South Cachar.—Outturn last month poor. Immediate prospects fair. Weather seasonable. Red Spider blight lighting. Outturn to date is considerably under last year.

Eastern Dooars.—Immediate prospects fair. Weather seasonable. Outturn to date is slightly under last year.

Western Dooars.—Outturn last month about normal. Immediate prospects fair. Weather favourable.

Sylhet.—Outturn last month about normal. Immediate prospects vary in different districts. Weather seasonable. Weather hot. Outturn to date is considerably under last year.

Darjeeling.—Outturn last month poor. Immediate prospects fair. Cold and hot weather is interfering with outturn. Blister blight severe. Mosquito blight prevalent.

Terai.—Outturn last month about normal. Immediate prospects fair. Cold and wet weather is interfering with outturn. Mosquito blight prevalent.

London.—At the auctions on August 2, 20,700 packages of Indian tea were submitted for sale. There was a keen demand, and prices were firm to a little higher.

The following were the lowest prices fetched during the day's auction.

	Last auction per lb.	To-day auction per lb.
Common Pekoe	9½d.	9½d.
Common Broken Pekoe ...	9½d.	9½d.
Common Orange Pekoe ...	9½d.	9¾d.
Common B. O. Pekoe ...	9¾d.	9¾d.
Common B. P. Souchong ...	9¾d.	9¾d.

The following were the value prices:—

Clean Common Pekoe ...	**9¾d.**	**9¾d.**
Clean Common B. Pekoe ...	**9⅞d.**	**10d.**
Clean Common O. Pekoe ...	**10d.**	**10d.**
Clean Common B. O. Pekoe	**10⅛d.**	**10¼d.**
Clean C. B. P. Souchong ...	**9¾d.**	**9¾d.**

On August 3, 6,500 packages of Java and other teas (including Sumatra) were submitted for sale.

The market was firm and prices in some cases rose by a farthing per lb. Lower varieties were unsteady. Teas suitable for export, were often in favour of sellers.

The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day's auction per lb.
Common Pekoe ...	7¼d.	7¼d.
Common Broken Pekoe ...	6¾d.	6¾d.
Common Orange Pekoe ...	7½d.	7½d.
Common B. O. Pekoe ...	7½d.	7¾d.
C. B. P. Souchong ...	7½d.	7¾d.

The following are the value prices:—

Clean Common Pekoe ...	8d.	8d.
Clean Co. B. Pekoe ...	8d.	8d.
C. C. O. Pekoe ...	8⅛d.	8⅞d.
C. C. B. O. Pekoe ...	8⅛d.	8⅛d.
C. C. B. P. Souchong ...	8d.	8d.

TEA AVERAGE PRICES.

The following were the average prices of Tea in the London market during the week:—

(By Wire)

(From our Correspondent.)

Karachi, August 3.

The market during the earlier part of the week ruled very quiet in sympathy with American markets. Towards the close the tone, however, has been steady. On the whole there has been little change in the values. Weather reports are favourable and demand for flour continues to remain dull.

Calcutta.	Rs. A. P.
Punjab Ready	3 10 0
Cawnpore Ready	3 10 0
September Beta	3 13 3
May Beta	3 14 0
Liverpool.	
Baruso Parcels	24s. 9d.
Rosafe Parcels	25s. 0d.
Australian South	28s. 6d.
Chicago (per bushel).	
September	$0.98\frac{1}{8}$
December	$1.00\frac{7}{8}$

LINSEED.

The market for the major part of the week ruled very week in spite of a bull operator buying heavily. The values, in sympathy with American markets, and weakness in other oil seeds, declined from Rs. 5 to Rs. 4-10 for September futures, there being a small recovery at the close. The closing quotation was Rs. 4-12.

FLOUR.

The market ruled quiet but steady. Following are the quotations :—

Qualities—	Rates per maund Ex. Mills Rs. A. Rs. A.
Patent Flour	5 14 to 6 0
Superfine Flour ...	5 10 to 5 12
Household Flour	5 4 to 5 6
Flour No. 4 and 5	5 2
Soojee	5 10 to 5 12
Atta B.	5 6 to 5 8
Atta 2	4 14 to 5 0
Atta S.	4 12 to 4 14
Atta K.	4 4 to 4 6
Atta 3	3 6 to 3 8
Pollard	1 13 to 1 14
Bran	1 11 to 1 12

Rates quoted above include value of gunny bags.

SHELLAC.

During the week under review, the market ruled steady, with a recovery in prices.

The following are the latest quotations :—

	Rs. A. P.
T. N.	23 8 0
S. T. I.	24 0 0
I. T. N.	22 4 0
12%	22 12 0
Super fine	26 0 0
Seed lac	17 8 0
Kiri	3 8 0
Stick lac	13 0 0
September futures	26 14 0

Shipments up to August 9, amounted to 3,983 chests.

According to a communication from the Calcutta Shellac Exchange, Ltd., the daily quotations of T. N. Shellac for the week ending Thursday the 10th inst. are as follows:—

Friday the 4th August, 1933	...	26 8
Saturday the 5th August, 1933	...	Holiday.
Monday the 7th August, 1933	...	26 14
Tuesday the 8th August, 1933	...	27 2
Wednesday the 9th August, 1933	...	27 0
Thursday the 10th August, 1933	...	27 0 Closed steadier.

Delivery for July transactions has been completed and about 7,500 mds. of T. N. Shellac has actually been delivered according to the rules of the Calcutta Shellac Exchange Ltd.

Rate for weekly margin payment announced on Friday the 4th inst. Rs. 26-8.

COAL.

There have been few enquiries in the market, barring the purchase of a total quantity of 190,000 tons for delivery during this and next year by the Ceylon Government Railway, the Bombay Port Trust, and the Bombay Steam Navigation Co., Ld. The bulk of despatches are on contract account.

The prices are nominally as follows:—

	Per ton. Rs. A. Rs. A.
Victoria, Desherghur and Poniati ...	3 12 ...
Other Raniganj	2 0 to 2 8
Super Selected Jherrias	3 12 ...
Selected Jherrias	3 8 ...
Other Jherrias	2 4 to 3 0

FREIGHT.

There was a little activity in the Plate position for August shipment.

Other markets were dull.

Kapok.—Machine Cleaned, seedless double ginned at Rs. 19-8 per br. md. Baled express house Sulkea.

HIDES, SKINS AND LEATHER.

(By our Correspondent).

Calcutta, 11th August.

The Hide market again continued to rule steady throughout the week. Demand for all classes of hides remains keen and stocks of hides as soon as they are received from outstations are readily taken up in the market. For the last 1½ months there has been practically no accumulation of stocks even for a few days. But for the lack of interest shown by Tanners who produce goods for the Indian markets, the demands from every other quarter is brisk.

One or two parties from Madras are buying heavily in the Colutola market, specially the wet-salted cow hides. The rates for mixed lots of Durbhangas have been raised to 4¼ as per lb. (wet), while selected lots are not available even for 4½ as per lb. (wet). There is great scarcity for better qualities of wet-salted cow hides.

25 YEARS TEST

REVEALS THE BEST

Service: For over 25 years "The Indian Mercantile" has served the Indian Public with complete satisfaction.

"Dependable" is no exaggerated description of this indigenous concern which has at the time Assets exceeding three times its paid-up capital and has paid, with rare exceptions, handsome Dividends since its inception.

Life policies issued by this Company are scientific, up-to-date and designed to meet individual requirements at competitive rates of premium.

Agency Terms are unique and treatment sympethetic.

THE INDIAN MERCANTILE INSURANCE CO., LTD.,

11, Bank Street, Fort, Bombay.

Stocks of buffalo hides are also limited and heavy varieties are in keen demand.

To-day's prices of various qualities of hides and skins in the Calcutta market may be quoted as follows.

Cow Hides.

	Per 20 lbs.
(1) Agra dry framed arsenicated ...	Rs. 6 8 to 8 0
(2) Durbhangas	,, 4 0 to 4 12
(3) Patnas	,, 3 12 to 4 4
(4) Dry salted	,, 4 8 to 5 0

Buffalo.

Dry arsenicated	Rs. 3 8 to 4 0

Goat Skins.

Good quality	Rs. 110 to 145
Ordinary	,, 80 to 110
Rejects	,, 45 to 50

The Goat skin market continues weak and less interest has been taken in these skins during the last three weeks continually.

Leathers.

The local Leather market continues dull and in spite of the approach of Pujah season when shoe sales are at their highest in Calcutta and throughout Bengal, the buying movement has not started as yet. It is expected that in the next week or so some interest is bound to be taken in all kinds of shoe leathers—both uppers and bottoms. The Chinese Tanners also have raised the prices of chrome tanned cow hides for shoe uppers by ¼ to ½ anna per square foot. Their production has remained restricted, as usual at this time of the year, owing to drying difficulties. But absence of demand in India has been a great discouraging feature to Tanners who manufacture leathers for Indian market.

A few parcels of Box Sides of better qualities have been exported recently to the London Market from the port of Calcutta. These have been approved by the consumers of this class of leathers. It is reported that arrangements are being made by several large tanneries to export larger quantities of black Box Sides for shoe uppers to various foreign markets.

The Madras tanned hides and skins market continues steady and prices have continued more or less on last week's level. Tanned cow hides are being quoted from 10½ annas to 13½ annas per lb., according to quality and selection. Buffalo hides from 7½ annas to 8½ annas per lb. Sheep skins (tanned) from Re. 1-6 to Re. 1-15 per lb. Goat skins (tanned) from Re. 1-7 to Re. 1-15-6 per. lb.

The exports of tanned hides and skins from all ports of India during the three months of April, May and June have been satisfactory, as may be judged from the following figures:

	April.	May.	June.
Buff. Hides. (In tons) ...	33	43	52
Cow Hides. (In tons) ...	665	925	984
Goat Skins. (In tons) ...	211	377	289
Sheep Skins. (In tons) ...	171	226	204

STATISTICAL INFORMATION

ADEN.

The number of merchant vessels over 200 tons that used the Port of Aden in June, 1933, was 118 as compared with 122 in the corresponding month last year and the total tonnage was 488,000 as compared with 506,000. Excluding coal, salt, fuel oil and Military and Naval Stores and transhipment cargo, the total tonnage of imports in the month was 7,800 and of exports 5,000 as compared with 6,900 and 5,100 respectively for the corresponding month last year. The total value of imports excluding Government stores was Rs. 39,37,000 as compared with Rs. 44,86,000 for June, 1932, and of exports Rs. 27,54,000 as compared with Rs. 28,80,000. The total value of both imports and exports together was Rs. 66,91,000 as compared with Rs. 73,66,000 for the corresponding month last year.

Imports during the month were above those for June, 1932, in the case of grain, pulse and flour, gums and resins, hardware, hides raw, skins raw, sugar, piecegoods, printed or dyed, twist and yarn, tobacco unmanufactured and treasure private; and below in the case of coffee, seeds, piecegoods grey and white and tobacco manufactured.

Exports were above those for June, 1932, in the case of grain, pulse and flour, hides raw, skins raw, sugar, piecegoods, white and printed or dyed, twist and yarn and Treasure private; and below in the case of coffee, gums and resins, hardware, seeds, piecegoods grey, and tobacco unmanufactured and manufactured.

SIND.

The Report on the Maritime Trade of the Province of Sind for the official year 1932-33 states:—Rapeseed is the most important seed exported from this province. The quantity shipped, viz., 111,374 tons showed an increase of 111 per cent. over exports last year, and was the highest since 1924-25, when 198,702 tons were exported. The expansion was due to a bumper toria crop, which made a large surplus avilable for export. Moreover, the exceptionally good quality of the seed, coupled with the fact that the price at which it was placed on the market, compared favourably with the prices of other oilseeds, created a good demand, especially from Italy, which purchased nearly 60 per cent. of the total quantity exported during the year.

(Continued from page 346).

day throughout the entire banking hours. If there is no intention of the list being kept open for the whole day, let the authorities make it clear that there will be no question of *pro rata* allotment and that the list will automatically close when it is known that a total of Rs. 150 lakhs approximately has been reached. Once people know that there is no question of *pro rata* allotment, they would apply for just the amount that they need. It is the expectation of a *pro rata* allotment that is responsible for applications being made for larger sums than actual requirements. When, in such a situation, the bombshell of full allotment is thrown on the market, it is bound to cause havoc. We believe that the issue of the 4 per cent. loan at Rs. 96 is an ill-advised step. We trust, however, that if there is no bungling in the matter of allotment, and if the New Loan goes to a premium as it is bound to do, this Loan might come to have a heartening influence on the giltedge market. The issue may be posed as follows: Let there be either a time limit and *pro rata* allotment or no time limit and full allotment.

The market has been quiet. There have been a few bills about but shippers have been reluctant to discount bills at the rates asked. On the weekly sterling tender day, applications for £2,070,000 at 1s. 6 1/16d., were received and allotted approximately 48 per cent. The total of sterling purchases in the current year, inclusive of this week's remittance, come to over £16 million.

T.T. may be quoted: 1s. 6 3/64d., right up to the end of the year. But this rate must be said to be but barely available.

Bills may be quoted: 1s. 6½d., up to October; and 1s. 6 9/64d., November.

Money was tight, though, towards the close, a relaxation in the stringency was felt. Business in interbank call money was done at as high a rate as 3½ per cent. The quotable rate in the early part of the week was 2 per cent. At the close, the quotable rate is 1 per cent. Union rate for call, three days and seven days notice money was ½ per cent. Onemonth, twomonth and threemonth deposits were quoted 1, 1¼ and 1½ per cent. respectively.

(Continued from page 388).

This Conference requests the Government to prohibit the import of foreign cotton in order to give some compensation to the cotton growers and to make proper and effective representation to the Government of Great Britain with a view to increase the consumption of Indian Cotton in Lancashire."

It was also decided that Messrs. G. Lakshmana Reddi, M.L.C., K. Kotti Reddi, M.L.C., T. N. Ramakrishna Reddi, M.L.A., Y. Ranganayakulu and M. Vellingiri Gounder should wait on deputation on the Government of India as representatives of the cotton growers of South India.

Below are given a few extracts from the official *communique* stating the progress up to date of the Mettur Dam:

"At present the depth of the flow over the crest is ten feet, the discharge being about 55,000 cubic feet per second.

The reservoir affords a pleasing sight even at the present level with an expanse of some 27 square miles of water dotted with islands; while towards the western margin the palmyra trees about to be overtopped are still struggling for existence. The village of Samballi, about two miles north of the Dam, has, of course, disappeared for ever. During the last floods it was submerged and then, on occasions, the remains of the Samballi Fort built by Tippoo Sultan would appear above the water. The overflow level has since been raised by fifty feet and even the high spots of Samballi will never be seen again.

From the right flank, one may walk along the completed portion of the Dam for over 1,600 feet and by November it will have extended to about 3,500 feet while another 1,160 feet will be finished on the left flank with only the 613 feet overflow gap to complete the entire Dam. The raising by about 75 feet involving the construction of 1,400,000 cubic feet of masonry has to be completed before the arrival of the 1934 floods. The Cauvery will then be discharged through the sluices of the Dam or through the surplussing sluices and will no longer flow as it did hitherto uncontrolled."

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

STATUTORY RAILWAY AUTHORITY

Elsewhere in this issue will be found the text of the proposals for the future administration of Indian railways. These proposals are the outcome of the conference that was held in London, for which a few members of the Central Legislature had been invited. At the very outset, it strikes us that any criticism of the plan now put forward is futile. The fact of the matter is that, even assuming that the necessary legislation in connection with this plan will be brought forward in India, the present Assembly is composed of such members as would swallow any the most unpalatable pill. To make the passage of such legislation doubly sure, the Finance Member, with his uncanny shrewdness, devised the project of despatching nearly a score of Assembly members to London. It may be taken as certain that these twenty and odd members would, cheerfully and dutifully, give their assent to any proposal sponsored by the Treasury benches for the Reserve Bank scheme or the future control of Indian railways. In regard to so momentous a gathering as the World Economic Conference, Sir George Schuster wanted to practise economy; towards this end, he did not want to select any representatives from India; he was content to suggest names from among those who were already in London on some kind of errand or other. Travelling allowances came to be a serious item when the *personnel* of the Indian delegation for the World Economic Conferene was the question. Travelling allowances did not bother Sir George Schuster when he was asked to agree to the programme of joy-rides for a score of Assembly members for the Reserve Bank and Railway Board Conferences. The real meaning of this is that whatever proposals have now been decided on in the London discussions are sure to be carried through in the Indian legislature by the combination of the votes of the Treasury members and of the votes of the Central legislators who have been allowed the chance to have a good time at Government's expense in London.

* * *

It seems to us, therefore, that any criticisms that we may make either in regard to the Reserve Bank plan or the Statutory Railway Authority would prove to be but a cry in the wilderness. The Government have made up their minds in the matter; they have their plans ready; they have the strength to get through these plans. Whether we approve of these or not, whatever the Indian public might think of them, however hoarse the Indian commercial bodies might cry, the projects will go through the Assembly in exactly the form in which the Government want them to go through.

* * *

What is really the object behind this project to place the railways on an independent footing? Has the control of the Assembly over the working of the railways since the Convention of the separation of railway finance from general finance came into force been exercised in a manner tha has interfered with the good and economical management of the railways? Have the authorities any complaint to make as regards the working of the Standing Finance Committee for Railways? Our own view is that the Assembly has exercised a proper and alert watch over the working of the railways; that this alertness has been responsible for the pursuit of a more wholesome policy; and that there is every case for the continuance of such an alert watch. On the other hand, the way in which colossal sums have been squandered by the Railway Department and the way in which the representative of the Finance Department on the Railway Board has allowed himself to be more or less a party to many a wild-cat scheme shows that there is every case for more intense scrutiny. The railways are the biggest asset of India. If you take away the interest contribution of the Railways from the Central Government's budget, the latter is distinctly smaller than the Railway budget. By the way in which the railways are managed, it is possible to cripple or strengthen national industry and trade. By the way in which the large allocations are spent, it is possible to make all the difference between the protection of Indian interests and the pampering of alien interests. The large staff employed by the railways affords the fullest scope for Indian youths; at the same time, a perverse policy, as heretofore, might mean that Indians are denied opportunities in their own land. A department, in which such far-reaching issues are involved, should not be handed over to any outside body without full and adequate consideration of all the issues involved. This is too serious and important a matter to be disposed of in a month's discussion in London amongst members most of whom had no particular competence to sit in judgment upon this question.

* * *

We might go so far as to say that this idea of a Statutory Railway Board was jumped on us only in the closing stage of the reforms discussions. The suggestion for such a Railway Board was made, in the first instance, by the Government of India in their Despatch on the Simon Commission Report. There was some reference to this topic in the Federal Structure Committee Report of the Round Table Conference in 1930 and 1931. The Committee expressed the opinion that the Statutory Railway Authority should be established "if after expert examination this course seemed desirable." We maintain that there has been no such expert examination. The kind of examination that took place in June and July last is one by mere lay members. A property worth Rs. 800 crores could not be transferred to an outside authority on the recommendation of a crowd of ill-informed and irresponsible members. We have no doubt that the present members of the Assembly would themselves admit that their claim to represent the tax-payer rests on slender grounds. It would be taking advantage of the present tragical position in the country if the Government wish to carry through the scheme of a Statutory Railway Authority in an Assembly constituted as it is at present. If there is to be a Statutory Railway Authority, let this matter be gone into in detail by a real committee of experts. Let such a committee answer, in the first instance, the question whether the present system could not be continued. If a change is necessary let such an expert committee lay down the terms and conditions on which the new scheme must be worked. In the absence of such an expert investigation, we regret that we cannot see our way to support a plan whereby the tax-payers are asked to give up their rights over so valuable an asset as the railways of India. The present proposals will have the effect of making the Railway Board a body analogus to the various port trusts in India. The port trusts are not an example of sound management. They are a standing warning as to the mischief that a combination of vested interests could cause to the country. We have no doubt in our mind that if the Statutory Railway Authority comes into being, it will be no more than a conspiracy of vested interests.

For India, as she is situate today, many of the economic experiments of recent times have, strictly speaking, but academic interest. For, it is futile to expect a foreign government to take points from the experiments and experiences of other countries and to conceive and execute a comprehensive economic policy designed to give full employment to our resources of men and material. And it must be confessed, in fairness to ourselves and to the Government, that even if there were a sudden change to a truly national government, it would be no easier to formulate or to apply an economic policy modelled on, say, Russia or Italy or the United States. Nevertheless, the prevalent conditions, as well as the prospects of political and economic autonomy in the near future, make it useful to examine the changes in economic thought and effort in various parts of the globe. Those who ardently wish for the full and early development of Indian economy must feel gratified that the post-War years have fully vindicated their demand that economic development should be sought rather through a policy of descriminating State support than mere unqualified *laissez faire*. It will be remembered that in the first stage of what may be called economic self-consciousness, it was widely urged in India that the State must be prepared to play a more active *role* in the industrialisation of this country. The Government were, on the other hand, impelled, for obvious reasons, to contend that State interference must, in the long run, be to the detriment of the national interests and that the enduring foundation of industrial greatness must be laid in the purely individualistic regime. The course of events during the last decade and particularly, in the last three years has made the issue between *laissez faire* and individualism a far less debatable one. Force of circumstances, more than logic or the relative merits of *a priori* doctrines, has impelled most countries of the world on the path of regulation of economic activity with more or less interference on the part of the State. It is no longer the case that men are sharply divided between those who abhor economic planning as a new-fangled demagogy and those who worship with unfavouring faith the fetish of absolute *laissez faire*. It is common knowledge that the trend towards regulation has been accelerated and intensified by the complexities arising from the present depression. Apart from the deviations from classicial individualism noticeable in almost every country, we have, at present, three outstanding instances of national governmets breaking the fetters of obsolete doctrine and exploring with a new found freedom the possibilities of economic regulation.

* * *

The difference between these three outstanding instances, of Soviet Russia, Fascist Italy and the United States of Mr. Roosevelt, are so marked that an examination of them has a unique interest for countries like India. The difference between each of these countries and India naturally calls for appropriate variations in the methods which the future Government of this country will employ. But for the present the difference of theory and method as amongst Russia, Italy and the U. S. A. are more important, inasmuch as the utilisation of this knowledge in the formulation of a practical policy for India is yet far off.

* * *

The facts about economic theory and economic conditions in Soviet Russia have so often been the subject of examination in these columns that we need not go into them at any length. The Soviet Government are such firm believers in orthodox Marxism that the theories which govern their actions may be easily imagined. As for practice, the most significant development of recent years, from the standpoint of national economic policy is the formulation of the New Economic Policy or the NEP *as* it is called for short. It signified the recognition on the part of the Soviet of the impossibility of a sudden application of Marxism to the conditions which ruled in Russia, and the failure of their attempt in this regard. By proclaiming the new policy, the authorities showed themselves ready to deviate from orthodox standards, where necessary, and to run the Soviet economy on an admixture of individualism and communism, the latter ingredient being by far the greater part of the whole. The fact that the authorities were compelled to compromise with the fierce individualism of the *kulaks* need not deter us from regarding the Five Year Plan of the Soviet as essentially an experiment in Communism. On the last occasion on which we examined the position of the Plan at length, we came to the conclusion that in their attempt to achieve a vast expansion of production at a break-neck speed, the Soviet had erred on the side of a serious lack of proportion between capital equipment and the production of current consumer's goods. The new plan is naturally formed with a view to correct this error. Even if it should prove that the Soviet have succeeded in expanding the production of consumer's goods and avoiding the tell-tale phenomenon of bread queues in the cities and towns, the ultimate verdict on communism must rest on the answer to the question, whether or not the Soviet Government have succeeded in the instilling into the minds of the average citizen the communist, as distinct from the traditional individualist, mentality. We are thus of the view that the success of the Soviet must in the last resort depend not on figures of production but on the ability of the Government to erase from the mind of the average citizen that part of ordinary natural selfishness which may be considered anti-social.

* * *

A communist regime established by force and maintained by force has little practical value for countries which are wedded to constitutionalism. Besides planning with so vast a scope and on so slender a basis of previous achievement is necessarily beset with risks and dangers. No Government, barring those established by force and composed of relentless autocrats, would consent to shoulder the responsibilities involved or remain indifferent to the risks of failure.

* * *

It was left to Fascist Italy to realise that economic planning need not necessarily be of the "red" brand. The State might avoid the deep sea of unregulated individualism without going over to the devil of Marxim Communism. The economic theory of Fascism is a compromise between classical *laissez faire* and Bolshevik regimentation. Add to this the political theory of the "Corporate State" and its willingness and ability to clip the wings of individual freedom where it threatens to go against the common interest, we have the theory of Fascist economics. As for its practice, one needs far more than can be gleaned from books and articles in the press to decide whether Fascism has done better by the masses than the Government of frankly capitalist countries. Mr. Sydney Hook, whose monumental work on Marxism was reviewed in these columns last week, regards Fascism as the last rampart of finance capitalism, while Mr. Paul Einzig has not a word of disapproval for any of the acts of Fascists, not even the Fascist dictatorship as an offence against well-understood principles of modern polity. It is true that the Charter of Labour proclaimed by the Fascists contains safeguards for labour which are attainable for the working classes of other countries only on the strength of a persistent fight with the employers. But in so far as the State claims, and exercises the right to regulate productive activity and wages and hours, with a view to preserve the balance between production and consumption, it marks a significant advance from the old world of "let alone."

* * *

The NIRA or the National Industrial Recovery Administration of Mr. Roosevelt has the more intimate interest for the present inasmuch as it has a direct relation to the economic depression which neither the Soviet nor the Fascist economy can be

said to possess. The economic programme was, to all appearances, burst upon the world with sensational suddenness immediately after the banking crisis of March last. Its most characteristic features were imparted to it immediately before, and during the meeting of the World Economic Conference. It displayed its aggressiveness when the conflict between the immediate requirements of the Conference and the pursuit of the policy in America was first evident. Its concentration on the regulation of internal conditions betokened a disregard of economic relations with foreign countries and a confidence in the idea of national self-sufficiency. The various pieces of legislation passed by Congress in its last session also conveyed the impression that they are so many palliatives for the different ailments of American economy. To adduce only one instance, the legislative authority for Mr. Roosevelt's monetary dictatorship is deducible only from a surprise amendment to the Farm Bill. Though in his broadcast speech on the eve of the circulation of the Blanket code, President Roosevelt claimed that all his legislation was a well-planned whole, one cannot avoid the feeling that each Act of Congress was thought of under the pressure of the moment with reference to the most urgent preoccupations of the hour. Nor was there reason at that time to think that Mr. Roosevelt, who is, undoubtedly, the mainspring of all this new activity, had thought out the problems as a whole and had arrived at a definite body of ideas before assuming his high office.

* * *

Yet the plan and objective of the "NIRA" are of such compelling interest that it calls for a calm and dispassionate examination on its own merits. This task, Mr. Roosevelt himself has helped by his work, which bears the expressive title of *Looking Forward*. It is, of course, impossible in the nature of things that a first rate politician of the type of Mr. Roosevelt could not have pondered long over the problems of his country or could have relied for making a success of his tenure of office on the notorious fickleness of brain-waves. But the developments of the few months which have elapsed since he took office have been so dramatic and sudden that it is difficult to believe that Mr. Roosevelt could have pre-conceived plans to meet them as they arose. In the first place, the banking crisis came to a head on the day of his advent at the White House. The conflict between Mr. Roosevelt's inflationism and the first steps of the World Economic Conference towards a successful session also came to view with a similar suddenness. The later phases of the Administration of the National Industrial Recovery Act should also have defied attempts at anticipation. Lastly, neither the break in stock and commodity prices nor the resultant indifference displayed by the Administration towards this threat to the economic programme have been foreseen with any degree of clearness ahead of their time. Doubtless, some of the features of the plan and its working have been due to the President's resourcefulness.

* * *

But it is certain, from a perusal of Mr. Roosevelt's *Looking Forward*, that the basic ideas underlying the NIRA had been cultured in the brain of Mr. Roosevelt long before his nomination to the Presidency by his party. The President had long observed and pondered over the economic *impasse* in the country. He had dived deep into past history to trace the relation which the present crisis bears to the untended evils of the past. He has pieced out an American history, political and economic, in which clear perception of the development of these evils suggest also their natural remedy. He clarifies the political and economic origins of the rugged individualism with which America has always been associated. He sees that just as the growth of the national governments of Europe and the creation of strong central government were due to the individual's preference for the great master far away to the exploitation and cruelty of the smaller master near at hand and were, therefore, due to the conditions in which they grew up, in America, too, the man of ruthless force had his place in developing a pioneer country. The financial Titan and the relentless captain of industry had their counterpart in politics. The confusion of the days of the War of Independence shook the faith of even the rebels in popular government. And it was not till the American political life showed an unmistakable threat of oligarchy that the individual was again juxtaposed against the State. The historic duel between Hamilton and Jefferson was the origin of the two parties, Republican and Democratic, as we know them to-day. Once individualism was made the great watch-word in American life, the period of economic development in America began. The new country offered rich soil for the growth of individualism. So great were the natural resources that, despite the depressions which came and went not infrequently, most of the people lived partly by selling their labour and partly by extracting their livelihood, from the soil, so that starvation and dislocation were practically impossible. "At the very worst, there was always the possibility of climbing into a covered wagon and moving West, where the untilled prairies afforded a haven for men to whom the East did not provide a place." In fact, America was able to afford this facility not only to her own people but also to the distressed of all the world. Mr. Roosevelt thus points out the basis and the *raison d' etre* of individualism : "As long as we had free land, as long as population was growing by leaps and bounds, as long as our industrial plants were unable to supply society had given the ambitions of man free play and unlimited reward, provided only that he produced the economic plants so much desired." The President aptly points out in a different context that, though it can be proved that the investors in American railways had paid for them nearly three times over, still it is a fact that the railways have been laid and that society is getting an adequate return from them. The striking difference between the conditions in which the financial Titan and the ruthless captain of industry throve and were, in spite of their defects, allowed to thrive, and the conditions of the present lies in the fact that equal opportunity is no longer present and that the growing corporation like the feudal baron of old threatens the economic freedom of individuals to earn a living. The prejudice in favour of tariffs had not only been woven more deeply into American political life through log-rolling and other vicious practices, but it had brought about a serious maladjustment between industry and agriculture. The foreign markets had been closed by nations by the incompatibility of foreign lending and refusal to take payments in goods. The native belief that the wheels of trade could be kept running through persistent foreign lending only reduced values of stocks and bonds. With the failure of foreigners to buy American cotton and American wheat, the farmers found themselves seriously impoverished. The products of industry could no more be sold to the population at home than to the foreign markets abroad. The safety valve provided in former days by the presence of new land for reclamation is no longer present. The political machinery, too, kept pace with economic organisation in becoming increasingly out of date. The national life had long burst the bounds of city and State. Not to speak of the industrial barons who looked upon the whole country as territory for their potential expansion, even the criminal had adopted a State-wide and a national range and crime had thus ceased to be a local matter. Mr. Roosevelt gives a graphic description of the many layers of social authority under which a person in an American city or town has to lead his life. With the cumbrous nature of National, State and local government, it is inevitable that taxation and government expenditure should also fall into a lamentable chaos.

INDIAN FINANCE
YEAR-BOOK 1933-34

NOW READY

OUTSTANDING FEATURES:

1. A CONCISE AND COMPREHENSIVE REVIEW OF INDIA'S TRADE, BUDGET, FINANCE, BANKING, INSURANCE, TRANSPORT INDUSTRY AND AGRICULTURE.
2. LUCID EXPOSITIONS AND COMPARATIVE STATISTICS.
3. TEN YEAR FIGURES ARE GIVEN IN MOST CASES.
4. OVER 200 STATISTICAL TABLES.
5. WHERE NECESSARY, CORRESPONDING STATISTICS OF INTERNATIONAL VALUE ARE GIVEN.

THE "HINDU": Non-official enterprise has been able to achieve what the Government failed to do.

THE "TIMES OF INDIA": . . . . . A compilation which nobody . . . . . ought to miss.

THE "LEADER": Excellent book of reference and information.

THE "INDIAN REVIEW." A mine of information, statistical and historical.

THE "HINDUSTHAN REVIEW": . . . . . The politician and the journalist the legislator and the businessman, cannot prize too high.

THE "STATIST." An exhaustive review.

THE "INVESTORS' CHRONICLE". First compilation of its kind in India. No previous attempt has been made either by the Government or by private agency to bring into a single volume all available economic information and relevant economic statistics.

SIR OSBORNE SMITH: Astonishing production.

Sir R. N. MOOKERJEE: Remarkable achievement.

MR. G. D. BIRLA: Undoubtedly a compilation of very useful information.

SIR BASIL BLACKETT. There is hardly any financial or economic information regarding India which does not find some place in the volume.

J. SCHUMPTER: All the more, economists all over the world must be grateful to you.

Price Rs. 5 only.

To subscribers of "INDIAN FINANCE" Rs. 3 only.

Rs. 4 for extra copies to subscribers.

The Managing Editor,

"INDIAN FINANCE," 20, British Indian Street, CALCUTTA.

Sir,

I send herewith Rs..... for of "Indian Finance Year-Book" on the basis of concession allowed to subscribers.

Name.....

Address.....

A balanced budget had ceased to be the obligation of the governments or parties in power.

* * *

Mr. Roosevelt sees clearly that in such conditions what is required is a revision of economic and political ideas to suit the changed requirements. The task of statesmanship, he says, has always been the redefinition of rights in terms of a changing and growing social order. Mr. Roosevelt has thus no hide-bound theory whose deductions are unquestionable dictates of conduct. In matters of social welfare, he confesses no man can have the last word, though everyone has the obligation to suit policy to changing conditions and the unchangeable objective of the common welfare. Recognise that free land is no longer available as a safety valve to the pressure of depression. And you will drop your old fatalism in regard to the depression. In the same way, let it not be forgotten that our task is, not discovery or exploitation of national resources or necessarily of producing more goods, but "the soberer, less dramatic business of administering resources and plants already in hand, of seeking to re-establish foreign markets for our surplus production of meeting the problem of under-consumption, or adjusting production to consumption, of distributing wealth and products more equitably, of adapting existing economic organisation to the service of the people." In the matter of organisation, let us recognise that we are steering a steady course toward economic oligarchy and that a mere builder of more industrial plants or the creator of more railway systems is as likely to be a danger as a help. Let us not overlook the place of holding corporations, Insulls and Kreugers in the wiping out of the hard-earned savings of thousands of families and it will not be difficult to put the finger to the danger spots in modern economy or to devise the remedies necessary for their removal.

* * *

It is unnecessary to point out at length the obvious relation between this diagnosis of the political and economic ills of the United States with the remedies that have now come to be collectively known as the NIRA. The only ingredient in the *recipe* indicated in Mr. Roosevelt's *Looking Forward*, which has not so far been conspicuous in the national Industrial Recovery Administration, is the move for lower tariffs all over the world with a view to facilitate the exchange of goods between America and other nations. The reason for this is to be sought in the incapacity of the World Economic Conference to proceed with its work without interfering with the NIRA at one of its vital points, namely, the depreciation of the Dollar to a point at which the repayment of debts could be made on an equitable basis. The other features, namely, inflation, the resuscitation of the national banking system through the recreation of nation wide solvency and the Bankers Guarantee Corporation, the regulation of industry through a limitation of hours and minimum wages and production, the check on speculation and the elimination of fraud by making firms more responsible for the issues they sponsor—these are well known and need but a bare reference. What is important to our purpose is the apparet evolution of more practical ideas in economic organisation signified in the historic sequence of the New Economic Policy of the Russian Soviet, the regulation of economic activity by the Fascist State in Italy, and the National Industrial Recovery Administration of Mr. Roosevelt. We believe that while the first mentioned signifies a rigorous application of the *a priori* doctrines of Karl Marx and Fascism marks an uncritical reaction therefrom, the NIRA must be hailed as the embodiment of freedom from doctrinaire notions and the triumph of practical commonsense.

MALCONTENTS' MISCHIEF.

During the past few days, cables have flashed news of German Diplomacy, apparently menacing the peace of Europe, if not of the world. But, the alarming character of the news bears no relation to the commitments which Germany, so recently, entered upon in Rome. The National-socialist Revolution has been declared to have ended on the 11th July. But, the Government are, in no way, enjoying the benefits of peace. They have embarked upon a policy of "returning to normal." Drunk with unquestioned authority, the local Nazi dictators feel reluctant to part with power. They have been conducting themselves in the countryside, as though no central authority exists. In many cases, they have been superseded by trusted officers of the Government. The Nazi rank and file have not yet had sufficient time to re-adjust themselves to the altered position, nor their officers reconcile themselves with their degradation. The Government have, in all conscience, a difficult enough job in taming the wild section of the Nazis. They were constrained to invest their officers with arbitrary powers for the summary disposal of Nazi mal-contents. Apart from these mal-contents in Germany, there are cliques of Nazis in the neighbouring States, with the avowed object of doing propaganda work, quite independent of the control of the Nazi Government. These persons are hand and glove with some of the Nationals of the neighbouring States, whose desire it is to march their nations on the Nazi path, and get control of their respective Governments. In all these, the German Government has no hand, or has not yet been proved to have had a hand.

* * *

But, Herr Adolf Hitler did essay to link his nation with Austria, for economic purposes. All Austria is not Dr. Dollfuss. Austria is a country, which has had very intimate relations with Germany for a long time before the war, and as allies, in pursuance of the Triple Alliance, fought together in the War. Though the Versailles Treaty could delimit the boundary of Austria and prevent her from entering into secret treaties with any other Power, it had not been able to suppress intimate relations between Austrians and Germans, as individuals or groups of individuals. In fact, three or four years ago, Austria and Germany came very near each other in the widely known Austro-German Economic Union. France, as usual, got panicky and vigorously protested against the then prospective union, as an infringement of treaty obligations, with conspicuous success. Soon after, the late M. Briand, the then Foreign Minister of France, made a noisy bid, in the League Council, for a United States of Europe. Despite his untimely demise, his scheme would have had a promising carreer, had it not been for the economic collapse of Europe. The various nations had their hands busy with tidying up their houses. The economic trouble of Europe has contributed, not a little, to isolating the various nations in their respective cells. But, sections of Nationals in every country attributed their calamities to the failure of democracy, and hit upon dictatorships as the shortest cut to national rehabilitation. Signor Mussolini rules supreme in Italy. The contagion caught other ambitious men in its grip, elsewhere. Herr Hitler comes nearest to the Duce in the qualities of dash and daring. In the early days of Fascism in Italy, neighbouring countries did complain of Fascist forays, even as they did, and are still doing, of Bolshevik encroachments. The success of Nazidom in Germany, has, as usual, ushered in grumblings from all around. But, the foundation for the protests is certainly within the complainant nations. Even such is the case with Austria, which has been of late, the most vociferous of all revilers of the Nazis. Let her first segregate her own Nazi Nationals, and more than half her work would be done. Let her also remember that a section of her Nazi Nationals may have taken refuge across her frontiers.

How about Germany, for instance? Expelled anti-Hitlerites have been engaging several Soviet stations for broadcasting propaganda in German, which powerful transmitters in *Deuchland* have deliberately jammed. When the German Minister of Propaganda asks all German stations to protest against "poisened news" from a station in eastern France, the French Secret Service follows, in hot haste, with the story that they have frustrated a plot, by five men, to blow up Luxembourg and Strasbourg broad-casting stations with dynamite. For aught, the news may be quite true. In the former case, anti-Hitlerites, and in the latter pro-Hitlerites! The incident of Eastern France does not exhaust Germany's sins of commission. The bill against Germany is a long one. The shooting of an Austrian frontier policeman and two others at Kufatein; the incursions of æroplane over Austrian territory, dropping propagandist pamphlets all over the place; and the tone of the semi-official Communique, issued in Berlin, answering the representations of the French and British Governments, more or less cover the charge-sheet against Germany. These charges, if anything, vindicate Hitler's earnestness to pursue the "Return to Normal" policy, rather than any international culpability.

* * *

It was only on the 15th July last, that the Four-Power Pact had been signed by Signor Mussolini and Ambassadors of Britain, Germany and France. Later on, Diplomatic conversations were carried on in Rome. An agreement is understood to have resulted between France and Italy on guarantees of the security of Yugoslavia, the maintenance of the independence of Austria, and disarmament. Germany is aware of this sub-pact. By signing the Four-Power-Pact, she has deliberately undertaken to respect the territorial integrity of Austria, and to keep the Peace for ten years. In the face of these commitments, how can Nazi Germany dare to complicate herself in objectionable transactions against Austria, and how can any one be bold enough to swallow news, purporting to convey this impression. What is more, the Four-Power-Pact has been the interest not only of the German Government, but also the satisfaction of the German public. Germans attached considerable importance to it, in the earnest hope that, as a result of the Pact, a substantial improvement in her relations with France, so desirable for both countries, will be achieved in the near future. It is preposterous that Germany, with a mentality such as this, will plot or instigate plotting, against Austria.

* * *

Albeit the disconcerting German reply to the French and British Notes of protest on August 7, the German Government gave assurances to the Italian Government, only the day previous, that "it would do its best to prevent the incursions of æroplanes over Austrian territory and check wireless propaganda against the Austrian Government by tightening the censorship; and it had also disapproved of the acts of terrorism committed against the Austrian Government, although it was not prepared to accept responsibility for them." As regards the shooting incident at Kufstein, the German official account says that it has occured between Austrian Fascists and a group of unknown persons, while the Bavarian political police have undertaken, of their own accord, investigation into the affair, in order to bring the perpetrators to justice. While the Austrian Charge d' Affaires in London was told that British Government believed, in view of the assurances given by the German Government to the Italian Government,

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

GOVERNMENT OF THE PUNJAB
FINANCE DEPARTMENT
NOTIFICATION.

No. 1-B. Special

Dated Simla E., the 7th August, 1933.

Subscriptions for an issue of

4 PER CENT BONDS, 1948.

will be received from the 15th August, 1933. The issue will consist of two sections:—

A—Cash.

B—Conversion 6¼ per cent. Punjab Bonds, 1933.

Section A will be closed to subscriptions without notice as soon as it appears that a total of Rs. 150 lakhs (nominal) approximately has been reached, and in any case not later than the 31st August, 1933. In the event of subscriptions in this section exceeding the limit of Rs. 150 lakhs (nominal) approximately, partial allotment will be made. Section B will remain open up to the 31st August, 1933.

4 PER CENT BONDS, 1948.

issued at Rs. 96 per cent. and redeemable at par on the 1st September, 1948.

2. DATE OF REPAYMENT.

The Bonds will be repaid at par on the 1st September, 1948.

3. ISSUE PRICE.

The issue price will be Rs. 96 for every Rs. 100 of the Bonds applied for.

4. INTEREST.

The Bonds will bear interest at the rate of 4 per cent. per annum from the 1st September, 1933. Interest will be payable half-yearly on the 1st March and the 1st September, and will be liable to income-tax.

Interest from the date of application to the end of August, 1933, will be paid in cash to subscribers at the time of issue of the new securities at the rate of 4 per cent. per annum on the nominal value of the Bonds allotted.

5. CONVERSION TERMS.

6¼ per cent. Punjab Bonds, 1933, will be accepted in subscription to the **4 per cent. Punjab Bonds, 1948,** as the equivalent of cash at their full maturity value, that is to say, at Rs. 100 per Rs. 100 nominal of the Bonds tendered. If the nominal value of the Bonds tendered is not an exact multiple of the issue price per cent. of the loan applied for, the tenderer will receive in cash at the time of issue of the new securities, the amount by which the value of the Bonds tendered exceeds the nearest lower multiple of the issue price. In addition, the following cash payments will be made at the time of issue of the new securities:—

(a) interest accrued on the **6¼ per cent. Punjab Bonds, 1933,** tendered for conversion up to the end of August 1933, at the rate of **6¼ per cent.** per annum; and

(b) advance interest on the new Bonds in accordance with paragraph 4 above.

SUPPLEMENTARY PROVISIONS.

6. FORM OF SECURITIES.

The Bonds will be issued in the form of promissory notes, transferable by endorsement in denominations of Rs. 100, Rs. 500, Rs. 1,000, Rs. 5,000, Rs. 10,000, Rs. 25,000, Rs. 50,000, Rs. 1,00,000, and Rs. 10,00,000.

7. PURCHASE OF BONDS.

Applications which must be for Rs. 100 or a multiple of that sum, will be received:—

(a) at the Imperial Bank of India, Public Debt Office, Calcutta;

(b) at any branch of the Imperial Bank of India located in the Punjab; and

(c) at any Government treasury or sub-treasury in the Punjab, if there is no branch of the Imperial Bank of India at the place.

8. FORM OF APPLICATION.

Applications may be in the form available on application or any other form which states clearly the amount and description of the securities required, the full name and address of the applicant, and the treasury or sub-treasury at which he desires that interest shall be paid. Application should be accompanied by the necessary payment in any of the forms mentioned below.

9. FORM OF PAYMENT.

Payment may be made either in cash or by cheque. Cheques should be drawn in favour of the officer to whom and on a bank in the place at which the application is presented.

Bonds tendered for conversion should be endorsed with the words "Pay to the Governor in Council" over the signature of the holder.

10. PAYMENT OF INTEREST.

Interest will be paid at the Imperial Bank of India, Public Debt Office, Calcutta, or at any treasury or sub-treasury in the Punjab at which the promissory note may be enfaced.

11. REFUNDS.

If partial allotment is made in the cash section, a proportionate refund will be made at the time of issue of the new securities. No interest will be paid on the amounts so refunded.

12. BROKERAGE.

Brokerage at the rate of one-eighth per cent. will be paid to recognised bankers and brokers on allotments made on applications for the Bonds bearing their stamp.

13. BONDS ACCEPTABLE IN PAYMENT FOR CROWN LAND.

At any time after the 31st August, 1933, the Punjab Government will accept the Bonds at par in payment of the price of Crown lands sold in any part of the Province by public auction or private treaty.

14. SINKING FUND.

The Punjab Government undertake to make provision annually of the sum sufficient to provide for the amortization of the Bonds within fifty years from the date of issue.

15. TRUSTEE SECURITIES.

This loan is included in the securities described in clause (a) of section 20 of the Indian Trusts Act, II of 1882, as amended by the Repealing and Amending Act, XXXI of 1920.

16. PUBLIC DEBT OFFICE.

The Provincial Public Debt Office will be located at the local head office of the Imperial Bank of India at Calcutta.

17. LIABILITY TO INCOME-TAX.

Interest on the Punjab Bonds will be subject to income-tax, but refunds will be payable to holders who are not liable to the tax or are liable to the tax at a lower rate.

F. H. PUCKLE,
Secretary to Government, Punjab,
Finance Department.

For further particulars please apply to the Imperial Bank of India, Public Debt Office, 8, Council House Street, Calcutta.

that there would be no repetition of these incidents. The British Government does not view the German reply to the British representative on August 7, as affecting German assurances, given on August 6 to the Italian Government. Similarly, the German Government informed the British Charge d' Affaires in Berlin that, "as the objective, immediately desired by the Government, had been attained, it now hoped that the whole series of incidents were liquidated." The ugly affairs, perpetrated, in all probability, by malcontents of all the nations involved, during the past few weeks, have been buried by the nations concerned. The French Government, also, is bound to feel happy over such a culmination of the events which so much promised, only a couple of days before, to disturb the peace of central Europe, if not of the whole of Europe. The jingo Press did, really, take up a minatory attitude, when it said that "if Germany does not admit friendly representations, surprise cannot be felt if the subsequent steps are less friendly." What really is the job of mal-contents need not have been made so much of. If Herr Hitler embarked upon the "Return to normal" policy, which had already sent some to the gallows and many to penal servitude, it was with a view to do his best to obviate the merry activities of omnibus mal-contents. The recent diplomatic breeze vindicated itself, as it had afforded an opportunity to get an insight into the current repression in Germany, although the National-Socialist Revolution, officially, came to an end on July 11.

PARTING OF THE WAYS.

Burma is at the parting of the ways. Ere long, the Burmans have to make up their minds. They cannot, for all time, run with the hares and hunt with the hounds. They should stand together as one man, if they would avert the disaster that has opened its jaws wide. The Secretary of State presented the scheme of constitutional Reforms for Burma, if separated from India, to the Joint Committee. The chance for laying this speculation low came their way last May, when a special session of the Burma Council was held to give them an opportunity to make their choice. They essayed to make their choice alright, in an unambiguous manner. The resolution, which was on the agenda of the Council, stated "that the Council while recommending that, as between the two alternatives offered by the Prime Minister, Burma should remain a part of India, demands adequate facilities for the modification of the White Paper constitution in the interest of Burma". Between making up the agenda and the passage of the resolution, bungling of some sort intervened. The result was that it enabled the Secretary of State to interpret Burma's choice as, that "although registering emphatic opposition to Federation with India on the same terms as any other province, Burma has refused to choose separation on the basis of the constitution outlined by the Prime Minister." What a travesty of the resolution on the agenda! The resolution on the agenda was on all fours with the Kin resolution of the Indian National Congress. Besides, ample evidence exists to show that the resolution would have been carried by a decisive majority, if it had a chance of registering votes, for, or against. The unanimous protest, sent to the Secretary of State, against the way in which the President did not allow the proposition on the agenda being put to the Council, was signed by forty-four members of the Council, who would, in the natural course, have solidly voted for it. Even though the right to secede from the Federation might be denied, it would not be open for the Secretary of State to ask the Joint Committee to make recommendations for, or against, the separation of Burma in the absence of any clear expression of opinion from the Burma Council.

* * *

The only faint rift in the lute is that, when the Committee reassemble, after the recess, "an opportunity will be afforded to the Indian delegates to express their views, and that the Committee will agree to invite to London a suitable number of representative Burmans for consultation." What a lump does the word "Representative", nominated by the Government, send to the throat! The performance of the Government-Nominated delegates to discuss the Reserve Bank and the Railway Board questions, not to speak of the Round Table Conference, leaves no doubt as to the upshot of the consultation. Why beat about the bush? The separation of Burma is a settled fact, unwritten though it may be, at present. The all-wise *Times* has started the ball, rolling, of manufactured opinion, when it says that "no member of the Federation which is planned for India can expect the British or Indian Government to recognise Burma's right to secession; if Burma be granted

this right, why not Bengal?" Because Bengal is an integral part of India; whereas, Burma is not, with a "homogeneous people, country, culture and future of her own." The *Daily Telegraph* goes one better, when it says that "to admit Burma to the Federation would be an act of political insanity. Indians would be the first to resent it." Anyhow, the *Times of India* is able to say that "so far as Indians are concerned, they have made their position clear from the outset. They have no desire to act contrary to Burma's wishes in any respect, but they have no need to know, before they come to decisions on certain aspects of the federal plan, whether Burma elects to remain a part of India or whether she prefers to stand out. Their other wish is simply to advise Burma not to make a decision of which she will later repent and, if she votes for a change, to caution her to see that the change is for her advancement." On the other side, Burman leaders have, lately, given up their insistence on the right to secede from the Federation. For, in reply to an express enquiry from the members of the Indian delegation to the Round Table Conference, they (Burmans) stated that they were ready to enter the Federation, unconditionally.

* * *

Now that both Indians and Burmans have expressed their views unequivocally, it is needless to comment upon the possible solicitude of the Joint Committee for consultation with "Indian Delegates" and "Representative Burmans". The scheme is for Burma, if separated from India. The Federation is planned for India. Throughout the sorry history of this hapless land during the British period, any separist tendency, be it racial, communal, sectarian, social, economic or political, is jumped at for suitable exploitation without the least compunction. The Government always treated themselves as nearer, and dearer, to the Burmans than the Indians. In the Scheme of Reforms for Burma, there is, for instance, the stipulation that the (Burman) legislature will have no power to make laws subjecting any British subject domiciled in the United Kingdom (including Companies and partnerships) to any disability or discrimination. But what of those British subjects, domiciled in India (including Companies and partnerships?) The scheme provides that "it will be necessary to consider whether the principles underlying this proposal are to be adopted as between Burma and India. The importance to Burma of immigration problem might also render it necessary to make special provision in this respect." Sure, some manner of solicitude for India will be demonstrated by step-motherly Britain; but certainly not to the extent of safeguarding against "any disability or discrimination", on a par with any British subject, domiciled in the United Kingdom. Nor will there be a reciprocal clause introduced in the British Statute, to safeguard the interests of the Burmans, as they have none now.

* * *

Should any Burman mistake the shadow for the substance, there is the verdict of *Times of India* on the scheme, to disillusion him; "what His Majesty's Government have offered her (Burma) as an alternative to her continuing as part of India is certainly not responsible government." Judgment Final shall be reserved till the full text of the scheme is available for publication. For the gratification of some, whose faith in British generosity is ever abiding, a gist of the scheme is, however, given here for perusal. The executive authority will vest in the Governor who will also be the Commander-in-Chief, and who will himself direct and control the administration of defence, external affairs, ecclesiastical affairs, monetary policy, currency and coinage and also the affairs of scheduled areas. The Governor, in the administration of the reserved departments will be assisted by the Councillors not exceeding three, of whom one may be the Fiancial Adviser. The legislature will consist, of two Houses, a House of Representatives, consisting of 132 members, representing general and special constituencies, and a Senate consisting of 36 members of whom 18 will be elected by the House of Representatives and 18 non-official nominated by the Governor, at his discretion. A Public Service Commission will be appointed by the Governor and the safeguards for the Public Services will be on the lines of those given in the White Paper. The Secretary of State will also continue to recruit Europeans to them in the same proportion as at present, pending a statutory enquiry. Appeals lying previously to the Governor-General will in future lie direct to the Secretary of State. He will be empowered to appoint two persons, for the purpose of advising him. Distribution, between two countries, of the assets and liabilities would also be required. It will not be competent for the Burma Legislature to make laws affecting the Naval Discipline Act, the Army Act, the Air Force Act or any similar laws enacted by a competent authority in India. As regards Central Services, it would be a matter for arrangement between the Governments of India and Burma. The officials in Burma would be permitted to retain membership of the Family Pension Funds.

* * *

Let Burmans decide, and choose. For guidance, they cannot have more wholesome advice than that of the *Times of India*, which we wholeheartedly endorse. "While Indian delegates will do their best for Burma on the terms suggested by Burma at the last stage, we trust the delegates from Burma will stick to their position, refuse to allow themselves to be exploited by interested parties, and thus secure the lasting good of their country".

THE READING ROOM

Monetary Policy and the Depression: Oxford University Press, London: 7s. 6d.: 128 pages.

The volume under review fully justifies the expectations which a production of the Study Group of the Royal Institute of International Affairs naturally arouses in the minds of the reader. The output of economic theses in recent years has, undoubtedly, been beyond the capacity of the most voracious readers. It is particularly so on monetary questions, for not only have the theorists of acknowledged standing been found to revise their views and make significant modifications therein, but there has also arisen a new race of monetary faddists who have come to regard impracticability as the attribute of original thinking. They have, nevertheless, their use, inasmuch as they emphasise certain aspects of the function of money which the more respectable implicitly assume in their writings and thereby obscure from the common view. The book under review, however, is singular in its attempt, which has been unquestionably successful, perhaps, too, successful, to steer clear of all the variety of views that have held the field since monetary problems presented themselves in their peculiarly aggravated form in the summer of 1930. *Monetary Policy and the Depression* is one of the few books of which it may be said that the idea and the execution are alike excellent. We have, indeed, had far too much of particularist theories of the place of monetary policy in the development of the depression to its present form and the ways in which the international monetary standard can be reconstructed. If the World Economic Conference were miraculously to meet again to consider monetary questions in other than the partisan way which brought it to an untimely and unnatural end, it could derive but little practical help from the monetary theories as they have been formulated and propounded during the last three years. We do need an exposition of the relation of the monetary factor to the depression, in a manner that would show its originality only in a masterly synthesis of the conflicting viewpoints that have till now been urged. It is, perhaps difficult to realise that such a task can be performed only by a group of experts who, despite the fervour, with which they have held their own individualistic views, would recognise the value of the common endeavour signified by the work under review. The foreword written by the Chairman of the Council of the Royal Institute sets out the object of this exposition:

"First, to give the general reader an account of the nature of the problems with which any International Conference would have to concern itself; second, indicate the nature of the various possible solutions to these problems which the Conference would have before it. It should be clearly understood that the group were not, at this stage invited to recommend solutions. They were invited to set out divergent views side by side, to co-ordinate, bring into proportion, and make public the knowledge of the experts, and to show where and why the views of experts differ."

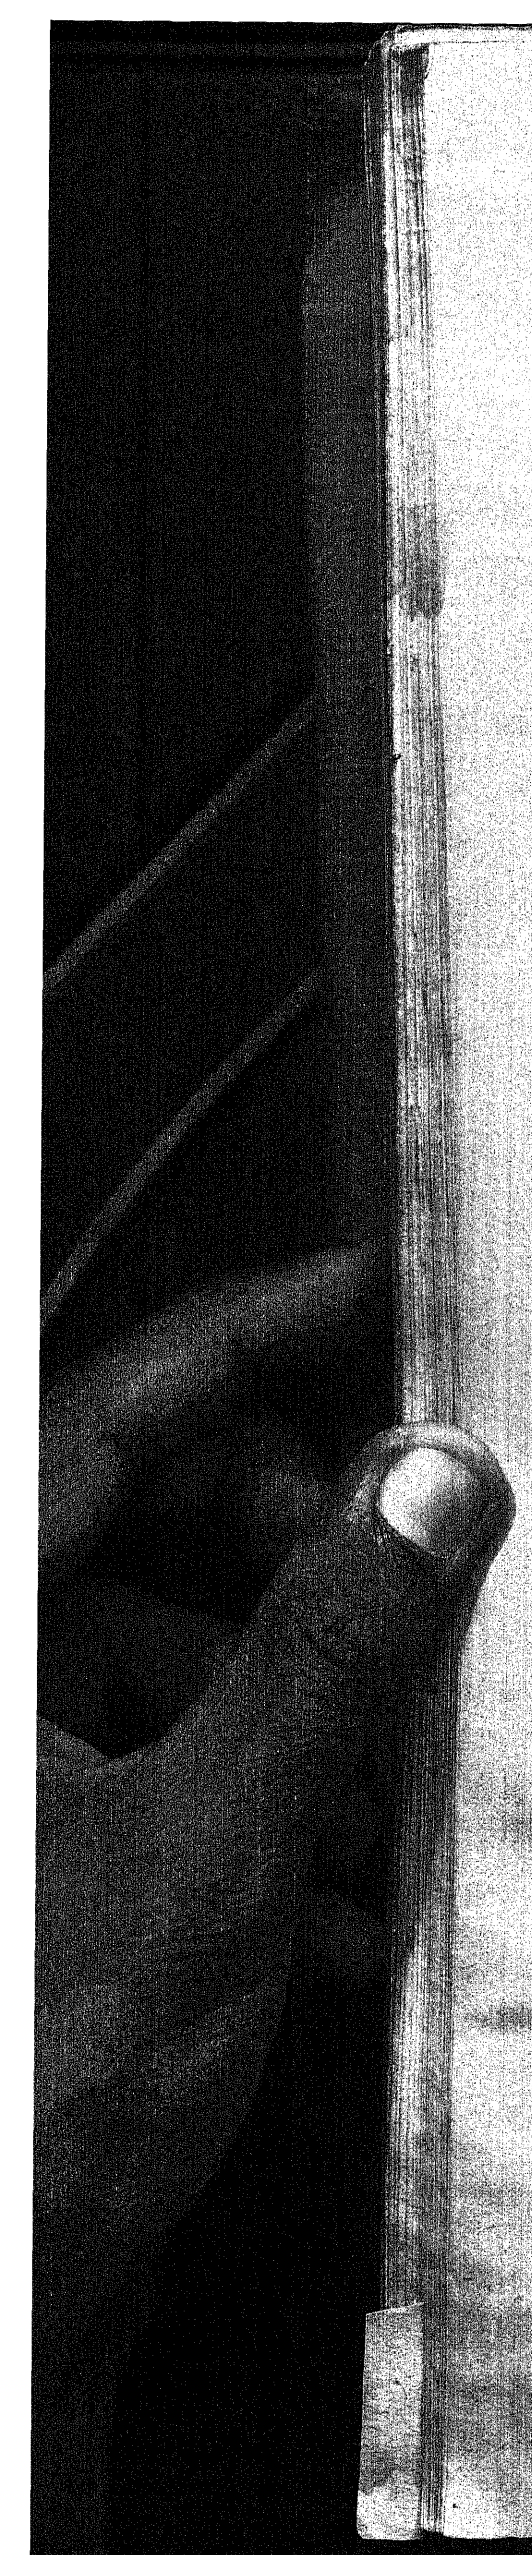
That the authors of this report have been true to the mission they were entrusted with is evident even on a perusal of the introductory chapter. To me what is most praise-worthy in the attitude of the authors is the recognition that "the present world economic situation might have been approached from many angles other than that of money and that money alone cannot be held responsible for the plight in which the world finds itself, although opinions differ as to whether it is a major cause of the crisis or merely an incidental factor which helped to intensify the depression once it had begun." Equally praiseworthy is the appreciation of the fact that the place of the monetary factor amongst the cases of the depression need not determine the value of a study of the monetary problem itself in the present juncture. For even if it be supposed that the monetary machine is guiltless of all sins of commission and that it could have done little to prevent the landslide in its later stages, it does not necessarily follow that its reconstruction is not indispensable for an adequate plan of recovery. If this is recognised and if it is also remembered that the most serious misconceptions of a partisan nature have found in monetary questions a most fertile field to thrive in, then it is indispensable that there is the most urgent public need for clarifying this very controversial issue. It is controversial because, while there is general agreement on the injurious effects of tariffs, war debts and reparations on world trade and the desirability of disarmament, in regard to monetary question there is no such agreement. The Study Group has taken care to utter the warning "that it must not be assumed that monetary action, however widely interpreted, is alone responsible for the present collpase or alone has the power to bring about revival." For money is not the sole source of our mishaps, even if one could agree with those who hold that monetary action could have done a great deal to prevent the crisis reaching its present proportions. The plan of the work is best stated in the words of its authors:

"The subject is approached through a survey of various forces at work in the post-War world which paved the way for, or influenced, the character of the depression and crisis, This is followed by an analysis of the interrelations between falling prices and decreasing turnover on the one hand and productive enterprise on the other. This leads to a definition of the issue. Next various proposals are examined, first from the point of view of general theory and then from that of public policy. Finally, the whole subject is examined in its implications from the international point of view."

It is only fair to state that such a non-partisan character has not tended to make the book a colourless chronicle of events or a mere recapitulation of well-known theories. The publications of the League of Nations tend to degenerate into a mere assembly of facts, for their authors have not only to be afraid of favouring any one academic theory, but also of implied condemnation of the policy of any one of the Powers. The volume under review is rather to be classed with the best blue books published in Great Britain. In analysing the pre-crash position of the principal currencies, the disapproval of the measures adopted by France in undervaluing the franc, though implicit, is nevertheless real. In the more theoretical discussions regarding savings and investment there is a veiled hit at Mr. Keynes for overlooking the fact that investment is not necessarily equivalent to capital development. The rival theories about the relation of the monetary factor to the depression are stated without any bias, though the statement of Professor Ohlin's views, which are a sound *via media,* affords a rallying point for the members who, if they were called upon to offer their own individual views would, swing violently to one extreme or the other.

After all their able survey of the problem and the suggested remedies one feels a sense of frustration to find that the authors have gagged themselves as regards their final verdict. Only on the question of inflation do they express themselves against its more extreme forms. They concede that cheap money is an essential of recovery and are confident that the conversion of the War Loan must initiate a period of low interest rates. But the sense of frustration persists none the less and would be more poignant but for the promise of a second report.

"JNAN."



WONDERLAND FOR WILDERNESS.

GAMBLE IN AUSTRALIAN DESERT

To essay the peopling, with ten million persons, of a wilderness,—523,620 Sq. miles in extent and about ten times the area of England and Wales, but now holding only 4,193 persons, and, that in a continent with about a population of 6½ millions only—is to out-do Alladin. The Northern Territory, comprising of Central and North Australia, is soon to be crowded with white settlers. In the Overseas Section last week, it was stated that "the stampede of Japan in Manchuria, her penetration beyond the Great Wall of China, so soon after the high-handed annexation of chosen ; and the possible entry into inner Mongolia, have frightened the Pacific countries, even as Nazi Germany has alarmed the rest of Continental Europe. No wonder, therefore, that the Australian Government should regard the development of the Northern Territory as an imperative responsibility." But, an Australian Government Commission, which recently inspected North Australia, reported that "it needs to be stressed that the North should be settled and developed if the opportunity is not to be allowed to remain for some other nation to establish itself in Australia."

Company Government.

The recommendation was approved, when, on July 14, the Commonwealth Premier announced that the Cabinet had agreed, in principle to the undertaking. The Government are prepared to grant charters to two British Companies with British Capital, undertaking to employ only white labour. If, and when, necessity arose, similar charters would be granted to more companies. The Government would pass Bills, exempting the settlers from land-tax and income-tax, and from tariff duties to a very large extent. Grant of leases would be for a hundered years. Firms would receive administrative powers for policing and social services, while the Commonwealth Government would retain control of law courts, customs and native administration. In this huge enterprise, Governments of Great Britain, Australian Commonwealth, Western Australia, South Australia and Queensland have agreed to co-operate. The development scheme involves a capital expenditure of £200,000,000 for the purpose of developing towns, railways, mines, coastal harbours and factories. Provisional plans include the construction of a £15,000,000 railway, involving the employment of 10,000 workers. All these services are to cater for cattle ranches, forming the centre of the scheme and hoping to outstrip even the Argentine in cattle enterprise. On the success of this development, does the growth of agricultural farms and plantations depend, if conditions favour it, later. As if anticipating the Government scheme, Bovril Ltd. already have 13,000 Sq. miles of leased land in North-Western Australia in, and around, Wyndham area, whose cession by Western Australia is expected to be settled. British financiers are, all out, for coaxing the soil to yield wealth, to make the grass grow, to butcher the cattle to breed beef, and to rear sheep to shear wool, to mine gold, tin and precious stones, and to attract and solicit tourists. They will strike rocks with the rod of money to jut out waterspouts.

Scarcity of Rain.

The financiers have a long purse to serve the purpose of Alladin's lamp. But, on the land of prospective transformation, rain had not fallen for several years, and its younger children had never seen rain. Clouds pass over the blue skies, but fail to burst into rain. When they do, it never rains but pours in a torrent on thousands of square miles of arid country of red sand, rocky plains, barren flat-tapped hills except for desert *spinifex* and *mulga*. But, soon after the rains, a garden of wild flowers and grass, high enough to hide a man, shroud the sand. To quote a visitor, "rain there means gold ; rain is the god of the Centralians." In 1927, during a drought, men at the few stations were supplied with rations, rifles and ammunitions to shoot horses at 4 sh. a head, in order to conserve the all-too-scanty, feed for the cattle. To trek the horses and rail them for 1,000 miles to Adelaide would fetch only £1½ per head at auction against a £2 cost of transport. A report says that, at a waterhole, a hundred cattle—dead from starvation—have been found polluting a small spring with their snouts in the water.

Hottest Part of the World.

Though the tropic of capricorn passes through the southern half of the Northern Territory, temperature gambols, off and on, in the region of 123 degrees in the shade. From Alice Springs on the tropic of capricorn to Oodnadatta—a considerable distance to the south of the tropic,—the temperature is unspeakably terrible. At Charlotte Waters, about midway between Oodnadatta and the tropic, the temperature is 100 degrees. As we proceed north to Darwin, life at the port is one long, humid bath of perspiration. Conditions at these places are a welcome change to those at Marble Bar with 123 degrees in the shade. So hot is it there that settlers' houses hold their counterpart underground where the family retires, when too hot. But, in the winter, the day temperature for months is that of an Italian summer. But the nights are so cold that water-bags freeze.

Scarcity of Water.

The Key problem of the Northern wilds is the supply of water. The sky is treacherous, with dogged persistence. Water is the key to incalculable wealth. Experts declare that millions sterling can pull up water from the sub-soil. Along the route, south to north, there are luxuriant oases, round the artesian bores. Wide areas periennially grow water-bearing fodder which draws moisture from the sand. Cattle grow fat there. But, before they reach the southern markets, they become lean. Underneath the red desert sands is an artesian area. The £200,000,000 plan is a water-finder, first and foremost. Bores will be sunk in the sand or rock until water gushes out, or near, to the surface. Artesian wells are many in Centralia. But, they are too few to turn the desert into a garden. A great many more wells are needed before water can be tapped, adequate enough to irrigate the country for development.

Difficulties of Transport.

The next baffling problem of the Northern development is transport. From Adelaide, a railway line stretches for about 1000 miles to Alice Springs. From there to Daly waters in the north, one has to trek on the sands, dodging the rocks. Sand-Storms bury the railway line sometimes. The sand has to be shovelled away before the North-South Express can trundle on. From Daly waters to Darwin, a railway line runs again. The gap between Alice Springs and

Daly waters has to be linked, as a first step, in the development of the country. This virgin tract is surfeit with droves of cattle, goats, and horses too. Mails reach station families four times a year, normally. But, this facility is halved at times. Underground, gold, silver, precious stones, tin and mica abound. The mica-field is reputed to be bigger than any other known in the world. Not an ounce of any of these minerals is worth tapping, unless, and until, the main railway line is completed, and feeder lines constructed. But, water must be found anywhere and everywhere, in this sub-continent, if ventures of any sort should succeed. It is always not sand to negotiate with. Rocky plains confront the adventurers. They have to find water. This £200,000,000 gamble in a desert intrigues even the most unconcerned wayfarer, to watch the experiment with interest.

Home of Primitive Man.

These vast wilds hold, in their bosom, an island, "the Interior," the ancient home of the primitive man. Pushed inward from the shores on all sides by white settlers, the aboriginal Blacks have rediscovered their ancestral home of weirdly-carved and painted caves. The source of their fire is to rub sticks together. They perform war dances, painting themselves with white and red mud. But, their folklore, in its basic elements, vies with the myths and legends of the Greekstt. They still sport themselves, in all their nakedness and armed with spears, in killing the Kangaroo. What fate awaits them is at the sweet mercy of their white brethern and rulers. The Commonwealth Government have them in their charge, and would not surrender them to the tender mercies of the chartered companies. All the same, they would lose their privacy in the midst of smart-looking houses with sanitary arrangements, all too modern for their ancient notions. Nothing better could befall their lot than that a densely populated portion of "the interior" should be reserved to them, even as forests for the preservation of big game, until Time in its majestic measure wrought their evolution. An international body, like the League of Nations, without fear of sin or guilt of crime, may do well to show a measure of solicitude for their preservation and welfare.

Asiatic interests Overlooked.

The white development of the bleak territory, designed by God as the habitation of the Blacks, must in the nature of things prove a fruitful source of future trouble. After years of development and civilisation, Australia is blessed with a population of about 6½ millions only. The vast continent of Australia is thus suffering from under-population, not to speak of the roughly 500,000 Sq. miles of Northern Territory with the density, to-day, of .008 person to a sq. mile. The teeming millions of China and India badly need, however, an outlet for their over-population. The Northern Territory of Ausralia, if it is to be rapidly populated, can only be attractive to the Southern Asiatic immigrant. But the dog-in-the-manger policy of "white Australia" has shut him out. When the pet theories of the Nineteenth century have all crashed to pieces under the stress of trade depression, over-production and low price-level; when even the sanctity of National debts has been scrapped by common consent; when the wealthiest nation of yesterday has become the bankrupt of to-day without devastating wars or nation-wide famine or pestilence; and when the universal brotherhood of man is the sad desideratum of the world—it is a scandal that the "white Australia" policy should persist. It is a sad reflection on the intelligence of the civilised man that reason is as nothing against military might, and that one fetish, or another, of racial arrogance is to overrule the common heritage of man. If cherished principles in the economic sphere should have to go to the wall, why then should national pettiness be tolerated? The troubles, through which the world is passing to-day, are a lesson for the better conduct of Nations. The least that can be done for the general uplift of the human race is for the League of Nations to exercise its influence upon narrow-minded and short-sighted nations, and impart to them a broader and a more humanitarian outlook. The League of Nations should, therefore, take up the question of "white Australia" policy, convince the Australians of its crass folly and cause them to throw open the uninhabited territory to suitable foreigners, however divergent in race and culture. That way is the path to the future peace of the world. "What can money do? It can achieve everything, except the manufacture of humans. How long would be the time before the Australian Continent could be densely peopled? How much more fresh land will be available for the benefit of man, in the meantime? Unless the League exerts itself in rounding off the racial angularities of nations, wars and annexations must last for ever; empires must rise and fall; and boundaries shall be changing. When argument fails, the fetish of the standard of living is trotted out, as if the barrage of vast areas can ever guarantee that standard, which the "coloured" consumption of "white" products makes it possible. A gesture in time will, therefore, save "colour" rupture in the future. Let Australia develop her Northern Territory by all means. But, it would defeat its purpose of preventing foreign aggression, if it could not allow the rapid peopling of the developed area. In fact, the development of the territory, without guaranteeing dense population in it, would invite a foreign invasion under propitious conditions and favourable circumstances. Among kin races, there is no affinity because of divergent political allegiances; and among kin politicals, there is no love lost because of racial differences. When is the rot to stop? Let the League of Nations contemplate, and answer.

Current Deposit Accounts.—Interest is allowed on daily balances from Rs. 300 to Rs. 1,00,000 @ 1% per annum. Interest on balances in excess of Rs. 1,00,000 allowed by special arrangement. No credit will be given in accounts for interest amounting to less than Rs. 5 per half year.

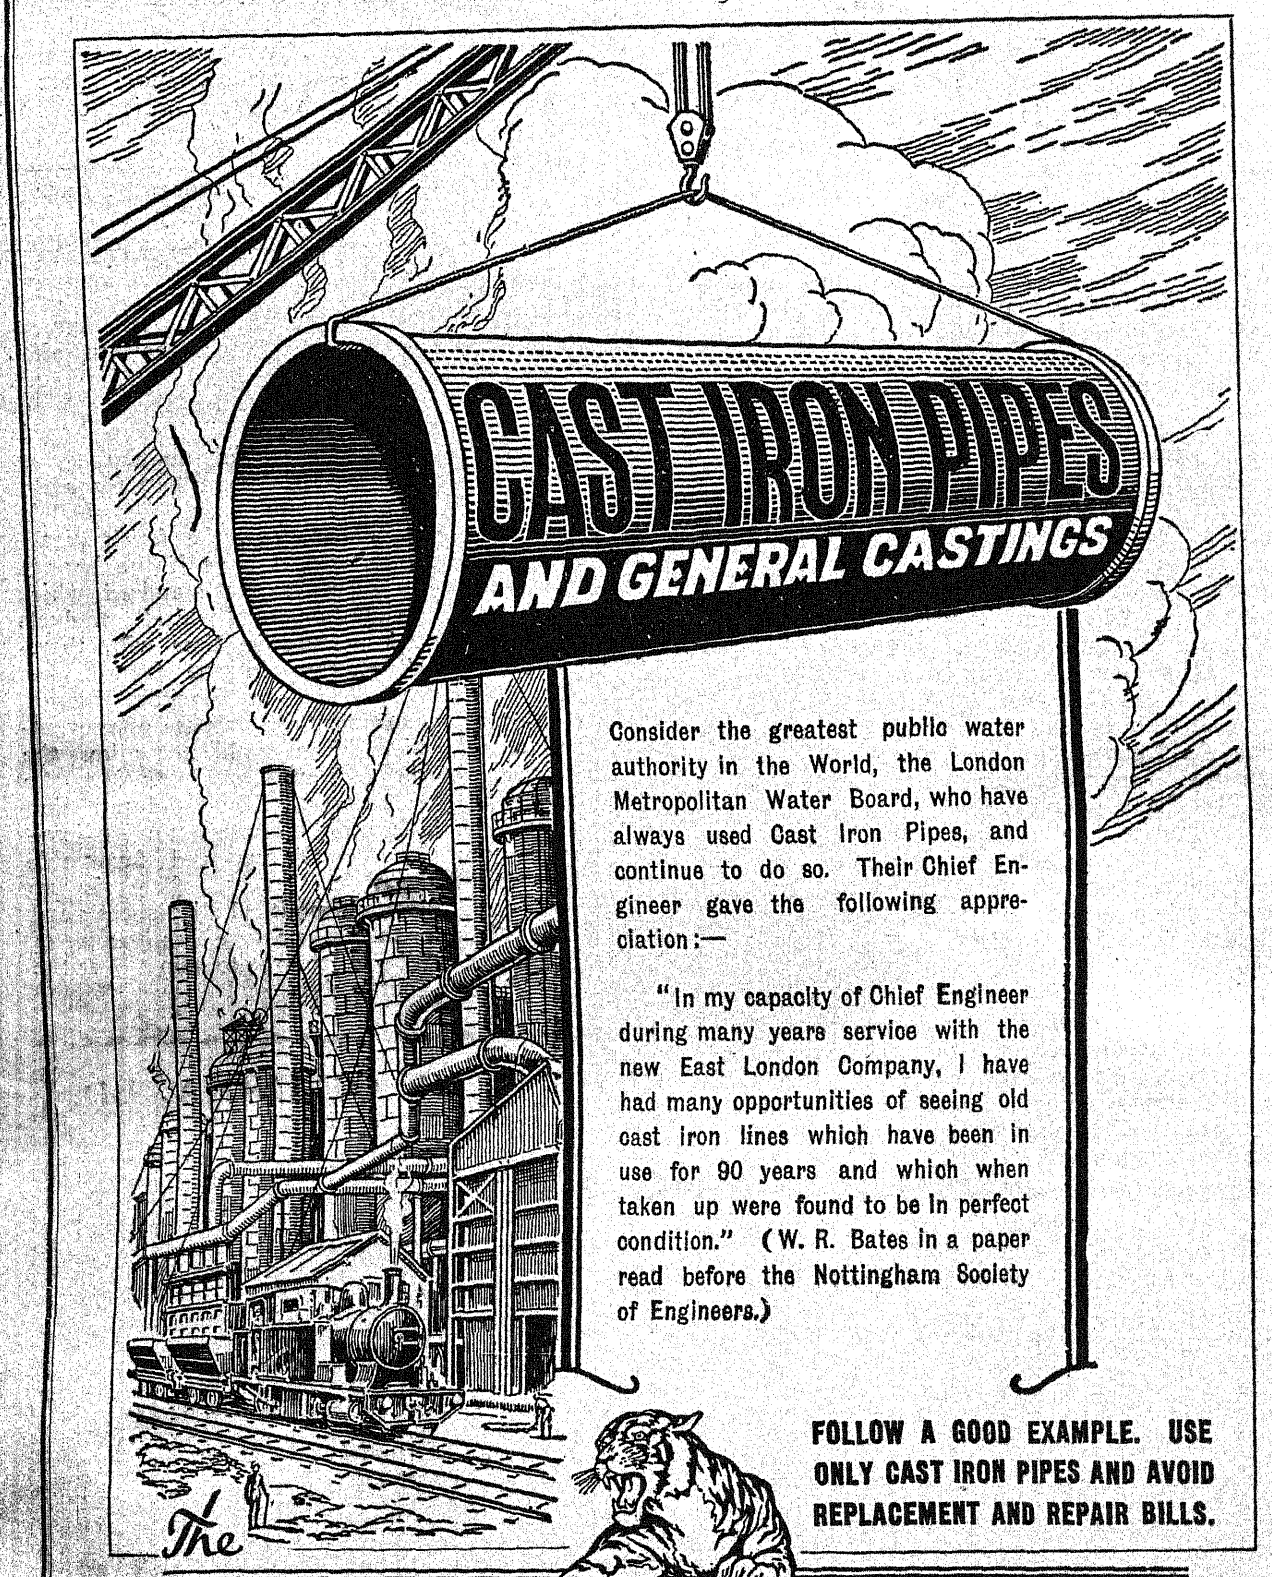
Fixed Deposits.—Deposits are received fixed for one year or for shorter periods at rates of interest which can be ascertained on application.

Savings Bank.—Accounts opened on favourable terms. Rules on application.

The Bank acts as Executor and Trustee under Wills and Settlements, and undertakes Trustee business generally.—Rules may be obtained on application.

General Banking Business transacted, rules for which can be obtained upon application.

A. G. GRAY, Manager.



Consider the greatest public water authority in the World, the London Metropolitan Water Board, who have always used Cast Iron Pipes, and continue to do so. Their Chief Engineer gave the following appreciation:—

"In my capacity of Chief Engineer during many years service with the new East London Company, I have had many opportunities of seeing old cast iron lines which have been in use for 90 years and which when taken up were found to be in perfect condition." (W. R. Bates in a paper read before the Nottingham Society of Engineers.)

Clive Street Gossip

A reader, whose communication is given at the end of this section, chaffs me that I neither gossip nor treat of Clive Street while writing for a feature yclept Clive Street Gossip. My simple answer is that, in this column, I am expected to cater to a hundred different tastes ; and that on the particular occasions when my correspondent was not altogether satisfied with the story, someone or other of the devoted enthusiasts of this feature must have felt vastly amused and profoundly instructed. He may be sure that he will have, in due course, his own turn when even his special predelictions will be satisfied. Anyway, the effect of this communication has been to make me search for themes of little or no moment for this week's gossip. And as I sit here, in my motley mood, intent on extracting aught of humour from everything that looks dull and drab and stale, I have come across a pamphlet describing the illustrious nature of the staff of a certain college in this city. Some of the renowned teachers are described as follows :

Mr. So and So, B.A. (Gold Medallist) ;

Mr. Such and Such, M.A. (Silver Medallist) ;

Mr. Blank, M.Com. (stood third in the Presidency) ;

Mr. Know-All, M.A. (Premchand Roychand Scholar) ;

and so on and so forth. It seems to me absurd that professors should thus seek to advertise themselves before the students by appellations which look crude and stupidly vain.

* * *

Here is another instance : The Editor of a paper describes himself as Doctor So and So, M.R.A.S. (Lond.), and F.R. Econ. S. (Lond.). If he is a Doctor in letters or Philosophy or Law, he should certainly have put in the needed suffix, especially as he has not omitted tinsel appellations like M.R.A.S. He is, therefore, not a Doctor in this sense. Nor, for the same reason, could he be a Doctor in the sense that he is an M.D. In other words, just as a famous circus owner, Ramamurthy, used to style himself as Professor Ramamurthy, our friend has elevated himself into a Doctor. As for the other titles which, we are carefully told, have something to do with London, everyone of his readers would know that no visit to London nor examination taking place in London is involved. The payment of an annual subscription after a proper proposal ensures these grandiloquent titles. But they mean nothing more than this, that the owners thereof have been regularly paying their subscriptions—and not very big subscriptions at that.

* * *

This reminds me of a friend who used to describe himself as an M.A., and M.R.A.S. I wanted to cure him of this trifling vanity. One day, I asked him for the name of his wife. "Kiron Debi," he replied. I suggested that he should add the suffix H.O.K.D. What does it mean?—he asked. I replied : "Husband Of Kiron Debi. It is a far more precious title than M.R.A.S. The latter only proves your capacity to pay a subscription. On the other hand, the title H.O.K.D. proves your ability to own a wife, maintain a wife and retain a wife. This is a title which bespeaks your physical ability and financial resources. Give up M.R.A.S., and take on H.O.K.D."

The truly eminent men fight shy of decorations. It is only the upstarts that seek embellishment by imitation—decorations. But it behoves professors and journalists to set a better example.

* * *

In my last week's comment on the developments in America, I said that she was right in giving her immediate and prime attention to the reform of her currency such that the purchasing power of the domestic population would be raised. I concluded with the following words :

> "So far as India is concerned, the application of this plan would be simple enough if only we had a free hand. I do not see why, when England could have depreciated her currency by 25 per cent., New Zealand by another 10 per cent. and Australia by a further extra 15 per cent. India alone should be asked to accept tamely whatever others say is good enough for her. Why should not India be allowed to decide that the ratio is a question which is strictly subordinate to the internal purchasing power of the rupee? An increase in prices in India, as in America, would have far wider effects than a like happening in any single country in the world. Every country is anxious to put its house in order. It is only American that has energetically set herself about the task. Great Britain wil have to do the same but she has a much harder task. India must also do likewise but, comparatively speaking, she should not find it difficult. India's sufferings to-day are unquestionably accentuated by the devastating effects of an over-valued currency unit. To-day, America has the timely good senst to see the error of her ways and is taking steps to save her population from further misery and ruin. And yet a section of the complacent press of the world has the effrontery to call it an experiment. Well may America sal that he laughs best who laughs last. The scoffers of to-day will not be the ones who will laugh to-morrow."

A striking confirmation of the view advanced by me is forthcoming in the columns of the *New Statesman and Nation*, which, in a recent issue, observes :

> "This is in effect what the American delegation said in the memorandum which it put forward last week, with President Roosevelt's full authority. It appealed to the European countries to follow the double programme of expanding bank credit and providing, by means of public loan expenditure, an adequate outlet for its issue into consumers' purchasing power. Unless European countries are ready to adopt this double programme, their talk of expanding bank credit and raising prices is the merest pretence, when it is not a direct invitation to further disaster. "NEW CHRYSLERS—AND FINER THAN EVER"

W. P. Chrysler

For those who know fine motor cars, the new Chryslers mean a distinct advancement in mechanical features as well as a combination of beauty and stamina.

All Chryslers have advanced beauty and that type of performance which comes from fast, powerful and flexible power plants. From the Chrysler Six and the Chrysler Royal Eight through the Chrysler Imperial Eight and the Chrysler Custom Imperial, you will find one standard of excellence—the highest. You should expect no less in your motor car than that which is commonplace in a Chrysler.

money without more goods (or even with less goods, as the French and Mr. Chamberlain seem to desire) will lead not to an expansion of employment or consumers' purchasing power, but at most only to an unreal and short-lived speculation boom on the stock and produce exchanges, to be followed by a fresh collapse as soon as it is realised that there is no real increase in consumers' demand behind it. No policy is worth a moment's consideration unless it puts first and foremost the expansion of the incomes in the hands of the general body of consumers; and it is because the Americans seem to have come nearer than anyone else to understanding this that we regard them as having made, so far, the most hopeful contribution towards the cause of real world recovery."

Who, then, were the non-co-operators at the World Economic Conference? Was America to blame for the fiasco? If President Roosevelt is guilty of non-co-operation, he has a perfectly plain case to put forward. It was impossible for Mr. Roosevelt to enter into any currency treaty with the leading European countries, mainly because he is prepared to inflate, and to take the steps which are necessary to make inflation effective in raising the volume of production and employment as well as the level of prices, whereas the leading countries of Europe have shown no sign at all of willingness to co-operate in carrying through any such policy. The real question is: Is Europe prepared to co-operate with President Roosevelt in a real effort to raise world prices, and, at the same time, increase the volume of production and employment? If the answer is "no," it is Mr. Roosevelt's critics who are non-co-operators!

"Sac" writes:

Somebody once remarked that the Indian Civil Service was neither Indian nor Civil nor a Service. And I regret to notice that, of recent months, Clive Street Gossip has had nothing to do with Clive Street nor has it been, in any sense of the word, Gossip.. In my usual unselfish way—readers of *Indian Finance* will be surprised to learn that I do not get paid a pice for my most erudite contributions, though I do receive plenty of promises—I propose to remedy this defect, at least for this week. Here, then, is a brief *resume* of the latest gossip from our local Wall Street.

There have been numerous complaints about the paucity of public clocks, with the result that, owing to everyone's watch being in pawn in these hard days, it is next to impossible to tell the time. At the last meeting of the Bengal Chamber of Commerce, a proposal was put forward that a sum of money should be allotted for the purpose of remedying this defect. Considerable discussion ensued and it looked as though the proposal would be carried, when, at the last moment, a forceful and soul-stirring speech against the motion was made by a certain Burra Saheb. "What", he enquired, "is the good of our wasting valuable money in this manner? One can tell the time at one's house, for we all still have clocks. If one leaves at about ten minutes to eleven and pulls up at the Bristol Hotel, one will know when the hour has struck by virtue of the opening of the doors of that house of refreshment. After a bottle of beer or two or three, one can look at the clock, for they have one there ; and, finding that it is now noon, one knows that it is time to go to office. The office also owns a timepiece, so that it is a simple matter to ascertain when thirty minutes have expired, making it time to go along to Peliti's for lunch, preceded by an appetiser or two or three. Here there is another clock so that it is the easiest matter in the world to tell when it is three o'cclock, necessitating one's return to office to sign the *dak*. An hour's sleep—one can soon train oneself to snooze for exactly sixty minutes—half an hour of the said signing ,and it is time to go home, calling in at the Park, on the way, for a whisky and soda".

It is said, though I cannot vouch for the accuracy of the statement, that the cheers which greeted the conclusion of this speech could be heard on the other side of the Hooghly.

I have it on the authority of Sir Osborne Smith himself that there is no truth whatsoever in the rumour that the Imperial Bank intends to observe a *hartal* in order to show their dissatisfaction with that portion of the Report of the Reserve Bank Committee which rules out the practicability of converting the former into a Reserve Bank.

"All that we are doing," said Sir Osborne, "is to serve a pleader's letter on the Controller of the Currency, intimating that we shall allow him no further Ways and Means Advances. We are, it is true, raising our rate of interest for loans against Government Paper to twelve per cent., but that small gesture, we feel, we owe to ourselves, in order to show our dissatisfaction."

It is often said that, at the present day, it is a case of everyman for himself and the devil take the hindmost, in all matters of money. It is, therefore, refreshing to be able to record an instance of touching self-denial in this connection that has recently come to my notice. At a mass meeting of the shareholders of over five hundred companies, held during the week, it was unanimously resolved that, owing to the very difficult period through which Managing Agents are now passing, their commission should be doubled and that shareholders should voluntarily forego all dividends until such time as the Managing Agents had received, by way of commission, at least twice the amount of each company's paid up capital. So hard is the present lot of Managing Agents, it transpired from the remarks of one shareholder, that he knew of an instance where the head of one Managing Agency had not been able to go to England for eighteen months ; had to sell his Rolls—Royce and sneak about in a Sunbeam ; had been compelled to give up the membership of two out of the forty-eight clubs to which he had previously belonged ; and was even contemplating giving up his riverside house at Barrackpore and living entirely in his ten-roomed hut in Ballygunge.

I am happy to be able to deny the scandal, so assiduously spread in some quarters, that the Government of India are bankrupt and have applied to the High Court for the appointment of an Official Receiver. I have been at some pains to trace this *canard* to its source and I find that the new ten and five rupee notes are responsible. It was thought that owing to their smallness and the flimsiness of their texture, the Government could not even afford a decent size and a decent quality of paper. The facts are, as I have ascertained, that, during a search for the official file about Mr. Gandhi which had been mislaid, there was found in a large godown at Simla some fifty thousand maunds of used or partially used "Urgent," "Immediate" and "Early" slips with which the heaven-born delight to ornament their files when doing their strenuous day's labour of passing on the said files to someone else. It was, therefore, decided to employ these scraps of paper for the new currency notes. That's all for the moment. (*And quite enough too.—Ed. I.F.*).

August 8.

Japan's dirt-cheap goods a menace to costly British manufacture—Sir Lalubhai Samaldas unravels the secret of Japanese efficiency: Japan's hard-working business executives succeed where ease-loving Indian magnates fail: Labour in Japan much better recompensed than in India: Mr. Mody's invitation to Lancashire: Tariff Board report on textile industry: Bombay Governor deplores the plight of Agriculture in India.

In a recent instalment of Clive Street Gossip, *Eavesdropper* referred to the surprisingly low prices at which some of the Japanese manufactures in miscellaneous lines were being sold in India. He made special mention of Japanese toys, cycles and electric bulbs.

In connection with his remarks, the account, furnished in a recent issue of the *Times of India*, regarding Japan's latest incursions into the Indian markets, has a peculiar significance. A comparison in prices is furnished; and the following extract shows how Japanese products, though they are as a rule well finished, neatly packed and made to appeal to the eye, are offered at dirt cheap prices:

"A dozen cakes of household toilet soap of British manufacture cost Rs. 2-4; toilet soap of Japanese manufacture costs between eight and twelve annas per dozen cakes.

A dozen boxes (small) of British toilet powder is offered for sale at Rs. 6 —the Japanese article costs Rs. 1-2 per dozen boxes.

British or American tooth brushes cost Rs. 1 each—Japanese tooth brushes are yours for two annas each.

British feeding bottles can be had for Rs. 1 each—but Japanese feeding bottles can he had at Rs. 1-8 per dozen!

Then again, British hot water bottles cost Rs. 30 per dozen, Rs. 2-4 each—the same Japanese article costs only Rs. 6 per dozen, eight annas each."

But, it is in respect of electric bulbs that the appalling nature of the disparity in prices is revealed. Till recently, India was importing bulbs mainly from Britain, Holland, Germany and, to a small extent, America and France. Japan entered the market about two years ago; and during this period she has caused such a havoc in the market that most rivals have lost the lion's share of their custom. Japan's imports of bulbs have increased from about 20,000 bulbs monthly in 1931 to nearly 500,000 bulbs a month this year. That the Japanese article has forged ahead in this amazing fashion should be no matter for surprise when it is added that whereas British or Dutch or German lamps would cost Rs. 11-8 per dozen, lamps of Japanese manufacture, similar in size and shape to the British or Continental article, cost a bare Rs. 2-4 per dozen.

Everyone is naturally puzzled as to how Japan does this trick of downright under-selling in practically every market she has entered. One in the trade suggested that the explanation should be found in the use of inferior ingredients, superior selling organisation and employment of cheap and efficient labour. Another dealer suggested that the low price was due to the negligible low wages paid to Japanese workers and their long hours of work.

Sir Lalubhai Samaldas, who has just returned from a tour in the Far Eastern Empire, has endeavoured, in a press interview, to unravel the secret of Japanese competitive power. Sir Lalubhai would appear to be convinced that, from what he could gather from interviews with responsible officials, the Government of Japan did not subsidise their textile industry. Nor is there any ground to suppose that this theory of Government subsidy, widely prevalent in Bombay circles, is true of any other industry of Japan.

"We have a good deal to learn," said Sir Lalubhai, "from the manner and systems of our rivals and the superiority of their labouring classes. The mills in Japan are run on a highly efficient basis, each department directly under a technical director who personally supervises the work of his assistants and the labourers. These directors, as also the technical assistants, are all locally trained, as the practice of sending them to foreign countries has now been entirely given up."

The first point which comes out of Sir Lalubhai's discussion is that those in charge of the management of industrial concerns in Japan take a live and active interest in management. They take all possible measures to improve their technical equipment in such a way as to enable them to look after specified sections. The directors are not persons who are content to sit in their offices and exercise a cursory supervision. They are on the spot; they have specified duties to discharge, to which they give their whole attention. They have a higher sense of responsibility and a more complete equipment for discharging all that responsibility.

For directors of such calibre and efficiency, the salaries paid are, says Sir Lalubhai, very low as compared to what is paid in India.

There is a vernacular saying which emphasises that the best manure for the field is the master's feet. If Zemindars in India have got themselves, in recent times, into serious trouble, the main cause is "absentee landlordism". Similarly, managing agents, who have any number of concerns to look after and who look after these concerns only in the sense that they sit in their offices, for a few hours every day, in the cool breeze of an electric fan, are not unlike absentee landlords. What the mills in India require is more and more of the master's feet.

For all the arduous labours of our agents in their cool and luxurious offices, they are paid far more than the alert and hard-working directors in Japan. And, as everyone knows, apart from the legitimate and specified emoluments which are extravagant enough, mill agents in India have other perquisites of varying degrees of illegality.

If Sir Lalubhai's remarks are properly understood and correctly appreciated, it means that our mill agents will have to give up their notions of superficial management and extravagant remuneration.

If the men who control the concerns are themselves furnishing such an illustrious and impressive example, it is no wonder that the entire staff, from top to bottom including labour, have the highest standard of efficiency. The mills are kept clean and tidy; and the employees are equally clean and tidy in their clothes. Girls who preponderate over the male workers are paid from 1½ to 2 yens per day. Sir Lalubhai's description of labour conditions in Japan is interesting and instructive:

"At the age of about 15, girls, who are healthy and well developed, are recruited as apprentices in the mills for a period up to six months and are later taken on as regular workers when they are conversant with the work. The life of a girl in the mill is a period of disciplinary training for her own future, and besides mill work, the girls eagerly attend the mill schools during recess hours where, among the subjects taught, are arithmetic, designing, cooking, music, domestic economy, sewing and housekeeping. Thus, while the Japanese demand high quality of work from these operatives, they do not forget to educate them for a higher life after they leave the mills.

Lodging is provided free by the Mill-owners and half rates are paid for food by the girls. After paying incidental expenses, the balance of the money earned by the girls is looked upon by them as their marriage dowry."

It is generally alleged in India that the scale of wages in Japan is far too low. Two yens per day with lodging free and with half rates for food in the case of girls (and with many other amenities like suitable education thrown in) does not suggest that the labour in Japan is sweated more than is labour in India.

The fact is that the Japanese Mill-owners feel that they have a duty to perform by the workers under them. They have created conditions in which the labourers feel that what they are engaged in is not mere drudgery but a preparation for the higher life that awaits them.

Labourers in India are all sunk in debt to the Kabulis. The girl workers in Japan are able to save enough to be able to posses a handsome capital when they leave their work to get married.

A state of affairs, in which the workers are provided with clean and wholesome living conditions, full opportunity for just the education that would fit them for their own future and enough wages to yield a handsome surplus, is a thing to be copied by our Indian Mill-owners. Far from studying this aspect of the matter, our agents have been furiously propagandising that Japan sweats her labour, pays little, exacts much and maintains altogether uncivilised standards of labour conditions. This is far from the truth. It is the Mill-agents in India that have sweated labour, paid little, and cared a brass farthing whether the workmen are able to save anything at all, how they live, and what ill-health and mortality affects them owing to execrable housing and other conditions.

Few Mill-owners in India have deemed it a part of their responsibility to provide clean and suitable accommodation to their labourers.

Because labour is treated as a human factor in Japan, the workers, in their turn, endeavour, might and main, to do their best by their employers. What you give, you get back—neither more, nor less. If you treat labour well, labour will treat you well. As an example of the efficiency of Japanese labour, Sir Lalubhai refers to the number of looms that each girl looks after:

> "On an average, a girl operative can easily attend to seven to eight plain looms at a time, while in a mill in Nagoya, a girl looked after 30 automatic looms. On account of this, it is usual to find the mills of Japan far less crowded than our mills. This means that the Japanese operative is four times more efficient than the Indian operative, naturally resulting in a considerable saving in wages".

In the communication which Mr. Mody issued to the press after his visit to Lancashire and to which I made reference in my last week's letter, the Chairman of the Bombay Mill-owners' Association had extended an invitation to the British cotton mill interests to send a deputation to India with a view to facilitate better mutual understanding. I now understand that this invitation has been accepted.

The representatives of Lancashire are expected to be in India a few days earlier than those of Japan. To be frank, all this flirtation of Mr. Mody is evoking mixed feelings among the public in this city. That Lancashire will be vastly benefitted by any agreed plan as between itself and Bombay is admitted on all hands. The following comment of the *Manchester Guardian* in the Air Mail week is a clear admission of the vital importance of the Indian market to the British cotton industry:

> "The question which does suggest itself is whether all the energy, tact, resource, ond intelligence which will undoubtedly be needed to reach agreement with Japan—not to mention the real hard labour which will have to be put to induce Lancashire to present a united front—would not have been more usefully expended in seeking closer co-operation with Indian cotton interests. Quite apart from the fact that agreement with India would be more valuable to Lancashire, it should also be far easier to reach. Lancashire has something to offer India, but with Japan the conclusion of a satisfactory agreement would almost rank as one of the seven wonders of the world. But since we are apparently committed to negotiations with Japan there is one aspect of the question which should be borne in mind by all who have the welfare of Lancashire at heart. In view of the vital importance of the Indian market to the British cotton industry, there should be a full exchange of views and the closest co-operation with the Indian Government as a preliminary to the Anglo-Japanese talks."

It is significant that the above passage is extracted from an article under the characteristic heading "India First." Mr. Mody will have to be on the alert, all the time, lest, in the continued love-making in India, "India First" should be subtly transformed into "Bombay and Lancashire First."

The public will have to be equally on the guard against the materialising of any "unholy alliance." From the broader point of view of the masses, the crux of the matter is this: How far will Lancashire commit itself, in practical terms, to make up by its purchases of our cotton for the loss that will be sustained by the fulfilment of Japan's threat to boycott Indian cotton?

Sir Lalubhai averred that this threat was no mere idle threat. He added: "The boycott question is at present being discussed in mass protest meetings. Arrangements are being made by the Japanese for the substitution of other products in place of Indian cotton."

To treat Japan's ultimatum, any longer, as mere bluff would be the most criminal type of bluff. To rely on the vague promises of Lancashire would result in the disillusionment that awaits all fond hopes.

Ottawa saw heroic resolutions in this behalf. But has anything concrete resulted therefrom? The attitude of Mr. Mody's friends in Lancashire is still in the state of experiment, exhibition, promise and earnest hope. All these are only manifestations of indifference.

Does Lancashire mean business? Will Lancashire definitely undertake to buy a specified minimum quantity of Indian cotton per year? The representatives of British cotton industry, who will be here in the Autumn, will do well to come with definite and clear-cut answers to these questions. Mr. Mody would do well to elicit categorical replies before he enters on the further stages of negotiations.

In securing for the Indian textile industry protection as against British manufactures, Mody and Company found the support of the Indian public valuable.

But in securing protection for the British and Indian industries as against Japan, Mody and friends might feel like flouting Indian opinion, as they are sure to have the Government's support on their side on the present occasion.

The overtures and intrigues of the coming weeks should prove highly diverting and even bitterly controversial.

The report of the Tariff Board on the textile industry is expected to be made public in the third week of this month. There can be no doubt that the protective measures recommended would not fall short of those in force at present. At the same time, it is expected that the Report will contain some "plain-speaking" on the managing agency system.

If this anticipation proves true, it would mean that this will be the first Tariff Board report, which discusses the uses and abuses of the managing agency system in the industrial structure of India. It is quite likely that fairly clear hints are afforded as to the urgent and imperative reforms that should be carried out, if the textile industry is to be deemed worthy of all this protection from the State.

This might mean that in the impending enquiry on the steel industry, the managing agents will come in for a severe scrutiny of their worth or otherwise.

The Bombay Shareholders' Association deserve the lion's share of the credit for thus bringing this question to the forefront. But their real objective is to cause a revision of the Indian Companies Act in a way that the vagaries of the undesirable type of managing agents are reduced to a minimum. The Association have sueceeded in the first round. But for final victory, there is yet far more to be done.

Treat labour well—this, in brief, is the lesson which Sir Lalubhai would like his millowner friends

THE STATE-AIDED BANK OF TRAVANCORE, LTD.

Head Office:

Alleppey

Branches:

Trivandrum, Changanacherry, Cochin, Quilon, Kottayam, Kayenkulam & Ernakulam

(Under the patronage of the Government of H. H. The Maharaja of Travancore).

Chairman:

Mr. K. C. PANDALAI, B. Sc., (Econ.)

Fixed Deposits are now received at the following rates:—

6 Months	... 4 %	per annum
1 year	... 4½ %	,,
2 Years and more	5 %	,,

The interest is payable half-yearly. The Bank has made arrangements at Madras, Bombay, Calcutta and Bangalore for receiving and paying the Deposits AT PAR.

to learn to a genuine way. A more or less like suggestion was put forward by Sir Alan Anderson, President of the Association of British Chambers of Commerce, at a luncheon of the National Industrial Alliance.

Emphasising that the possibility of a solution of the problem raised by Japanese competition is by means of co-operation between employers and employed, Sir Alan said:

> "The problem is that in these days of trade crisis and disturbance, certain nations have suddenly acquired the power to compete on enormously lower terms than their neighbours.
>
> Between 1926 and 1930 the real wages of Japanese workers had risen by 50 per cent. Even so, the Japanese were selling in South Africa shoes at a shilling a pair and bicycles at 20 shillings each.
>
> Britain could either compete or decline the competition, but to refuse to compete would be false to the whole theory on which the basis of progress has been built.
>
> Our philosophy is best work is the cheapest in the long run, done by contented workers, properly housed and looked after . . . . . It is obvious the line of approach is co-operative thought."

The function organised by the Deccan Agricultural Association in honour of Sir Frederick and Lady Sykes was utilised by the Governor for emphasising the importance of agriculture in India's national economy. His Excellency could not understand why it was that so many people differentiated between agriculture and industry. "Agriculture is an industry—in India by far the greatest industry of all." Yet, all possible developments would seem to indicate that agriculture is being allowed to fall into decay. It is well to remember that a bold peasantry once destroyed can never be revived. His Excellency declared that "the development of a vigorous and prosperous peasantry is a strength to any country and should be the spear-point in the policy of every Government."

We have had quite a lot of pious sentiments expressed as regards the need for furthering the development of agriculture. On ceremonial occasions, the agriculturist comes in for elaborate solicitude; and his sad plight draws crocodile tears. Once the function is over, the speakers board their costly limousines and return to their life of gaiety. Rural India is again remembered when another such ceremonial function recurs.

What is needed is much more than oft-repeated platitudes. It is to be hoped that the Governor proposes earnest and serious measures when he said: "The time has arrived when we must take stock of the position and attempt to elaborate some wider-scheme, a realisation of the soundest principles and some kind of general doctrine upon which a presidency-wide campaign may be based."

The P. and O. English mail steamer "Comorin," which sailed from Bombay on Saturday, carried bar gold of the value of Rs. 75,74,803. Out of this consignment, Rs. 6,18,887 worth of gold was for London, option Marseilles, Rs. 7,83,444 for London, option Amsterdam, and Rs. 3,99,817 for London, option New York. This was the only steamer, which carried the precious metal during the week.

The total amount of gold exported from Bombay since Great Britain went off the gold standard now amounts to Rs. 1,47,41,75,153.

The amount of Indian cotton consumed in mills in India in June, according to the Indian Central Cotton Committee, was 187,499 bales compared with 182,835 bales in June, 1932. The amount of cotton consumed since September last was 1,966,184 compared with 1,934,017 bales during the corresponding period of the previous season.

Messrs. Tata Sons, Limited, Agents for the Tata Iron and Steel Company, Limited, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during the month of July, 1933, was:—

	Tons.
Pig Iron	74,700
Steel Ingots	70,700
Finished Steel	47,700

SOUTH INDIA

(From Our Correspondent.)

Madras, August 8.

In the field of industrial enterprise and activity, the Madras Presidency has lagged so far behind that doubts have come to be expressed if ever this Province could come anywhere near Bombay or Bengal in industrial pre-eminence. This backwardness is attributed to shyness of capital. It is also said that Madrassees are lacking in enterprise. But I think it may be said that time will prove that given the same facilities and opportunities which other provinces have enjoyed, Madras should be able to make rapid progress.

It would not be altogether correct to say that there is lack of capital or lack of enterprise in this province. The large number of cotton mills sponsored by Indians in Coimbatore shows that once the public are assured that there are good possibilities in any particular industry, there are enough enterprising persons to start new ventures and there is enough capital for the installation of such concerns.

While, in one sense, the industrial enterprises of Madras do not make as impressive a showing as those of the two other presidencies, the Madras concerns, have however, a unique record of substantial success and first-rate efficiency. The Buckingham and Carnatic Mills are models of their kind in the entire country. As a spinning mill proposition, the Madura Mill of Harveys is the biggest single unit in the country; its yarn sets the standard; its financial policy is unimpeachable; and its reserves are of the amplest description. Or take sugar companies. Parrys are not only the pioneers of sugar manufacture in India but their concern has marched from strength to strength, irrespective of all vicissitudes.

In other words, those who control industrial concerns in this province have shown more competence and efficiency. Their financial policy has been scientific. They have treated labour well. They have provided housing and other amenities in the most liberal fashion. And labourers of South India are the last word in efficiency, cleanliness and devotion to work.

If Madras has a slender record as regards industrial enterprise, it makes up for its slenderness by a high degree of achievement.

Seeing that such concerns as have been started in Madras have done well; and seeing that investors have patronised such concerns and been, in turn, vastly benefitted, there is every reason to feel that the charges of shy capital and lack of enterprise are not altogether justified. The real cause of the industrial backwardness of Madras is the lack of motive power, such as coal or oil resources within the Presidency. If Madras had remained mainly agricultural, it is due to the fact that it is so far remote from the coalfields of India.

Thanks to the progressive policy of the Madras Government, this supreme difficulty in the way of the industrialisation of the province is being removed; and if only South India takes the tide at its flood, it is bound to forge ahead in the next decade.

A network of hydro-electric schemes has been planned and is being carried out in instalments, the primary objective being to supply cheap power to industry. It is laudable that, as an incentive for industrial expansion, the Government propose to supply energy at a price only a shade higher than cost. The first of the schemes, the Pykara, has just been completed; and cheap power will be supplied from this scheme to the textile and cement companies of Coimbatore and the tea and coffee estates of the surrounding districts.

In the course of a speech which Rao Sahib G. Sundaram, Executive Engineer, Hydro-Electric Department, delivered last week-end, he gave interest-

ing information about the principal sites which have been investigated in more or less detail and found capable of economic development. The following are the sites arranged in order of their magnitude, the figures representing maximum output:

Pykara (Nilgiris Dt.) 100,000 H.P.; Kolab (Vizagapatam Dt.) 70,000 H.P.; Machkand (Vizagapatam Dt.) 70,000 H.P.; Periyar (Madura Dt.) 55,000 H.P.; Mettur (Salem-Coimbatore Dt.) 45,000 H.P.; Papanasam (Tinnevelly Dt.) 40,000 H.P.; Cholatipuzha (Malabar Dt.) 40,000 H.P.; Silent Valley (Tinnevelly-Nilgiri Dt.) 30,000 H.P.; Kumbar (Madura Dt.) 30,000 H.P.; Pinjikave (Madura Dt.) 20,000 H.P.; Thalipuzha (Malabar Dt.) 10,000 H.P.; Chettipet and Canal falls (Godavari Dt.) 1,000 H.P.; Total 521,000 H.P.

A total of more than half a million H.P. is, therefore, in sight.

The principal feature of these schemes is that they are spread over the province so that no one centre will be out of the reach of anyone or other of the projects; and that they are designed to give a stimulus not only to large-scale, but also to cottage, industries. In Bombay and Bengal industrial concerns have tended to be concentrated in a few selected centres. On the other hand, the general tendency in Madras has been for a kind of diffusion in this respect. This diffused plan would be greatly helped by the availability of electric power over large tracts of the country.

Mr. Sundaram gave a most lucid exposition of the revolution which will be caused in present-day industrial life by the mobdility of electric power. The main point of his argument is that raw products and labourers have now to be transported to the centres nearest cheap power. Hereafter it is the cheap power that will be transported with the result that there would be no dislocation of labourers from their home —lands nor needless carrying of raw products on payment of heavy freight charges. The following description of Mr. Sundaram, though set out at some great length, brings out the point in a most interesting manner:

"Hitherto large industrial areas were areas where power was cheap or in other words where fuel was cheap and abundant. They were therefore near coalfields or near ports. The raw products needed for the industry often came from the ends of the earth and men to run the industry had to leave their villages and congregate in such areas in large numbers. This process created the big urban settlements of the western world with their congested population and slum life. England furnishes classic examples of the centralisation of industry in areas of cheap power. The evils associated with life under such conditions and the almost insoluble nature of the social problems they have given rise to, make one wish for some means to avoid such centralisation.

Electricity offers the means to decentralise power, and so to decentralise industry. Electric power can be generated at the place where it is cheap and sent to any place where it is required for use with instant rapidity and ease. It will be unnecessary for men to leave their villages. Instead, power will go to them. There is no need to transport raw material to distant centres. They could be rendered into their final form even where they are grown as power could reach such places.

Indian life has been for ages essentially rural and the disruption of it in recent years by the tendency towards urbanisation, is widely deplored. Electricity now offers a chance to restore the countryside to its own by providing cheap power for cottage industries, giving fresh means of livelihood and increased fruits for labour.

It would also bring to the village the undoubted amenities of electric light, obtainable so far only in towns. The village will no longer be dull and stagnant and might conceivably regain its former place in the Indian scheme of life."

In the development of power schemes, activities to assist the agriculturists have been given the fullest attention; and the increase in the demand for raw material to meet the industrial expansion is bound to be met by the vast tracts of land opened up for irrigation by the Mettur Dam.

The development of Cochin and Vizagaptam Harbours should also go a long way to place the foreign trade of Madras on a par with Bombay and Calcutta.

If in regard to industry, we have been backward, there has been real overproduction in the manufacture of graduates. The Convocation of the University of Madras which was held this week has the same sad tale to tell. Out of 1,758 students who took their degrees this year, there were only 32 in engineering and 38 from the Agricultural College. It is the graduates in Arts or Law that predominate. From the point of view of the great potentialities in the industrial sphere of this province, it is of importance that there should be more emphasis on the commercial and industrial side of education. The Convocation address of Reverend Carty was most illuminating and thoughtful.

Certain far-reaching changes in regard to the management of some of the industrial ventures of South India are under contemplation. The Travancore Government afforded great help in regard to the floatation of a sugar conern by private enterprise. This factory is situated at Tukkalay; it has been working for over 10 years. But it has made no headway. Recently, however, certain satisfactory arrangements for management have been concluded with a Syndicate consisting of Mr. N. S. T. Chari and Mr. M. K. Srinivasan. The most bitter critic of Mr. Chari would not deny his all-round ability. And Mr. M. K. Srinivasan commands great repute as a successful businessman. This combination is satisfactory, the most happy feature being the balance between the two partners. If there is one man who can make the Tukkalay refinery a success after a decade of abortive attempts, it is Mr. Chari. I understand that work may be said to be "well-begun."

The Andhra Paper Mills are also to be handed over to the same Syndicate for management. The necessary resolutions in this connection have been passed unanimously by the shareholders.

In both these arrangements, the interests of the shareholders have been fully protected; at the same time, sufficient inducement has been offered to the new management to put forth their best. The shareholders are assured of a certain minimum before the Syndicate could appropriate any share of the profits. Over the specified minimum, the profits are to be divided in an agreed proportion between the Syndicate and the shareholders. In the reorganisation of companies which have passed through severe disaster, the plan thus settled may be considered as an ideal one.

There is also considerable talk that the cotton mills under the management of Messrs. T. Stanes & Co., of Coimbatore may be taken over by Messrs. A. & F. Harvey of Madura. Stanes had a high reputation as successful mill agents. But the depression in the textile industry has been so persistent and so acute that it has become necessary for them to seek the co-operation of a powerful and wealthy firm like Harveys.

The cotton growers of South India have been particularly hard-hit by the closing down of many of the mofussil purchasing offices of Japanese firms. A conference of the cotton-growers of this presidency was held last week, at which Mr. K. Koti Reddi presided and Mr. N. G. Ranga made a spirited speech. Mr. Ranga's fear is that the interests of the agriculturists were being sacrificed for the benefit of Bombay millowners.

The following resolutions were passed:

"This Conference of the representatives of cotton growers protests against the way in which their interests have been neglected by the Government of India and the Members of the Central Legislature when the anti-dumping measure was being discussed and requests the Government to ascertain the views of the cotton growers and give proper opportunities for them to represent their grievances before the Japanese delegation when it comes to India.

This Conference opines that the threatened Japanese boycott of Indian cotton is likely to have dire effects upon themselves, if and when that boycott is enforced and this Conference draws the attention of the Government to the fact that this threat has already resulted in a great fall in the price of cotton.

(Continued on page 365).

OLYMPUS

(From Our Correspondent).

Simla, August 8.

Simla sceptic as to real intentions of authorities regarding Reserve Bank and Railway Board: The former giving Bank of England power to control Indian financial affairs: Latter perpetuating existing vested interests: Reserve Bank to be established by legislation through Assembly: But what about the Statutory Railway Board?

The scheme for the establishment of the Statutory Railway Authority has been made available to the press this week. And while various details are set out in the memorandum, the main question remains unanswered. The main question is this: Will the Statutory Railway Authority be brought into being by virtue of legislation passed in the Indian legislative Assembly or by an Act of British Parliament?

* * *

In the course of the discussions through the various sessions of the Round Table Conference, certain proposals have had varying degrees of emphasis in varying stages. In the earlier stages, the Reserve Bank was put forward as the proper machinery for the safeguarding of the credit and financial policy of the new Government. By the end of the discussions, the Reserve Bank came to be the condition precedent to the conferment of Central Responsibility.

* * *

By the same token, the Statutory Railway Board was never discussed in detail or at any length in all the three conferences. The Federal Structure Committee of the Conference in 1930 and 1931 did consider this question but was content to make the recommendation that an expert investigation should be made and that such an Authority should be established if the expert enquiry warrants it. But the Statutory Railway Board is an essential condition of the White Paper.

* * *

In other words, the increased insistence on a Reserve Bank and the Statutory Railway Board in the ultimate stages of the constitutional enquiry may be said to represent the intensifying of the zeal for full and complete safeguards.

* * *

The Reserve Bank is to be the machinery whereby the Bank of England and the London interests are to continue to have full control over Indian financial destiny. The Statutory Railway Board is to be the machinery for the perpetuation of the existing vested interests that have grown round the administration of the railways in India.

* * *

So far as the Reserve Bank scheme is concerned, it is now definitely known that the legislation for this scheme will be brought in the Assembly at the earliest possible moment. Precise information as to the procedure in the case of the Statutory Railway Board is lacking.

* * *

The opening paragraph of the memorandum is, however, significant:

> "Subject to the control of policy by the Federal Government and legislature, a Railway Authority will be established and will be entrusted with the Administration of railways in India (as described in paragraph 4), and will execute its powers through the Executive constituted as described in paragraph 3."

If the Federal Government and legislature is to control the policy of the Railway Authority, does it not follow that the Authority should itself owe its being to an Act of the Indian legislature? And, why should the Government fight shy of bringing in tht necessary legislation in this behalf in the present Assembly? They can get through any legislation in this Assembly. However retrograde the proposals of the Government may be, they are sure of reaching the Statute book under the existing conditions. It is, therefore, not the fear of obstruction in the Assembly, that would stand in the way of the bill for the Statutory Railway Board being brought into the Indian Central Legislature.

* * *

It is quite likely that the authoritits are apprehensive that if the Railway Board is created by an Act of the Indian Legislature, a future legislature might well make drastic modifications on the plan now put through. What the British vested interests want is a safeguarding of their rights and privileges for all time and against all contingencies.

* * *

The Railway Authority is to consist of seven members. As to the composition, the committee is divided as to whether.

> "(*a*) three will be appointed by the Governor-General in his discretion and four by the Governor-General on the advice of the Federal Government or (*b*) all will be appointed by the Governor-General on the advice of the Federal Government. Those members of the Committee who are members of the Central Legislature with the exception of Mr. Anklesaria support the latter alternative. All the Hindu and muslim members of the Central Legislature on the committee agree that out of seven seats on the Railway Authority, two should be reserved for the Muslim community and one for the European community.
>
> Sir Phiroze Sethna, Mr. Anklesaria, Sir Manubhai Mehta, and the European members of the Committee, while they would welcome an Authority representative of all interests and all communities so far as is compatible with efficiency, do not consider that any special provision should be made in the statute for the establishment of a Railway Authority on a communal basis."

These members will correspond to the commissioners of the Port Trust. They are to hold office for five years but will be eligible for reappointment for a further term of the same length or for a shorter term. At the head of the Railway Executive, there will be a Chief Commissioner who must possess expert knowledge of railway working and will be appointed by the Railway Authority, subject to confirmation by the Governor General.

* * *

The Financial Commissioner will be appointed by the Governor General on the advice of the Federal Government. He must possess extensive financial experience, and have served for not less than ten years under the Crown or have shown outstanding capacity in the conduct of the financial affairs of commercial railway undertakings.

* * *

The Railway Authority, on the recommendation of the Chief Commissioner, may appoint additional Commissioners who must be chosen for their knowledge of railway working.

* * *

So far as the Legislature is concerned, their control is to be seriously curtailed as compared with the existing conditions. "Revenue estimates are to be submitted annually to the Federal Government which will in turn submit the same to the Federal Legislature, but these estimates will not be subject to the vote of the House. If the revenue estimates disclose the need for a contribution from the general revenues, a vote of the legislature will of course be required."

HILL-BIRD.

ESTABLISHMENT OF RAILWAY AUTHORITY.

TEXT OF PROPOSALS.

The text of the proposals for the future administration of Indian railways as approved by the London Conference is now available.

1. Subject to the control of policy by the Federal Government and the legislature a railway authority will be established and will be entrusted with the administration of railways in India (as described in para 4) and will exercise its powers through an executive constituted as described in para 3.

2. The railway authority will consist of seven members. The committee is divided on the question whether (*a*) three will be appointed by the Governor-General in his discretion and four by the Governor-General on the advice of the Federal Government or (*b*) all will be appointed by the Governor-General on the advice of the Federal Government. Those members of the committee who are members of the central legislature with the exception of Mr. Anklesaria support the latter alternative. All Hindu and Muslim members of the central legislature on the committee agree that out of seven seats on the railway authority two should be reserved for the Muslim community and one for the European community. Sir Phiroze Sethna, Mr. Anklesaria, Sir Manubhai Mehta and the European members of the commiittee, while they would welcome an authority representative of all interests and all communities so far as is compatible with efficiency, do not consider that any special provision should be made in the statute for the establishment of a railway authority on a communal basis. Seven members so appointed must be possessed of special knowledge of commerce, industry, agriculture or finance or have had extensive administrative experience. The president of the authority who shall have the right of access to the Governor-General will be appointed from the members by the Governor-General in his discretion. The Federal Minister responsible for Transport and Communications may at any time convene a special meeting of the railway authority for the purpose of discussing matters of policy or questions of public interest. At such meetings the Federal Minister will preside. The Federal Minister may by order require or authorize the railway authority to give effect to the decisions of the Federal Government and legislature on matters of policy and it shall be obligatory on the railway authority to give effect to such decisions. No Minister or member of the Federal Legislature or any other legislature in India will be eligible to hold office as a member of the authority till one year has elapsed since he surrendered his office or seat, nor will any person be appointed as a member of the authority who has been a servant of the Crown in India, a railway official in India or has personally held railway contracts or has been concerned in the management of companies holding such contracts within one year of his relinquishment of office or of the termination of the contract as the case may be. The Federal Minister responsible for Transport and Communications may, if he sees fit, attend the ordinary meetings of the authority or be represented thereat but in neither case will there be the right to vote. The members of the authority will hold office for five years but will be eligible for re-appointment for a further term of the same length or for a shorter term. (In case of first appointments three will be for three years only but these members will be eligible for re-appointment for a further term of three or five years). Any member of the authority may be removed from office by the Governor-General in his discretion if in his opinion after consultation with the Federal Government there is sufficient cause for such action. Members shall be appointed to the railway authority who are prepared to give their services to such extent as may be required for proper performance of their duties as laid down in the statute. Their emoluments shall be such as to secure suitable men who will be prepared to devote sufficient time for the proper discharge of their duties and responsibilities and will be fixed by the Governor-General in his discretion after consultation with the Federal Government, emoluments of members of the first railway authority being fixed in the statute.

3. At the head of the railway executive there will be a chief commissioner who must possess expert knowledge of railway working and will be appointed by the railway authority subject to confirmation of the Governor-General. A financial commissioner will be appointed by the Governor-General on the advice of the Federal Government. He must possess extensive financial experience and have served for not less than ten years under the Crown or have shown outstanding capacity in the conduct of railway undertakings. The railway authority on the recommendation of the Chief Commissioner may appoint Additional Commissioners who must be chosen for their knowledge of railway working. Except in matters relating to Finance the Chief Commissioner shall have the power to overrule his colleagues. The Chief Commissioner will carry out the duties from time to time delegated to him by the railway authority and may delegate such powers to his subordinate officers as may be approved by the railway authority.

4. The railway authority will be responsible for the proper maintenance and efficient operation of railways vested in the Crown for purposes of administration (including those worked by companies) all of which will remain vested in the Crown for the purposes of the Federal Government. The railway authority will also exercise control over other railways in British India at present exercised by or on behalf of Government. Provision will be made for safeguarding the existing rights of companies working under contracts with the Secretary of State in Council and it will be the duty of the railway authority to refer to the Secretary of State any matters in dispute with companies which under the terms of those contracts are subject to the decision of the Secretary of State in Council or which may be referred to arbitration. It will be obligatory on the railway authority and the Federal Government to give effect to the decision of the Secretary of State or award of an arbitrator.

5. In exercising control vested in it the railway authority will be guided by business principles, due regard being paid to the interests of agriculture, industry and the general public and to defence requirements. After meeting from receipts necessary working expenses (including provision for maintenance, renewals, depreciation, bonus and interest on provident funds, interest on capital and other fixed charges, payments to companies and Indian states under contracts or agreements) the surplus will be disposed of in such manner as may be determined from time to time by the Federal Government under a scheme of apportionment running for a period of not less than five years. In the event of a dispute as to the inadequacy or otherwise of allowance to be made in respect of renewals and depreciations, the Auditor-General shall be the deciding authority. Pending any new scheme of apportionment the disposal of any surplus will be governed by the arrangements in force at the time the authority is established.

6. The railway depreciation reserve and other funds should be utilised solely for railway purposes and will be treated as far as possible as the property of the railway authority. The investment of such funds and realization of such investments by the railway authority will be subject to such conditions as the Federal Government may prescribe. A committee might be convened in India to advise what these conditions should be.

7. Revenue estimates will be submitted annually to the Federal Government which will in turn submit them to the Federal Legislature, but these estimates will not be subject to vote. If revenue estimates disclose need for contribution from general revenues a vote of the legislature will of course be required. A programme of capital expenditure will be submitted to the Federal Government for approval by the Federal Legislature. The Federal Government may, however, empower the railway authority to incur capital expenditure subject to conditions to be prescribed.

THE TATA IRON & STEEL CO., LTD.

NOTICE

The Transfer Books of the Company will be closed from Monday, the 21st August to Monday, the 11th September, 1933, both days inclusive.

By Order of the Directors,
TATA SONS, LIMITED, AGENTS,
JEHANGIR R. D. TATA,
Director.

BOMBAY,
3rd August, 1933.

8. The railway authority will be empowered subject to the powers of the Governor-General in exercise of his special responsibilities and subject to safeguarding of the rights of all officers in the service at the time of the establishment of the railway authority to regulate by rules or by a general or special order the classification of posts in railway services of State-worked lines in British India and methods of recruitment, qualifications for appointment to the service, conditions of service, pay and allowances, provident fund benefits, gratuities, discipline and conduct of those services, to make such delegations as it thinks fit in regard to appointments and promotions to authorities subordinate to it and to create such new appointments in the State railway services in British India as it may deem necessary or to make to authorities subordinate to it such delegations as it thinks fit in regard to creation of new appointments. In its recruitment to railway services the railway authority shall be required to give effect to any instructions that may be laid down to secure representation of various communities in India. In regard to framing rules to regulate recruitment of superior railway services the Public Service Commission will be consulted. Any powers in regard to matters dealt with in this paragraph at present exercised by the Government of India over the company-managed railways shall in future be exercised by the railway authority.

9. The railway authority will at all times furnish the Federal Government with such information as that Government may desire and will publish the annual report and the annual accounts. The accounts of the State-owned lines in British India will be certified by or on behalf of the Auditor-General.

10. Should any question arise involving a conflict of interest between various authorities in British India responsible for railways, waterways and roads as a competitive means of transport, a commission will be appointed by the Governor-General to ascertain the view of all interests concerned and to report with recommendations to the Federal Government whose decision shall be final. The commission shall consist of one independent expert of the highest standing and experience in transport matters with whom will be associated at the discretion of the Governor-General two or more assessors.

11. The Federal Government shall lay down regulations for safety on all Indian railways and one of the departments of Federal Government other than that responsible for transport and communications shall be responsible for the enforcement of such regulations subject in case of Indian States to provisions of their respective instruments of accession. In regard to railways referred to in para. 4 the maxima and minima rates and fares shall be fixed by the railway authority subject to control of the Federal Government. Any individual or organisation having a complaint against the railway administration under the control of the railway authority in respect of any matter which may at present be referred by the Railway department to the Railway Rates Advisory Committee may have the matter referred under such conditions as the Federal Government may prescribe to the Advisory Committee to be appointed by the Federal Government. Before the Federal Government passes any order on the recommendation of the Advisory Committee it shall consult the railway authority.

12. Provisions should be made for reference at the request of either the railway authority or the administration of the railway owned by an Indian State of disputes in certain matters such as construction of new lines, routing and interchange of traffic and fixation of rates to arbitration by a tribunal consisting of one nominee of each party and a Chairman approved by both parties. The decision of the committee should be final and binding on both parties. Should parties be unable to agree on the nomination of a Chairman he shall be nominated by the Governor-General in his discretion. The arrangements should be such as not to prejudice the position of the Federal Court as an interpreter of the constitution and constitutional documents.

Sir Cecil Kisch who was appointed to the committee was not able to take part in its discussions owing to his pre-occupations in connection with the World Economic Conference. He has, therefore, not signed the proposals.

GREAT BRITAIN

END OF ECONOMIC CONFERENCE.

The curtain has dropped on the World Economic Conference which, out of the six weeks it has been in session, may be said to have been active only in the first two. The Conference has been ill-starred from the beginning, the malefic growing in ascendancy from the beginning of the second week. But the end, as *Indian Finance* aptly remarked nearly a month ago, has been unconscionably long. The reason for this is not far to seek. Though none of the nations was prepared to effect in its national policy the changes necessary for the success of the Conference, a speedy and unnatural end was more than they were prepared for. With the result that, perhaps, the only sincere part of the Conference activities was the last minute attempt to save it from an irreclaimable wreck. As is well-known, this only served to prolong the agony and not to restore life. The game of referring questions from Steering Committee to Bureau, and Bureau to Commission, and Commission to Sub-Commission, could not in the nature of things be played for long. Nor did the Conference gain much by Mr. Neville Chamberlain winning the spurs from M. Bonnet in the epic fight in the Monetary Sub-Commission for Immediate Measures. The others sat listlessly over their papers till it became evident that an adjournment of the Conference would save the face of its sponsors more efficiently than leaving the committees to mark time indefinitely.

Delegates' Views of Results.

If the unduly prolonged end of the Conference somewhat frayed the nerves of the public all over the world, it had also the effect of restoring good feeling amongst the various delegates which had been disturbed to an alarming degree by the unfortunate turns which the various negotiations took during the deliberations of the Conference. It may, therefore, be claimed on behalf of the Conference that it has at least not handicapped the task of a future session of the World Economic Conference by bringing into being serious antipathies among the principal delegations. Of the messages delivered at the last plenary session President Roosevelt's is the most notable for its spirit of reasoned conciliatoriness. President Roosevelt attempted to impress upon the Conference the soul of good in all the evil signified in the failure of the Conference to arrive at any definite understandings. He pointed out that as a result of the tortuous negotiations, the nations had been able to understand one another's viewpoint more clearly than it could have been possible otherwise. He wanted Mr. MacDonald to know "of my sincere admiration and respect for your courage and your patience as its presiding officer," for because of it "the nations of the world can continue to discuss mutual problems with frankness and without rancour". He urged that "results are not always measured in terms of formal agreements; they can come equally from the presentation of each nation's difficulties and each nation's methods to meet its individual needs". And as if in extenuation of the obstinacy displayed by him at certain crucial stages of the Conference he urged that "the United States understands the problems of other nations better to-day than before the Conference met and we trust that other nations will in the same spirit of goodwill understand the American policies which are suited to the unprecedented economic situation at home. "Such inter-change, especially if it results in full discussion of all problems and not a few only, makes progress more and not less possible in the future. That is why I do not regard the economic conference as a failure". With no less optimism, but a distinctly keener sense of realism, M. Bonnet emphasised that they "must not conceal the fact that the Conference had not been able to proclaim its essential task of achieving the stability of currencies which everyone declared at the beginning to be indispensable". But he had no doubt whatsoever "that the time will come, perhaps sooner than is thought, when the conditions required for a general stabilisation of currency will be fulfilled. It will then be seen that the gold standard countries by maintaining their positions have helped to solve the difficulties of other countries. In this way they will have done good service to the world". "At every turn," M. Bonnet contended, "the irrepressible pressure of events has deflected our course and frustrated our efforts". But he said that "if our work appears incomplete it would be unfair to blame the men who have contributed to the Conference their enthusiasm and loyalty". The insularity of outlook which M. Bonnet displayed was seen in a more aggravated form in Dr. Schacht's speech, in which he affirmed that the failure of the Conference must be attributed to the attempt to regulate simultaneously by general recommendations the conditions of sixty-four entirely different countries. He said the unsound method of temporarily alleviating the economic difficulties of particular countries with the help of international credits, which have been unfortunately frequently employed in the past, must be replaced by a firm determination to restore a certain economic stability with the help of the country's own resources. M. Colijn stands alone in the frank recognition of the Conference's failure.

All this verbiage will not obscure the vision of the average man who will recognise along with the delegate of one of the greatest economic powers of the world that the basic items of the Conference agenda remain virtually untouched and unacted upon. One has, however, to turn to the criticism outside the precincts of the Conference for an adequate description of the position. As on most matters of international importance here also Mr. Lloyd George has the most expressive phrase: "Not a cent has been taken off the tariff; not a strand has been broken of your barbed wire." However much one might feel that this is a just description of the work of the Conference, one might well attempt a recapitulation of the developments of the last month and a half by examining the reports that have come to light. If one turns from the intangible to the tangible work of the Conference the extreme meagreness of the results seem altogether inescapable. The *Economist* has the most carping comment, namely, that a conference which was called to deal with the problem of the rapid shrinkage of international trade and the alarming decline of economic activity in every country of the world, has in its most substantial and voluminous portion of the Conference report only plans for still further restricting production, though even in this part of the proceedings as in almost every other, almost nothing definite has yet been agreed upon. It is well-known how the question of currency and monetary stabilisation has been shelved on the ground that the time is not yet come. The next important question of the reduction of tariffs and restrictions was hardly touched upon. International indebtedness figured on the agenda of the Monetary Commission but to no purpose, and "shipping and other subsidies" was suspended owing to the intractable conflict between the viewpoints of the various delegations. Where discussions were carried on only differences emerged to view. Every negotiation led to a deadlock, drafts invariably served to befog the questions yet more by the employment of phrases of undefined and undtfinable meaning.

Air Mail Week.

Useful Bye-products.

The only good that has resulted from the Conference is such as may well be called its Bye-product. The acceptance of a token payment in respect of June 15 payment of war debts, the resumption of Anglo-Soviet Commercial relations and the conclusion of pacts between Russia and her neighbours may be regarded as having been facilitated by the meeting of the delegates concerned at London. And if we add to this the intangible effect of the close appreciation of rival points of view and a sense of the magnitude of the task that remains to be achieved by the comity of nations in the economic sphere one may lay the unction to one's soul that the Conference has not met altogether in vain. Even those who hold the view that the problems of the present depression cannot be solved by the nations meeting in a common Conference might feel that the next Conference would meet with a greater appreciation of their viewpoint than would have been possible otherwise.

Work of the National Government.

The approach of the Parliamentary session has induced many minds to recapitulate and appraise the work of the National Government. With the end of this month, it will be nearly two years since the present Government was installed in power securely as a result of the panicky conditions, in which Great Britain found herself in the third quarter of 1931. It is difficult in the first place, to arrive at any fair criterion of judgment. For the times we have passed through are such that results must be deemed in this context to be a far cruder test than ordinarily. Nor can one apply the generally accepted principles of party government, for the Ministers took office with a virtual abjuration of party colour. The Government called itself a national Government, and its avowed purpose was to produce a sound budget and save the pound. Implicitly, its task was to straighten the economic muddle at home and, abroad, to bring about international understandings in so far as they are necessary for domestic economic reconstruction. There are, doubtless, momentous issues of international significance, but they have meaning only for those who stand successfully the more common tests of efficient government. To judge the National Government out of their own mouth, so to say, it may be conceded that they have succeeded in producing a reasonably sound scheme of national finance and also to have made the best of the bad job of maintaining a sound currency and exchange policy in these distracted times. More restricted problems, such as regulation of passenger transport in London and implementing the recommendations of the Salter Committee in regard to road and rail and the reorganisation of the police, which do not involve large questions of social policy, do not call for either breadth of outlook or keen statesmanship. They are administrative problems which, strictly speaking, ought to be outside the immediate and direct attention of the Legislature itself. These have been tackled; but they have little place in any judgment of the Government as such.

It is only in the sphere of broad national policy that the National Government must be judged. Here it may be said, to begin with, that they have well nigh secured their avowed purpose of producing a balanced budget. But the compliment can be paid only in a literal, and, therefore, very restricted, sense. While credit is undoubtedly due to the Government for the manner in which the colossal interest charges on the national debt have been reduced, the other savings in the national expenditure are not an unmixed good to the nation or an unqualified compliment to the Government. In insisting on a balanced budget at a time when a balanced budget inevitably means an unbalanced national economy, the Government have shown themselves incapable of appreciating the more novel, but really sound, standpoint of many leading economists like Mr. J. M. Keynes. What from the standpoint of the disinterested economist is only ignorance must from the social view be deemed a crime. The formulation and administration of the "means" test have imposed more handicaps on the poor; and so long as nothing is done either to improve employment adequately or to make the relief less inadequate, the economy of the national budget must be condemned as having been gained at the price of avoidable human suffering. In the sphere of fiscal policy the Government may well be charged with breach of faith. There is no surer condemnation of the Government than that men like Lord Snowden and Sir Herbert Samuel felt it necessary to resign their places in the Cabinet and go into opposition. The *Economist* points out that considering the solid conservative majority in the House the Party could easily have been even less accommodating to rival viewpoints. But this only heightens the charge of partisanship against a Government which has called itself "National" up to this day.

UNITED STATES OF AMERICA

PRICE RECOVERY AND BLANKET CODE.

The break in the stock and commodity prices has come and gone in a manner that President Roosevelt may well feel thankful for. It was treated by the critics of the Government as a reinforcement of the arguments which they had long been advancing against the pace and manner in which artificial progress was being sought to be achieved. For the same reason it is possible for the Government to contend that their economic policy has passed through no inconsiderable ordeals and that, therefore, its practicability and soundness should be more apparent to the public. The week's happenings may also be regarded as a welcome God-send, without which the markets might have persisted in their course of inflating commodity and stock prices. It is inconceivable how with its programme of recovery Government could possibly have stopped this undesirable tendency of prices to outstrip the depreciation in the external value of the dollar. If any action had been taken towards this end, apart from the criticism of the opponents of the Government, the public at large would have found it difficult to appreciate the motive and the action of the Administration. It was pointed out in these columns last week that President Roosevelt had long been of the opinion that much of the increase in prices was unjustified and far from helpful to the programme of recovery which he had undertaken. Now that the markets have had a course of healthy blood-letting without the intervention of the Government, Mr. Roosevelt has reason to congratulate himself on the operation of the *deus ex machina*. In the same way the Government have also demonstrated their capacity to stay the rot and prevent confidence from being sadly impaired. Above all, the suddenness with which it occurred and the panic it created provided the President with an opportunity for a fresh drive in regard to his recovery programme.

Less Trading and Steadier Prices.

The history of the week is only the story of how these tendencies were worked out both in Government policy and in the course of the markets. On Saturday, July 22, the improvement noticeable on the previous day was more pronounced. There was widespread relief that the downward movement had been stopped. Though at a stage some tension was evident and prices threatened to break badly, support was noticeable at every fall and the day's

Air Mail Week.

closings were much better than the lowest levels touched during the day. The weakness of the commodity markets was felt to be a great embarassment in the task of keeping the stock markets steady ; but here, too, selling orders were eventually checked. Much uncertainty was felt about the policy of the Government and this was reflected in the position of the stock exchanges which was embodied in the following announcement : "On account of the sustained pressure under which members of the Stock Exchange, and the employees of their firms and of the Stock Market Clearing Corporation have been working for a very considerable length of time, and particularly in the last few days, the governing body, by a resolution this morning, determined that, beginning on Monday, July 24, and until further notice, the Exchange will open at noon instead of 10 a.m. on full business days.

Furthermore, the governing committee will determine next week, provided the present rate of activity continues, whether or not the Exchange will be closed next Saturday."

Restrictions on Trading.

The shorter sessions thus announced saved the market from a further 'test of strength and paved the way for the steadying of conditions. That in spite of the evidence of renewed confidence the general sentiment was nervous may be seen from the fact that the turnover on Saturday amounted to as much as 4.2 million shares which is the third largest for a Saturday. It may be mentioned that the steadiness of the grain markets was due to the proposal of the Chicago Board of Trade, which was duly approved of by the Agricultural Department, that Thursday's closing prices were to be regarded as the minimum, below which no trading would be allowed. Grain trading was to be resumed on Monday, July 24, but the market would open an hour later than usual. On Monday a more satisfactory spirit was in evidence, uncertainty giving place to a degree of mild optimism. Prices gained from one to five points and even public interest was found to have revived. The total reached 3.4 million shares as against 9.5 million shares on the previous Friday. Grains gained a number of points. The improvement in quotations were steadily maintained on Tuesday, at the end of which a statement was issued by the representations of the grain exchanges after a conference with Mr. Wallace, the Secretary of Agriculture. In that statement, the recommendations of the future regulations of grain markets were set forth. The measures, to which the representations of the exchanges signified their approval, are: the permanent limitation of daily fluctuations, further limitation of open lines and speculative commitments, with particular reference to large commitments, the permanent elimination of trading in indemnities and the necessary consideration to properly constituted hedging requirements. But it was stated on behalf of the administration at the same time that the Goverument was not committed to these proposals and had not, as a matter of fact, made up its minds on those questions. Quotations and turnover in the remaining days of the week alike showed that the market had recovered from the

effects of the earlier mishaps. Prices were maintained, even in the face of wild movements in the dollar and fluctuations in the grain exchanges. Everywhere it was felt that the market was behaving quite satisfactorily though, of course, the future outlook was dependent upon the conditions of trade and industry. In this matter, the policy of the Government is no small factor to reckon with ; and it is interesting that wet shares led the way in the upward movement, even as they did in the downward fall of prices last week.

Business Situation.

It is difficult to size the business situation at the moment though it is hardly the case that encouraging reports are coming in from all sides as they did a month or two ago, there is still no lack of heartening factors. So far as the stock markets are concerned, there can be no doubt that the losses recently sustained are of a corrective character and that, if anything, they must tend to help the technical rally in the future. But it must not be forgotten that the elimination of non-professional speculators will make the general upward movement a task of an uphill nature. Smaller balancing factors are noticeable in other departments of the national economy also. The railroad prospects, doubtless, show signs of improvement, earnings for June being expected to compare more favourably with the previous year. The statement of Mr. Eastman the Railroad Co-ordinator against the Railroad Co-ordination Act does not prevent the companies from reducing the hands, provided such action does not result from any authority conferred by the Act or involve the use of any agency or mechanism, will enable certain economies which will, undoubtedly, improve the earning capacity of this industry. The Railroads are endeavouring earnestly to reorganise their position. A plan for reduction of higher grades of salaries has already been drafted, and, it is believed, will meet with the approval of Mr. Eastman. The results of companies announced during the week are all, with but few exceptions, highly encouraging. But the most heartening feature of all is the indication of a marked improvement in retail sales. Chain stores report increased volume of sales ; and if it is remembered that much of the criticism against the present recovery programme was based on the tendency of retail sales to lag behind, thus showing the inability of consumptive capacity to improve with the increasing production, it would be realised how much this new development means for the success of the administration's policy.

The other side of the Shield.

But there has been no mitigation of the dangers that threatened to wreck the programme of the Government. There is no doubt that throughout the country industries are taking on more hands and effecting increase in wages. It is also reported that the income of the farming class has increased by 37 per cent. over the level of June, 1932. But, on the other hand, there are sharp rises in prices also. The Bureau of Labour's price index for the week ended July 22, increased to 69.7. Retail prices are also being increased and it is believed that more are yet to come. The increase in business activity is less during the last three weeks than in the earlier days of the present recovery. Bank clearings, though well above the level of this time last year, show a fall from preceding weeks. *Steel* reports that operations in the steel industry were fairly maintained during the past week. There is every reason to believe that the rise in prices is operating against the placing of new orders. Automobiles are in fear of reduced sales during August.

Labour Unrest.

Above all, there is the general unsettlement caused by the increase in costs, without the necessary assurance of compensating factors. It is felt that in their attempt to impose the blanket code, the Government have encouraged labour to put forth stiff demands in regard to wages and earnings. Both organised and unorganised labour have come to feel that they can count upon the backing of the Government in getting the executives of the businesses concerned to grant advances in wages and, at the same time, an appreciable reduction in working hours. It may be that when the Government have completed their programme of imposing well-planned codes of fair competition the present mal-adjustments might be set right, but, at present, talks of a strike are heard from many quarters and already some strikes are afoot.

President's Broadcast.

President Roosevelt, for his part, considers all these circumstances as an incentive, rather than a deterrent, to further progress with his plans. On Monday night the President made another personal appeal to the country for the acceptance of his recovery programme. He began by declaring that his "explanation should make it abundantly clear that all the proposals and all the legislation since he took office had not been just a collection of haphazard schemes but rather of component parts connected with a logical whole." The President claimed that, long before his inauguration, he had become convinced that individual effort, and even disjointed Federal effort, must, of necessity, fail and that rounded leadership by the Federal Government had become a necessity both in theory and in fact. This leadership was essential for balancing the budget of the Government which had not lived within its income for a long time. He took pains at the same time to make clear that there was nothing inconsistent in the Government cutting regular expenses and borrowing and spending bullion for emergency purposes. For a large proportion of the emergency expenditure was in the form of sound loans which would be repaid over a period of years. The President took credit for the fact that by reviving Federal Credit he had provided the essential basis of the whole recovery plan. But it was only the banking crisis that "to-day

only about 5 per cent. of the deposits of the national banks is still tied up and although the conditions of the state banks is not so satisfactory, they are showing a steady reduction in the total of frozen deposits". On the question of the devaluation of the dollar he urged that it is vitally necessary to restore the purchasing power by reducing debt interest charges upon our people.

Mr. Roosevelt's Faith in the Country.

All this was only to lead to the insistence of an early adoption of the codes which Government had formulated for those industries which for any reason failed to provide one on a voluntary basis. "We cannot attain lasting prosperity with a nation half boom and half broke." He contended that "if all the people received fair wages and fair profits they could buy the products of their neighbours and business is good". It was on this ground that the Federal Relief Act was based to ensure adequate purchasing power for half the population of the country, which is agricultural. Where production is clearly above internal consumption or the possible consumption of foreign export markets, reduction is unavoidable. Of the scheme in its entirety Mr. Roosevelt said "I have clearly stated that this method is in essence experimental but so far as we have gone, we have reason to believe that it will produce good results." All that was wanted, therefore, was "the final dash to bring industry back along sound lines and this would be impossible without united action. For the selfish man and the least competent would pay starving wages and insist on long hours of work, with the result that others in the same group must follow suit or close shop. The results of this procedure were seen in the continuing of the descent into the economic hell of the past four years." The solution therefore lay in the employers of each competent group agreeing to pay their workers the same reasonable wages and requiring the same reasonable hours so that high wages and shorter hours would harm no employer.

To get the plan into regular working Mr. Roosevelt has a variety of instruments. He is aware more than even his critics that there are a few employers who might thwart this great purpose at seeking a selfish advantage. For them the State has adequate penalties in law. But "I am now asking the co-operation that comes from opinion and conscience. These are the only instruments we shall use in the great scheme of defence against unemployment." The purpose of the broadcast talk was to ensure the adherence of the smaller buyers, for the basic industries have already come in ; and for the large mass of small employers, Mr. Roosevelt expects the majority to signify their approval of the Blanket Code. Concluding, he urged ; "I cannot guarantee the success of this nation-wide plan, but people in this country can. I have no faith in cure—all but believe they can greatly influence economic plans, I have no sympathy with profesional economists who insist that things must run their course. But I do have faith and retain faith in the strength of common purpose."

GERMANY.

THE HITLER CONTROVERSY.

Quite a storm of controversy rages round the name of Herr Adolf Hitler and the expansionist policy for which he stands. The antagonism to him is of all sorts, from personal to international. The Austrian Facist party published in their organ, the *Oesterreicher Abendblatt* that Herr Hitler was of Jewish origin. Naturally, Germany got so furious that the German Embassy demanded that the Austrian Government should give satisfaction to Herr Hitler for the "insult." By way of reply the Heimwehr (fascist) papers made further allegations that ateмpts had been made by German Nazis in Polna to carry off the records of the Jewish community from which the extracts were made. They challenge the German authorities to prove the contrary. They further assert that Hitler, the greatest anti-semite, is of Jewish origin within the third generation, which makes him technically a Jew. What bearing the origin of the Chancellor has on his policy is difficult to divine, except as causing annoyance to an overworked leader of a big nation.

Apart from this personal taunt, Nazi storm troopers raided, on July 13, the Austrian Customs Office at Mittenwald border, and attacked its officers. It is reported that the Austrian Government ordered their officers to withdraw to the Tyrol, and sent auxiliary police to the frontier. Diplomatic protests were made to Berlin and Geneva. It should also be remembered that Germany is a signatory to the Four-Power Pact and the Vatican concordat. In the face of these facts, the stories of German aggression, overt or covert, have not much significance.

"Return to Normal".

In official theory, the Nazi Revolution ended on July 11. But the Nazi Revolutionaries, drunk with arbitrary power, were for anarchy by their excesses. The weeding of the rank and file has started. For the proper and prompt discharge of this work, Captain Goering is empowered to grant amnesties, without any need of Parliamentary confirmation, for penal offences, commited by members of Nazi organisations in connection with the operations of the National-socialist Revolution between March 21st, the date of the first grant of amnesties, and July 11th when the Revolution ended. A central public prosecutor is empowered to award death penalty, imprisonment for life or 15 years' penal servitude to any person who kills, or plots or instigates to kill any member of the Nazi privileged forces, or who disobeys the law forbidding the formation of new parties or the regulations, proscribing certain associations, or against the introduction of foreign periodicals with political contents.

General Economic Council.

Nation-socialism of Germany is making common cause with National plutocracy. To help and advise the Government on economic questions, a general economic council of economists, bankers, and industrialists like Messrs. Krupp, Thyssen, Prof. Bosch, and Dr. Otto Fischer, the banker. Landlords are placated by the announcement of Dr. Darre, the Minister for Food Supply, that not only unencumbered estates, but also the heavily indebted estates will be left secure.

Mining employers and workers were relieved, since October 1931, of all unemployment insurance contributions. The Government were shouldering the burden. But, on account of financial exigencies, this concession has been withdrawn from July, the workers having to contribute in part. But, from January next, the conributions will be deducted from their wages.

Unemployment Problem.

The see-saw of unemployed figures keeps jumpy with seasonal requirements. The shrinking trade does not guarantee a larger production and the consequent reduction of the unemployed. The Government, therefore, requisitioned measures to augment seasonal reductions. In the Ruhr mining area, for instance, they are enhancing the employment of workers. The number of holiday shifts are being increased, by which individual workers are not employed at all on certain days, in times of slack trade.

Air Mail Week

In East Prussia, factory workers are few in number, as the small holdings absorb the working classes there. The number of the unemployed there is, therefore, small. The scheme for the reduction of unemployed by the inauguration of public works will be in full swing there. The reduction of the unemployed in East Prussia, cannot but have reassuring effect on the minds of other unemployed, elsewhere in Germany. For the time being, the unemployed position has somewhat improved. Between July 1st and the 15th, the number of the unemployed fell by 29,000 to 4,828,000, as opposed to a rise of 16,000 during the same period, last year. But, in the second half of June, there was a decrease of 120,000 in the number of the unemployed as against an increase of 93,000 during the corresponding period of last year.

State Dowry to Married Couples.

The fifteenth of July was the first day for handing in applications for Nazi marriage loans. Long queues of excited men and women thronged German register offices. The staff was overwhelmed with enquiries and stacks of forms. This scheme formed an integral part of the huge unemployment reduction programme of Herr Hitler. The purpose of this scheme was to wean away the German woman from public jobs and re-establish her in the home. Incidentally, at the end of Hitler's four-year plan, no fewer than a million situations, vacated by women will have been filled by men. The cost of the scheme is estimated to cost the Government £5,000,000 a year. This amount is to be met by a tax on all bachelors and spinsters, whose incomes exceed 75 marks a month. Under this scheme, German couples, about to marry will be given loans of 300 to 1,000 marks. The loan is given in the form of certificates which will be accepted by furnishers and store-keepers in payment for household necessaries of different sorts. The traders can cash these certificates with the Government. The rate of repayment is one per cent. a month, normally. But, a quarter of the loan will be remitted for every child, born within the first eight years. Those couples, having four children, will be absolved from all obligation to repay the loan. A big bid is thus being made for augmenting the population of Germany.

Effect of Transfer Moratorium.

From the beginning of July, Germany is to transfer only half the interest and dividends, due on her foreign obligations with the exception of Dawes and Young Loans. The conversion office at the Reichbank issues certificates for the sum. Certificates to British creditors are in the nature of negotiable bonds, to the nominal amount of £1, £2, and £2-10s. or multiples of these amounts. If the creditors, possessing these certificates, require cash, they have only to discount them. The Reichbank can carry out this operation on their behalf, at the very onerous rate of 50 per cent. discount. These discounted certificates are passed on to exporters for an equivalent in marks, which places them in the position of receivers of bounties up to 100 per cent., so very helpful for competing in foreign markets. Otherwise, the untransferred portion of interests and dividends can only be liquidated by the creditor countries importing German goods against the Conversion Office Certificates. Either way, this plan should give a great fillip to German exports. Nothing better, under prevailing conditions of world trade depression, can happen for the trade and economic recovery.

German Exports.

There is no meaning in creditor nations grumbling at the German facility for exporting to foreign markets at very competitive prices. Should they deny this facility to Germany, they will have to bless themselves with a repudiation of her debts. The indirect spurt to export trade, given by transfer Moratorium plans, is beng further strengthened by the direct operations of barter. Western German Chambers of Commerce recommended extensive bartering of German grain for the foreign. The scheme envisages the exchange of German soft wheat and wheat products, unsuitable for bread-making, rye and rye-meal, oats and barley for hard foreign wheat, rye of bread-making quality, fodder, barley, maize and fodder grains. Thus, the German consumers have their needs supplied, while the farmers receive help in disposing of their produce. To what extent foreign producers will fall in line with this barter scheme remains to be seen.

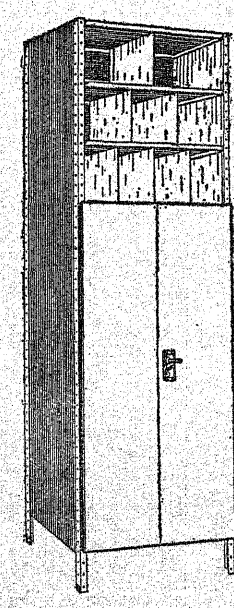
Although Germany still e njoys a favourable trade balance the month of June witnessed a heavy fall, compared with that for May. During June imports increased by £1,150,000 to £17,800,000; while exports decreased by £1,850,000 to £19,250,000; leaving a favourable balance of £1,450,000, compared with the favourable balance of £4,450,000 in May. During the first half of this year, imports were £104,350,000 in value; and for the same period exports were £118,900,000, leaving a favourable trade balance of £14,550,000, or 50 per cent. less than in the first half of 1932.

Reichbank.

The bank returns, ended July 22, show that the gold holding rose by Rm. 10,175,000, the equivalent of £500,000 at par, to Rm. 228,387,000 (£11,170,000). The reserve in foreign currencies is higher by Rm. 3,715,000. The total note cover is up by Rm. 13,890,000 (£680,000). There was a sharp contraction of the Note Circulation by Rm. 77,247,000 (£3,800,000). The Reserve ratio has, thus, risen by 0.7 per cent. to 9.6 per cent.

BEST STEEL SHELVING

GODREJ



(1) Made by latest Machinery.

(2) Well designed and strongly constructed.

(3) The sheets are cold-rolled and fully flattened by special machines to give them a planished even surface.

COMPANY REPORTS

ASSAM CO., LD.

A smaller loss is reported, the net figure for 1932 being £13,950, as against a debit of £16,143 for 1931. Reserve is tapped to the extent of £15,000 (last time £10,000 was brought into Profit and Loss) and £3,461 is carried in from 1931, leaving a balance forward of £4,511.

The quantity of tea invoiced 8,219,088 lb. (8,584,294 lb.), realised an average of 9.03d. per pound (9.99d.). In April a loss, estimated at 34,000 lb. of tea, was sustained through hail-storms.

Extracts from Directors' Report:

Accounts cover the year ended March 31, 1933. The total capital outlay on final heads now amount to Rs. 19,82,799 as against Rs. 19,82,094 at the end of the previous year, an addition of Rs. 705 for the cost of a turbo generator and headlight. The capital subscribed by shareholders amounts to Rs. 17,80,000, debenture capital to Rs. 4,00,000 and the gross capital outlay, inclusive of suspense heads, to Rs. 20,43,657. The unexpended portion of these funds has been invested from time to time in temporary loans to other railways under this managing agency and the interest thereon amounting to Rs. 9,505 has been duly credited to nett revenue account. The gross earning for the year amounted to Rs. 1,72,552. While the working expenses totalled to Rs. 1,28,291 as compared with Rs. 1,78,301 ad Rs. 1,46,216, respectively, for the previous year. The balance Rs. 44,261 has been carried to nett revenue account. Under the nett revenue account, after crediting the interest on temporary loans and deducting interest, etc., on debenture loans and excluding the balance of Rs. 610 brought forward from last year, there is an amount of Rs. 31,367 available towards the guaranteed interest on the total subscribed share capital of Rs. 17,80,000, which leaves a deficit of Rs. 30,933 to be met by the Government of India in terms of the agreement with the Secretary of State. Out of this sum an advance of Rs. 6,000 has already been received and a balance of Rs. 24,939 is still due. Warrants for the distribution of a 3½ per cent. dividend to shareholders (less income-tax and surcharge thereon) will be issued as soon as the amount is recovered. Compared with the previous year the total working expenses show a nett decrease of Rs. 17,925. The receipts under coaching amount to Rs. 128,545 for the carriage of 295,230 passengers as compared with Rs. 1,31,757 and 304,963 passengers for the previous year, and Rs. 1,87,610 and 396,390 passengers for the year ending March 31, 1926, when motor bus competition had not yet become established. The motor 'bus competition has not increased, as an adequate competitive train service has been kept up. The slump in general trade continues to reduce the number of persons travelling in the district. Earnings from goods totalled to Rs. 40,326 for 765,644 maunds of goods as against Rs. 43,040 for 811,560 maunds last year and Rs. 42,676 and 816,328 maunds for the previous year.

KALIGHAT-FALTA RAILWAY COMPANY.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.

			Government of India	...	41,048
			Cash Balance	...	8,911
			Preliminary exps. and general charges	...	1,74,777
Total Rs.	...	25,51,464	Total Rs.	...	25,51,464

Extracts from Directors' Report:

Accounts relate to the year ended March 31, 1933. The total capial outlay on final heads remains the same as last year, *viz.*, Rs. 23,66,849. The capital subscribed by shareholders remains as last year at Rs. 19,50,000 (inclusive of Rs. 3,00,000 subscribed by Government). The debenture capital likewise remains at Rs. 4,50,000 and the gross capital outlay, inclusive of suspense heads, amounts to Rs. 24,21,857. The gross earnings for the year amounted to Rs. 1,86,981 against Rs. 2,44,706 for the previous year and the working expenses to Rs. 1,77,636 against Rs. 2,03,029 for the previous year; the balance of Rs. 9,344 has been carried to nett revenue account. Under the nett revenue account, after crediting the interest accrued on temporary loans and allowing for debenture interest and excluding the balance of Rs. 1,187 brought forward from last year, there is a deficit of Rs. 16,650, which, added to the amount required for guaranteed interest at 3½ per cent. on the total subscribed share capital of Rs. 19,50,000, calls for a total supsidy of Rs. 84,900; as, however, Rs. 10,500 of this guaranteed intrest is due to the Government of India on their portion of the subscribed capital, the nett balance to be recovered from the Government in terms of the agreement with the Secretary of State will be Rs. 74,400. Out of this sum an advance of Rs. 33,352 has already been received and a balance of Rs. 41,048 is still due. On realisation of the balance from the Government, warrants for the distribution of a 3½ per cent. dividend to shareholders (less income-tax and surcharge thereon) will be issued. Compared with the previous year the total working expenses show a nett decrease of Rs. 25,393. The receipts under coaching amounted to Rs. 1,22,742 for the carriage of 608,731 passengers as compared with Rs. 1,84,651 and 724,140 passengers for the previous year, and Rs. 2,84,462 for the carriage of 812,070 passengers in the year ended March 31, 1925 (prior to the advent of road motor bus competition). The railway out agencies at Bowali and Sarisha hat connecting with Amtala hat and Shivanipur stations have had to be closed down due to bad roads. Earnings from goods totalled to Rs. 57,015 for 1,315,053 maunds of goods as against Rs. 82,228 for 1,827,871 maunds for the corresponding period last year, or a decrease of Rs. 25,213 and 512,818 maunds due to general trade depression.

			Cash & Invests.	...	8,31,431
Total	...	22,53,806	Total	...	22,53,806

Extracts from Directors' Report:

Accounts for the year ended December 31, 1932, show a nett profit of Rs. 32,082. On transfer of above and after sundry adjustments, including the transfer of Rs. 10,000 to reserve fund, there is a balance at credit of profit and loss account of Rs. 69,950. The dividend on preference shares was paid on December 30 last and the managing agents now propose to pay a dividend of 5 per cent. on the ordinary shares and to carry forward Rs. 9,950. The outturns for the season and the average selling prices compared with those of the previous year are as follows:—Crops, Hantapara, 1932—13,652 maunds ; 1931—11,379 maunds. Crops, Dumchipara, 1932—9,777 maunds ; 1931—8,179 maunds. Prices—Crops. Hantapara, 1932—5 annas 9 pies ; 1931—6 annas 5 pies. Crops, Dumchipara, 1932—5 annas 6 pies ; 1931—6 annas 2 pies. The total area under cultivation is 2,427.06 acres, being 1,265.06 acres at Hantapara and 1,162 acres at Dumchipara. The increment in the Hantapara area is due to a revision of this area following the adoption of the Government survey figures as per the renewed lease. Estimates for 1933 have again been compiled on economical lines and provide for a yield of 22,000 maunds for an outlay of Rs. 5,84,656 including inland freight and sale charges.

BOMBAY, BARODA AND CENTRAL INDIA RAILWAY CO., LD.

The gross earnings for the year ended 31st March rose by 4,71,252r., compared with 1931-32, to 10,27,82,611r., and as expenditure was reduced by 23,44,764r. to 5,90,71,437r., the net earnings were 28,16,016r. higher at 4,37,11,174r. The Company's share of the surplus after deducting Indian income-tax and supertax was 5,12,652r. (against 4,50,401r.). This has been remitted to England, producing £38,620. An interim dividend of 1½ per cent. was paid in January last, in addition to the guaranteed interest of 1½ per cent. then due, and the Directors recommend the payment on 27th July of a final dividend of 1½ per cent., making together with the guaranteed interest of 1½ per cent. for the half-year, a total payment of 6 per cent. for the year, the same rate as has been paid for the last 12 years.

AHMADPUR-KATWA RAILWAY CO., LD.

Extracts from Directors' Report:

Report relates to the year ended 31st March, 1933:—

Capital.—The total Capital Outlay on Final Heads now amounts to Rs. 20,71,557 as against Rs. 20,74,851 at the close of the previous year. The decrease of Rs. 3,294 is due to certain credits being afforded to the head Rolling Stock.

The Capital subscribed by Shareholders amounts to Rs. 17,24,000, the Debenture Capital to Rs. 3,00,000 and the gross Capital Outlay, inclusive of Suspense Heads, to Rs. 20,78,299.

Revenue.—The gross earnings for the year amounted to Rs. 1,15,325, while the working expenses totalled to Rs. 92,854 as compared with Rs. 1,10,258 and Rs. 96,934 respectively for the previous year. The balance of Rs. 22,471 has been carried to Net Revenue Account.

Under this Account, after crediting the interest on temporary loans and deducting interest, etc., on debentures and temporary loans, there is an amount of Rs. 5,278 available towards guaranteed interest on the total subscribed share capital, which leaves a deficit of Rs. 55,062 to be recovered from the Government of India in terms of the agreement with the Secretary of State. Out of this sum an advance of Rs. 25,000 has already been received and a balance of Rs. 30,062 is still due.

Taxation.—As intimated last year, owing to the Secretary of State having refused to allow Super Tax as an item of Working Expenses in arriving at the amount of subsidy due from the Government of India, Super Tax and Surcharge thereon have to be recovered from the amount of the subsidy.

We, therefore, recommend that a dividend at the rate of Rs. 3-7 only per share (less Income Tax and Surcharge thereon) be declared for the year ending 31st March, 1933, payable on receipt of the balance subsidy from the Government of India.

Working Expenses.—Compared with the previous year the total working expenses show a decrease of Rs. 4,080 due to the graduated cut in pay as reported last year and repairs and renewals of structural works having been kept down to bare essentials.

Coaching.—The receipts under this head amounted to Rs. 86,064 for the carriage of 229,152 passengers as compared with Rs. 86,990 and 226,095 passengers for the previous year.

The feeder bus services from Ganutia and Nanoor continued to contribute towards bringing in new traffic, but owing to the bad state of the roads the Nanoor service could not be kept up during the monsoon.

Goods.—Earnings from this source totalled to Rs. 27,847 for 524,747 maunds of goods as against Rs. 21,826 for 409,592 maunds last year.

It is pleasing to note that in spite of the present trade depression the goods traffic on this railway has shown a tendency towards improvement.

NEW SAVAN SUGAR AND GUR REFINING CO., LD.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	11,00,000	Block (net) ...	9,13,225
Reserves ...	2,20,000	Sugar & Molasses	6,60,382
Debts ...	2,87,687	Stores	41,176
Profit & Loss ...	1,88,708	Outstandings ...	16,220
		Cash & Invest ...	1,65,392
Total ...	17,96,395	Total ...	17,96,395

Extracts from Directors' Report:

Report relates to the year ended 31st May, 1933:—

The Revenue Profit for the year was Rs. 3,17,535-10-2. After providing Rs. 1,13,697-8-6 for depreciation, Rs. 49,080-4 for Income and Super Tax and making Sundry Adjustments there remains a balance at credit of the Profit and Loss Account of Rs. 1,88,708-8-3. From this the Directors recommend the payment of a dividend of 12½ per cent., absorbing Rs. 1,37,500, the transfer of Rs. 30,000 to the Reserve Fund bringing the total up to Rs. 2,50,000 and that the balance Rs. 21,208-8-3 be carried forward.

The Factory worked satisfactorily throughout the season, but owing to the failure of the monsoon and the shortage of rainfall during 1932 in the area from which the Factory draws its cane supplies, the quality of cane available throughout the season was inferior to that of the previous year whilst sugar prices also suffered a decline.

The area under cane for next season is reported to show a further satisfactory increase and planting is reported to have made good growth under favourable climatic conditions.

HOOLUNGOOREE TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	4,35,000	Block ...	6,06,049
Reserves ...	4,70,000	Crop A/c. ...	97,308
Debts ...	21,669	Outlay ...	7,237
Profit & Loss ...	47,328	Outstandings	2,649
		Cash ...	2,60,754
Total ...	9,73,997	Total ...	9,73,997

Extracts from Directors' Report:

Accounts for season 1932:—

After providing for depreciation, show a profit of Rs. 23,032-1-10, and after making sundry adjustments, transferring Rs. 15,000 from Reserve Fund, and allowing for taxation, there remains at credit of Profit and Loss Account the sum of Rs. 47,328-3-1, from which the Directors recommend the payment of a dividend of 8 per cent. for the season absorbing Rs. 34,800, and that the balance of Rs. 12,528-3-1 be carried forward.

Crop weighed out at 8,688 maunds as against 8,153 maunds in the previous year, whilst the average prices obtained were annas 7-6 per lb. and annas 9-3 per lb. respectively.

Growing conditions at both the divisions were favourable throughout the season.

The area under Tea now amounts to 592.30 acres at the Hoolungooree Division and 558.76 acres at the Konikor Dallim Division.

Estimates for the current season have been framed for a crop of 7,701 maunds at a revenue cost of Rs. 2,09,623 at the Gardens and Rs. 1,18,008 in Calcutta.

MAJULI TEA CO., LD.

Loss for 1932, £6,689 (against £5,362 for 1931). The debit balance carried forward now amounts to £16,481. Floating assets, £53,331, creditors, etc., including £47,262 bank overdraft, £55,893. The Preference dividend is in arrear from 1st January, 1931. A crop of 1,646,900 lb. was manufactured during the year (against 1,488,102 lb.). A drought of still greater severity occurred for the third successive year, entailing a much lower crop than the estates are normally capable of producing, especially to mid August. Consequently the Company was robbed of the early invoices of quality teas, and the later outturn had to meet a most unfavourable market. Last February shareholders were invited to subscribe for £30,000 Eight per cent. First Mortage Convertible Debenture Stock. Subscriptions from shareholders amounted to £9,000 only, but the Secretaries arranged for the balance of the issue, which is now fully subscribed.

BANKURA-DAMODAR RIVER RAILWAY.

		India ...	68,247
		Cash balance ...	15,855
Total Rs. ...	41,13,124	Total Rs. ...	41,13,124

Extracts from Directors' Report:

Report covers the year ended March 31, 1933. The total capital outlay on final heads remains the same as at the end of the previous year, *viz.*, Rs. 39,50,706. The capital subscribed by shareholders amounts to Rs. 34,00,000 debenture capital to Rs. 4,00,000 and the gross capital outlay, inclusive of suspense heads, to Rs. 40,17,135; the balance was met by means of an overdraft account arranged with the Imperial Bank against the deposit of 4 lakhs bearer debentures as referred to in last year's report. The gross earnings for the year amounted to Rs. 1,50,438, while the working expenses totalled to Rs. 1,38,666 as compared with Rs. 1,50,916 and Rs. 1,84,049, respectively, for the previous year. The balance of Rs. 11,772 has been carried to nett revenue account. Under the nett revenue account, after allowing for interest payable on debentures, temporary loans, etc., there is a deficit of Rs. 19,247 which, added to the amount required for the guaranteed interest of 3½ per cent., calls for a total subsidy of Rs. 1,38,247, from the Government of India in terms of the agreement with the Secretary of State. Out of this sum an advance of Rs. 70,000 has already been received and a balance of Rs. 68,247 is still due. As intimated last year, owing to the Secretary of State having refused to allow super-tax as an item of working expenses in arriving at the amount of subsidy due from the Government of India, super-tax and surcharge thereon have to be recovered from the amount of the subsidy. The directors, therefore, recommend that a dividend at the rate of Rs. 3-7 per share (less income-tax and surcharge thereon) be declared for the year ending March 31, 1933, payable on receipt of the balance subsidy from the Government of India. Compared with the previous yaer, the total working expenses show a decrease of Rs. 45,383 representing decrease under all heads of abstracts. The receipts under coaching amounted to Rs. 90,361 for the carriage of 172.298 passengers as compared with Rs. 96.344 and 185,028 passengers for the previous year. The earnings from goods totalled to Rs. 57,826 for 738,560 maunds of goods as against Rs. 51,147 for 643,596 maunds of goods for the previous year. The increase in goods traffic is mainly due to coal traffic.

SARA-SIRAJGANJ RAILWAY COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	95,00,000	Block (nett) ...	78,64,681
Forfeited shares		Preliminary expenses and	
and interests	2,651	general charges	11,35,588

		Balances ...	32,288
Total Rs. ...	99,83,995	Total Rs. ...	99,83,995

Extracts from Directors' Report:

The managing agents of the Sara-Sirajganj Railway Company (Messrs. Gillanders, Arbuthnot and Company), submit the audited accounts of the company for the year ended March 31, 1933. Capital expenditure for the year amounted to Rs. 47,004, making the total expenditure from commencement of operations Rs. 95,84,861. The total paid-up capital of the company on March 31, 1933, was Rs. 95,00,000. The nett earnings for the year amounted to Rs. 3,43,454, as compared with Rs. 3,63,291 for the previous year. The continued depression in trade generally and in especial the low prices obtained for Jute throughout the year were responsible for the falling off in earnings. The area under jute was somewhat reduced and paddy was sown in its place. The export of jute and the import of rice and paddy were, therefore, both restricted. Gross goods earnings were lower by Rs. 50,507 and coaching earnings were slightly higher by Rs. 6,894. The latter increase is small, and was spread out over most of the various classes of traffic that come under this heading. During the year an interim dividend at the rate of Rs. 2-4

per share, less income tax, was paid. The amount available for final distribution on March 31, 1931, is Rs. 3,21,483. We now propose to pay a final dividend at the rate of Rs. 2-4 per share, less income-tax, making Rs. 4-8 per share, less income tax, for the year, absorbing Rs. 2,13,750 and leaving, after payment of the managing agents' commission, Rs. 98,823 to be carried forward.

Directions.—Messrs. W. Hunter and T. S. Gladstone were elected to the Board to occupy the seats vacated by Messrs. S. C. Lyttelton and S. D. Gladstone. Rai Bahadur D. N. Batra took the place of Mr. F. R. Morgan as Government Director. Dr. Narendranath Law, M.A., B.L., Ph.D., retires from the Board by rotation, but, being eligible, offers himself for re-election.

Auditors.—Messrs. Price Waterhouse, Peat & Co., retire, but being eligible, offer themselves for re-election.

KATAKHAL-LALA BAZAR RAILWAY COMPANY.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets.	Rs.
Capital ...	8,91,100	Block (nett) ...	11,72,991
Interest ...	36,065	Preliminary exps.	11,314
Reserves ...	1,407	General charges ...	1,89,148
Loans ...	6,02,932	Interest commission and	
Demands payable ...	13,184	compensation ...	1,69,389
Deposits ...	2,511	Assam Bengal Railway ...	40,876
		Cash balance ...	4,570
		Assam administration ...	8,911
Total ...	15,47,199	Total ...	15,47,199

Extracts from Directors' Report:

Accounts refer to the year ended March 31, 1933. The total capital outlay on final heads remains the same as last year, *viz.*, Rs. 14,92,842. The capital subscribed by shareholders amounts to Rs. 8,91,100; the balance of Rs. 6,01,742 has been met as heretofore by means of temporary loans and a cash credit overdraft as authorised by the railway board with the Imperial Bank. The gross earnings for the year amounted to Rs. 53,023 as against Rs. 59,488 for the previous year; the working expenses, which, under the agreement with the working agency, amount to 50 per cent. of the gross earnings, are retained by the Assam-Bengal Railway and the balance being the like amount of Rs. 26,511, is carried to nett revenue account. Under this account, after including sundry petty receipts and allowing Rs. 82,955 for interest charges there is a deficit of Rs. 6,437 which, added to the sum of Rs. 40,099 required to meet the guaranteed interest at the rate of 4½ per cent., calls for a total subsidy of Rs. 46,536 to be recovered from the Government of India and from the Government of Assam administration in terms of the agreement with the Secretary of State, their respective shares amounting to Rs. 37,625 and Rs. 8,911. Warrants for the distribution of a dividend of 4½ per cent. (less income-tax and surcharge thereon) will be issued as soon as the necessary funds are received from these sources. The guarantee of 1 per cent. for 10 years by the Assam Government will expire on September 30, 1933, and the guaranteed interest on paid-up capital will thereafter be at the rate of 3½ per cent. only. The receipts under coaching amounted to Rs. 44,405 for the carriage of 135,950 passengers as compared with Rs. 51,139 and 159,866 passengers for the previous year. The decrease in coaching earnings continues and there are no signs of any improvement in this direction; the experiment with reduced third-class fares over the Assam-Bengal Railway has not yet provided any such conclusive evidence of improvement as to warrant similar measures being taken over the branch line. Earnings from goods totalled to Rs. 8,399 for 2,180 tons of goods as against Rs. 8,219 and 2,112 tons for the previous year.

WORLD OF INDIAN FINANCE

Calcutta, August 18.

So far as money conditions are concerned, it has been an erratic market. It will be remembered that in the early part of last week, considerable pressure for funds was felt. Towards the close of the week, however, there was appreciable relaxation. There was, again, a stiffening of rates early this week. This is, doubtless, due to the funds locked up in the applications tendered for the 4 per cent. 1948 Punjab Loan. It was a foregone conclusion that this Loan would be shooting up to a premium immediately the list closed. There were, therefore, applications for nearly four times the amount on offer. Considerable sums were, thus, locked up until the balances on the unaccepted portions of the applications were returned on Thursday. Business was done up to 3 per cent. Lenders were scarce. Since the release of funds in respect of applications for the Punjab Loan, easier conditions have prevailed. The quotable rate at the time of writing is ½ per cent. It is curious that while, on the one hand, there was an appreciable drain from the market to the coffers of the Government on August 15 owing to the Punjab Loan, the same day witnessed a big outflow of money from the Treasury to the market against the redemption of 6 per cent. 1933-36 bonds. Of the sums paid in towards the Punjab Loan, a portion should have been from the Punjab. But the major portion should have been from Calcutta. In regard to the release of funds from the 6 per cent. 1933-36 bonds, the share of Calcutta might have been much less than what it paid out for the Punjab Loan. However, the fact remains that on a day when Rs. 9 crores was released and Rs. 6 crores was absorbed, there was considerable stringency in the money market.

It will be seen that, on balance, the market must have been in receipt of a surplus of Rs. 3 crores. How is it, then, that the surplus of so large a sum as Rs. 3 crores did not make its weight felt? The answer to this question would raise interesting issues. Now, exchange banks in India have received more or less strict instructions from their Head Offices that they should not keep in their giltedge portfolio any long-term securities. Even scrips like 1940-43 or 1938-40 have been looked down with disfavour by the London offiees. There has been a transfer of investments from long-term and medium-term loans to bonds maturing over the next two or three years. When this is the attitude of exchange banks, it is hardly likely that they would have applied, to any considerable extent, for the 15-year Punjab Loan. We should think that most of the applications for this Loan should have come from Indian institutions. So far as Clive Street is concerned, it should not have experienced any special demand on account of the Punjab Loan. If this reasoning be correct, we have next to find out what are the likely factors in regard to the release of money from the 1933-36 loan. There is ever reason to think that the funds set free from this Loan did not augment the balance of the exchange banks to any marked extent. The largest demand for short credits in the current week has been amongst exchange banks. By the same token, it may be inferred that the heaviest applications on the sterling tender day came from them. Applications on August 15 came to the unexpectedly large figure of £2.68 million against £1 million on offer. Let us now set these three facts in their order:

1. Exchange banks could not have taken any great interest in the Punjab Loan.

2. There was considerable stringency for money in Clive Street.

3. So great was the demand for money that tenders on the auction day were nearly three times the amount offered.

The conclusion from these three facts is that of the sums flowing in the market from the 6 per cent. 1933-36 bonds, only very little could have gone to swell the balances of exchange banks. This point is very important in relation to the future of giltedge. As is well-known, many of the exchange banks have been picking up loans maturing over the next few years. If a considerable portion of 6 per cent. 1933-36 bonds had thus gone into the investment portfolio of exchange banks, the money now released would have been reinvested only in short-term securities. This means that despite repayment by Government of nearly Rs. 9 crores, the giltedge market would not have benefitted to any considerable extent. Conservely, if exchange banks did not hold any large proportion of the 6 per cent. 1933-36 bonds, it means

that these bonds were, right to the end, in the hands of investors who have always been in the habit of looking upon giltedge from the point of view of Safety First. Taking this argument a step further, it follows that, in such a case, the funds now released would come back into the giltedge market by way of investment in one or other of the existing securities.

The announcement of the Punjab Loan on an yield basis far higher than warranted by the giltedge situation was in itself a considerable bearish factor. This was used by the bears in Bombay to launch a heavy raid. There was a conspiracy of other circumstances which led to further support of bear tactics. The collapse of an important operator in the Bombay Stock Exchange was responsible for a severe landslide in mill shares. Giltedge also declined sympathetically. At this stage, the trouble in Ireland, the complications in Germany and the fast of Mahatma Gandhi were abroitly used by bears to frighten those who otherwise would be inclined to take a bullish view. During this period, London advices have also been somewhat unfavourable. India sterling securities have barely maintained their prices. But this would seem to be due to profit-taking rather than any inherent deterioration in the London giltedge position. For the moment, bears in India have succeeded in causing a slight setback. On the whole, it must be said that their game has not been so damaging as it would have been in a really nervous market. The fact is that, intrinsically, the giltedge market is in a healthy condition. Operators are, in the majority of cases, of an outimistic outlook.

OTHER INDIAN MONEY MERKETS.

(By Wire.)

(From Our Correspondents.)

Bombay, August 17.

Money remained fairly tight during the week with call money quoting 1½ per cent. to 2 per cent. But there was sudden ease yesterday owing to the repayment of 6 per cent. 1933-36 bonds on the 15th and there were lenders of call funds at ¾ per cent.

Exchange was steady, early during the week, both for ready and forward, due to gold exports. There were sellers of ready T.T. at 1s. 6 3/64d. and buyers at 1s. 6 5/64d. with business possible at 1s. 6 1/16d. But the quotable rate towards the end was 1s. 6 1/32d. for ready and 1s. 6 3/64d. three months sight forward.

Three months bills are quoted 1s. 6 5/32d.

Karachi, August 17.

Contrary to general expectations, exchange has developed some steadiness and ready business is done at 1s. 6 1/16d. Buyers are now asking something better than this rate and there are free sellers up to January at 1s. 6 3/64d. There are also occasional buyers at 1s. 6 1/16d. after October.

Three months bills are quoted 1s. 6 1/8d.

The monetary position of the market is very easy and it is difficult to find borrowers for short credits even at 1 per cent.

Madras, August 17.

Money remained easy, call being done at 1 per cent.

The securities market was weak though short-dated securities remained steady with a large business passing in 4 per cent. 1934-37 at Rs. 101-14, 5 per cent. 1939-44 at Rs. 106-10, 5 per cent. 1940-43 at Rs. 106-14 and 4 per cent. 1943 at Rs. 101-15. 5½ per cent. 1938 Mysore hardened to Rs. 109 and the 6¼ per cent. 1940 Mysore to Rs. 114-12.

FINANCE ABROAD

In our reference to the return of one half of the £30 million credit extended by British banks to the French Treasury, we pointed out that for the exact mode of repayment and its significance to the markets we would have to await the receipt of the Air Mail papers. It is now learnt that the £15 million, the repayment of which was foreshadowed a month earlier in a speech of M. Deladier, the French Premier, was not paid in a lump to the parties concerned. The announcement in the French press on July 29, was only to the effect that the repayment of £ 15 million was *begun* as from that date. It may seem strange that the return of such loans should be protracted over any period. But the provisions of the original understanding between the French Treasury and the British bankers concerned allowed the repayment of the whole or part of the £30 million, in instalments at any time after the expiry of three months and within the time limit of six months. It is natural, therefore, that the French Treasury had availed of the option to make payments as and when suitable to itself. The amounts of British currency for the repayment of the loan had, therefore, been acquired over a long period ; and when payments were made little or no disturbance was caused either to the money or to the exchange markets. One would have thought that a considerable remittance of sterling by the French Treasury would have caused an access of strength in sterling in relation to the franc. But as a matter of fact, sterling weakened on the day of the first payment ; and this is to be attributed to the increase in the prestige of the French currency, consequent on the easy repayment of British credit well ahead of the time limit fixed in the original contract.

Coming to the week now ended, the increasing complexities of Mr. Roosevelt's programme of recovery in America, the wistful interest displayed by Canada therein, and the quotation of the new Austrian 3 per cent. 1933-53 loan at a premium of 1½ to 2 per cent. are the principal developments in the world of international economy which fall to be noticed in these columns. As regards the first, our overseas columns will show the variety and nature of the obstacles encountered by the Administration in their efforts to bring about the conditions of business, in which, according to them, there would be a fair balance between the productive and the consumptive capacity of the nation. The reports appearing in the British press about the latest phases of the recovery programme tend to create a scepticism about the success of Mr. Roosevelt, for which the support of adequately convincing evidence has not been proferred. It is quite understandable that Great Britain should view with alarm the strange mixture of Socialist, Fascist and Capitalist economics with which Mr. Roosevelt seeks to nourish American industry. And perhaps a suppressed resentment is felt in Great Britain at the manner in which Mr. Roosevelt has allowed his enthusiasm for his own plans of recovery to torpedo the World Economic Conference. For, despite the persistent effort of the present British Government to rehabilitate national economy on the foundations of Emipre and other trade pacts, the interest of the British nation in the purposes, for which the World Economic Conference may reasonably be expected to stand, is unquestionable. There is also the chagrin that America possesses a vast expanse of self-sufficient country which Britain lacks and, therefore, it is not open to Britain, in the same measure as America, to apply a similar plan of internal economic reconstruction. This, perhaps, gives a clue to the impulse, largely unconscious, to detract from the value of the recovery programme in the United States . It is not our purpose to underrate the stupendous difficulties in the way of Mr. Roosevelt. Mr. Roosevelt himself has never under-estimated them. In his *Looking Forward* which we referred to at length last week, he has made it clear that mistakes, even blunders, are bound to be committed. But it is commonsense that a crisis which is mainly a crisis of consumption should be resolved by a large-scale attempt to expand the purchasing power of the country through an increase in wages and employment. No one has questioned the fact that millions have been re-absorbed during the last few months. Scepticism of foreigners is based on the belief that Mr. Roosevelt will not be able to achieve an increase in prices sufficient to compensate for the increase in wages and costs. This doubt arises from the assumption that in the new conditions which Mr. Roosevelt seeks to create capital should not continue to enjoy the same return on outlay as in the pre-crisis days. A writer in the *Financial News* contends that, should the return on capital decrease on account of the recovery programme, there is bound to be an efflux of American capital, which will necessitate further depreciation of the dollar. Apart from the attitude of the Administration to the fate of the dollar in the future, it is certain that, should the menace of a flight of capital appear, the Government will not spare themselves in the effort to prevent it. It is inconceivable how the balance between production and consumption could be secured and retained over a long period if capital should continue to receive the same disproportionate reward as in the past.

The balance between production and consumption, between saving and investment and the production of producers' goods and the production of consumers goods can be maintained only if capital can be induced to be content with a lower return of interest on outlay. We do not know if Mr. Roosevelt has conceived the implication of his programme in this light. But it is certain that as the crisis has been caused by an excess of saving derived from the profits of previous capital outlay, a similar trend towards disequilibrium can be saved only if there is a more equitable distribution, involving a lesser share for capital on account of interest and profits. So far as the question of the decrease in wholesale prices and production is concerned—and these are the main points on which the press in this country, taking the cue from the British press, is making much of—it is inevitable that wholesale prices should suffer a setback. For admittedly, the increase in prices has been overwrought in the sense that it had far outstripped the depreciation in the external value of the dollar. Production, too, has gained such strength that the consumptive capacity of the nation, as indicated by the increase in wages and the expansion in employment, has not been able to keep pace with it. Those who insist that this aspect of present American economy is a danger signal to the Roosevelt programme must recognise the inconsistency of pointing to the same factor as a sign that the recovery programme is not progressing as satisfactorily as the Administration would like to see it. For the present, the important point does not lie in the details of the programme but in the determination and enthusiasm which the Administration are able to command and are able to secure in the country at large. It is certain that the American economy has come to a position in which sheer distress has induced the people and even their representatives to grant Mr. Roosevelt the utmost powers that he desired in any daring attempt at artificial recovery. That, on the whole, the scheme is conceived on sound lines, despite the fact that it is possible to suggest that in some cases at least the Administration has allowed its enthusiasm to outrun its discretion, is seen in the interest which Canada displays in the progress of the recovery—an interest which indicates that before long Canada might embark on a similar economic adventure for herself.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.

(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering :—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE.

(From Our Correspondent).

Calcutta, August 17.

Government Securities.—This section remained quiet in the early part of the week but a steady tone was noticeable as the week advanced. 3½ per cent. Paper quoted Rs. 84-13, 5½ per cent. 1938-40 came to business at Rs. 107-14, 4 per cent. 1960-70 quoted Rs. 97-11, 5 per cent. 1945-55 Rs. 113-2, 3½ per cent. New Loan about Rs. 94-9, and the 4 per cent. New Punjab Loan (1948) Rs. 96-15.

Banks and Railways.—Imperial Bank shares have declined during the week and are now quoting Rs. 1,201 for fully paids and Rs. 295 for Contributories, Centrals have been steady at Rs. 23¼, Allahabads have remained unchanged at Rs. 327 and Rs. 160 respectively. In Railway shares, Hoshiarpur Doab remains unchanged at Rs. 84, Burdwan-Kutwa has declined to Rs. 72½, Kalighat Falta to Rs. 72 and Sara-Serajunj to Rs. 83. The Imperial Bank rate is unchanged at 3½ per cent.

Coal.—These shares were unchanged during the week and a small amount of business was completed. Amalgamateds were easier at Rs. 13-4, Burrakurs had sellers at Rs. 11, East Indias at Rs. 14-4, Standards were steady roundabout Rs. 16-4, Equtables quoted Rs. 17-10, Mintos Rs. 4-4, Raneegunge quoted Rs. 23-12, Bengal Nagpores showed some improvement at Rs. 39-6 and Pench Valley at Rs. 33-4.

Jute.—Jutes shares were weak and prices showed a declining tendency all round. Howrahs have receded to Rs. 48-12, and Kamarhattys to Rs. 450. Belevederes quoted Rs. 345, Bally 140, Anglo-Indias had some enquiry at Rs. 340, Empires were easier at Rs. 36-4, Presidency declined to Rs. 5-5, Nationals quoted Rs. 20-6, Barnagores dropped to Rs. 133, Clives to Rs. 25-6, Gourepores to Rs. 347, Orients to Rs. 205-8, Dalhousies Rs. 363, Reliance Rs. 71-12, Auckland Rs. 179, Lothians Rs. 276, and Megna Rs. 20.

Teas.—In Tea shares the turnover was small and in some cases prices were marked back. Sellers, however, were reserved and there was not much buying evidence. Bishnauths were dealt in at Rs. 22-14, Hattikhiras at Rs. 20-2, Patrakola fell back to Rs. 930, Dooars were marked up sharply to Rs. 875, Dauracherras quoted Rs. 12-12, New Terai Rs. 11, Rajnagar Rs. 4-9, and Gohpur Rs. 6.

Miscellaneous.—This section was unchanged during the week, Bengal Irons were steady at Rs. 2-10, Indian Standard (Ordy.) were unchanged at Rs. 42-12, Marshall Sons quoted Rs. 12, Burma Corporation Rs. 9, Patna Electric Rs. 12-4, Port Shipping Rs. 12-8, s.l., Ivan Jones Rs. 5-4, Associated Hotels (Ordy.) Rs. 2-15, Triton Insurance Rs. 169, Indian Wood Products Rs. 32, Midnapore Zemindary Rs. 66 s.l., sugar shares were irregular, Carew & Co., having buyers at Rs. 15, Cawnpores Rs. 36-8, Ryams were on offer at Rs. 45-12, Punjab Sugar Mills quoted Rs. 327 s.l. Balarampurs Rs. 11-6 s.l. and Murree Brewery Rs. 167 s.l.

BOMBAY STOCK EXCHANGE

(By Wire.)

(From Our Correspondent).

Bombay, August 17.

Giltedge evinced slightly easier tendency although the undertone remained healthy. Government 3½ per cent. Loan came down from its previous close of Rs. 85-7 to Rs. 84-4 but closed steady at Rs. 84-7 after touching again Rs. 85-1. For a while, the market is expected to be quiet.

The previous close is dated from Tuesday, 8th. On 9th there was settlement and on 10th there was much trouble due to failure of a big outside operator. Consequently the market opened weak on Friday and till Tuesday, 15th, there was progressive slump particularly in mill shares as some of the annual reports disclosed heavy losses.

Tata Steel ordinaries and deferred also declined but Second preference scrips firmed up due to declaration of dividends.

Cement shares maintained a firm tone and big Power shares also were not much affected.

Bank and railway shares remained quiet.

MADRAS STOCK EXCHANGE.

(By Wire).

(From Our Correspondent).

Madras, August 17.

The Cochin Government accepted a further Rs. 50 lakhs from the public making the total issue of its loan Rs. 1 crore. No dealing has as yet been reported.

The White Paper on Reserve Bank Bill did not affect the Imperial Bank shares. All shares remained steady excepting Mysore Banks which hardened to Rs. 210.

Mill shares were easy with Buckinghams down to Rs. 187 cum. dividend of Rs. 5 and Maduras at Rs. 35. Coimbatores have buyers at Rs. 60.

There was no business in cement shares and sugar shares.

In teas, Peermades jumped 4 points to Rs. 20¼ and Devasholas were marked up one rupee in rubbers. Cochin-Malabar ordinary were taken up at 7 annas and Malankaras at Rs. 27.

In the Miscellaneous section, deals were noted in International Nickels at $21.25 and Rand Fonteins at £2-15-0. Rupee shares were neglected in preference shares. Cochin-Malabars were taken up at Rs. 15 and later at Rs. 20 and Tata Iron and Steel Second Preferences met with considerable enquiry with several transactions between Rs. 95 and Rs. 100.

JUTE AND JUTE GOODS

JUTE.

During the week under review the market has ruled quiet but steady with a healthier undertone towards the close. Opening at Rs. 31-4 the highest and lowest for October futures were Rs. 31-4 and Rs. 29-8 respectively, the closing rate being Rs. 31.

Due to long liquidation, weakness in the goods market and general easier conditions prevailing in U.S.A. and London markets, were responsible for the drop in values. The lower levels were not long maintained. Bears came out to cover blanks. Moffussil advices were for higher prices and holders on that end were not willing to discount values further. Mills were interested at the decline and came out as buyers at Rs. 4-6 and Rs. 4-14 for ULR and LR respectively. Business in London market was also good and shippers also came out as buyers at Rs. 28-8 for ready and August shipment for new crop. The result was that there were causes for a rise and between Wednesday and Thursday futures recorded a rise of Rs. 2.

The closing of the market is fully steady but the buyers have been well supplied at the moment. Business at a further rise is likely to be restricted. The technical position is changed from bear to bull and a further rise may thus be arrested.

The arrivals of new crop are not very large. The crop prospects are good and harvesting is being carried satisfactorily. Still the holders are not willing to part at lower levels. The market appears to remain narrow in near future.

FINAL JUTE FORECAST.

The final forecast of the jute crop for 1933 will be published at 12 noon (Calcutta time) at the Western Arcade of the Writers' Buildings, Calcutta, on Wednesday, September 13.

District returns for the final forecast, 1933, will be published at the above place at 4 p.m. on Tuesday, September 5.

BENGAL JUTE CROP
BIHAR PROSPECTS.

The following telegrams have been received from district officers concerning the prospects of the jute crop in Bihar and Orissa for the week ended August 7:—

Champaran.—Rainfall 0.92 ins. Weather favourable. Condition of crop fair to good. Average height 6 feet in Sadr and 5 feet in Bettiah.

Muzaffarpur.—Rainfall 0.53". Weather favourable. Condition good. Average height 2½ to 3½ feet.

Darbhanga.—Rainfall 0.45 ins. Weather seasonable. Condition fair. Average height 8¼ feet.

Bhagalpur.—Rainfall 0.69 ins. Weather seasonable. Condition good. Average height 5 feet at Madhipura and 6 feet at Supaul.

Purnea.—Rainfall 0.36 ins. Weather fair for jute. Condition of the crop is fair. Average height 4½ to 6¼ feet.

Santal Parganas.—Rainfall 2.39 ins. Weather for jute favourable. Condition of the crop good. Average height 4 to 5 feet at Pakaur and 4½ feet at Rajmahal.

Cuttack.—Rainfall 18.26 ins. Weather favourable. Condition of the crop good. Average height 3½ feet.

Balasore.—Rainfall 3.92 ins. Weather seasonable for jute. Condition good. Average height 4 feet.

JUTE MANUFACTURES.

Ruling fairly steady at the beginning of the week the hessians market had ruled very quiet during the middle of the week, the close however being steady. The highest and the lowest of the week were Rs. 10-6 and Rs. 9-12 for November futures.

The decline was due to the weakness in American markets and an exceptionally weak position of heavy goods. Under sheer pressure to sell the heavy goods market has ruled very weak and had a sympathetic effect on the hessians market. Fresh buying by longs and bear covering pulled up the market from its lowest. The tone of the market is however steady but quiet.

COTTON AND COTTON GOODS

COTTON.

(By Wire.)

(From our correspondent).

Bombay, August 17.

New York has experienced progressive slump, October rate coming down from 9.96 on Wednesday 9 to 8.71 at which it closed yesterday, after touching 8.27. The attitude of the U. S. Government impaired confidence. Favourable weather and crop conditions, lethargy in cloth and yarn markets and weakness in grains were factors affecting cotton rates. Locally, rate for Broach April-May came down from 211-8, which was the close on 10th, to 199-8 after touching 197. But sentiment here has now changed in view of heavy damage to crops owing to excessive rains and likelihood of Japanese boycott of Indian cotton being lifted.

Karachi, August 21.

Owing to continuous decline in price of Amreican cotton and steady appreciation of dollar in terms of sterling, the local cotton market was rather nervy, as prices have dropped over 15 per cent. during the last fortnight. Sind Desi quoted Rs. 15-4 and Sind American are Rs. 20-4.

The following are the quotations:—

PIECEGOODS.

The market during the period under review has ruled very quiet, and an alround decline in values is noticeable. The decline has been mainly on account of the sudden drop in the price of cotton following the unexpectedly large American cotton crop report published on August 8.

A small enquiry that was reported previously was also absent for the time being, later, however, reappearing. Due to the Pujahs approaching near, seasonal demand is not totally lacking. A better enquiry from upcountry centres is noticeable. By way of new business smal orders are placed for Lancashire goods or standard Indian shirtings, fancies and seasonal styles. No new business with Japan has been placed since the imposition of additional import duties in June. Japanese are however reported to be bringing in consignment goods sold immediately on arrival. So far the quantity of such consignments is not very large but it is reported that in the course of next month larger parcels are expected. On account of the continued depression the ten mills of Messrs. E. D. Sassoon group in Bombay are reported to have put up notices that the services of their workers are liable to be terminated at a day's notice instead of the usual fourteen days. The group employs about 20 thousand persons and should they close a very large number of mill hands will be thrown out of work.

Yarn.—The market has continued dull as usual and the tone of the market has been definitely weaker. Spinners of most counts have reduced their rates but without stimulating sales.

BULLION

GOLD.

(By Wire)

(From our correspondent).

Bombay, August 17.

Gold ruled quiet for some time but latterly evinced signs of firming up as sterling-franc rate has been declining.

The market is ruling steady and values of gold, at home as well as abroad are well maintained. There is very little change in the movement of price, quotations ruling about Rs. 30-12 per tola. Sovereigns are ruling at Rs. 19-12.

Arrivals of gold from upcountry centres are fairly large and stocks in Bombay are increasing, being estimated at about 6 lakhs tolas. Daily offtake is maintained at 314 thousand per day. Exports per s.s. 'Comorin' amounts to Rs. 75 lakhs. The tone of the market is steady.

The following are the quotations:—

Bombay.

Date.	Ready.	First Settlement.	Second Settlement.

London (Air Mail Week).

The Bank of England Gold Reserve against notes amounted to £190,054,120 on the 26th July as compared with £189,695,939 on the 19th July showing an increase of £358,181.

The purchases of gold by the Bank during the week amounted to £101,225.

There were substantial amounts of gold available in the open market. They were partly taken for the Continent, and partly for destinations not disclosed. Although prices continued to rule at a premium over franc parity, this has tended to diminish during the week.

The following were the United Kingdom Imports and Exports of Gold registered from mid-day on the 24th instant to mid-day on the 31st ultimo:—

SILVER.

(From our correspondent)

By Wire.

Bombay, August 17.

Silver continued dull in all markets, rates sliding down gradually.

The market during the earlier part of the week has ruled very quiet touching Rs. 54-10 per hundred totals, towards the close there has been a slight rise values being quoted Rs. 55-4. The long holders have lost all hope of a rise in silver values consequently a very dull state is prevailing in the silver market. Long interest is almost absent. Stocks are very heavy amounting to over ten thousand bars. The daily consumption on the country is very poor being hardly 25 bars a day.

London: (*Air Mail week*).

Following stronger advices from China, the week opened with a stronger tendency, and being helped by some demand from speculators and the Indian Bazaars prices advanced to 18⅜d. for cash and 18 7/16d. for two months delivery, these figures being reached on the 28th ultimo.

This advantage, however, was not for long. The demand slackened and prices eased on general selling; the quotations on August 2nd for the respective deliveries being 17¾d. and 17⅞d.

Continental sales have continued: Indian Bazaars and speculators have been reselling, though there had been some buying on China account.

New York had been a seller. The offerings from this quarter gave the market an easy tone on most of the afternoons. Towards the end of the week, however, movements in the dollar exchange tended to restrict this pressure.

A Reuter message from Washington, dated the 1st August states that the 10,000,000 dollars of silver paid as a "token" war debt on June 15th, by the British Government is being held in San Fransisco Mint in bars, and silver certificates are to be issued against it.

The following were the United Kingdom Imports and Exports of Silver registered from midday on the 24th ultimo to midday on the 31st ultimo:—

SUGAR

The market during the period under review has ruled featureless quotations remaining more or less nominal at the last week's level. The undertone is steady. But the offtake is poor. Stocks are low, but will be augmented by the arrival of two steamers towards the close of the month.

Drastic reductions in sugar prices in Java for Indian ports are reported. Superior kinds of sugar is fixed at 5.75 fl. per 100 lbs. The prices reduced are 75 cents for Western India and 25 cents for Eastern Indian ports.

The stocks in the main Indian ports are:—

Bombay.—Since reporting last the maket has ruled very quiet with a decline in values, mainly due to new arrivals. The downward tendency continues.

The decline in forward positions is however not so appreciable.

Foreign.—The markets in New York has shown a small decline, while the London market has remained unchanged with an easier undertone. The Java has already announced a reduction in prices for Indian ports.

Imports of sugar in British Indian ports during the six months January to June, 1933, have amounted to 163 thousand tons against 211 thousand tons and 384 thousand tons during the same period in 1932 and 1931 respectively.

TEA

Sale No. 10 was held on the 14th and 15th August, 1933, when 15,800 packages of tea with export rights, 5,700 packages of leaf and 5,500 packages of dust were sold at an average of annas 9-10, 4-8 and 4-7 per lb. respectively. Quality offered though above the average showed a further falling off.

There was less demand in the Room and the sale passed with a dull tone.

Prices declined for all grades and sellers being unprepared to meet the market very little tea was knocked down in the room. Commons and low mediums were 3 to 9 pies lower and better mediums ½ to 1½ annas. Tippy teas, which have recently enjoyed exceptionally strong support, were rather neglected and the bids forthcoming for these kinds were usually 2 to 4 annas below last rates.

The decline in common teas brings them down to about the equivalent of the last quotations received from the London auctions.

The following are full particulars of sale No. 10:—

Teas with Export Rights.

	1933.	1932.	1931.

RESTRICTION.

The tea (exports) restriction scheme is already in force. The restriction of production is now contemplated. A scheme is shortly to be introduced in the Legislative Assembly restricting t e issue of fresh leases as well as the extension of areas already planted. The scheme has been prepared and is being submitted to a referandum of planters in Northern and Southern India. According to the scheme estates where best crop basis is under 320 lbs. of manufactured tea per acre and small estates manufacturing under a thousand maunds per year are allowed to produce 87 per cent. of their best year's output. Larger estates are to produce 77 per cent. of their best years output.

At the annual general meeting of the United Planters Association of South India *inter alia* a resolution was passed expressing regret at the disagreement between certain estates to the scheme of restriction of tea crop.

London:

During the current week 42,000 packages of Indian, 23,000 packages of Ceylon and 9,000 of Java tea were offered for sale. The market was strong and active. Low priced teas were maintained at last weeks level.

INDIAN TEA SALES.

At the London auctions on Aug. 14, 18,900 packages of Indian tea were submitted for sale.

There was a very good demand for all descriptions at firm rates. Prices generally were a farthing, and sometimes a half-penny per lb. higher.

The following were the lowest prices fetched during the day's auction.

	Last auction per lb.	To-day auction per lb.
Common Pekoe	9½d.	9¾d.
Common Broken Pekoe ...	9½d.	9½d.
Common Orange Pekoe ...	9¾d.	9½d.
Common B. O. Pekoe ...	9¾d.	10d.
Common B. P. Souchong ...	9¾d.	10d.

The following were the value prices:—

Clean Common Pekoe ...	9¾d.	10d.
Clean Common B. Pekoe ...	10d.	10⅛d.
Clean Common O. Pekoe ...	10d.	10⅛d.
Clean Common B. O. Pekoe	10⅛d.	10⅛d.
Clean C. B. P. Souchong ...	9¾d.	10⅛d.

CEYLON TEA SALES.

At the London auctions on August 15, 24,000 packages of Ceylon tea were submitted for sale.

There was generally a good competition. Prices were somewhat irregular and generally favouring sellers. Lower grades were about a farthing per lb. higher. Medium sorts were irregular but fetched higher prices where qualities showed an improvement.

The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day's auction per lb.
Common Pekoe ...	9¾d.	10⅛d.
Common Broken Pekoe ...	9¾d.	10d.
Common Orange Pekoe ...	11d.	11¾d.
Common B. O. Pekoe ...	10¼d.	10½d.

The following are the value prices:—

Clean Common Pekoe ...	10⅞d.	11d.
Clean Co. B. Pekoe ...	10⅞d.	11d.
C. C. O. Pekoe ...	11¼d.	12d.
C. C. B. O. Pekoe ...	11⅞d.	12d.

TEA IMPORTS.

London, Aug. 15.

Imports of Tea of all kinds into the United Kingdom during the month of July, 1933, compared with the previous month and with July, 1932, were as follow:—

000's Omitted.

	July 1932	June 1933	July 1933
From British East Indies (except Ceylon)	18,460	8,209	10,718 lb.
From Ceylon	15,470	13,947	10,899 ,,
From China (including Honkgong and Macao)	1,891	101	1,638 ,,
From other countries	4,854	8,895	4,763 ,,

GRAINS AND SEEDS

WHEAT.

(By Wire)

(From our Correspondent.)

Karachi, August 17.

The wheat market has been weak on easier international advices but to-day a little steadiness has set in, due to bullish operations of upcountry operators, notably from Hapur side. Ready is quoted at Rs. 24-8 and September at Rs. 24-3-6.

Since reporting last week the slow downward movement of prices has continued unarrested. At the moment there seems to be little hope that any considerable rise in the values of wheat may take place. Long holders are day after day liquidating. The weakness of American grain markets has been acting favourably for a decline.

There has been a slightly better demand for internal consumption. Millers also have shown some more interest at the decline. But the long bull operators are out of the market, their opinion being that the above local factors would prove of little assistance to keep the wheat prices up.

The "pegging" of grain prices in the Grain Exchanges in U.S.A., which was adopted during the recent slump has been removed and the Chicago grain market has resumed operations on Wednesday. The restriction of 5 cents a bushel daily fluctuation, up or down during the day, however, continues. It is hoped that the reopening of the markets will have a healthy effect.

HIDES, SKINS AND LEATHER

(By our correspondent.)

Calcutta, 18th August.

The market was a bit easier at the close of the week under review as the principal buyers stopped operating in view of the proximity of tanned hide sale in the London market to-day. The hide prices in the market next week will be based on the prices that may be obtained by the Madras tanners in to-day's auction in London. The *arathdars* are also waiting for the London telegrams and have not quoted lower prices. Some weak holders have quoted 0-3-9 per lb. for best Durbhangas ; but no transactions so far have taken place. "Calcutta slaughters" are also quoted 1 pice lower. It is expected that there will be a definite drop in the prices of lower quality cow hides, but better qualities will maintain their prices, as otherwise the supplies will be diverted to the Cawnpore market, where there is good demand for slaughtered qualities and fairly high prices are being offered for them.

There is very little change to report in the prices of buffalo hides. Local tanners have increased their input of these hides and prices have remained steady during the week.

The prices for hides and skins in the Calcutta market may be quoted as follows:—

Cow Hides.

	Per 20 lbs.
Dry framed Agras	Rs. 6 to 7 8
Durbhangas	,, 4 to 4 12
Patna	,, 3 12 to 4 4
Dry salted	,, 4 4 to 5

Buffalo Hides.

Dry arsenicated	Rs. 3 4 to 3 12

Goat Skins.

	Per 100 skins.
Good quality	Rs. 110 to 135
Ordinary	,, 75 to 95
Rejects	,, 45 ...

The goat skin market has continued dull and stocks are plentiful. In the absence of buyers, the prices have dropped considerably during the week.

Leather.—The local market continues dull, for all classes of leather. There were larger arrivals of foreign leather in the market this week.

Madras tanned hide market continued steady but the prices of tanned goat and sheep skins have dropped during the week. The prices for tanned hides and skins may be quoted as follows:—

(Quotations per lb.)

Tanned Cows, Upcountries (18/8½ lbs.) as. 10-6 to as. 11-3.
Tanned Cow, Upcountries (Lights) as. 13 to as. 13-3.
Tanned Cow Bangalores (8/8½ lbs. as. 11 to as. 11-6.
Tanned Cow, Bangalores (7/7½ lbs.) as. 11-6 to as. 12-6.
Tanned Cow, Bangalores (Light) as. 13-3 to as. 13-4.
Tanned Cow, Bezwadas (7/7½ lbs. as. 11-6 to as. 12-3.
Tanned Cow, Vizianagrams (7/7½ lbs.) as. 11-6 to as. 11-10.
Tanned Cow, Ellores (7/7½ lbs.) as. 11-6 to as. 11-10.
Tanned Buffalo Hides, as. 7-3 to as. 8.
Tanned Buff Calf Skins as. 11-3 to as. 11-10.
Tanned Cow Calf Skins Re. 1-1 to Re. 1-3-6.
Tanned Goat, Medium, Re. 1-10 to Re. 1-12.
Tanned Goat, Patna, Re. 1-2 to Re. 1-6.
Tanned Sheep, Medium, Re. 1-10 to Re. 1-14.
Tanned Sheep, Inferior Medium, Re. 1-8 to Re. 1-10.

Chrome Tanned Upper Leather.

The demand for upper leather from upcountry markets was somewhat better specially in view of the reports that Tanners are contemplating an increase in the prices of side leathers. The present price at which side leathers are still being sold does not leave any margin for the producer. The leather prices have not advanced to the same extent as the raw hide prices, and unless the tanners obain immediate advances in prices of leather it would be uneconomical for them to tan leathers. The Chinese tanned leather are still being sold at unremunerative prices according to the ideas of the modern Tanneries, who are at a loss to undersatnd as to how they are able to produce these leathers at practically raw hide prices prevailing to-day. The consumption of upper leather has dwindled considerably during the last three years in the Indian market, due principally to the change in fashion in the style of footwear. The Gandhi style and the Nehru style of chappals (Sandals) require lesser quantities of leather than the different varieties of slippers which they have replaced. The majority of the chappals are being supplied by Cawnpore and Madras manufacturers. The products of C. L. C. of Madras are being very much approved in the market.

Reports from Agra market are not satisfactory and the consumption of all classes of leather is below the normal. A large block of old stock of C. C. T. leathers have been sent there which were sold at about 3 as. per sq. ft.

Sales of bottom leathers were better, and large quantities of sole leather buffalo sides are being received both from Cawnpore and Madras. The C. L. C. Buffalo Bark Tanned hides have become popular for industrial purposes and are being largely used in place of imported hides.

GOLD EXPORT.

Bar gold, worth Rs. 98,85,458, was exported from Bombay for foreign countries by the P. and O. mail steamer *Ranpura* which sailed from Bombay for London on Saturday afternoon. Out of this consignment, gold, worth Rs. 18,85,635, was for London, option New York, Paris or Amsterdam ; gold worth Rs. 3,57,397 for Amsterdam, option London ; gold worth Rs. 1,49,334 for London, option Paris ; gold worth Rs. 5,62,905 for London, option Amsterdam ; gold worth Rs. 3,95,093 for London, option New York or Amsterdam ; gold worth Rs. 11,82,907 for Paris *via* London ; gold worth Rs. 16,48,120 for London, option Paris or Amsterdam, and the rest for London.

The total value of gold exported from Bombay since Great Britain went off the gold standard up-to-date amounts to Rs. 1,48,40,60,611.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

"INDIA IN 1983."

It is the mark of a quack to guarantee the time of cure and the pace of recovery. Likewise, it is the man of little vision who succumbs most easily to the alluring role of a political prophet. To foresee the future is to-day as difficult as it is tempting. For never was the world so pregnant with potentialities. The ideas and ideals which have been the motive power of progress over a century and half are by now a spent force. And where they survive, they are regarded with more scepticism than faith, more dread than hope. At the same time, deep undercurrents have begun to flow with yet unsuspected strength. Individual and social values are in the melting pot. The educated classes only feel the impact of new changes without being able to appraise them properly. The mental habits of an earlier generation are still a deadweight on modern thought and culture. We see the requirements of a new world, with time and distance alike annihilated by the progress of science, in sharp conflict with the ideas of an old world, which drank deep of the now muddied springs of nationalism. We no longer regard war as inevitable. But we see no escape from the conditions which in the past often precipitated it. We recognise that individualism is no longer the engine of progress but is now, like a broken dynamo, a dangerous thing. But we regard its obvious alternative with religious abhorrence. Even in the murky atmosphere of the post-War period, self-determination was accepted as necessary and wholesome to the health of the human race. But the domination of one people over another is no nearer. Above all, we have seen that the chances are that the most backward country will prove to be the most radical in the end.

* * *

The difference between the present age and other periods of flux in human affairs is that the conflict of ideals is to-day more conscious. The conflict of ideals in earlier periods of history was, in large part, a figment of the historian's imagination. But to-day it is a conflict between classes with fairly clear demarcations. The initial prize of such conflicts is as ever political power ; and the political machinery is consequently too often thrown out of gear. Political faith is sadly shaken, and political principles seem to call for revision. An age of such cultural chaos coincides with an age of economic chaos. The political conflict between nationalism and internationalism has its counterpart in economics, though the latter has developed on different and more dangerous lines and its significance is more far-reaching.

* * *

Think of the innumerable factors which have to be reckoned with before any reasonably accurate picture of the future can be conjured up and the boldest of the present generation must shirk from the task. It is not any less difficult in the case of India, because of the unlikelihood of her getting sufficient freedom to add to her riddles, and those of the rest of the world. In fact, the uncertainty of the struggle between India and Britain and the difficulty of foreseeing the number, nature and strength of the many bye-products, so to say, of that struggle render the Indian situation far more baffling than, for instance, the future of international politics in Europe or the economic policy of Great Britain in the next half century. And yet it is a picture of "India in 1983" which Sir Malcolm Hailey has attempted to draw in broad outline in an address to the Royal Empire Society Summer School at Oxford on July 22. Rather he strained his eyes to peer into the next half century of Indian history. In the lengthy preface to what was in origin a comment on the speech, we believe, we have said enough to show that to foresee the future, what is important is not a knowledge of past politics and current history, to use the expressive phrase of Sir John Seely, but a sympathetic understanding of movements that still lie below the surface. And for this Sir Malcolm is by bent and by training singularly unfitted. Which administrator of Sir Malcolm's type could have foretold in pre-war days that Russia was soon to be a vast laboratory for the most daring experiment in social organisation? It might be urged that a knowledge of Tsarist Russia could enable the prophecy of a new dictatorship, different in motivation but similar in ruthless completeness. But to dwell on the Soviet dictatorship and its methods is to harp on the incidental and the transient. To foresee Russian history of the last two decades, would have required the sympathy and insight of a Chesterfield, who, however vaguely, foresaw, in a sense, the French Revolution. It is easy to isolate and exaggerate certain features of past history and hold them up as suggestive of indelible national traits. To project a picture of the future it is not sufficient to produce the major lines of past development.

* * *

And this is what Sir Malcolm on his own admission, has endeavoured to do. His objectivity degenerates into an acceptance of the current reading of Indian conditions and Indian character. Though he is struck with the contrast between what has actually happened in India during the last twenty years and what one might have been led to expect on the basis of Sir John Strachey's well-known book on India, he does little to avoid the error to which he drew attention. He accepts that "if there is one feature of modern India which is more striking than another, it is the revelation of its accessibility to mass movement." He sees there is enough in the past to show that "India is no longer in the same plastic state ; certainly the chief word does not rest with the administrative forces." But nowhere in the lengthy address is there any attempt to determine the relation of the "administrative forces" to the "mass movements" or the character and motive of such "mass movements." To examine these, perhaps, seem to Sir Malcolm to detract from the objectivity of his thesis.

* * *

All that he is content to predict of the India of 1983 is that, as capital is leaving the old traditional recesses of hoarding and money-lending for a fluid use for larger purposes, India would continue to move along definite lines of protectionism with an increasing absorption of her own raw materials ; that "we shall see in politics and social life a good deal more of the manufacturing interest and we shall lose something of the outlook which characterises the predominance of the agricultural classes" ; that the latter would demand with increasing insistance for the assistance of the State in the adjustment of relations of landlords and tenants to correspond with economic facts ; that we may see the rise in a large scale of a class having the characteristics of small peasant proprietors ; that industrial

labour may, through its growing solidarity, acquire an influence beyond its numbers. In the political sphere, though Sir Malcolm is essentially a doer and not a talker, and much less a thinker, he urges that the mainspring of political activity in India at present and in the recent past "was not anything that India had drawn from *its* own traditions." When the present process of superimposition of constitutions from without and demands inspired by foreign ideals works itself out, "it may well be," Sir Malcolm thinks, "that India may find herself best suited with something quite different from Parliamentary Government in our form ; something, that is, in the nature of a directorate sufficiently responsive to popular needs and ideas to gain general acquiescence but not dependent in the constitutional sense on the majority vote."

* * *

We have endeavoured to give in short compass the gist of Sir Malcolm's reasoning and conclusions. Most of it is only the expression of the belief, natural enough, that the developments which are taking place under our eyes will soon work themselves to their logical conclusion. The consequences of the apparently inevitable industrialisation of India are not difficult to indicate. Nor can there be any doubt that whatever the extent of the political freedom of India in the near future, it would be "progressively difficult to maintain that unitary control of policy from the Centre which characterised the past." What one would seek to know is not the logical outcome of the more discernible tendencies of the past, which can be read in the open book of history, but the implication of the changes in the political and economic faith of the countries which India may aspire, and may reasonably be expected, to follow.

* * *

The India of the future must be a synthesis of the changes in her own national spirit and the changes in the ideals and actions of the outer world. Internally, it sill remains for the people, or, if you like, the peoples, of India to rub off the angularities of classes, to remove the antipathies and animosities of religions and to bring the States and Provinces under the impulse of a common national sentiment. The foreign domination had served to create a vague feeling of such a sentiment in the earlier stages. In the later stages, the pressure has had, strangely enough, the diametrically opposite effect of accentuating the faults in the social strata. If we are to be led by the developments of the last ten years, we should say that the struggle for political freedom must yield many a hateful bye-product. If all institutions and ideas are, as, indeed, they must be, thrown into the boiling cauldron, who knows what noxious fumes may not emanate from this vicious brew?

* * *

The future may not be so baffling, if we could assume that the policy of the British Government towards this country would be helpful to the consolidation of the Indian nation. Or that India could throw up a leadership and a rank and file sufficiently powerful to keep the internal discords under control and to secure the essential freedom of action from the British Government. We do not regard either as a likely contingency. We should expect the process of national consolidation to begin only after those sections, which seek to advance their interests by an exaggeration of the separatist tendencies, have suffered a cruel disillusionment, alike as to their own insular tendencies, and as to the value of the external support on which they have relied. The latter is yet a long process.

* * *

In the absence of such a party and in the absence of a helpful attitude on the part of the British Government, the distraction of parties and politics must be continuously on the increase, creating social ills of a mutually aggravating character. Unless Great Britain finds at some time in the future that for the solution of her own internal problems, the political peace of India is essential, the social ills referred to earlier will receive their quietus only when they have run their full, fatal course.

* * *

To speculate upon this aspect of the future of Indian politics is well-nigh futile. One may accept tentatively the view that the economic development might provide the corrective to the fissiparous tendencies of Indian politics. Where religion and local affiliations tend to rend apart, economic interests and economic necessity might well heal the breach. It is idle to overlook the optimism underlying this view ; but the optimism is not altogether unreasonable. After all, the cleavages are in part due to the economic pinch. The economic class war is already regarded by the leaders of labour as the best antidote to communalism in its present form. If it is realised that there is no prospect of economic amelioration without healthy co-operation among all classes, it might be easier to rally the country round an adequate economic programme than round the banner of political revolt. Then the forms of government would necessarily have to be suited to the functions which the Government will be called upon to perform. The "genius of the Indian people," which is repeated as a catchword by many and emphasised by the Britishers less out of a belief in its separate identity than out of a desire to suggest that the political institutions she demands are not what she really wants, will have to yield place, even if it exists in reality, to the requirements of a new social organisation.

* * *

In fact, in any up-to-date theory of politics we have to reckon with the impact of modern economy on the structure of the State and Government. Though it requires no extra-ordinary insight to recognise that the nature of the State and the structure of Government are conditioned by the functions which they have to discharge, the full significance of this recognition to any theory of politics is yet inadequately appreciated. Every theory of politics, not excluding the purely juridical, betrays the traces of the obsession that social life must necessarily be a struggle for power for one class to dominate over another. In its crudest form it represents the State as the rampart against external aggression. Less crude is the protection of life and property from internal disorder. But both assume the desire on the part of some to dispossess and dominate over others. The refinements which modern democracy has been able to effect do not reach farther than a transmutation of the old struggle into the competition of rival parties for headship of the State. The success of the party government in Great Britain is due mainly if not solely, to the prescription of the limits within which the party in power may seek to appropriate the spoils of power. And this in turn must be attributed to the substantial identity of class purpose between the two historic parties. To the extent that other classes gain effective representation in Parliament, the party system must deteriorate.

* * *

The question, therefore, is not whether the genius of the Indian nation is suited to the working of representative government through the machinery of a party system, but whether the purposes of political classes in the near future will admit of such bilateral regimentation. We may say with little hesitation that no country in the world, not even Great Britain will find it passible to reduce its political life to an arena for the friendly contests of two principal parties.

* * *

realising them have secured common agreement. If the craving of one class to advance itself at the expense of another, whether in frank hostility or under cover of provoking platitudes regarding "fair field and no favour", disappears, then government is reduced to the accomplishment of specific tasks. Differences there might be about the relative value of alternative social ends ; but they would not be such as to occasion bitterness in feeling and friction in working.

* * *

Give the requisite good will, society could look to science for narrowing the sphere of controversy and removing therefrom most of the questions on which men have been divided and warring passions have been engendered. All obstacles notwithstanding, we do believe that the time is not far off when government would come to be viewed as an aggregate of definite tasks in which the expert, and not the mere vote-catcher, must have the decisive voice. The beginnings of this development are already discernible. In most countries of the world it is recognised that the control of currency and exchange is an intricate matter in which the politicians as such must be content to take a secondary place. In the same way, the administration of the commercial undertakings of the State would be less susceptible to the changes in the fortunes of political parties than in the past. When, as is most likely, there is a general acceptance of the need for economic planning, the Council which directs economic activity will acquire a similar immunity from party control. This development might conceivably proceed to a point at which the politicians will have nothing left to them except to regulate the rules of their own fatuous game.

* * *

By saying this we should not be understood to suggest that there is a social good in undermining the political authority of the sovereign state. That authority is, and must always remain, sacrosanct. The change must occur not in the supremacy of the general will, but in the conception of government as an organ of coercion ready to crush opposition and even to provoke it where there is none. The coercive aspect of the State it is, that must fade from memory. To us it is suggestive of a world of thought that in America the Government in power is referred to as the Administration and that in India we talk of government even where the ownership of railways or land is referred to. The growing solidarity of public interest is bound to sweep away these relics of a barbarous age.

* * *

The point we seek to emphasise is that in politics, the success of a nation lies not in evolving a constitution which bears a mysterious relation to the national genius but in achieving what we have called solidarity of public interest. It is becoming the fashion to regard democracy as a discredited ideal ; and the Britisher indulges in it most, for to dwell on the failure of democracy among other peoples is to enhance the unique glory of his own. It is forgotten that the sovereignty of the people does not rest on a divine right any more than despotism of medieval monarchs. It is expedient for the common good that the people should be sovereign, for any system of government other than democratic is but a gamble on the probity of an individual or a class. There cannot, therefore, be any escape from democracy, unless society is prepared to incur the risk and the cost of experiments in despotism. With popular sovereignty rooted so deeply in the consciousness of the public, it is doubtful if any individual or party can succeed in imposing for long his, or its, arbitrary authority on the whole nation. Despotism, if it is willingly acquiesced in, ceases to be such ; and if it is unpopular, it is bound to go down. The European dictatorships from which facile theories are sought to be developed are in many instances the result of successful deceipt of the people. The problem in India is not to hit at the right type of political institutions—for they depend—but to get the free hand for the leaders to weld a truly solid nation. The most elementary condition of free political institutions, namely, a literate public, is still lacking in this country. And the intrusions of foreigners are least welcome in the sphere of speculation about the future.

TATA STEEL.

Amongst Indian joint stock concerns, the Tata Iron and Steel Company is the most colossal and spectacular. Its capital plan is elaborate and of vast proportions. The paid-up capital (in the shape of first preference, second preference, ordinary and deferred shares) is Rs. 10½ crores. Directly or indirectly through debentures, the borrowings come to Rs. 3.60 crores. Working capital liability fluctuates roundabout Rs. 1½ crores. On the assets side, gross block expenditure reaches the astounding figure of Rs. 24¼ crores. Nearly Rs. 10 crores has so far been set aside for depreciation, bringing the net block value to Rs. 14½ crores. Stocks and stores are of the order of Rs. 2¼ crores. So large are the sales effected that credit for amounts up to Rs. ¾ crores has to be given and kept outstanding. Annual sales even in a year of poor demand and low prices are Rs. 5¼ crores. In normal conditions, the sales might come to nearer the ten crore mark. Production expenses are in the vicinity of Rs. 3½ crores. These figures are amazing enough.

* * *

A few facts may be set down, which are no less awe-inspiring. A regular town, complete in every particular and new in the completest sense, had to be built up. The town buildings stand in the books at Rs. 1,21 lakhs. Sanitary works have cost Rs. 50 lakhs. Electric light and other amenities account

ORIENTAL GOVERNMENT SECURITY

LIFE ASSURANCE CO., LTD.

INCORPORATED IN INDIA 1874

HEAD OFFICE : BOMBAY

1932 RESULTS

New Business: 29,982 Policies Assuring Rs. 594 Lakhs
Claims Paid During The Year : 3,816 for Rs. 85 Lakhs
Funds Increased to nearly Rs. 12½ Crores.
Policies in Force : 2,07,531 Assuring with Bonuses nearly Rs. 44 Crores.
Low Expense Ratio of 21% of the Premium Income.

NEXT DIVISION OF PROFITS

falls to be made as at 31st December, 1933.

Participating Policies effected in the Current Year will be entitled to participate in the Division of Profits if in force as at 31st December, 1933.

Applications for further information should be addressed to:

THE BRANCH SECRETARY,
ORIENTAL ASSURANCE BUILDINGS,
2, Clive Row, CALCUTTA.

or to any of the Company's other offices as undernoted:

AGRA, AJMER, AHMEDABAD, ALLAHABAD, AMBALA, BANGALORE, BAREILLY, BEZWADA, BHOPAL, COLOMBO, DACCA, DELHI, GAUHATI, JALGAON, KARACHI, KUALA LUMPUR, LAHORE, LUCKNOW, MADRAS, MANDALAY, MARCARA, MOMBASA, NAGPUR, PATNA, POONA, RAIPUR, RAJSHAHI, RANCHI, RANGOON, RAWALPINDI, SINGAPORE, SUKKUR, TRICHINOPOLY, TRIVANDRUM, VIZAGAPATAM

for Rs. 8.4 lakhs. Office and administration buildings have meant Rs. 20.23 lakhs. Water supply has involved an outlay of Rs. 51.94 lakhs. Town land and roads have absorbed Rs. 20.95 lakhs. Apart from the main manufacturing plants, the adjuncts have, thus, cost nearly Rs. $2\frac{3}{4}$ crores. Apart from the manufacturing cost, the maintenance of the town and the provision of the amenities should be costing (exclusive of interest on the outlay) Rs. 25 lakhs per year.

* * *

Let us turn to another aspect of the matter. The Tata Steel Company, next to the Railways, is the biggest consumer of coal (5 million tons per year). The labour employed is 16,000. The number of families dependant on this industry (inclusive of up-country selling agents, brokers, etc.) must be over 25,000. Sixteen special trains steam into Jamshedpur every day, carrying raw materials. Eleven special trains steam out of the Company's yard, to distribute the manufactured products over the far-flung districts. A substantial portion of the Bengal Nagpur Railway earnings is due to the freight furnished by the Tatas. If the factory at Jamshedpur is forced into idleness, the B. N. R. would also have enforced idleness in its traffic. Such is the great part played by the Tata Steel concern in India's economy.

* * *

In times of crisis, its usefulness has been fully proved. The following description extracted from "Tata Facts" (advertised by the Company with the object of placating its "enemies") shows that the Company was tried and not found wanting :

> When the furnaces at Sakchi had been in full blast for three years the Empbire was plunged into war. Germans who had been in charge of the open-hearth furnaces were at once interned, and their places were taken by an English crew. From August, 1914, until the war ended, the Company supplied the Government with 1,500 miles of rails, and a large amount of material for the campaign in Mesopotamia, Egypt, Salonica and East Africa. Nearly 300,000 tons of steel material was provided by the firm. Had the works not existed, the supplies would have been drawn from the United States, and at much greater cost, owing to the higher prices, the exorbitant rates for freight and insurance, and the risk of sub-marine warfare, with its losses and consequent delay.
>
> Instead of demanding an excessive profit during the war, the Company sold its steel at one-third to one-quarter of the price which it would have realized in Calcutta. It was the same with pig iron, of which some 4,000 tons were sold to the Government at Rs. 11 a ton below the price of the Cleveland iron without even taking into account the additional freightage, insurance, and other charges involved in transport from England to the East. Profitable as was pig iron at the time the Company, on realizing the urgent need for steel, added two more open-hearth furnaces to its steel plant, and converted most of its output of iron into steel. In 1916 the Company, for the first time in India, made ferro-manganese, an essential alloy in steel manufacture, and sold it in America, for some months, at a profitable price. But with a loyal determination to help the Government, the Tata Company, agreed not to manufacture this alloy, and utilized the blast furnaces for making pig iron, a sacrifice by which, from one furnace alone, they relinquished a profit of upwards of 10 million rupees. During the war the Tata steel was supplied at controlled price, not only to the various expeditions, but to the Indian Railways, and to the Military and Civil Departments of the Indian Government.

* * * * *

The Tata Iron and Steel Company is of interest as it is connected with a Key Industry. More. It is a National Industry as it is a concern, the success of which is, in the completest way, a triumph and glory of Indian enterprise. Its success will, in great part, remove the need for India to have to hang down her head when she is taunted for her industrial backwardness. After the trials and ordeals through which the Company passed for the best part of a decade, a brighter future is promised, as will become apparent from a study of the balance-sheet for 1932-33 issued this week and commented on, in detail, by our Bombay Correspondent. We entirely agree with our Correspondent's verdict :

> "There has been notable improvement from every point of view. Judged by every canon, the achievements of 1932-33 may be considered a proud feather in the cap of the new *personnel*. The balance-sheet has been cleaned up in a number of ways. There are abundant indications that Fate has been as kindly and gracious as the management has been keen and alive."

That so fulsome a tribute has been possible in regard to the operations in a year of continued—and even intensified—depression discloses an achievement all the more noteworthy. Demand for steel throughout the world was markedly on the small side, 1932 consumption being barely 40 per cent. of that for 1929. In India, a special factor was that the Railways, which used to be a big consumer of the Tata's output, were on starvation rations. Sales of Tata rails in 1932-33 were 27.88 per cent. less than in 1931-32; and the sales of the latter year were 65.73 per cent. less than in 1930-31. Fishplates were 4.44 less than in 1931-32 (which, in turn, showed a shrinkage of 47.28 per cent.). Sleeper Bar and Sleepers met with a demand reduced by no less than 66.84 per cent. In the early part of the year, prices of Continental steel, which is now the main source of competition with the Company's products, fell still further below the levels of 1931-32. Owing to poorer purchasing power in the country and the smaller number of Government or quasi-government construction, tested steel was very much less in demand. It is on tested steel that the margin of profit is greatest. The necessity of selling a larger proportion of the Company's output than ever previous in the more distant Indian markets involved increased expenditure on internal freights. In face of these handicaps due alike to international and domestic factors, it is

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

> "It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

OVER 86 YEARS' SERVICE IN INDIA

The STANDARD LIFE ASSURANCE COMPANY
ESTABLISHED 1825

Head Office: 3, George Street, Edinburgh.
London: 46, Que Victoria St., E.C. 4. A, Pall Mall, S.W. 1.

HEAD OFFICE FOR INDIA:
Standard Buildings, 32, Dalhousie Square, Calcutta.

creditable that the Company's output showed only a reduction of 5 per cent. as compared with the high record of 1931-32. In this context, the following passage from the Directors' report is interesting :

> "In these circumstances the Company was not able to maintain its output at the record high figure of 1931-32 ; the output of 1932-33 showed a reduction of about 5 per cent. The Company, however, by concentration on economy and economy and efficiency throughout all its activities, succeeded in reducing its costs of operation still further. While this reduction was assisted by falls in the prices or costs of raw materials, the greater part was due to increasing efficiency throughout and to the concentration of production on the more economical parts of the plant which resulted from the closing down of the old steam-driven mills and the handfired boilers.
>
> An additional important factor in the improvement of the results for the year was the success achieved in increasing the output of sheets up to the full estimated capacity of the sheet mills, and the conversion of a larger proportion of the output into the more profitable galvanised sheets. In February, 1932, the Company authorised the Commerce Member to inform the Legislature that it would, during 1932-33, produce about 4,000 tons of galvanised sheet per month. The actual output for the year was practically 47,000 tons, a result for which all concerned deserve congratulation".

Economy, however, has not meant reduced wages for labour. With justifiable pride, the Directors claim credit for this enlightened attitude towards the workmen.

> "Throughout the period of acute depression through which the Company has been passing, the utmost care has been observed to see that its labour suffered as little hardship as possible. No reduction in the rate of wages of labour has been made in the case of employees drawing less than Rs. 250 per month. There is reason to believe that labour on the whole appreciates the fact that the Company is doing its best to face the depression with the minimum of hardship for its staff".

At the same time, every effort is being made to speed up the pace of Indianisation. The covenanted staff were further reduced from 87 to 77 in the year. In this programme of Indianisation, the Technical Institute, liberally endowed and efficiently run by the Tatas, is bound to prove of great value.

BENGAL WATERWAYS BOARD.

The Bengal Waterways Bill, which was introduced in the Legislative Council on Tuesday last and promptly referred to a Select Committee, is a belated response to the long-standing demand for a methodical treatment of the problems, connected with the water-ways of this province. Thanks to the persistent agitation in the press and memoranda submitted repeatedly by the various commercial bodies, it is now common knowledge that round the Bengal waterways are gathered a variety of problems that bear intimately on the material well-being of the people. In the first place, the Waterways are, or rather should be, a cheap form of internal communication for goods and passengers; and if possibilities in this regard are fully explored, the Waterways might well lead to considerable increase of Bengal's wealth. Secondly, owing to the neglect of the waterways, they have proved to be a fertile breeding ground of mosquitos and a veritable Pandora's Box from which the malarial scourage has spared far and wide. Thirdly, the Waterways have been the chief means of the spread of the hyacinth, a pest whose potentiality for runing the wealth of the province might seem almost incredible to those who have no first-hand knowledge of its gravity. The public have naturally demanded that a problem of such a complicated nature and of such far-reaching importance should have the prime attention of any government which has regard for the public interest. For reasons which are not difficult to guess, the question has been shelved for a long time; and it has been the good fortune of Sir Abdul Karim Ghuznavi to sponsor a measure which is only the more welcome for its being belated.

The proposal is based on the report of a committee specially appointed to enquire into the question. It is obvious that a problem, which does not admit of a speedy or final solution and which has, therefore, to be tackled persistently over a long period of time, is best committed to the charge of a special Statutory Board formed on the lines of the Improvement Trust. Such a body endowed with the power to derive its own revenue from specified sources and within certain limits would be in a position to give its whole attention to the questions connected with the waterways, study them in all their bearings and chalk out a programme of work which holds promise of adequate solution in the end. The advantage in constituting such a board lies in the fact that it would be able, unlike purely government departments to feel its way at every step and suit its actions and policies to the changing conditions of the moment. There is, thus, a substantial agreement on the desirability of constituting a Waterways Board, which could take over the navigable waterways of Bengal from the Irrigation Department and administer and maintain them throughout the Presidency. Whether such a Board would proceed on proper lines and would bring to bear the best ability of the most considered methods on the solution of the problem of Waterways in Bengal would necessarily depend on the personnel of the Board and, it must be confessed, to a larger extent, on the amount of vigilant direction which public opinion would afford to those who are directly in charge of this work. The constitution of the Board would naturally be designed on the lines of other statutory public which have to administer matters closely related to the general well-being of the public and particularly to the progress of trade and commerce in the province.

* * *

We have already said enough to show that the waterways concern the trading and commercial interests, on account of their being the means of communication, and the general public through the presence of the water hyacinth and its relation to the spread of malaria. The proposed Trust consists, therefore, of nine trustees. Commercial interests would be represented by one member of the Bengal Chamber of Commerce and two trustees elected by bodies representing the interests of the Indian mercantile community. Two members, one a Hindu and the other a Moslem, would be chosen by the Legislative Council. Two trustees would be nominated by the Government, and of the remaining two the Government would appoint one as chairman; and the Chairman of the Port Commissioners, ex-officio, or a person appointed under section 7, would be the other.

* * *

Though the constitution of the Board may be open to criticism on the ground of needless exaggeration of the principle of sectional representation, our prime concern is the adequacy of the financial provision for the activities of the Board. On the Government's own calculations, the minimum expenditure of the Trust per annum would come to Rs. 15.94 lakhs, and of this sum about Rs. 7 lakhs exclusive of establishment charges would be available for maintenance, extension and improvement of navigation works. It has also been calculated that in normal times the income of the Trust would not be less than roughly 23 lakhs per annum exclusive of the income derived from license fees imposed on country boats and other vessels of a certain class and above certain size which could not at present be estimated with any degree of accuracy.

* * *

The Government may naturally be expected to make a contribution to the revenues of the Trust, not only because the purposes of the Trust are a major concern of Government, but also because the Trust would be taking over the establishment of other charges, which have hitherto been incurred

by the Government and which the Government would have to continue to incur but for the constitution of the Board. The expert committee recommended, on the basis of its own estimate of the savings of Government expenditure likely to result from the formation of the Trust, that the Government contribution should be Rs. 5 lakhs. In his speech on the Bill, Sir Abdel Kerim contended that the Committee had erroneously included the whole of the charge for the establishment or works which would be taken over by the Trust. "As the Government," contends Sir Abdel, "would not be relieved to any great extent, of these charges, the saving would not amount to more than 2.31 lakhs." At the same time, the Minister holds out the hope that when the loans on account of the dredgers have been paid off, the Government might be able to make an increased grant. At the moment of writing, we have not the data necessary to make a judgment as to the exact saving that Government would be able to effect, on account of the transference of these functions to the new Water-ways Trust. The Government have also pointed out that he income from navigation works which would be handed over to the Trust could be estimated only at 8.4 lakhs as against Rs. 9½ lakhs estimated by the Committee. In the same way, the proceeds of the estimated taxation on steamer freights and fares came to 11½ lakhs as compared with Rs. 17 lakhs estimated by the Committee before the present slump in trade. Despite these apparent over-estimates of revenue and despite the fear generally entertained that with the levy of new steamer rates and fares there would be a diversion of traffic from steamers to railways and country boats, the Government believe that the Trust would be well able to pay its way and that, if conditions return to normal, there is every prospect of a considerable increase in income which would enable the Trust to extend its activities.

* * *

In the peculiar conditions that obtain to-day it is, indeed, difficult to see how the Trust could effect any appreciable expansion of its income without endangering the very sources from which they seek to derive it. The two classes, on which the Trust can conceivably attempt to impose its levies, are the inland steamers and the country boats, which are now plying and whose number and taxable capacity have not yet been estimated with any degree of accuracy. But it requires no investigation to conclude that the classes which are plying these boats are living on the very margin of subsistence and are, therefore, but lean kine for the taxgatherer's knife. As for the inland steamers, they are the limbs of powerful vested interests in the country; and it remains to be seen whether the Trust would gain sufficient freedom of action to subject these interests to the levies which, from the point of view of their taxable capacity as well as from the point of view of the amenities which they would get in return therefore, are reasonable and equitable. But we are inclined to believe that for some time, till trade again starts on the upswing, the new Waterways Trust might be content to prepare its plans of action postponing their execution for a time when the requisite revenue will be yielded by trade and commerce more cheerfully because they could be afforded more easily. For the present, it is well that a problem, which has been consistently neglected for a long time has at last been given its due attention, and that preparation for its solution has been made by the constitution of an independent statutory authority.

A FOOL'S PARADISE.

Economics has long ceased to be, even if it ever was, a definite body of objective knowledge. Endless varieties of it have developed of late, each leaving the trained economist gasping at what it all means. The following from Lord Rothermere affords relief from the wearisome task of calculating the balance of advantage in international exchange of commodities:

* * *

"As compensation for bearing the cost of Indian defence Great Britain should have free entry for her goods into India. The Indian market is of our creation. But for our efforts in the past it would be to-day no more than a disorganized mass of primitive peasants incapable of buying imported goods at all . . . We have the right to send our soldiers. Free entry for British products would be a small price for India and the Crown Colonies to pay for their defence by British. India's imports are rather more than £100,000,000 a year. Of that less than £35,000,000 comes from this country and less than £9,000,000 from the rest of the Empire. Fifty million pounds' worth of annual trade to which we are entitled is escaping us in India. No foreign goods that Britain can possibly supply should be allowed to enter Indian ports."

BURN & COMPANY, LIMITED.

NOTICE

NOTICE is hereby given that the Thirty-ninth Ordinary General Meeting of the above-named Company will be held at the Registered Office No. 12, Mission Row, Calcutta, on Thursday the 24th day of August, 1933, at 11 a.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the year ended 30th April, 1933 and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 17th to 24th August, 193, both days inclusive.

BY ORDER OF THE BOARD,
BURN & Co.,
Managing Agents.

DATED, CALCUTTA,
The 16th August, 1933.

THE CALCUTTA JUTE MANUFACTURING CO., LD.

NOTICE

NOTICE is hereby given that the Sixth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 4, Lyons Range, Calcutta, at 4 p.m., on Monday, the 21st August, 1933, for the purpose of receiving and passing the Directors' Report and Accounts for the half-year ended 30th June, 1933, and transacting such other business as may be brought forward.

The Transfer Register will be closed from 18th to 21st August, 1933, both days inclusive.

Managing Director,
CALCUTTA JUTE MANUFACTURING CO., LD.

CALCUTTA,
11th August, 1933.

We are not so immodest as to believe ourselves to be equal to commenting on this. It is such an amalgam of history, historical speculation, accountancy, economics, practical business and military strategy—there is also talk of sending soldiers— that a committee of encyclopediae knowledge is required to fathom its wisdom. Meanwhile, the Jap is in the citadel of which Lord Rothermere supposes himself to be in command. There is no paradise to compare with a fool's paradise !

THE HINDUSTHAN CO-OPERATIVE INSURANCE SOCIETY LD.

Valuation Report.

Hindusthan Co-operative Insurance Society Ld., of Calcutta have just published the results of the Fifth quinquennial valuation of their assets and liabilities as on April 30, 1932. The results are published rather late and this may be explained by the fact that their consulting Actuary, Mr. Louis E. Clinton, F.I.A., resides in London and that much time is wasted in correspondence and sending the requisite cards etc., for Valuation. We may suggest to the Society that it will be better if they release the Report earlier by adopting some system of continuous recording of actuarial details.

* * *

The results of the Valuation are satisfactory and show a surplus of Rs. 19 lakhs out of a life fund of Rs. 1,19 lakhs. The Directors have declared a bonus of Rs. 23 per thousand per annum on Endowment assurances and Rs. 20 per thousand per annum on Whole Life policies. The above rates apply to the policies issued at their new enhanced rates (which came into force from August 1, 1930). On policies issued at the old rates, the bonus declared is Rs. 21 and Rs. 15 on Endowment and Whole Life policies respectively. It is pointed out that in fairness to the policyholders under the new enhanced rates, they get a slightly higher rate of bonus. But a major portion of the surplus disclosed has arisen out of the accumulated premiums of the old policyholders, especially in view of the fact that not more than two annual premiums have been paid by the new policyholders and that nearly the whole of the first annual premium is spent in procuring the business. As such, this distinction does not appear to be altogether fair.

* * *

The spectacular increase in the bonus rate of Rs. 5 per thousand per annum on the Whole Life policies and Rs. 3 per thousand per annum on Endowment policies is, indeed, a good achievement. But, the rapid increase in the new business of the Society and the heavy decline in the interest rate of the world money market may make difficult the maintaining, let alone the increasing, of the present rate in future valuations. We trust the directors and the actuary would have carefully considered the above factors before declaring the bonus rates.

* * *

It is noteworthy that a big relaxation has been made in the matter of vesting of bonus and in the rtae of the interim bonus. Under the previous valuation of 1927, no bonus will vest to a policy unless five full policy years have lapsed after the issue of the policy, and five annual premiums have been paid. Now the consulting actuary has recommended the reduction to two years and two annual premiums. At the same time, the interim bonus rates (for policies becoming claims before the next valuation date in 1937) have been increased to the full rates of the present valuation, while formerly it was two-thirds of the previous valuation rates. In this connection, it may be mentioned that almost all English companies give full interim bonus rates and it is satisfactory to note that Indian Insurance Companies have begun to follow this principle.

* * *

The following table shows the comparative figures of the valuation details under the present valuation and that of the previous one in 1927 :—

(Amounts in thousands Rs.)

Year	Total business in force on April 30	Total premiums received during quinquennium ending April 30	Total life fund on April 30	Average sum assured	Valuation reserve	Gross surplus on April 30	Bonus rate	
							End policy	Whole life policy
1927	2,70,48	43,55	69,48	1·61	59,98	9,50	20	15
1932	5,62 76	1,62,57	1,18,60	1·68	99,63	18,97	23	20

The total business in force has more than doubled during the five years under review. It is noteworthy

that the New Business of the Society has risen very rapidly from Rs. 1 crore in 1928-29 to more than Rs. 2 crores in 1932-33 and that the Society is occupying the second place for the past three years in the matter of New Business among Indian Life Offices.

* * *

While we appreciate the splendid progress which the Society has made during recent years, we have to point out that the expense ratio (about 34 per cent.) is rather high for such a well-established office. Hindustan has long passed the age when it should buy business at any cost. As we have already pointed out in these columns, it has come to the stage when it should dictate its own terms for getting business. We hope that the Directors will pay immediate attention to this matter and concentrate their efforts on procuring more economical business. We wish the Society every success and the encouragement it deserves.

RESERVE BANK.

The Reserve Bank proposal, as contained in the report of the Committee that met in London, must be considered satisfactory as a basis for discussion. In broad outline, the features are such as should prove acceptable. In fact, the constitution and functions of a central banking institution may be said to have become standardised; and the task before the Committee was considerably lightened because of the vast experience available in regard to the institutions created in the post-war period. The real task of the Committee was to devise those special clauses that should be considered necessary in view of the peculiar conditions of this country. The question that arises is therefore simple: Have the Committee taken due note of the personal factors? And are the measures suggested by them apt and suitable in relation thereto? In the report it is assumed that "the best device, which the practical experience of other countries has evolved for achieving this object (namely, freedom from any political influence) is that the capital of the bank should be held by private shareholders." In all our discussions with financial authorities, the only reason that we have heard urged in favour of shareholders' scheme is that this is the simplest device for securing an electorate for the selection of directors. For our part, we are prepared to put forward schemes whereby a suitable directorate could be elected. While granting that the experience of other countries is in favour of a shareholders' bank, and while we concede that elaborate precautions have been taken in the scheme to prevent any caucus or clique securing control of shares, we do consider that the proposal of a State Bank should have been given far more consideration—especially as Sir B. N. Mitra Banking Committee, recommended unanimously the formation of a State Bank.

* * *

In the next place there should be considerable difference of opinion as to the wisdom of giving to the Governor-General the power to nominate four directors. It is the view of the European members that the Governor-General in his discretion should have the power to appoint four members when the new constitution comes into being. What is meant by the phrase "Governor-General in his discretion?" Sir Samuel Hoare has, more than once, made it plain that the Governor-General's special responsibilities are to be discharged under strict responsibility to the Home Government. In other words, the "Governor-General in his discretion" can be easily paraphrased into "Governor-General as he is told to do by the Secretary of State and his advisers". It means that it is the voice of the Secretary of State and the London financial interests that will prevail in regard as to the composition of the directorate and in regard to the appointment of the Managing Governor and Deputy Governor. If the Bank is to be free from political influences on the Indian side, equally should it be free from the political infiuence exerted from London. The Indian Legislative Assembly can never be a party to confer this power on the Governor-General.

* * *

Nor can the Assembly agree to the Reserve Bank Bill being put on the Statute Book without adequate consideration of the various factors connected with the present ratio. So far as the sterling exchange sandard as such is concerned, we can have no objection so long as the present confusion prevails as regards the future of the gold standard. But we do maintain that eighteenpence even on a sterling link is a ratio that has been proved to be greatly harmful to India. A study of the indices of whosesale prices in India, Britain and other parts of the world would prove that the ratio of eighteenpence is responsible for a far steeper fall in Rupee prices than in the prices of other countries. It is an admitted fact that but for gold exports, our international balance sheet would be disrupted beyond recognition. The question of rectifying the merchandise position is urgent and imperative. The question which the Assembly will have to consider is whether the lowering of the ratio is not the easiest, best and most popular way of rectifying the position in this regard.

* * *

In regard to the other details of the Reserve Bank proposal, especially those on which further discussion is to take place in India as suggested in the Parliamentary paper, we are considering the advisability of bringing out a special unmber; and we would, therefore, defer detailed consideration.

AMSTERDAM BANK RATE.

Another important event of the week is the reduction of the official minimum of the Bank of Amsterdam from 3½ per cent. to 3 per cent. This is apparently the last of the reductions, which the Bank has thought fit to effect from the level 4½ per cent., to which the Bank rate was raised in the confusion of international finance, which followed the failure of the attempts of the World Economic Conference to secure a stabilisation agreement between France Great Britain and America. It will be remembered that the failure of the stabilisation agreement was the signal for speculative bear raids on the gold currencies of the world. For, it was naturally taken for granted that, in the panicky conditions resulting from America's avowal of her intention to depreciate the dollar without limit, the gold standard countries would be unable to maintain the gold standard and will necessarily be forced to abandon the link. Though such bear raids affected all currencies and even the franc was threatened for a while, the guilder it was that was subject to the heaviest pressure from without. The circumstances in which it was thought that Holland was not averse to the abandonment of the gold standard were detailed in these colums at the time. But it is important here to note that, as a consequence of these trials to her currency, the rate of the Bank of Amsterdam was raised from 3½ to 4½ per cent. on June 28. But when the agreement between the gold standard countries to help each other in the event of severe trials revived confidence in such currencies, the Bank found it possible to embark on a fortnightly reduction of ½ per cent. in their official rate. The rate was reduced from 4½ per cent. to 4 per cent. on July 15, from 4 per cent. to 3½ per cent. on July 28 and 3½ per cent. to 3 per cent. on August 15.

(*Continued from page 414*)

There is no getting away from the fact that the major portion of the Rs. 9 crores on August 15 and of the Rs. 4 crores to be released on September 1, should find its way back to the giltedge market ; and that as and when it does, prices are bound to show good response. It is true that in the last two or three days, no tendency has been noticeable in regard to the investment, in the giltedge market, of any portion of the monies paid out on August 15. Owing to bear tactics, the market is now in a hesitant mood. But it would be altogether wrong to say that there is lack of confidence in the market. Moreover, there is always a lag of time between the receipt of funds by bond holders and reinvestment of such funds. This is particularly the case when any large body of bond holders belong to the mofussil. Well-informed opinion both in Bombay and Calcutta markets is convinced that from next week onwards, there should be a sharp rally in giltedge. The closing prices on Friday were on the quiet side. 3½ per cent. Rupee Paper was quoting Rs. 84-10 ; 4 per cent. 1960-70, Rs. 97-10 ; 5 per cent. 1945-55, Rs. 112-15 ; 3½ per cent. New Loan, Rs. 94-10 ; and the Punjab Loan, Rs. 96-14.

Exchange has been featureless. On the weekly tender day applications came to £2.68 million at 1s. 6 1/16d., and the allotment was on the basis of 37 per cent.

The closing rates are : 1s. 6 1/32d., August-November T.T. ; 1s. 6 3/64d., December-February T.T. and 1s. 6 1/32d., March T.T.

Bills may be quoted : 1s. 6 1/8d., November and 1s. 6 5/32d., December-February.

Money was easy at the close. The rate for inter-bank call money being ½ per cent. Union rates for call, three days and seven days notice money was ½ per cent. Onemonth, twomonth and threemonth deposits quoted 1, 1¼ and 1½ per cent. respectively.

THE READING ROOM

Banks and the Money Market: By Basavarasa Ramachandra Rau: Lal Chand and Sons, Calcutta:

To the tyro in Indian banking and currency the Indian Money Market is as elusive of understanding as the market itself is disjointed, unrelated and devoid of the essential features. Mr. Rau's book, which is a compilation of a series of lectures delivered by him to the Institute of Bankers, unravels the mystery of the money market in a lucid way by first describing the money market as it ought to be and then pointing out the various shortcoming as they exist in the Indian money market. The position occupied by the Imperial Bank, the Foreign Exchange Banks, the Indian Joint Stock Banks and the Indigenous Bankers is clearly set out, as well as the various means adopted by the Government for the expansion and contraction of currency. The divorce of currency from credit and the manipulation of the currency by the Government more with a view to maintain the exchange ratio and facilitate foreign trade than to assist he maintenance of stable internal prices or to satisfy the credit requirements of Indian industry, agriculture and commerce is forcibly brought forth, preparing the mind of the young student to recognise the vital necessity of a central bank for regulating and conroling the currency and credit system in the wider interests of the country. The interest of the reader is taken further by the addition of a series of useful appendices, which are reprints of the author's previous contributions. Mr. Rau's treatment of such questions, as the remonetisation of silver and the linking of the Rupee to sterling bring the reader into touch with more live problems, and it is note-worthy that instead of dogmatising on only one set of views, the author has presented both sides of the picture and leaves the reader to hake his choice himself. The chapters on the future of the Imperial Bank of India and the joint stock banks, and the lessons from foreign banking give a constructive lead.

P. B.

The Law and Principles of Co-operation : By H. Calvert, C.S.I. C.I.E., I.C.S., Thacker Spink & Co., Calcutta : Price Rs. 7-8.

The one feature of Indian rural economy that arrests the attention of the observer is the appalling poverty of the cultivators. The danger to the nation as a whole will be evident when the predominance of the agricultural population in India is taken into account. The poverty of the Indian cultivator is mainly due to the uneconomic size of his holdings, his heavy indebtedness. Progress is rendered doubly difficult by his illiteracy. The problem of rural uplift is imprisoned in many a vicious circle but there can be no question that it is co-operation that must break all such vicious circles.

It is more than a quarter of a century since the movement began in India. The limitations of the first Co-operative Societies Act of 1904 were soon recognised and the Co-operative Societies Act of 1912 was passed. Since then the movement has made no inconsiderable progress.

For the successful working of the movement, it needs proper co-operative training and education, that is, development of what is called the co-operative spirit. The extent of the country as well as the evils from which the rural population suffers provides vast scope for the movement. But if co-opera-

Clive Street Gossip

At long last, the *Indian Finance Year-Book* for 1933 has seen the light of day. As we set about our work early in the financial year, it was our ambition and hope to bring out this publication in the latter half of June. From the latter half of June, the date of issue was postponed to the latter half of July. Actually, it is in the latter half of August that the patience of our indulgent readers is being rewarded. Fully three weeks ago, I had a taunting letter from a relation in South India that even *my* ingenuity would be sorely taxed if any more excuses for procastination had to be found. As it is, the printing portion of the work was finished last week. It is now the binder's turn to add to the delay. In the kind of binding that we have finally decided on, the maximum number of copies that could be delivered by the binder is 300 a day. And during this week, as the copies come from the binder, they have been simply taken off by an avid mob. It is only from to-day that the registered orders of mofussil subscribers will commence being executed. It is hoped that by next week, all those who have booked their requirements in advance will have received their copies.

* * *

However much we have been trying to ensure delivery against registered orders, clamant individuals have snatched all copies, leaving us helpless. We have been receiving telephone calls at the rate of 100 per day, most of them being angry enquiries whether *Indian Finance Year-Book* is to be published at all. By way of explanation, we have to urge that in a compilation which deals with statistics of various kinds, even one rolumn, for which the latest figures have to be procured from distant places or difficult sources, could hold up the entire publication. This is exactly what happened. Two little provinces, budgets for which reached our hands only a fortnight ago, made it impossible for us to give the final printing order for the last remaining form. And, then, the printing job in a book of this nature is no easy matter. Last year, there were 220 statistical pages; in the present year, there are over 300 tables. All this must be done by hand composing. The effort involved is stupendous. There is hardly any other printing establishment than the Art Press which could handle statistical tables of such number, variety and intricacy with accuracy and expedition. Again, the binding is a pure mechanical job. The Muslim binder simply refuses to be hustled. I had to bring to bear on him all the persuasiveness I am capable of, in order to coax him to agree to deliver 300 copies a day instead of 200.

* * *

In order to give an idea of the onerous task we have taken on ourselves, I need only mention this. That excellent and model Year Book (issued by the *Times of India*) is generally published in the end of July. This means that the publishers have at least three months of the new financial year within which they could complete the figures of the old. Yet, the *Indian Year Book*, in most sections, is fully a year behind the *Indian Finance Year-Book* in statistical information. The organisation of the *Indian Year Book* is efficient and complete. The publishers have gathered vast experience; and the whole system has been regularised. They have access to all manner of information; and they have ample resources to pay whatever is needed for securing all relevant facts and figures. By comparison, the *Indian Finance Year-Book* is a humble and modest endeavour. It has yet to build up its organisation. We have barely a year's experience. We are yet groping our way in most matters. It has, however, been our aim to make our *Year Book* as up-to-date as possible. For this purpose, even if there should be a delay of a month or so, we thought it best to include, as far as possible, the complete figures of the old financial year and, wherever possible, the official estimates of the new financial year.

* * *

In the form of statistical tables, we have also made important changes in certain sections. The statements pertaining to India's foreign trade are now more elaborate and have been specially designed in order to enable readers to follow the course of developments in most of our commodities as well as in regard to most of our customers. In the earlier year, figures for ten consecutive years were given. On the present occasion, we have given the figures for five consecutive years and three quinquennial averages, namely, the pre-war period, the war period and the post-war period. For purposes of comparison, the five year figures in relation to three typical five-year periods are bound to prove more instructive and interesting. The expansion and revision involved in this new procedure has entailed much labour and time. The budget figures have also been greatly amplified. While money market statistics are as full and comprehensive as in the previous year, improvements in presentation have been effected wherever necessary. A section on co-operative banking has been added. In the Industries section, sugar has been dealt with in greater detail as sugar manufacture has come to occupy an important place in India's industrial future. We wished to add relevant statistics based on Census Report. But as all tics reports are not yet available, the study of population statistics has had to be postponed to the next year.

* * * * *

While no one is more keenly alive than ourselves to the defects and shortcomings both in the

plan and execution of the *Indian Finance Year Book*, we have ventured to launch this year's volume in the hope that in the organising of improved economic statistics in this country, for which Sir George Schuster has professed great sympathy and vouchsafed some manner of practical support in recent months, this *Year-Book* would greatly arouse, and partly allay, popular curisoty for information on economic questions. We were greatly touched by the generous appreciation evoked by our maiden effort. We hope that we will receive the same indulgence for this year's number, which, we believe, will not be an unworthy successor to a publication hailed by a notable expert like Sir Basil Blackett as affording information on every conceivable topic bearing on Indian economy.

* * * * *

Service, not profit, has been our aim. We did not even canvass for advertisements. We contented ourselves with sending out circulars. And we are selling the *Year Book* at a price which barely covers the cost of production. We offer a 360 pages publication for Rs. 3 for subscribers, Rs. 5 for others—and Rs. 2-8 for students and bank assistants. And, in this service the most satisfying acknowledgment has been from the student class. A youngster, who took his M. Com. degree this summer, has written to me as under :

DEAR EAVESDROPPER,

I write to you and not the Editor as you have been the favourite of all your concession readers amongst whom students, I believe, should figure largely.

You will be happy to learn that I got through my M. Com. this year.

You will be happier to know that I stood first in the Presidency.

You will be happiest to know that I secured record marks.

And I am most happiest—excuse this double superlative—to inform you that my securing the first amongst the first and the record marks is due to my being a regular reader of *Indian Finance ;* and, more particularly, to the great help I received from your *Year Book*.

I am profoundly grateful to my uncle, Mr. Naren Mukherjee, for introducing me to *Indian Finance* and the *Indian Finance Year Book*.

Yours sincerely,
AMAL KUMAR MUKHERJEE.

This is enough reward for our labour. We are thrilled and moved by tokens of appreciation from students such as this. I cherish this as the proudest feather in my cap. I ask for no prouder plume.

THE GATEWAY OF INDIA

(From Our Correspondent).

Bombay, August 16.

The balance sheet of the Tata Iron and Steel Company for the year ended March 31, 1933 (issued in the current week) is of great significance for more reasons than one.

In the first place, it refers to a period during which important changes of *personnel* took place. The main centre of activity was transferred from the Managing Agents Office in Bombay to the Agent's office in Calcutta. And this change has meant an increasing share of responsibility on the shoulders of Mr. A. R. Dalal.

Mr. Dalal represents, in short, the drive, the more intimate and direct control, the more thorough Indianisation, and the more real revitalising, of the new plan and the new *regime*.

The Sales Department—by far the most vital section—is now under an Indian chief, Mr. J. C. Mahindra. The year's results have an important bearing in assessing the success or otherwise of the Indian controller of sales of such vast magnitude.

At the factory itself in Jamshedpur, Mr. Gandhy acted as General Manager for some portion of the year under review—again, the first occasion when an Indian occupied this most onerous position.

Rationalisation in the accounts department has been entrusted to the adroit care of Mr. A. M. Hayman.

Have these changes in *personnel* been fruitful in securing more striking results?—this is the question for an answer to which the accounts, now made ready, would be eagerly scrutinised.

In the second place, 1932-33 happens to be the eve of the period during which the statutory investigation by the Tariff Board of the Steel Protection case is to take place.

From this point of view, the results should be neither too good nor too bad. If too good, the need for protection might be held to be no longer existent. If too bad, the finding might be that the Company, under the present system of management, would not appear to be able to benefit from protection, on however vast a scale such protection might be given.

In the third place, the year under reference saw the conclusion of the Ottawa agreement, which gave special prominence to the steel industry. How has the Indian industry fared under this much-advertised plan?

In the fourth place, have the Tatas shown grit, resourcefulness, skill in management and adaptability to new situations as they arise, during all this period when the world-wide depression continued as grave as ever, and when competition from foreign rivals was not less severe than in earlier years nor decline in prices less steep?

In view of such intriguing issues raised by the balance-sheet for the year 1932-33, a detailed analysis is called for. And, at the very outset, it may be stated that the latest accounts make far more cheerful reading than was the case in any year during the long protection period.

There has been notable improvement from every point of view. Judged by every canon, the achievements in 1932-33 may be considered a proud feather in the cap of the new *personnel*. The balance-sheet has been cleaned up in a number of ways. There are abundant indications that Fate has been as kindly and gracious as the management has been keen and alive.

First. Liabilities of every description have been reduced. The first mortgage debenture stock has been redeemed to the extent of Rs. 4 lakhs, the outstanding amount being Rs. 2.92 crores against Rs. 2.96 crores in the previous year. Loans secured by Rupee and Sterling Stock have gone down from

Rs. 1,08 lakhs to Rs. 65 lakhs (– Rs. 43 lakhs). Cash credit availed of from the Imperial Bank against security of stocks, stores and part investments has fallen from Rs. 52.77 lakhs to Rs. 36.09 lakhs (– Rs. 16¾ lakhs). Unsecured loans at Rs. 20.47 lakhs are less by Rs. 38¾ lakhs. Sundry liabilities are now Rs. 57.68 lakhs and are lower by Rs. 9½ lakhs. The reduction in liabilities comes to an impressive total as is summed up below :—

(In lakhs of Rs.)

Reduction in	Amount.
Debenture Stock	4
Loans against Debentures ...	43
Cash Credit	16¾
Unsecured Loans	38¾
Sundry Liabilities	9½
Total ...	1,12

Second. The gross block expenditure, inclusive of collieries, has increased from Rs. 23.76 crores to Rs. 24.25 crores. That is, Rs. 49 lakhs represents the expenditure on the expansion of plant in 1932-33. This shows that the management is, constantly and assiduously, in touch with all the developments in the technique of machinery in other countries ; and despite the difficult times, they have the courage, and command the resources, to add to the plant so as to make it more efficient and economical. The following passage from the Director' Report must be read in this connection :

> "Throughout the year, the development of the plant and equipment at the works was under active consideration. The installation of a plant for cleaning blast furnace gas received the very careful attention of the Works Management, your Agents and the Board, and an order has been placed for a plant for cleaning this gas, the operation of which is expected to add considerably to economy and efficiency.
>
> An extension of the Sheet Mill was sanctioned by the Board in July 1932 and the erection was completed in an exceptionally short time, the first sheets on the new roughing units being rolled on the 15th February, 1933. The extension necessitated certain alterations to the Sheet Bar and Billet Mill; and a new 7,500 H.P. Motor was installed to drive the 18-inch section of that Mill. This motor is ons of the largest of its type in the world and records were achieved both in the time of manufacture and of installation.
>
> Apart from the above extension, other new equipment was installed in the Sheet Mill, such as a 156-inch squaring shear, a galvanising plant, a sheet levelling machine and two additional cranes. A 1,500 K.W. motor convertor set is being installed.
>
> In the Rail and Structural Mill, new finishing equipment has been installed and put into operation and an extension to the crane runaway at the rail loading dock is now in hand.
>
> A central elevator is being installed at the new calcining plant and arrangements are being made to burn pulverised coal in the rotary kilns at this plant so as to release more coal tar for sale.
>
> Kilns for the manufacture of bricks from magnesite obtained from the Company's mines in Mysore have been erected at Jamshedpur and put into operation. These bricks are replacing imported Austrian magnesite bricks with a marked reduction in costs."

Third. Depreciation has been provided on an adequate scale. Against Rs. 78 lakhs set aside in 1931-32 balance sheet, the sum provided in 1932-33 is Rs. 82 lakhs. The result is that the net block expenditure at Rs. 14.45 crores is nearly Rs. 1/3 crore less than in the preceeding year.

Fourth. At one time, the Company, due to heavy preference issues and debenture liability, was considerably embarrased as regards arranging of working capital. Apart from the fact that loans borrowed against rupee and sterling stock kept alive have been reduced from Rs. 1,08 lakhs to Rs. 65 lakhs, there are now ample assets as cover against cash credits for the maximum requirements. The assets eligible for this purpose are as under :

	Rs. in crores.
Stocks & Stores	2.21
Investments	0.23
Total ...	2.44

Besides, book debts amount to Rs. 68.94 lakhs ; and miscellaneous advances to Rs. 11½ lakhs. The problem of working capital need no longer cause any concern.

Fifth. The profit and loss statement is even more heartening. Nett Profits have risen from Rs. 87.58 lakhs to Rs. 111.85 lakhs. Depreciation accounts for Rs. 82 lakhs as compared with Rs. 78 lakhs. The amount available for distribution is Rs. 39.81 lakhs against Rs. 11.53 lakhs. Dividends absorb Rs. 39.19 lakhs as against Rs. 11.44 lakhs. The first preference shares get the stipulated 6 per cent. dividend. The second preference shares get 5 per cent., as compared with one per cent. grudgingly given (as a compromise proposition and after "posthumous" adjustments) in 1931-32. The carry-forward is Rs. 61,964 and is over Rs. ½ lakh higher.

Sixth. Value of stock at beginning of 1931-32 was Rs. 1.48 crores against Rs. 1.32 crores at the beginning of 1930-31. On March 31, 1933, stocks came down to Rs. 1.33 crores. Sales at Rs. 5.26 crores are Rs. 6½ lakhs higher. The new salesman has justified expectations !

Seventh. Expenses on production have gone down from Rs. 4.13 crores to Rs. 3.53 crores (– Rs. 60 lakhs). Debenture interest is lower by Rs. 36,000. The shrinkage in other liabilities accounts for a saving of Rs. 3¼ lakhs in interest charges. Bombay office expenses, too, have felt the axe—they are less by Rs. 60,000.

Regarding the effect of the Ottawa agreement on the working of the Company, one has to gather that the results are not exactly gratifying. After a statement of the conditions leading up, and pertaining, to the agreement, the Directors' Report makes the non-committal observation : "The working of this arrangement will be carefully watched before the expiry of the period".

OLYMPUS

(From Our Correspondent).

Simla, August 16.

The Reserve Bank proposals—office gags useful critic. No fear of caucus control—Ratio to the fire, again—Blackett scheme in new garb—Immediate Drafting and Early introduction.

The Reserve Bank Committee's Report was released this afternoon. It arrived in Simla only yesterday by *Air Mail* and no one here knew its contents beyond the cabled summary given in Reuter's messages. It is too early to state what the opinion here would be especially as most of the Members of the Assembly are not yet up for the forthcoming session.

* * *

There is one man here who could say a lot about it and speak with authority. He is one of the few in India who can discuss the matter with knowledge and foresight. But rules of office have nearly gagged him. Sir Shaumukham Chetty just before he assumed office of Presidentship of the Legislative Assembly gave his views about the sound tests for a Reserve Bank in a newspaper article and it would be interesting to know how far the scheme prepared in London satisfies those tests.

* * *

Those who have read the Report to-day feel that the scheme tries to meet a number of objections ; for instance, the Shareholders of the Imperial Bank will not have, in theory at least, a prior right to subscribe to the capital of the Reserve Bank ; that representation on the Central Board will be regional and will comprise the varied interests in the country. No caucus can get control as is now the case with the Imperial Bank which is dominated by Calcutta and Bombay interests.

* * *

But the fact that the Imperial Bank will be the agent of the Resevre Bank wherever it has branches at present will certainly cause the other commercial banks feel a grievance that whereas they will be asked to part with a large amount of their money as deposits with the Reserve Bank, the Imperial Bank will have large resources of government funds always at its disposal for use, free of interest. They would welcome the provision that in places where the Imperial Bank has no branches, the Reserve Bank can have its own agency but they would have preferred the entire field of agency work to be thrown open to them on a competitive basis. That would certainly have advanced the cause of banking and given strength to the Indian banks.

* * *

Some interest has been roused here in the comment made by the Indian members of the Committee that the question of the ratio should be reviewed as soon as world monetary conditions permit of such a course being taken. The Government of India, of course, swears by the present ratio even though they believe that a mistake was committed in fixing the ratio at 1/6 instead of 1/4. However, the fact that agricultural interests in the country, which, at the time, were roped in by Sir Basil Blackett for his view, are becoming more and more vocal in favour of 1/4 will certainly weigh with the authorities; and it is recognized here that one day—not in the very distant future—this question will become pressing.

* * *

Another comment made here is that the appointment of the Governor of the Reserve Bank would really be a gift in the hands of the Financial Advisor to the Viceroy and that this would create some embarrassment for the Federal authority. It is held that the appointment should be made by the Federal Government out of the names sent up by the Board of Directors and that the appointment be subject to the approval of the Governor-General.

* * *

On the whole, it is held here that the Report backs the Blackett scheme except for two major changes, firstly with regard to Rupee Redemption Fund which is considered a step in the right direction, and secondly the Sterling Standard which is considered here to be of doubtful value. Anyway it seems that the London City interests made the second factor a central point in their fight and they have succeeded in getting their way.

* * *

The drafting of the Reserve Bank Bill will be taken in hand next week, so that it may be ready for introduction either by the end of the autumn session, in order that the November session may be utilized for detailed consideration of its provisions. Or it is expected that the Bill would be published in the *Gazette of India* with a view to facilitate expression of public opinion before the Assembly meets in November.

"HILL-BIRD."

(*Continued from page 443*)

tion is to be a success, many more should take to the study of the principles and law of co-operation. This has been felt in a greater degree in recent years.

Mr. Calvert's books exactly meets the requirements of students of co-operation. The principles and law of co-operation have been lucidly expounded by one who has been in close touch with the movement as the head of the Co-operative Department in the Punjab.

The books consists of two sections. The first one deals with the principles. The meaning of "co-operation" the object and functions of co-operative societies are discussed in a detailed manner. The second sections gives the Co-operative Societies Act (No. 11 of 1912) with copious notes by the author. Mr. Calvert has also placed before the reader the practice and views of authorities on the subject. The views expressed by the author have been corroborated on Agriculture and Labour and the reports of the Central and Provincial Banking Enquiry Committee. Altogether a volume well worth the attention of those who regard co-operation as the sole means of rural uplift—and who does not?

THE EDITOR,

Indian Finance.

SIR,

I find, on going through your weekly dated August, the 11th, the following in the World of Indian Finance:

Beginning of Paragraph 2.

"Moreover, it is reported that blocks of Government Securities of the order of Rs. 75 lakhs were disposed of by one or two Chettiar firms of Madras on the Bombay and Calcutta markets etc., etc., etc."

Without flattering myself, I may say that practically every important Nattukottai Chettiar with means, who deals in government securities frequently or even occasionally, is in my books. I have made enquiries locally, and I find that there has been no such business done. I am more or less certain that there is no Chettiar Frm of Madras (Nattukottai Chettiar or otherwise) to do business to the tune of Rs. 75 lakhs. Barring one Nattukottai Chettiar, I do not think there is any other party in Madras capable of holding such a block for disposal.

My impression is that the selling should have emanated from one of the local Native States, possibly Travancore or Mysore. If you have, however, other information to the contrary, will you kindly let us know?

Yours etc.,

T. N. KRISHNASWAMI.

MADRAS,
August 14.

SOUTH INDIA

(From Our Correspondent.)

Madras, August 16.

Agriculturists in this Presidency are in the sorriest plight. Their grievances are many. For one thing, there is no permanent settlement, with the result that land revenue is subject to changes periodically. The revenue scale in force now is based on calculations in which paddy, for instance, was expected to fetch at least twice as much as it fetches now.

In a typical paddy-growing district like Tanjore, a *kalam* of paddy went down to as low a rate as annas 13. For purposes of land revenue, the price assumed in the 1922 settlement was Rs. 1-14-6. Even at this low price of annas 13, it was not easy to dispose of any large quantities. A stage was reached when paddy was almost unsaleable.

The tax gatherer was ruthless as the Government were adamant and turned a deaf ear to all the plaintive appeals for reduction of revenue or part remission. On the one hand, it was difficult enough to secure a purchaser for paddy; on the other hand, even if the paddy could be sold, the entire produce of the land could fetch barely enough to cover the Government dues.

This has been the position in district after district. This matter was ventilated in the local council. Remission of revenue of at least 25 per cent. was earnestly asked for. The utmost that the Government would agree to was to postpone 12½ per cent. of the dues.

There can be no two opinions about the extreme distress that prevails amongst land-owners. The Government have had ample evidence in this connection. They had the fullest opportunity to know the exact state of affairs. But so far, they have been unwilling to take any definite or positive measures for redress.

This attitude of indifference to the calamity that has befallen the entire class of agriculturists has to be ut down to callousness, as the same Government stand out as the unique instance amongst the Governments in India to abolish the entire salary cut of 10 per cent. If it is a question of restoring the cuts in salaries, the Madras Government have been capable of great generosity. If it is a question of bringing succour to millions and millions of cultivators, all that is vouchsafed is a vague promise that representations would be considered in due time.

The Revenue Member, Sir Archibad Campbell, toured Tanjore, Trichinopoly and Salem districts. In centre after centre, he had to listen to a piteous tale. Amongst the points brought to his notice were the following :

1. The remission of 12½ per cent. land revenue for Fasli 1342, the collection of which was postponed by the orders of the Government;
2. Grant of another 12½ per cent. as further remission to make up a total remission of 25 per cent;
3. The utilisation of the good offices of the Government for the reduction in the freight charges of agricultural produce over the S.I.R. system.

The reply of the Revenue Member was equally standardised. He said that though the Government had postponed the collection of 12½ per cent. on land revenue in certain portions of the Presidency till the next *kist* season, they would consider probably next November whether the postponed revenue should be collected, or whether it should be remitted partly or wholly, or whether it should be postponed still further. The Hon'ble Member was sure that his hearers would understand that he was not in a position at the present time to make any definite announcement beyond the fact that the Government would carefully consider the reports received from their district officers and representations made by responsible bodies.

As for the railway freight question, something has already been done by the intervention of the Government. The South Indian Railway has reduced freight rates from certain stations to Ceylon. These measures have already resulted in considerable increase in the traffic over the South Indian Railway and, incidentally, in the earnings made by the Railway itself.

This experiment is to be in force up to October. But as the results so far have been gratifying, it is to be hoped that the Railway will take even bolder measures to increase the movement of crops and to augment its own earnings thereby. The Madras Government and the Government of India are taking up this matter with the Railway Board, assured the Revenue Member. Though relief in regard to taxation seems remote, it is likely that the South Indian Railway could be persuaded to allow more favourable rates on transhipment of produce.

In this connection, the South Indian Chamber of Commerce has made an important change in its tactics. In the first instance, acting on behalf of the paddy growers' associations of Tanjore, the South Indian Chamber was inclined to appeal to the Railway Rates Advisory Committee for an investigation of the freight on produce. Seeing that the Railway has already moved in the matter and that this move has led to satisfactory results, the Chamber is now emboldened to think that further negotiations with the railway authorities for a slightly increased concession as a permanent arrangement might prove fruitful. It is, therefore, likely that the South Indian Chamber will not press its case before the Railway Rates Committee.

In the course of a memorandum addressed by the Chamber to the Agent of the South Indian Railway, it is claimed that traffic has, from the commencement of the reduction, more than doubled in volume and tended to increase still further. The memorandum continues :

> "A great deal of traffic was, however, still moving by the sea route and the landed cost of those goods was reported to be about annas 4 per bag cheaper than the rail-borne goods and the Steamship Companies appeared to be re-doubling their efforts to recover the lost traffic.
>
> As it was still possible to sell in Colombo the sea-borne goods at least Rs. 3 per ton cheaper than the rail-borne goods, a situation has arisen in which the increased traffic on the South Indian Railway could not be sustained unless a further reduction of freight were given by them and the Ceylon Railways jointly, and if the latter were not agreeable, by the South Indian Railway independently of them. A further reduction so as to make 25 per cent. on the freight that ruled up to April 1933, might be tried with a view to retain the market in Ceylon".

It should be to the mutual advantage of the South Indian Railway and the agriculturists and merchants of Madras Presidency if a greater portion of the Ceylon rice market is captured by South India. The Ceylon rice market has great potentialities. It consumes as much as 4.5 lakhs tons of imported rice and 20,000 tons of paddy in the year and no source of supply could be nearer to it than that the south of Madras. Similarly, other commodities, like spices and vegetables, could be successfully marketted in Ceylon if the Railway adopts a more liberal policy.

This is a case in which the South Indian Railway and the Ceylon Railway would do well to act in co-operation. But if the Ceylon Railway would not come in, the South Indian Railway would be well-advised to act independently.

If it is true that the traffic has been doubled owing to the recent reduction, it would be suicidal on the part of the South Indian Railway to refrain from launching on bolder measures on these lines.

THE STATE-AIDED BANK OF TRAVANCORE, LTD.

Head Office:

Alleppey

INDUSTRIAL LIFE ASSURANCE.

SIR BENJAMIN COHEN COMMITTEE'S REPORT.

Industrial life assurance is of much later origin then ordinary life assurance. It may be said that it was founded upon the desire of the masses to provide for funeral expenses in order to avoid a pauper funeral. Prior to the introduction of industrial assurance by Life Offices, what are called Burial Clubs and Friendly Societies helped the masses in their desire to avoid pauper funerals. They collected small levies from their members and, as in ordinary life assurance, they undertok the risk of paying small lump sums. As time went on, they found the collection of the levies in one single sum difficult, hence they began to collect the premiums in small amounts at very frequent intervals. And this was the origin of industrial insurance. Most of the Burial Clubs were badly managed at that time, when life offices began to introduce the industrial assurance for the poor.

The most important points, which distinguish industrial assurance from ordinary life assurance, are that in this, premiums are usually paid weekly and rarely monthly and that the sums assured are in most cases below £100. I shall, in a subsequent article in these columns, deal in detail with the origin, principles and growth of industrial assurance in the world. Now, suffice it so say that industrial assurance in Great Britain has attained phenomenal success during the past few decades as is shown by the following figures:

1877	...	2,036	1,802
1887	...	5,317	8,495
1897	...	9,511	21,462
1907	...	17,042	47,730
1917	...	25,174	83,446
1927	...	48,050	217,107
1930	...	54,218	264,052
1931	...	60,000*	300,000*

*Approximate figures.

The total policies in force by the end of 1931 were £1,300,000,000.

There can be no denying the fact that the above figures amply prove that industrial assurance fills a real want felt by the working classes and is also a demonstration of the success of the methods by which it is carried on. As it affects the life and wellbeing of millions of labourers, the Government of Great Britain are always eager in safeguarding the rights of the masses. As such, there have been a series of Governmental enquiries and legislation about the practice of industrial assurance during the post-war years. The latest of these enquiries is the Departmental Committee on industrial assurance appointed by the Treasury on April 2, 1931, under the presidentship of Sir Benjamin Cohen K.C., to examine into and report on the law and practice relating to industrial assurance and to assurances on the lives of children under ten years of age. This committee took elaborate evidence from the Industrial Commissioner and industrial offices between June 6, 1931 and June 6, 1932 and, after careful consideration of various other points, have just now released their Report to the public.

The Report gives us no official version of the conditions which exist in the conduct and practice of industrial life assurance. The general trend of the report clearly indicates the unsatisfactory nature of these conditions. The committee are of opinion that the defects of the business and their consequences to the assuring public cannot be substantially remedied by a mere change in the statutory provisions. They say that remedial measures of a much more substantial character are called for; and they have suggested three alternatives. Of these the committee seem to favour the third one, namely, the statutory imposition on companies of a general limitation of expenditure to a fixed maximum, except for the benefit of the assured. The other two alternatives present, in their opinion, formidable difficulties in their application.

According to the findings of the committee, the principal defect of the business as it exists to-day is that "excessive competition with its almost feverish pressure for increase firstly by the offices on their field staffs and secondly by the latter upon the working class population, is responsible for the principal defects of the business. To this competition and pressure must be ascribed the masses of uneconomical contracts (many of them of doubtful legality) into which people are induced to enter and the inordinate number of lapses which ensue, with the heavy losses resulting from them." Thus in Appendix A it is shown that in the year 1929 out of a total issue of ten million policies, five million policies lapsed during the course of that year.

The Insurance Correspondent of the *Financial News* (London) suggests that the effective remedy for such defects as the committee find in the industrial assurance business, will be to dispense with the services of part-time agents completely and to cover the country with a net work of full-time agents. He has also given definite data from the findings of the committee, to prove that whole-time agents can do more effective and sound business than part-time agents. In one group of five industrial offices, 95 per cent. of the total agents were whole-time employees, while, in another group of five offices, 60 per cent. of the total agents were whole-time men. On a comparison of the lapse ratio of these two groups it is shown that 36 per cent. of the cases lapsed in the first group of offices while 50 per cent. of the cases lapsed in the second group.

It is, of course, true that a successful and scientific development of the highly specialised business of life insurance business is possible only with the aid of whole-time agents. For, part-time agents need not have special knowledge; they do not actually canvass but book only those cases which come their way; they do not bring home the full benefits of life assurance to the general public; and they are not bound to give all their business to one company only. On the other hand, a whole-time agent is usually a specialist, has an exhaustive and intensive knowledge, can give the fullest and most comprehensive information to his prospect and is allowed to work only for his own office. Thus, from the companies' point of view, only whole-time agents are best suited to increase their new business. At the same time, they can exercise a greater degree of control over this type of agents. It is evident that the cost incurred will be comparatively higher but is well

(Continued on page 458)

OVERSEAS' NEWS:

By Air Mail

U. S. S. R

ANGLO-SOVIET NEGOTIATIONS.

For sometime now, negotiations between the representatives of Great Britain and Soviet Russia, are being carried on, in London, for a new Anglo-Soviet commercial treaty. The Sub-Committee, consisting of accredited officials of both countries, resumed, since July 19, the consideration of subjects, dealing with the balance of trade and the provision of credits to Russia, at the offices of the Board of Trade. A few days later, another committee met to consider the form of agreement. These two Committees have lately come together again for further talks.

The frequency of these meetings, without apparently tangible results, was necessitated by the British insistence upon changes in the new agreement, as compared with the old. The pace of the negotiations, naturally, slowed down. But such difficulties, as are likely to be set up by British officials, have been clearly foreseen. The Soviet representatives have, therefore, not permitted any hitch to mar the progress of the negotiations.

The British view-point is that guarantees, concerning the balance of trade between the two countries, should be offerred in a convincing manner. A suggestion is made that sterling credits, resulting from sales in Britain, shall not be used for the purpose of placing orders in other countries.

A Disconcerting Memorandum.

The intransigent attitude of the British is obviously strengthened by a memorandum, issued by M. Sabline, a former *Charge d' Affairs* for Russia in Great Britain and M. Anatole V. Baikaloff, a former Chairman of the joint committee of the Russian Co-operative Organisations in London, and addressed to the General Secretary of the World Economic Conference. The joint authors were convinced that credits and loans, granted to the Soviet Government, would extremely harm the real interests of the Russian people and of the Russian national economy. For their authority, the pamphleteers resorted to the speech of M. Litvinoff, on June 14, at the plenary session of the Conference. They tore, from the speech, passages out of their context, and interpreted them to illustrate their point of view.

M. Litvinoff stated, declares the memorandum, that, while the capitalist countries were struggling in the grip of a severe economic crisis, the U.S.S.R. had been steadily developing its rich natural resources, through the specific nature of its economic system. He further declared that the Soviet Delegation could conceive of conditions which might induce its Government to place, exclusive of the normal and the usual ones, orders abroad, in the future, to the sum of about a billion dollars. There is nothing abnormal or irrelevant in the aspirations of a nation, which has, so far, successfully defied the approach of economic pestilences, which are ravaging the rest of the world to-day.

But, the authors of the memorandum have thought fit to warn the unhappy countries, with the superflous stocks and staggering unemployed figures, against hopes of relief by accepting M. Litvinoff's offer at its face value. They further infer that, to meet the bills against the delivery of goods, the Soviet Government desire to secure not commercial credits, but a longterm loan from the capitalist countries.

The memorandum is a bare-faced, capitalist stunt.

The U.S.S.R. is one of the few great markets of the world, because of its large population, if not of its high standard of living. If there be countries with idle capital, why should they hesitate to invest it in a country which, through good report and bad, experienced vigorous rule for over sixteen years, in all fields of activity, and taught the rest of the world to practise planned economy, in order to circumvent national ills?

Altogether of a different character, was the address of Professor Sir Bernard Pares on July 17, at the London Chamber of Commerce. Dealing with trade relations with Russia, he held the opinion that such of the British people, as could take risks, might carry on trade with Russia; but, that, on no account should it be backed by the money of the taxpayers. Capitalist predilections on the one hand and its necessities on the other, compose the cross-currents in all relations of Great Britain with Soviet Russia.

During the first five months of this year, the second best customer of the U.S.S.R. was the British Empire, Germany being the first. Russia had a favourable balance of 18,934,000 roubles (£1,893,400, taking the rouble at 2s.). Exports totalled £18,803,000 against imports valued at £16,909,000.

The British Empire imported £4,042,000, and exported £1,883,900 worth of goods, from and to the Union.

Germany imported £4,814,000 and exported £8,851,000 worth of goods from and to the Union.

British Creditors.

The Association of British Creditors of Russia is out for a final settlement of all outstanding questions, particularly those of the claims of British creditors. The Association has actively participated in every attempt made to reach a settlement. But, no formula, satisfactory to both parties, has yet been evolved. The Committee of this Association has presented a formidable list of claims against the Soviet—apart from British Government claims of upwards of £1,000,000,000, with which the Association is not concerned—to the Russian Claims Department. The claims against the Soviet do not include the addition of any interest, since the date of confiscation. The items are: Properties and concessions, £180,000,000; bonds and securities, £41,350,798, roubles 300,415,269, marks 9,543,200, francs 6,657,428 and dollars 3,304,000; and miscellaneous claims of £40,646,453 and roubles 682,371,763.

Trade Relations.

The recent non-aggression agreements with the neighbouring States have improved trade relations, to wit, between Poland and Russia. The Soviet Government placed orders with a group of Polish metal concerns for 130,000 tons of metalware, the value of the order being Z1,30,000,000. An eighteen months' credit for liquidating the bills, has been granted to Russia. It is expected that Poland will also increase her imports of furs, fish and caivare.

On July 29, the Russian Press announced the Spanish Government's official recognition of the U.S.S.R., which will, now, explore possibilities of purchasing certain kinds of industrial raw materials from Spain. Various Soviet exports, particularly oil, are equally desired, in Spain, for purchase.

The visit, to Moscow, of M. Ismet Pasha and M. Tewfik Rushdy Bey last year, has drawn Turkey nearer, in industrial aim, to the Soviet Union. Though some of the equipment and machinery for the Soviet's schemes of industrialisation are secured from abroad, Soviet textile machinery constitutes part of the longterm "goods loan," granted to Turkey. In fulfilment of the transaction, Soviet engineers have completed the plans for a large combination-spinning-and-weaving plant in Caesarea.

Air Mail Week

Transport Reorganisation.

At a time when all reports point to a good harvest, indicating a probable additional strain on the transportation facilities, the railway system is ailing from slackness and disorganisation. But, the Government wasted no time in the application of drastic remedies. There was an all-round deterioration, during the first half of 1933, in transportation efficiency, goods loadings, average daily length of locomotive runs and average daily speed of goods vans. Most of the higher officials in the Commissariat for Transport were promptly dismissed, as discipline in the staff had been virtually absent. Many communists, holding leading posts, were too lax and incapable, to master the technical side of the work. The other efficient part of the staff avoided the directly operative sections, but sought cosy berths in central offices with higher pay and lesser responsibility. Besides, political departments were established on all the railroad lines. The most reliable communists were posted to these departments, with wide powers in directing the work of Party and Communist Youth organisations among the transportation workers, and in taking summary measures with a view to overcome all defects and drawbacks. A similar prescription for the parlous agricultural situation last autumn and winter, set things right. It will, no doubt, prove equally effective in the case of railways.

Production of automobiles of all sorts, tractors, lorries and cars, during the first half of this year, showed a marked improvement over that of last year during the same period. The Soviet factories turned out 33,031 tractors and 21,101 lorries and automobiles. Production plans were not fully carried out. The Stalingrad tractor plant produced slightly more than three-quarters of its capacity of 50,000 tractors a year ; and the Kharkov-factory somewhat better than half of its full power.

The automobile works at Gorky (Nijni povgorod) are in their second year, and have much leeway to make before their planned figure of 140,000 cars a year, they turned out 2,600 passenger cars and 6,507 lorries only. On the whole, the programme, by reason of falling short of the expectation, will, in all proabbility, be lashed up in the same manner, as agriculture and railways have been.

The Chinese Eastern Railway.

The Chinese Eastern Railway, traversing Northern Manchuria, which was constructed by Russia and which has been jointly managed by China and Russia, is invited to sell itself. The creation of a new autonomous kingdom, called Manchukuo, which has, so far, had the wholehearted recognition of Japan and in a qualified manner of the Soviet Union, has elbowed out China of her rights over the railway. Perhaps, her priveleges descended upon Manchukuo. Ostensibly, Manchukuo desired to purchase the railway. In fact, Japan is more interested in the bargain than her her protege. The transfer of this railway to the control of Manchukuo, and indirectly to Japan, bears within itself the seeds of future encroachment, by Japan, on foreign territory and penetration into inner Mongolia, which is still a Chinese province. But, the bargain is hanging fire for sometime now, owing to the wide discrepancy in the respective offers. The Soviet demand is for 250,000,000 gold roubles. Manchukuo would, however, have the railway for 50,000,000 paper yen, about a tenth of the Soviet price. How long would the negotiations protract, it is hard to guess. It looks as though Japan is not over-anxious to place the railway in the possession of Manchukuo. Russia's need for capital, so very necessary for her industrialisation plans, is perhaps restraining the purchaser from impulsive bargaining. Otherwise, the railway is of such strategic and commercial value, that Manchukuo, under the tutelege of Japan, cannot delay its acquisition.

Another design seems to be under requisition, possibly with a double string, both for striking a profitable bargain over the railway purchase and for affording an opportunity to push forward the penetration scheme of Japan. Rumours of Japanese origin are in circulation that the Soviet military and financial aid is reaching the Christian General, Feug-Hsiang. They are vigorously denied in Moscow, however. But denial or no denial, these are not matters which can be proved to a nicety, one way or the other. While the League of Nations is busy with collecting and weighing the evidence, Japan can perform another *fait accompli* with regard to Inner Mongolia. But, the Soviet Union must have drawn its rubicon. Expansionist Japan will, therefore, do well to commune with her better self, and set limits to her ambitions of territorial or economic aggrandisement.

Echo of Metro-Vickers' Affair.

A recent question, in the British House of Commons, elicited the reply that the information, furnished by Messrs. Thornton and Macdonald, only confirmed and amplified the knowledge of the Government as to the genesis of their alleged confession at the trial, to the effect that spying operations in Russia had been carried on by a managing Director of the Metropolitan-Vickers Co. The Company has not, and never has had, any connection with the British Intelligence service whatever. This reply inspired a supplementary question from Mr. James Maxton (Ind. Lab. Bridgeton) ; "How can the Foreign Secretary be so positive in this matter when the personnel of the Secret service is completely unknown to Ministers of the Crown?" The Government were content with the lame answer that the Rt. Hon. Member was absolutely convinced of the accuracy of his statement. The question of complicity is, thus, permitted to stand as before, with the assurance that the British Government regards this case as closed.

UNITED STATES OF AMERICA

THE NIRA IN CRISIS

The week is one of dull trading in the exchanges which neither bull nor bear factors have succeeded in altering to any appreciable extent. Wall Street was closed on July 29, and only the grain exchanges were found to provide some interest. News of better crop weather in Canada caused some heavy sales, and in Chicago wheat, rye and barley lost 5 cents each and there were lesser declines in the other markets. The statement of Mr. Wallace, the Secretary of State for Agriculture, regarding grains encouraged considerable buying, but it was soon more than offset by a renewal of liquidation. Dullness set in when the limits of fluctuation prescribed by the authorities were reached. August 1st, however, witnessed a dramatic upswing, due partly to the reimposition in Chicago of minimum prices and partly to a contradiction of earlier report regarding good weather in Canada. The following day Wall Srteet followed with a somewhat unexpected firmness. Wet stocks again led the way, but the motor shares advanced on the strength of encouraging results of the Chysler Corporation. In the early part of the week, the Governing Committee of the New York Stock Exchange announced new rules fixing minimum marginal requirements, requiring members to file weekly reports of pools and joint accounts and prohibiting brokers from soliciting business in the houses of their clients. Henceforth, the minimum margin of 30 per cent. of the debit

Air Mail Week.

balance of more than 5,000 dollars and a minimum margin of 50 per cent. in accounts with a debit balance of 5,000 dollars or less would be required by the Committee on Business Conduct. It was explained by Mr. Whitney, President of the New York Stock Exchange, that these steps have been adopted because thy are convinced that they are sound and in the public interest. Though there can be no question that such requirements are necessary for the healthy conduct of speculation in the stock exchange, yet they are singularly unhelpful to the upswing of prices. These requirements together with other unfavourable circumstances were without effect on Wall Street. Prices closed fairly steady on August 3rd, except in the bond market where a slight sagging was visible. The New York Stock Exchange session of August 4th was brought to a dramatic end when the fumes of tear gas bombs, which had been thrown into the cooling system, drove traders out into the street at noon. The last fluctuations immediately before the forced closing had thus to be declared to be the official closing prices. The week was, thus, a dull one both for the share and for the commodity prices.

The other circumstance unfavourable to progressive prices was the uncertainty attaching to the monetary and exchange policy of the Administration. In the earlier part of the week, rumours circulated freely that Prsident Roosevelt contemplated an early move to devaluate the dollar. Officials have declined to comment on these rumours, and it remained only to speculate on the considerations which must weigh with the Administration in making a decision on this question. Those who are sceptical of any real inflation being taken, at any rate for the present, point to the conflict between a rank inflationary plan and the Government's plans to refund in September 6,000 million dollars of War Loan, for which the confidence of the public in the stability of the currency is absolutely essential. Perhaps the real reason why the Administration is believed to entertain ideas of stopping the inflationary moves at present is the disposition of the anti-inflationist party to make it up with President Roosevelt by advising him that his programme has reached a stage when it is both feasible and advisable to reduce the gold content of the dollar to a level which is in consonance with the new domestic price level. Businessmen and bankers, who are opposed in toto to the idea of currency inflation, recognise that it would be no longer possible, for as long as can be foreseen, to restore the dollar to its former parity. They are, therefore, agreeable to call off the fight by reducing the gold content and ensure the stability without which it would be difficult to persuade investors to purchase long term securities. It was on the strength of such considerations that the markets, especially in London, believed that the recovery of the dollar towards the end of last week implied a desire on the part of the Administration to cry halt to the inflationary procedure and to prepare for the stabilisation of the dollar.

It is believed in London that the Administration have disavowed all intention of not devaluating the dollar or persisting further in the depreciation of the exchanges. This report has been widely believed in, especially as it is difficult to see how, with the best of intentions, Mr. Roosevelt could avoid allowing the dollar to sink lower. At the pace at which wages and costs are being increased in America, it is doubtful whether prices could be successfully pushed up to a level at which capital would yield the same returns as heretofore. Those, who doubt the capacity of the Government to achieve such a high level of prices, would naturally export their capital abroad and this flight of capital would itself tend to depress the dollar. Exchange control, however carefully designed, and rigorously enforced would not be equal to the task of preventing the efflux of funds, sacred by the threat of vanishing profits. Mr. Roosevelt cannot thus avoid continuing the present policy of pushing prices up with the lever of a depreciating exchange. What made the rumours to the contrary seem somewhat plausible is the readiness of banks and anti-inflationists to close up their ranks if the Government would consent to reduce the gold content of the dollar to a level in consonance with the present level of internal prices. Another circumstance is the indifference displayed by the President and the Administration in regard to the break in stock and commodity prices. The statements of the officials at the time the break occurred led people to think that, after all, the Administration was not so enthusiastic about further depreciation as they were supposed to be some time ago.

While this undoubtedly is more than disputable, it is certain that the present preoccupation of the President is the pace, at which they can progress in the matter of imposing the blanket code upon the various industries. Much inconvenient recalcitrance is being experienced by the Government. The code submitted by the steel industry is highly unsatisfactory, and its co-operation is, therefore, of a more embarrassing kind than the dilatoriness displayed by other employers in the formulation of their codes. Miss Perkins, the Secretary of State for Labour, stigmatised the whole code as a scheme for sharing work and wages and not as one calculated to increase the purchasing power in the country. Later in the week, it was reported that the steel industry had relented and that the Executive was in a better frame of mind. But at this rate it is certain that much valuable time would be lost before a satisfactory code could be brought into operation in this industry. Other employer's organisations, it is understood, have been circularising their members not to be in a hurry to sign the copies of the codes sent to them by the Government. It would appear that the employers want to arrive at a clear understanding with the Government that in cases of appreciable reduction of hours, the employers should be exempt from increased wages. As this cuts at the root of the whole scheme, it is inconceivable that President Roosevelt would allow his plan to be jeopardised by the intransigeance of groups of employers. Motor manufacturers have, on the whole, signified their willingness to accept the blanket code. But Mr. Ford, is reported to be still vascillating. He claims that he was the originator of the idea of increased wages as a means of all-round prosperity. But at the present time, he says, "if we are to live up to it, we have to live down to it." It is doubtful if Mr. Ford will go to the extent of offering resistance to the Government. Labour, organised and unorganised, is making most of the opportunity afforded by the Government to improve their wages and working conditions.

The strikes have assumed a serious aspect. In the mining areas, martial laws have had to be proclaimed; and in the effort to preserve the peace serious casualties have also been occasioned. All this points to the fact that the National Recovery Administration has arrived at a crucial stage and is at its worst trials. But the spirit in which President Roosevelt initiated it is not the one to be cowed by the emergence of such obstacles. General Johnson is dealing with employers with firmness and discretion and the rate at which the small employers are sending in their acceptance of the codes is highly satisfactory. Much is made of the recession in business activity, especially in the steel industry. But it will be remembered that the steel industry is subject to the seasonal influences and that the falling off in production at this stage was foreseen even in the days of rapid increase in production. The next two weeks will show how far the Administration is equal to its task and how far the country deserves this unique attempt at the recovery of the national economy.

Air Mail Week.

GERMANY.

LINE OF GENTLE CURVATURE.

The cloven foot, at last!

Under cover of restoring normal economic conditions, the Nazi Government is declining towards a capitalistic State, in open contravention to the pledges given before the Revolution, in order to enlist the support of the Socialist Public. The tinge of socialism, if any, pertains to the State Control of all organisations, and activities, of the country.

The socialist assult has degenerated into fascist consolidation.

From the enlistment of the support, to the Revolution, of socialists, to the solicitation, by the Nazi Government, of capitalist grandees such as bankers, industrialists, and landlords who have made up the Supreme Economic Council to advise the Government, and the translation of Germany's greatest financier to the Cabinet as Minister of Economics, is to follow the line of gentle curvature. Lest, the gullible critic should make a mistake, the workers were reduced to servitude—a covert form of forced labour —under the gradiose public work scheme for the relief of then unemployed.

Under the dowry code, the emancipated woman is enticed away from work in factories and shops into the home—an open harem—to bear children and fill the ancient role of being exclusively the plaything of man. The next inevitable step for the Government to take is match-making, in order to preserve the race purity. Ethics may not matter; but Eugenics must. In Thuringia, a marriage department of State is established to make sure that the true—blue Aryans do not taint their blood with an admixture of the Non-Aryan, even into the thirty-second dilution. The funniest part of it all is that these marital austerities are enacted under the regime of Herr Hitler, whose Jewish extraction within the third degree is still a moot point.

Throughout the Reich, Courts of Eugenics would preside over the ceremony of compulsory sterilisation of persons, who were certified to be suffering from certain bodily and mental infirmities. The self-anointed apostles of the Nordic Gospel must have determined upon convenient criteria of health and intelligence for the survival of certain pedigree broods.

From dragooning the social and biological policy to circumventing the religious, is an easy march. Under the slogan of nationalism, the capture of the German Protestant Church organisation by German Christians under the lead of Chaplain Muller, is virtually complete. Fraternity is, thus, exorcised from the temples of God. As for the Roman Catholics, the Vatican Concordat sanctioned the insistence, by the Nazi Government, upon the non-participation, of the sheep of the Papal See, in politics.

Though it played upon the whole gamut of national life, the German Government has taken still further measures to restore the normal economic life. The supervisors, installed by the Nazi leaders in business, factories and Municipal undertakings, were withdrawn under pressure from the Party. Nazi employees or workers, in a combine or a fiirm, appointed the supervisors to control the management of the business, in the days of the Revolution. In some cases, they were even required to take steps against recalcitrant employers. These supervisors virtually took over the entire management of many works from the directors. But now, the "Return to normal" policy reigns supreme in the Counsels of Nazidom. Incidentally, the industrial magnates have been reinstated in the full plenitude of their power. Labour Trustees, in pursuance of this self-same policy, have stepped in to thwart all attempts to force unorganised workers and employers into the "Unified" Trade Unions. Thus, the employers have gained both power and status.

The wealthier classes experienced re-orientation. But the socialists, communists, pacifists and Jews are mere "bones to the dog" of Nazi Moloch. While it suits Nazidom to enter the Four-Power-Pact, guaranteeing peace for the next ten years, free association, free speech, free Press and the vote are costly and dangerous luxuries in the internal economy of the country. Rightly or wrongly, the Nazi Hierarchy could not afford to leave the cultural machinery, intact, if the "return to normal" would endure.

On the other hand, it is reported that, for the purposes of the police, twenty-five to thirty British Aircraft have been wanted by the German Air Minister for purchase. But, the British Government declined to supply on the score of infringing the terms of the Paris Air Agreement of 1926, under which fifty members of the German police force were allowed to receive flying instruction. This clause, according to the Birtish view, does not lend itself to the interpretation that the police force has to own aeroplanes and perform duties in the air. The Nazi machine of internal persecution thus, lacks the complement of air-bombing, the interpretation of which as mere police bombing or preventing bombing is much in vogue, to-day.

British Export Trade Hit.

In the wake of this rebuff from the British Government, Germany raised the custom duties on cotton and wool yarns. This increase in tariffs purports to counteract "exchange dumping". The idea is that British products have been seriously competing with the German, since the fall of the pound. With a view to benefit fully by the high tariff, the cotton spinners are endeavouring to form a cartel, in order to capture the home market. But, important concerns deal both with spinning and weaving. These undertakings of a mixed nature do not countenance any movement for restricting the production of yarn. The formation of cartel is, thus, retarded by recalcitrance of spinning—weaving firms. In view of the sharp increase in tariffs, whether Britain will offer adequate concessions to German exporting interests is highly doubtful. It is even more problematical if the higher duties may not persist, even if gestures from Britain favour Germany. These higher duties have become operative as from August, 2.

The duties on the raw cotton yarn single thread are doubled or more than doubled for every grade. In addition, a duty of 20 marks is imposed on the pure twisted cotton yarn known as "Number 47 English", single or double spun, which os used for manufacturing laces, nets and similar woven fabrics. The duties on cotton yarn of two or more threads are raised from 160 to 250, and 200 to 275 Reichmarks, respectively. On all kinds of cotton twist designed for retailing, the duties are raised from 250 to 300 Reichmarks.

While the tariff war has restarted, even before the ink on the paper of tariff truce is dry, hopes are entertained that the North Atlantic Conference will decide upon a change in tariffs, in view of the decline of the dollar.

Commercial Isolation.

Commercial treaties of the most-favoured nation type or the fixed tariff-rate one, which Germany has already contracted, have recently been allowed to lapse, owing to her protectionist agricultural policy and because of the inclination abroad to exclude German manufactured goods. A new commercial policy in group treaties is in contemplation. This scheme should succeed if an economic collapse were to be averted. For, the economic well-being of the Nazi State is essential for its continuance.

Air Mail Week.

Germany had no doubt assured herself of a load-line of exports, through her debt conveyances. Beyond that, it is hard for Germany to progress, to any very large extent. The British Empire has gone protectionist. France keeps Germany at arms' length. Austria might, any day, sever diplomatic relations with Germany. Hungary would keep step with Austria. Italy has the two Central European States under her wings. The South-Eastern European States of the Little Entente march in the wake of France. Hitlerism has alarmed Russia into several non-aggression pacts with the neighbouring States.

And yet, the Post-War Market of Germany has been Europe.

With so much favour to curry from the rest of Europe, Germany thought fit to raise tariff walls against one and all, thus scrapping up her former bilateral treaties with many countries.

Success crowned the efforts of a mining commission, prospecting for copper, among the hills between Kirchhunden and Marmecke in the Sauerland district of West Germany. Ore containing "brown" copper, at present only obtainable in America, is reported to have been located. Boring is shortly to be commenced. The certain availability of copper deposits in Germany will depend on final results of the mining operations, that are now being started.

GREAT BRITAIN

TRADE PACTS AND DOMINION LOANS.

With the break-up of the World Economic Conference, there are serious apprehensions among all sections of opinion in Britain that it must inevitably mean a further fillip to economic nationalism. At any rate, no government would be so optimistic as to commit the economic fortunes of its people to the chances of an international agreement at some indefinite date in future. The cabinets all the world over are bound to take up the threads of their insular policies where they were left when their prominent members hurried to London in the hope of bringing about economic disarmament. Great Britain differs from other countries in her greater dependence on international trade; but her policy has perforce to be circumscribed within the Empire and just those countries with whom she has very close commercial relations. The resumption of trade relations with Soviet Russia, though chronologically preceding the fiasco of the Economic Conference, must bear a logical sequence to the realisation, which followed it, that no channel of trade available should be willingly foregone. The undertone of pessimism is still there; and, in fact, it may be said to have even gained in strength. Mr. Lloyd George gave vigorous expression to it when he cried disconsolately "not a cent, off the tariffs, not a strand of your barbed wire has been broken." The helpfulness of his criticism lies in the diagnosis of the malaise of the world conference, namely, that "we under-estimated the psychology of the war and the fear which it put into the very heart and fibre of nations." The key to most of the international problems would be gained by the achievement of a fair measure of disarmament.

Mr. Henderson an M. P. Again?

Speaking of disarmament, it is difficult not to refer to the decision of Mr. Arthur Henderson to stand as Labour candidate for Clay Cross. His defeat at the last general election, it was apprehended, would prove a tragedy to Britain and the world if it involved his resignation of the Presidentship of the Disarmament Conference. Happily, it turned out that the Government were no more inclined to replace him than the accepted constitutional principles and practice required his resignation, on the ground of his having ceased to be a member of the House of Commons. Though by his continuance in the Presidentship the worst consequence of his defeat at the elections has been averted, it is still a regrettable anomaly that the accredited representative of the British nation should be without a seat in its sovereign legislature. So far as Mr. Henderson himself is concerned, his prestige has been enhanced by his efforts in the cause of world peace. His position in the country has been buttressed by an international reputation; and the Economist makes the very apposite comment that his return to Parliament at this juncture would strenghen his position at international conferences. The electorate must by now have found the error of its ways; and the election of Mr. Henderson, apart from being a recognition of his services, must also signify the fact that the National Government has lost favour with the country.

The Waiting List.

But to return to the effects of the break up of the World Economic Conference. The Board of Trade has again taken up the "waiting list" of countries who have already signified their readiness, their anxiety, to discuss the terms of a commercial treaty with Great Britain. It is claimed that there are too many countries on the list and that the negotiations could be taken up only in the order in which applications had been received. It is flattering to the national vanity to believe that all the nations of the world are waiting in a queque for the boon of more regularised trade relations with Great Britain. It is understood that more countries could be simultaneously negotiated with, if there were a sufficient number of experts in the Board of Trade to tackle the countries at the same time. As it is, some have been too exhausted by the preparations for and the deliberations of the World Economic Conference to take up these tasks immediately thereafter.

Coal Allocations.

Before, however, initiating negotiations for new trade pacts there is the question of protecting those already concluded. The gains indicated in the treaties with the Scandinavian countries have to be secured by the requisite internal regulation. Most of these have only recently come into force; and they provide a short period of grace in which imports from Great Britain need not come up to the prescribed figure. Taking the case of the coal industry, for instance, it is imperatively necessary to make the requisite export and inland allocations. If this is not made in time there is grave danger that the gains secured under the treaties with the Scandinavian countries would be lost. At the moment, there is little chance of such agreement being arrived at on a voluntary basis. For there is bound to be much difference on the date to be chosen as the basis of allocation. Much of the inland trade has been gained from the Inland districts by the export centres which have resorted to the sea route. And the former might, therefore, insist on such a date being chosen as would restore to them the lost trade. In the event of an irreconcilable conflict the State would have to step in with an amendment of the Act of 1930.

Trade with Baltic States.

As for new treaties, negotiations are proceeding with Soviet Russia. And the Baltic States will, it is expected, have their turn in early October. The following table will show that the problem which Britain would have to solve is how best to reduce the heavy adverse balance of trade against Great Britain to her advantage.

Air Mail Week

TOTAL TRADE, (£) 1931.

It is expected that negotiations with Poland might be taken up before Christmas.

Dominion Loans.

Despite all these treaties, the mind of the Government is set on the consolidation of the Empire. The most immediate effect of the failure of the World Economic Conference, it must be remembered, was the declaration of the leanings of the Empire towards a common Empire monetary policy. It was aptly suggested in Indian Finance at the time that the Dominion of Canada must have insisted on some tangible inducements for overcoming the rival attractions of the dollar. The Dominion loan announced during the week gives a glimps of the negotiations between Great Britain and the Empire countries for the acceptance of a common monetary policy. The Dominions must have naturally argued that, if the Empire is to adopt for itself the ideas which failed to commend themselves to the World Economic Conference, Great Britain must be prepared to give effect to all of them and not just those which suit her most. The essentials of an enlightened international economic policy are, the restoration of a common monetary standard, the lowering of trade barriers between country and country and the resumption of international lending. The first was accepted in principle. The second, in so far as it was practicable, was embodied in the Ottawa pacts. So, the Dominions must have argued, it is the last one that remains to be put into force. Great Britain, being the only big creditor country in the group, must be prepared to discharge its natural obligations in this regard.

Canada Loan.

In the position in which Great Britain finds herself now, she cannot demur, if she is called upon to lend to the Dominions on a large scale. The Commonwealth of Australia Loan, which was mainly a conversion loan, and the Dominion of Canada loan are the natural results of these talks. The loan is a £15,000,000 Government of Canada 4 per cent. Registered Stock, 1953-58. The stock will be redeemed at par in London, on September 1, 1958, the Government having the option to redeem in whole or in part at par on or after September 1, 1953, on giving three months notice. A sinking fund of ½ per cent. per annum will be provided. The Bank of Montreal is authorised to receive applications, payable as follows: 5 per cent. on application, 30 per cent. on August 9, 35 per cent. on September 1 and 30 per cent. on September 29. Interest is payable March 1 and September 1. A full six months' interest will be paid on March 1 next.

Budget and Trade Balance.

The revenue position of the Government and the balance of payments of the nation in the light of which the soundness of the investment can be judged are briefly stated. Canada's total revenue totalled $311,106,000 in 1932-33, and ordinary expenditure was $358,528,000. In addition there was special expenditure of $48,303,000 and capital expenditure of $8,548,000. The Budget for 1933-34 introduced in the House of Commons on March 31, 1933, provided for a surplus on ordinary account and for a substantial reduction in special and capital expenditure. As for the balance of trade it was favourable in 1932-23 to the extent of nearly $131,000,000 while an important invisible item in Canada's balance of trade is the expenditure of tourists. According to estimates of the Dominion Bureau of Statistics, receipts from this source in 1932 totalled $212,000,000 while expenditure of Canadian tourists abroad amounted to $57,000,000, leaving a net balance in Canada's favour of $155,000,000.

It is stated in the prospectus that the loan is raised to provide to meet maturing obligations and for other Government purposes and that no part of the proceeds will be remitted, directly or indirectly, to countries outside the British Empire. This is the usual clap trap. If it means anything more than that no part of this loan would be utilised to repay the American loans as they mature, it is, as the Financial News bluntly puts it, "sheer nonsense". But as a security it is, beyond doubt, safe and the issue is sure of a favourable reception.

FRANCE

PROSPECTS OF TRADE WAR.

The outbreak of a serious trade war, consequent on the violation of the spirit of the Tariff Truce, is feared to arise from the discovery, by an American importer, of a customs ruling. It deprives the United States of the minimum or intermediary tariff rates, hitherto enjoyed in France on 67 clesses of goods, including machinery. The private discovery of this sweeping action was the first information to the American Commercial Attache, according to an American official who complained that no official publication of the new commercial policy had been made ; nor was there any announcement in the Press.

The implication of this new policy is to cancel trade privileges, extended to America on all commodities for which tariff rates are increased. Official American representations are bound to be made. American circles are, however, tickled over the veiled French desire for special trade concessions. The decree, modifying the customs tariff on American products, raise the duty on cotton waste to 40 francs per 100 Kilos. Potassium and Sodium silicates remain at the former intermediary tariff. Machines and apparatus, cutlery and razor blades, formerly on the minimum tariff, are now placed on the new minimum tariff. Sewing needles and machines, formerly on the intermediary tariff, are now placed on the new minimum tariff. The text of the decree will, in all probability, be issued about the middle of August.

There is every likelihood that an exchange Compensation Surtax, similar to that of 15 per cent. imposed on imports from Great Britain since the fall of the pound, will be applied to American imports. This additional surtax is to serve the purpose of an exchange compensation against the fall of the dollar.

For the first six months of this year, imports amounted to 15,105,000,000 francs, a decrease of 130,000,000 francs, as compared with last year for the same period. Exports during the same period were 8,976,000,000 francs, a decrease of 1,103,000,000 francs as compared with the first half of 1932.

Air Mail Week.

The adverse balance for the half-year was thus 6,129,000,000.

Navigation Burdens.

A new harbour and maritime station was constructed at Cherbourg. The great building was equipped with up-to-date landing stages. The harbour was made to receive the largest ocean liners at any hour of the day or night, in any weather, and without regard to the state of the tide. The harbour railway station has been built to resemble a Greek temple with a 230 ft. tower. The new harbour and station was opened on July 30, by the French President, M. Leburn. He was accompanied by the Minister of Merchant Marine and the Minister of Public Works.

The Credit Foncier scheme for encouraging mercantile shipbuilding, by a system of cheap long-term loans to shipping interest, has been prolonged for another four years, by the French Government decree of July 26. All transactions will pass through the medium of Credit Foncier. The total loans to shipping concerns must not exceed 500 million francs during the next four years. The maximum amount, which a shipping firm can borrow under the extended scheme, must not exceed an average of 4 million francs a year, exclusive of allowances given in respect of speed capacity. The maximum total of allowances for speed, earmarked for the next four years, is limited to 2 million francs. All loans, direct or intended to finance other such loans, must be liquidated within a period of twenty years.

The French Government have been pursuing the policy of taking over enterprises under its control, either for purposes of obtaining revenue, ensuring the national defence, or saving them from bankruptcy. Under one or other of these contingencies, the State runs postal, telegraph, telephone, tobacco, match and potash monopolies, and owns and operates two main-line railway systems, besides factories for the manufacture of gunpowder and nitrates and porcelain, and plant for the production of natural mineral waters, two private banks, a commercial aviation company, etc. The latest commitment is for the State to assume direct financial and technical control of the Compagnie Generrale Translantique for the next fourteen years. The Translantique is a shipping combine, owning over 100 ships of tonnage exceeding 600,000, which has sought rescue from bankruptcy, after 65 years of successful operation. The Socialists welcome State-ownership, and lean upon the natural course of developments to fulfil their hopes.

Under the reorganisation scheme, the capital of 200,000,000 francs disappears. But, the subscribers receive profit-sharing certificates of a strictly limited return. The bond-holders claim over 350,000,000 f, and will receive certificates for their drastically reduced claims. Other creditors of the Translantique are, among others, the State and subsidiary companies, including the one which is constructing the gigantic *Normandie*. The State claim amounted, in 1931, to over 1000,000,000 f. Since then, advances were granted to the extent of 400,000,000 f. The new law, which enabled the State to control the Translantique, requires the payment of an annual subsidy, which may range between 50 million and 150 million francs. In all probability, the upper limit will be exceeded in covering operating deficits and financial obligations.

Over and above all this, come the costs of the completion of the *Normandie*, on which 400 million francs have been spent, and as much more is still needed. At shareholders' meetings and on the directorate, the taxpayer will play a leading role in the reorganisation of the Translantique.

M. Front, the Minister of Merchant Marine, admitted the *Normandie* to constitute an element of uncertainty. This 73,000 ton liner is expected to entail annual financial charges of 70 million francs, on account of construction alone. Its cost per gross ton is officially admitted to exceed by at least 30 per cent. the cost of building, elsewhere. It is feared that the *Normandie* will turn out to be a white elephant of the sea, if the conditions induced by the depreciation of the sterling and the dollar, so detrimental to French shipping, be not soon readjusted.

French National Lottery.

The Finance Act of last May empowered the Government to organise a State lottery during the current financial year. The gross yield, by sale of tickets, is estimated to yield about 1000 million francs. It will be organised under the authority of the Finance Minister, with the aid of a Committee, consisting of the Governors of the Bank of France and the Credit Foncier and many other high officials. No remuneration or accessory advantage of any kind shall accrue to any person, attached to the venture. Sixty per cent. of the receipts from the sale of tickets, minus expenses of printing and sundry other items, will be devoted to prizes. The balance shall allot 100 million francs for agricultural purposes; and the residue will be utilised for the reduction of the credit, authorised for the current financial year in respect of pensions for soldiers, disbanded after the War.

(*Continued from page451*)

worth the benefits gained. In Canada and the United States of America, the part-time agency system has now been almost entirely eliminated and the business is conducted wholly by full-time agents operating under the license of the State.

In view of the peculiar nature of the collection and other work of industrial agents as distinct from that of the ordinary life agents, the question of part-time versus whole-time agencies in industrial assurance is an important one which should be duly considered before any legislation is passed.

THE "IT" IN INSURANCE.

At first sight, the connection between "IT" and a type of insurance policy is not obvious. This very interesting insurance policy owes its origin to the enterprise and adventure of the "British Gate" Insurance Company of London. "IT" is a combined policy covering twelve different kinds of risks namely, fire, burglary, workmens' compensation, plate glass, loss of profits, public liability, damage to shop fronts, damage to window displays, storm and flood, riots and strikes bursting of water pipes, explosion and lightning. The number of attractive and interesting leaflets that are designed by the company to push the sale of this policy, is noteworthy. One says "As a progressive trader you know the advantage of buying bulk—but do you always get 'It.' " Another tells that film stars have "IT" in describing the special features of star actors and that all grocers should have "IT" too. A third is entitled "Have you got 'IT,' asks his wife." A useful blotter informs the public that "IT" covers twelve essential risks and that "IT" costs much less than the cost of separate policies. A fifth points out that "IT" consolidates your insurances, saves money, time and trouble, representing maximum protection at minimum cost. "IT" means that you have to deal with only one source whatever trouble you may get. "IT" allows ten per cent. on claim bonus. Thus "IT" claims to be *it*.

There can be no denying the fact that "IT" will prove to be a very useful kind of policy to traders particularly. I wish some enterprising companies in India devise some such novel combined policies.

FROM OUR READERS

COTTON—KING OF INDIAN AGRICULTURE.

THE EDITOR,
Indian Finance.

SIR,

Cotton is verily the King of Indian Agriculture. The sway of King Cotton extends from Peshawar to Cape Comorin, from Dwarka to Assam in the East. There is not a province in India but grows some cotton. King Cotton easily beats by lengths any other agricultural product of India in the areas covered by cotton cultivation (*viz.*, 2 crores 35 lakhs acres) and in its value (*viz.*, Rs. 60 crores). He is the mainstay of the Indian agriculturist and the founder of the prosperity of Bombay and Karachi. Few people even in India realize that Bombay is the World's biggest cotton spot market, inasmuch as Bombay handles annually 35 lakhs of bales of actual cotton which no other single port even in America or Europe does. Karachi comes second best in India and handles 10 to 12 lakhs of bales annually.

King Cotton is a hardy plant and known to the Indian farmer for generations. It is easy to grow, wants but little attention or cultivation during the growing period, withstands long stretches of sunshine or showers better than any other agricultural product, and grows almost like grass. Its growing period is just 4 to 5 months ; it is non-perishable and can be marketed at convenience. It is a cash crop and admirably suits the Indian farmer.

In spite of over-production in America, no better substitute for cotton is found either in the U.S.A. or in India.

Given a broader market, the potentialities of King Cotton expanding his dominion in India are still immense in the region of both extensive and intensive cultivation. Large tracts in the Sukkur Barrage and elsewhere are available for cotton cultivation ; in the matter of intensive cultivation the average yield per acre in India is only 85 lbs. lint as against 155 lbs. in America and 450 lbs. in Egypt ; and this offers a great field for useful research work for the Indian Central Cotton Committee.

Thus, while the prime need for India is to find yet newer and wider markets for her cotton, it seems suicidal to endanger or destroy even the existing markets, by driving away our best and biggest buyers of Indian cotton. Those critics who call the Japanese boycott "mere bluff" have apparently nothing more constructive in their heads than "mere bluff".

Only a few years ago, Japan was one of our best buyers of Burmese rice. Within a decade, she has turned the tables so much so that the Indian rice-grower to-day cries for protection against rice imports from Japan.

The worst critics of Japan will have to concede that, as a nation, she is not wanting in both ample resources and brains. Necessity is the mother of invention, and if she grows cotton in Manchuria or replaces Indian cotton anyhow by any other fibre or process, the market may be permanently lost to India, if the struggle is carried on to its bitter end.

Dumping means selling goods at ridiculously cheap prices, in other words, giving away something for almost nothing! To the extent that Japan buys our surplus raw cotton, even if she was foolish enough to dump her goods and chose to sell them at distress prices, India stands to lose nothing. An average business man will never miss an opportunity if he can pick up distress cotton easily and what is good for the individual is good for the country. As long as the Balance of Trade does not go against India, all exchange or surplus goods on both sides must result in mutual benefit; and if one of the countries chooses to dump them, so much the better for the other party.—(Question! Ed. *I. F.*)

To my mind all cries of dumping are mere moonshine. It is a cry of helplessness, of inefficiency, of fruitless jealousy.

When Henry Ford first put up his cars for sale at £100 only, the motor trade was aghast ; but, soon enough, all other motor builders had to, and did, fall in line by reducing their costs. Else, they had simply to go out of business.

With the increasing perfection of modern mechanism, inventions etc., it is only a matter of time when costs of manufactured articles such as bicycles, motors, aeroplanes etc., must be still further reduced so as to make them available for the less affluent classes. If Japan is first in the field, she rather deserves credit for it and the thanks of humanity at large, in the same way as Henry Ford has proved a benefactor of mankind by cheapening the motor car so that even the middle-class in every land can now own it, while, only 20 years ago, it was a luxury for the rich.

Under the circumstances, rather than worry over Japanese dumping India had better concentrate on increasing the purchasing power of her masses by allowing her cotton growing industry to rise to its full height and develop it on natural lines of supply and demand ; and this can be best helped by finding fresh and broad markets for her produce and not by restricting or endangering even her present markets, as is sought to be done by practically inviting the Japanese boycott and treating it as mere bluff.

Yours etc.,
VARJIVANDAS MOTILAL.

BOMBAY,
August 9.

THE EDITOR,
Indian Finance.

SIR,

From a perusal of the letter from Mr. Varjivandas Motilal in your issue of August the 5th, I gather that Mr. Motilal is well meaning but has no knowledge of the cotton spinning and weaving industry.

He states :—

(*a*) That yarns of counts between 31s. and 40s. cannot be produced from Indian Cotton, as grown at present.

(*b*) That there is a distinct demand for finer goods in India.

As regards (*a*), Cambodia cotton as grown in the Coimbatore and other districts of the Madras Presidency is eminently suited for the counts mentioned. Large quantities of 40s. and even 44s. are spun by mills in the Madras Presidency.

With regard to (*b*), what Mr. Motilal calls the expression of increased demand in India for finer counts, is merely the logical outcome of recent events.

I may mention that, in recent years, the tendency has been for demand to be more and more for the coarser counts, chiefly 20s., because of the fall in the people's purchasing power.

Now, however, an enhanced duty having been put on grey piecegoods, Japan and China are concentrating on exporting yarns to this country, as the duty on the latter remains as before. The result is a vicious circle. Low priced 40s., so cheap that no Indian Mill (no matter how efficient), can compete against them, are flooding the country.

A certain relationship in price between 40s. and, say, 32s. must always be observed ; otherwise the 40s., with greater length in proportion to weight, will be preferred to 32s. This can be seen now, with the result that prices for Indian Mills' 20s. to 32s. have steadily fallen and margins have completely vanished.

Mills in the Madras Presidency are giving up night work and there is talk of further wage cuts.

I write as a cotton spinner, having no connection with weaving ; but the description of the vicious circle would be incomplete without mentioning that the low price of yarns leads to low priced cloths from the hand loom weaver, thus forcing down the price obtainable for mill made cloth, and nullifying the benefits expected to accrue from the recent enhanced duty on grey goods.

The position, therefore, is that unless Government impose an enhanced duty on grey yarns emanating from Japan and China, and that in good time, much misery and loss will be felt throughout this country.

Yours etc.,
SPINNER.

Topical Extracts:

NATIONAL SELF-SUFFICIENCY

I.

I was brought up, like most Englishmen, to respect Free Trade not only as an economic doctrine which a rational and instructed person could not doubt but almost as a part of the moral law. I regarded departures from it as being at the same time an imbecility and an outrage. I thought England's unshakable Free Trade convictions, maintained for nearly a hundred years, to be both the explanation before man and the justification before heaven of her economic supremacy. As lately as 1923 I was writing that Free Trade was based on fundamental truths "which, stated with their due qualifications, no one can dispute who is capable of understanding the meaning of the words."

Looking again to-day at the statements of these fundamental truths which I then gave, I do not find myself disputing them. Yet the orientation of my mind is changed; and I share this change of mind with many others. Partly, indeed, my background of economic theory is modified. I should not charge Mr. Baldwin, as I did then, with being "a victim of the Protectionist fallacy in its crudest form," because he believed that, in the existing conditions, a tariff might do something to diminish British unemployment. But mainly I attribute my change of outlook to something else—to my hopes and fears and pre-occupations, along with those of many or most, I believe, of this generation throughout the world, being different from what they were. It is a long business to shuffle out of the mental, habits of the pre-war nineteenth century world. But to-day, at last, one-third of the way through the twentieth century, we are most of us escaping from the nineteenth; and by the time we reach its mid-point it is likely that our habits of mind and what we care about will be as different from nineteenth-century methods and values as each other century's has been from its predecessor's. It may be useful, therefore, to attempt some sort of a stocktaking, of an analysis, of a diagnosis, to discover in what this change of mind esentially consists.

What did the nineteenth-century Free Traders, who were amongst the most idealistic and disinterested of men, believe that they were accomplishing?

They believed—and perhaps it is fair to put this first—that they were being perfectly sensible, that they alone were clear-sighted, and that the policies which sought to interfere with the ideal international division of labour were always the offspring of ignorance out of self-interest.

In the second place, they believed that they were solving the problem of poverty, and solving it for the world as a whole, by putting to their best uses, like a good house-keeper, the world's resources and abilities

They believed, further, that they were serving not merely the survival of the economically fittest but the great cause of liberty, of freedom for personal initiative and individual gift, the cause of inventive art and the fertility of the untrammelled against the forces of privelege and monopoly and obsolescence.

They believed, finally, that they were the friends and assurers of peace and international concord and economic justice between nations, and the diffusers of the benefits of progress.

And if to the poet of that age there sometimes came strange feelings to wander far away where never comes the trader and catch the wild goat by the hair, there came also with full assurance the comfortable reaction:

I, to herd with narrow foreheads, vacant of our glorious grains,
Like a beast with lower pleasures, like a beast with lower pains!

II.

What fault have we to find with this? Taking it at its surface value—none. Yet we are not, many of us, content with it as a working political theory. What is wrong?

To begin with the question of peace. We are pacifist to-day with so much strength of conviction that, if the economic internationalist could win this point, he would soon recapture our support. But it does not now seem obvious that a great concentration of national effort on the capture of foreign trade, that the penetration of a country's economic structure by the resources and the influence of foreign capitalists, that a close dependence of our economic life on the fluctuating economic policies of foreign countries, are safeguards and assurances of internal peace. It is easier, in the light of experience and foresight, to argue quite the contrary. The protection of a country's existing foreign interests, the capture of new markets, the progress of economic imperialism—these are a scarcely avoidable part of a scheme of things which aims at the maximum of international specialisation and at the maximum geographical diffusion of capital wherever its seat of ownership. Advisable domestic policies might often be easier to compass, if, for example, the phenomenon known as "the flight of capital" could be ruled out. The divorce between ownership and the real responsibility of management is serious within a country when, as a result of joint stock enterprise, ownership is broken up between innumerable individuals who buy their interest to-day and sell it to-morrow and lack altogether both knowledge and responsibility towards what they momentarily own. But when the same principle is applied internationally, it is, in times of stress, intolerable—I am irresponsible towards what I own and those who operate what I own are irresponsible towards me. There may be some financial calculation which shows it to be advantageous that my savings should be invested in whatever part of the habitable globe shows the greatest marginal efficiency of capital or the highest rate of interest. But experience is accumulating that remoteness between ownership and operation is an evil in the relations between men, like or certain in the long run to set up straits and enmities which will bring to nought the financial calculation.

I sympathise, therefore, with those who would minimise, rather than with those who would maximise, economic entanglement between nations. Idea, knowledge, art, hospitality, travel—these are things which should of their nature be international. But let goods be homespun whenever it is reasonably and conveniently possible; and, above all, let finance be primarily national. Yet, at the same time, those who seek to disembarass a country of its entanglements should be very slow and wary. It should not be a matter of tearing up roots but of slowly training a plant to grow in a different direction.

For these strong reasons, therefore, I am inclined to the belief that, after the transition is accomplished, a greater measure of national self-sufficiency and economic isolation between countries than existed in 1914 may tend to serve the cause of peace, rather than otherwise. At any rate, the age of economic internationalism was not particularly successful in avoiding war; and if its friends retort that the imperfection of its success never gave it a fair chance, it is reasonable to point out that a greater success is scarcely probable in the coming years.

Let us turn from these questions of doubtful judgment, where each of us will remain entitled to his own opinion, to a matter more purely economic. In the nineteenth century the economic internationalist could probably claim with justice that his policy was tending to the world's great enrichment, that it was promoting economic progress, and that its reversal would have seriously impoverished both ourselves and neighbours. This raises a question of balance between economic and non-economic advantage of a kind which is not easily decided. Poverty is a great evil; and economic advantage is a real good, not to be sacrificed to alternative real goods unless it is clearly of an inferior weight. I am ready to believe that in the nineteenth century two sets of conditions existed which caused the advantages of economic internationalism to outweigh disadvantages of a different kind. At a time when whosesome migrations were populating new continents, it was natural that the men should carry with them into the New Worlds the material fruits of the technique of the Old, embodying the savings of those who were sending them. The investment of British savings in rails and rolling stock to be installed by British emigrants to new fields and pastures, fruits of which they would return in due proportion to those whose frugality had made these things possible, was not economic internationalism remotely resembling in its essence the part ownership of the A. E. G. of Germany by a speculator in Chicago, or of the municipal improvements of Rio de Janeiro by an English spinster. Yet it was the type of organisation necessary to facilitate the former which has eventually ended up in the latter. In the second place, at a time when there were enormous differences in degree in the industrialisation and opportunities for technical training in different countries, the advantages of a high degree of national specilisation were very considerable

But I am not persuaded that the economic advantages of the international division of labour to-day are at all comparable with what they were. I must not be understood to carry my argument beyond a certain point. A considerable degree of international specialisation is necessary in a rational world in all cases where it is dictated by wide differences of climate, natural resources, native aptitudes, level of culture and density of population. But over an increasingly wide range of industrial products, and perhaps of agricultural products also, I become doubtful whether the economic cost of national selfsufficiency is great enough to outweigh the other advantages of gradually bringing the producer and the consumer within the ambit of the same national, economic and financial organisation. Experience accumulates to prove that most modern mass-production processes can be performed in most countries and climates

with almost equal efficiency. Moreover, as wealth increases, both primary and manufactured products play a smaller relative part in the national economy compared with houses, personal services and local amenities which are not the subject of international exchange; with the result that a moderate increase in the real cost of the former consequent on greater national self-sufficiency may cease to be of serious consequence when weighed in the balance against advantages of a different kind. National self-sufficiency, in short, though it costs something, may be becoming a luxury which we can afford if we happen to want it. Are there sufficiently good reasons why we may happen to want it?

The decadent international but individualistic capitalism, in the hands of which we found ourselves after the war, is not a success. It is not intelligent, it is not beautiful, it is not just, it is not virtuous—and it doesn't deliver the goods. In short, we dislike it and we are beginning to despise it. But when we wonder what to put in its place, we are extremely perplexed.

Each year it becomes more obvious that the world is embarking on a variety of politico-economic experiments, and that different types of experiment appeal to different national temperaments and historical environments. The nineteenth century Free Trader's economic internationalism assumed that the whole world was, or would be, organised on a basis of private competitive capitalism and of the freedom of private contract inviolably protected by the sanctions of law—in various phases, of course, of complexity and development, but conforming to a uniform type which it would be the general object to perfect and certainly not to destroy. Nineteenth century protectionism was a blot upon the efficiency and good sense of this scheme of things, but it did not modify the general presumption as to the fundamental characteristics of economic society.

But to-day one country after another abandons these presumptions. Russia is still alone in her particular experiment, and no longer alone in her abandonment of the old presumptions. Italy, Ireland, Germany have cast their eyes, or are casting them, towards new modes of political economy. Many more countries after them will soon be seeking, one by one, after new economic gods. Even countries such as Great Britain and the United States, though conforming in the main to the old model, are striving, under the surface, after a new economic plan. We do not know what will be the outcome. We are—all of us I expect—about to make many mistakes. No one can tell which of the new systems will prove itself best.

But the point for my present discussion is this. We each have our own fancy. Not believing that we are saved already, we each would like to have a try at working out our own salvation. We do not wish, therefore, to be at the mercy of world forces working out, or trying to work out, some uniform equilibrium according to the ideal principles, if they can be called such, *laiser faire* capitalism. There are still those who cling to the old ideas, but in no country of the world to-day can they be reckoned as a serious force. We wish for the time at least and so long as the present transitional, experiment phase endures—to be our own masters, and to be as free as we can make ourselves from the interferences of the outside world.

Thus, regarded from this point of view, the policy of an increased national self-sufficiency is to be considered not as an ideal in itself but as directed to the creation of an environment in which other ideals can be safely and conveniently pursued.

Let me give as dry an illustration of this as I can devise chosen because it is connected with ideas with which recently my own mind has been largely pre-occupied. In matters of economic detail, as distinct from the central controls, I am in favour of retaining as much private judgment and initiative and enterprise as possible. But I have become convinced that the retention of the structure of private enterprise is incompatible with that degree of material well-being to which our technical advancement entitles us, unless the rate of interest falls to a much lower figure than is likely to come about by natural forces operating on the old lines. Indeed the transformation of society, which I preferably envisage, may require a reduction in the rate of interest towards vanishing point within the next thirty years. But under a system by which the rate of interest finds, under the operation of normal financial forces, a uniform level throughout the world, after allowing for risk and the like, this is most unlikely to occur. Thus for a complexity of reasons, which I cannot elaborate in this place, economic internationalism embracing the free movement of capital and loanable funds as well as of traded goods may condemn this country for a generation to come to a much lower degree of material prosperity than could be attained under a different system.

But this is merely an illustration. The point is that there is no prospect for the next generation of a uniformity of economic system throughout the world, such as existed broadly speaking, during the nineteenth century; that we all need to be as free as possible of interference from economic changes elsewhere, in order to make our own favourite experiments towards the ideal social republic of the future; and that a deliberate movement towards greater national self-sufficiency and economic isolation will make our task easier, in so far as it can be accomplished without excessive economic cost.

IV

There is one more explanation, I think, of the reorientation of our minds. The nineteenth century carried to extravagant lengths the criterion of what one can call for short of the financial results, as a test of the advisability of any course of action sponsored by private or by collective action. The whole conduct of life was made into a sort of parody of an accountant's nightmare. Instead of using their vastly increased material and technical resources to build a wonder-city, they built slums; and they thought it right and advisable to build slums because slums, on the test of private enterprise, "paid," whereas the wonder-city would, they thought, have been an act of foolish extravagance, which would, in the imbecile idiom of the financial fashion, have "mortgaged the future;" though how the construction to-day of great and glorious works can impoverish the future no man can see until his mind is beset by false analogies from an irrelevant accountancy. Even to-day we spend our time-half-vainly, but also, I must admit, half successfully-in trying to persuade our countrymen that the nation as a whole will assuredly be richer if unemployed men and machines are used to build much-needed houses than if they are supported in idleness. For the minds of this generation are still so beclouded by bogus calculations that they distrust conclusions which should be obvious, out of a reliance on a system of financial accounting which casts doubt on whether such an operation will "pay." We have to remain poor because it does not "pay" to be rich. We have to live in hovels, not because we cannot build palaces, but because we cannot "afford" them.

The same rule of self-destructive calculation governs every walk of life. We destroy the beauty of the countryside because the unappropriated splendours of nature have no economic value. We are capable of shutting off the sun and the stars because they do not pay a dividend. London is one of the richest cities in the history of civilisation, but it cannot "afford" the highest standards of achievement of which its own living citizens are capable, because they do not "pay." If I had the power to-day I should surely set out to endow our capital cities with all the appurtenances of art and civilisation on the highest standards of which the citizens of each were individually capable, convinced that what I could create, I could afford—and believing that money thus spent would not only be better than any dole, but would make unnecessary any dole. For with what we have spent on the dole in England since the war we could have made our cities the greatest works of man in the world.

Or again, we have until recently conceived it a moral duty to ruin the tillers of the soil and destroy the age-long human traditions attendant on husbandry if we could get a loaf of bread thereby a tenth of a penny cheaper. There was nothing which it was not our duty to sacrifice to this Moloch and Mammon in one; for we faithfully believed that the worship of these monsters would overcome the evil of poverty and lead the next generation safely and comfortably, on the back of compound interest, into economic peace.

To-day we suffer disillusion, not because we are poorer than we were—on the contrary even to-day we enjoy, in

Great Britain at least, a higher standard of life than at any previous period—but because other values seem to have been sacrificed and because, moreover, they seem to have been sacrificed unnecessarily. For our economic system is not, in fact, enabling us to exploit to the utmost the possibilities for economic wealth afforded by the progress of our technique, but falls far short of this, leading us to feel that we might as well have used up the margin in more satisfying ways.

But once we allow ourselves to be disobedient to the test of an accountant's profit, we have begun to change our civilisation. And we need to do so very warily, cautiously and self-consciously. For there is a wide field of human activity where we shall be wise to retain the usual pecuniary tests. It is the State, rather than the individual, which needs to change its criterion. It is the conception of the Chancellor of the Exchequer as the Chairman of a sort of joint stock company which has to be discarded. Now if the functions and purposes of the State are to be thus enlarged, the decision as to what, broadly speaking, shall be produced within the nation and what shall be exchanged with abroad, must stand high amongst the objects of policy.

V

From these reflections on the proper purposes of the State I return to the world of contemporary politics. Having sought to understand and to do full justice to the ideas which underlie the urge felt by so many countries to-day towards greater national self-sufficiency, we have to consider with care whether in practice we are not too easily discarding much of value which the nineteenth century achieved. In those countries where the advocates of national self-sufficiency have attained power, it appears to my judgment that, without exception, many foolish things are being done. Mussolini may be acquiring wisdom teeth. But Russia exhibits the worst example which the world, perhaps, has ever seen of administrative incompetence and of the sacrifice of almost everything that makes life worth living to wooden heads. Germany is at the mercy of unchained irresponsible—though it is too soon to judge her capacity of achievement. The Irish Free State, a unit much too small for a high degree of national insufficiency except at crushing economic cost, is discussing plans which might, if they were carried out, be ruinous.

Meanwhile, those countries which maintain, or are adopting, straightforward protectionism of the old-fashioned type, refurbished with the addition of a few of the new plan quotas, are doing many things incapable of rational defence. Thus, if the Economic Conference were to achieve a mutual reduction of tariffs and prepare the way for regional agreements, it would be matter for sincere applause. For I must not be supposed to be endorsing all those things which are being done in the political world to-day in the name of economic nationalism. Far from it. But I seek to point out that the world towards which we are uneasily moving is quite different from the ideal economic internationalism of our fathers, and that contemporary policies must not be judged on the maxims of that former faith.

I see three outstanding dangers in economic nationalism and in the movements towards national self-sufficiency.

The first is Silliness—the silliness of the doctrinaire. It is nothing strange to discover this in movements which have passed somewhat suddenly from the phase of midnight highflown talk into the field of action. We do not distinguish, at first, between the colour of the rhetoric with which we have won a people's assent and the dull substance of the truth of our message. There is nothing insincere in the transition. Words ought to be a little wild, for they are the assault of thoughts upon the unthinking. But when the seats of power and authority have been attained there should be no more poetic licence. On the contrary, we have to count the cost down to the penny which our rhetoric has despised. An experimental society has need to be far more efficient than an old-established one, if it is to survive safely. It will need all its economic margin for its own proper purposes and can afford to give nothing away to soft-headnedness or doctrinaire folly.

The second danger—and a worse danger than silliness—is Haste. Paul Valerys aphorism is worth quoting—"Political conflicts distort and disturb the people's sense of distinction between matters of importance and matters of urgency." The economic transition of a Society is a thing to be accomplished slowly. What I have been discussing is not a sudden revolution, but the direction of secular trend. We have a fearful example in Russia to-day of the evils of insane and unnecessary haste. The sacrifices and losses of transition will be vastly greater if the pace is forced. This is above all true of a transition towards greater national self-sufficiency and a planned domestic economy. For it is of the nature of economic processes to be rooted in time. A rapid transition will involve so much pure destruction of wealth that the new state of affairs will be, at first, far worse than the old, and the grand experiment will be discredited.

The third risk, and the worst risk of all three, is Intolerance and the stifling of instructed criticism. The new movements have usually come into power through a phase of violence or quasi-violence. They have not convinced their opponents ; they have downed them. It is the modern method—to depend on propaganda and to seize the organs of opinion ; it is thought to be clever and useful to fossilise thought and to use all the forces of authority to paralyse the play of mind on mind. For those who have found it necessary to employ all methods whatever to attain power, it is a serious temptation to continue to use for the task of construction the same dangerous tools which wrought the preliminary house-breaking.

Russia, again, furnishes us with an example of the blunders which a regime makes when it has exempted itself from criticism. The explanation of the incompetence with which wars are always conducted on both sides may be found in the comparative exemption from criticism which the military hierarchy affords to the high command. I have no excessive admiration for politicians, but, brought up as they are in the very breath of criticism, how much superior they are to the soldiers! Revolutions only succeed because they are conducted by politicians against soldiers. Paradox tthough it be—who ever heard of a successful revolution conducted by soldiers against politicians? But we all hate criticism. Nothing but rooted principle will cause us willingly to expose ourselves to it.

Yet the new economic modes, towards which we are blundering, in the essence of their nature, experiments. We have no clear idea laid up in our minds beforehand of exactly what we want. We shall discover it as we move along, and we shall have to mould our material in accordance with our experience. Now for this process bold, free and remorseless, criticism is a *sine qua non* of ultimate success. We need the collaboration of all the bright spirits of the age. Stalin has eliminated every independent, critical mind, even when it is sympathetic in general outlook. He has produced an environment in which the processes of mind are atrophied. The soft convolutions of the brain are turned to wood. The multiplied bray of the loud speaker replaces the inflections of the human voice. The bleat of propaganda, as Low has shown us, bores even the birds and the beasts of the field into stupefaction. Let Stalin be a terrifying example to all who seek to make experiments. If not, I, at any rate, will soon be back again in my old nineteenth century ideals, where the play of mind on mind created for us the inheritance which we are seeking to-day to divert to our own appropriate purpose.—(By Prof. J. M. Keynes in the *New Statesman and the Nation.*)

WORLD SHOULD AID ROOSEVELT

"It is to the world's benefit to watch the American experiment not only closely, but sympathetically, and to offer every possible assistance that can be given within the limits of diverse beliefs and interests."

That is what the Middland Bank says in its current review in an article on "The American Monetary System.'

"We regard it as one of the major benefits of the crisis—for even a major crisis has some good results—that a statesman of President Roosevelt's standing and power should have brought the world nearer to a true sense of proportion in the matter of monetary stability," writes the "Review,"

"There are two sorts of stability ,in internal purchasing power over commodities and services ,and in external purchasing power over other currency units. Notwithstanding the appalling experiences of recent years and their obvious association with internal instability, it is still the habit to think in terms of the second, to the almost total exclusion of the first.

"Yet, if the depression has taught us anything, it is this: that our neglect of the first has cost us not only an incalculable direct loss in terms of economic welfare, but indirectly the loss also of the benefits to be derived from the second.

"The President's statement is ,therefore, to be warmly welcomed, particularly as the price paid for it, in the abandonment of a formula which might have had little practical value and possibly injurious psychological effects, was so small.

"The dollar, in respect of its external valuation, has become a prey to speculation; and this is true to a smaller extent of its internal value as well. The two are seemingly closely associated, for it may be supposed that inducements to exchange speculation operate also to stimulate commodity speculation, and success in one encourages the hope of success in the other. It follows that suppression or limitation of exchange speculation would probably serve to check speculation in commodities and in stock exchange

securities—both now recognised as danger spots in the American situation.

"If this be so, it is doubtful whether the course of the dollar in the exchange market can be altogether ignored with safety.

At all events, it is evidently to the world's benefit to watch the American experiment not only closely but sympathetically, and to offer every possible assistance that can be given within the limits of diverse beliefs and interests.

"There is so much common interest and belief that the field for such assistance is large; the reward is the prospect of a share in restored and assured prosperity; it will be unfairly won if it comes as 'unearned increment': it will be bitterly lost if lost through shortsightedness and practical shortcomings in the attitude of other countries towards the President's plans."

AMERICAN OPINION ON AMERICAN DEVELOPMENTS

The National City Bank of New York, in the cabled summary of its monthly Review for Augst, says that the break in the latter part of July may engage the public attention in a greater degree than its economic importance warrants.

Influenced by the natural business recovery, the continuous depreciation of the dollar in the foreign exchanges and the measures adopted under the Industrial Recovery and Farm Relief Acts, the bank finds it natural that farsighted business men should anticipate their requirements for commodities, and that securities should advance on both investment and speculative buying.

It was also natural that a considerable number of marginal buyers lacking funds for their operations or relying upon less orders for protection should push the advance too fast and far. The danger that speculation would be overdone had been foreseen in all conservative quarters, and President Roosevelt last May warned against the "ballyhoo route to prosperity"; now that an early reaction has come, however, it would be difficult to show that any but the speculators have suffered greatly from their mistakes, and the latter have taken the most appropriate and efficacious punishment that could possibly be devised.

The farmers have had the benefit of higher prices earlier than would have been the case if speculators had anticipted the improvement, and in considering the part of speculation in the decline, its part in the advance must also be taken into account in the economic situation. While such wide fluctuations are disturbing, they are not the threat that they would have been if the period of speculation has been prolonged or if business were above normal. Moreover, they have given a lesson of the difficulty of forcing the recovery beyond its natural pace, and the situation hereafter may be more stable accordingly.

The bank finds no ground for ascribing to the market break any important influence on the business situation, the vertical rise or the business indexes continuing uniformly during the forepart of July, but in a few lines given signs of pausing toward the end of the month. This was to be expected after four months of continuous advance and the general view as to the probability of an autumn upswing is not disturbed by it with industry advancing so rapidly and rising prices influencing manufacturers and istributors to increase their inventories.

In short, the latent forces making for natural recovery are now getting under way, and what is needed now above everything else is confidence in the natural forces which have made so splendid a beginning, and intelligent cooperation with them. At some stage in our policy it surely will be necessary to re-establish confidence in the stability of money and credit, and it would seem that the sooner this is done the better. In view of the record of these five months, who can now believe that the provisions for increasingthe monetary circulation by sl.6,000,000,000, and for devaluing the dollar by one-half, are necessary to restore prices?

REVIEW BY RAI BADRIDAS GOENKA BAHADUR

IMPERIAL BANK ANNUAL MEETING

HAPPY THAT CONDITIONS WERE NO WORSE

TRIBUTE TO SIR KENNETH MACDONALD

Rai Badridas Goenka Bahadur, C.I.E., presiding at the annual general meeting of the Imperial Bank of India held in Calcutta on August 14, said :

GENTLEMEN,

Looking back on the year through which we have just passed, one must experience a feeling of relief that it has ended with condtions no worse than they are, but, at the same time, some disappointment that they are no better. Except for a brief spell in the autumn of 1932, prices continued to fall practically throughout the period under review with consequent strain on all sides. The downward course was, however, checked in April last; and since then, there has been a slow but steady all round improvement in prices—there are undoubted signs that the corner has now been turned and that this improvement will continue.

Gentlemen, the year has been an eventful one. We have seen the United States of America with a stock of gold of about 4,300 million dollars abandon not only the gold standard, but, by a legal enactment, the famous gold clause, and pass legislation of an inflationary character with the definite object of raising the internal price level. It is impossible to forecast what the result of that course will be. It seems clear, however, that, whatever the effect on the internal situation in the United States of America may be, this commodity dollar will be one more barrier against the revival of international trade, at least till such time as some kind of international agreement is reached on the question of exchange stabilisation. South Africa also has departed from the gold standard although she is the largest producer of gold in the world.

Great Britain has led the way in a reduction of interest charges by her 5 per cent. War Loan Conversion, and the success met with encouraged similar efforts by other countries. The conversion operations of the Government of India have succeeded wonderfully well, resulting in a definite improvement in their budgetary position.

It has been a year of Conferences. Lausanne and Ottawa have opened up new possibilities, but the beneficial results must, in their nature, follow slowly. The World Economic Conference has been adjourned, and although its definite results are disappointing to those who did not realize the difficulty of reconciling so many opposing interests, it is, perhaps, not too much to hope that the organisation that has been set up will prove of service in the work of recovery now proceeding.

If, however, no satisfactory solution of international problems be forthcoming, the next best course will, in my opinon, be for the sterling bloc to be properly organised and the general price level raised by a judicious process of reflation.

Gentlemen, I am glad that an agreement has been arrived at between the producing and the holding countries regarding silver—as a holding country, India is sure to benefit by the scheme; and, at the same time, the Government will have ample freedom to dispose of their stocks if and when necessary and to replace them by gold.

As you are aware, the question of a Reserve Bank for India has again been revived and the matter has been examined by a Committee in London to which delegates from India were appointed. The Report of that Committee is not yet available; and I am, therefore, unable to say what steps will be taken thereon. Your Board are, however, keenly alive to the importance of the matter; and you may rely upon it that your interests will receive their constant and careful attention.

Here in India, there has been some improvement on the whole. The sugar industry shows phenomenal expansion behind the high protection wall; jute and tea are definitely better, the latter owing to the policy of restriction arranged with other producers. The prices of hides, especially goatskins, have appreciated considerably. Cotton has improved. Grains and oilseeds in the aggregate are on the up grade. On the other hand, rice has fallen. That certain commodities have not responded to the general improvement is undoubtedly to be attributed to the existence of tariff barriers, quota systems, and various other restrictions, restrictions which the World Economic Conference tried in vain to remove or rectify.

A continuance of gold exports has supported exchange, enabling Government still further to improve their sterling position; but we must not forget that a part of this gold export is being utilised to meet our imports and that we are, to that extent, living on our capital.

The budget has been balanced; but to achieve that desirable goal, it has been necessary to increase taxation to a level which not only reduce the spending power of the people, but shackles trade and industrial enterprise so severely that a reduction is one of the many necessary preliminaries in this country to a return to normal prosperity.

The reduction in interest charges, which will result from the Government of India's conversion operations, and the fall in the rates for Treasury Bills, combined with the better political atmosphere, will effect a large saving in Government expenditure, but it is essential that further reduction should be made; for Government, like the individual, must cut their coat according to their cloth or face the disastrous results of living beyond their means. And here I venture to say that many individuals and concerns in this country from whom the Government revenue is received are to-day drawing heavily on capital; and unless relief is obtained in the manner I have indicated, the outlook for trade and industry must remain unsatisfactory. I am aware that retrenchment commission reports and schemes exist, also that many effective steps have been taken, but until Government curtail unproductive expenditure to accord with the reduced earning power of the people, it must be that taxpayers have to meet unduly heavy and proportionately largely increased demands on their pockets.

The improvement in conditions in India has not yet resulted in any increase in the demand for banking accommodation, whilst the comparatively low level of our trade advances, combined with the poor

rates obtainable for them, has reduced our gross earnings which have been further adversely affected by the lower return on Treasury Bills and Government Securities. On the other hand, we have not been able immediately to obtain the full advantage of the cheap money conditions, as a large amount of our Deposits is fixed for twelve months and the interest thereon cannot be reduced until maturity. The rise in Government Securities has improved our Investment position and the market value of the Government Securties we hold is above the figure appearing in our Balance Sheet.

We have continued to explore every avenue by which our charges can be reduced, with the result that our figures show a further saving of over Rs. 7½ lakhs as compared with the previous year, of which Rs. 6½ lakhs is in establishment. These efforts will be continued and their cumulative effect, combined with the reduction in our deposit rates, will help us not only to meet the decreased earning power of money but to take full advantage of any improvement in trade conditions when it occurs.

You will have observed that the savings effected in the Bank's expenditure have been mainly in establishment charges. As compored with the year ended 30th June, 1931, there hss been a total reduction of Rs. 19 lakhs, of which Rs. 16 lakhs fall under this head; and I wish to take this opportunity to pay a tribute to our staff for the loyal manner in which they have adjusted themselves to the altered conditions of their service. The reductions in pay and allowances have been effective throughout the service, from top to bottom, but they have not, as some appear to think, been the same in all cases. The steps taken have resulted in a reduction varying from 10 per cent. in the lowest grades to 25 per cent. or more in the higher, and your Board have great pleasure in acknowledging the assistance rendered by the staff in meeting the changed conditions under which our business is conducted.

In December last, the Hon'ble Sir Maneckji B. Dadabhoy was appointed to be President of the Council of State and accordingly ceased to be a Member of the Central Board. Sir Maneckji had been a Nominated Governor since the inauguration of the Bank in 1921; and, during that time, his wise counsel and great experience have been of the greatest service to us all. I am sure that you will agree in the hope that at some future date, whenever he may be released from his present high office, we may see him back amongst us as a Nominated Governor.

Before I resume my seat, Gentlemen, I feel I must refer to the impending retirement of Sir Kenneth MacDonald. Gentlemen, Sir Kenneth joined the old Bank of Bengal 33 years ago and by sheer dint of ability and hard work he has risen to the position of a Managing Governor. Gentlemen, I want to assure Sir Kenneth on behalf of all of us that we shall all be sorry to lose him and that we wish him and Lady MacDonald all happiness in his well-earned retirement.

STATISTICAL INFORMATION

INDIAN CUSTOMS REVENUE.

According to returns received in the Department of Commercial Intelligence and Statistics, the grand total of gross Indian Sea and Land Customs Revenue (excluding salt revenue) collected during the month of July, 1933, amounted Rs. 3,79 lakhs as against Rs. 3,95 lakhs in the preceding month and Rs. 4,39 lakhs in July, 1932. "The total revenue realised in the four months ended July, 1933 was Rs. 15,79 lakhs as compared with Rs. 17,31 lakhs in the same period last year. To this import duties contributed Rs. 11,40 lakhs, export duties Rs. 1,30 lakhs, excise duties on motor spirit Rs. 1,51 lakhs and on kerosene Rs. 1,03 lakhs and Land Customs and Miscellaneous Rs. 55 lakhs. Increases were noticeable in import duties on motor cars, liquors, wood pulp and wheat, in export duties on jute, raw, hides and skins, raw, and rice and in land customs receipts. On the other hand, import duties on sugar, iron and steel, cotton piecegoods, kerosene, raw cotton, silk and artificial silk piecegoods, tobacco, unmanufactured, metals other than iron and steel, silver, artificial silk yarn and thread, pneumatic rubber tyres and tubes, dyes and colours, cutlery and hardware, cotton yarn and thread, silk and artificial silk mixtures and electric lighting bulbs showed noticeable decreases. The protective special duties on private imports during the four months ended July, 1933, aggregated Rs. 3,90 lakhs. The duties on Government stores inclusive of protective duties collected thereon, amounted to Rs. 6 lakhs, as compared with Rs. 15 lakhs in the corresponding period of the preceding year.

TATA'S OUTPUT.

The annual report of the Tata Iron and Steel Co., Ltd., for the year ended 31st March, 1933, records the following figures relating to output and sales during the year:

Operations.

The output of the principal products during the year under review, in comparison with the results of the preceding year, was as follows:—

	1931-32.	1932-33.
	Tons.	Tons.
Coke	705,503	682,065
Pig Iron	304,736	672,069
Steel Ingots	602,366	590,778
Saleable Steel	449,723	426,968

Ore Mines and Quarries.

The despatches from the Company's properties have been:—

Iron Ore	1,093,377
Limestone	16,107
Manganese Ore	3,659
Miscellaneous Minerals	5,959
Total ...	1,119,092

Sales.

The quantities of steel despatched to customers during the year, including small quantities used in the Company's own Works, were as follows, in comparison with the preceding year:—

Rails	58,605	42,263	...	27.88
Fishplates	2,181	2,084	...	4.44
Bars & Light Structural	118,823	138,200	16.30	...
Heavy Structural ...	60,638	72,288	19.21	...
Plates	23,556	29,244	24.14	...
Black Sheets ...	21,797	15,524	...	28.77
Galvanised Sheets ...	31,152	42,913	37.75	...
Tin Bar	53,551	54,955	2.62	...
Sleeper Bar & Sleepers	32,403	10,744	...	66.84
Blooms, Billets & Sheet-Bar	24,533	38,391	56.48	...

RAILWAY EARNINGS.

The total approximate gross earnings of all State owned railways for the week ending 29th July, 1933 (17th week), amount to Rs. 134 lakhs, Rs. 5 lakhs LESS than the figures for the last week and Rs. 1 lakh LESS than the figures for the corresponding week of the previous year and Rs. 10 lakhs LESS than the corresponding week of 1931-32.

The total approximate gross earnings from 1st April to 29th July, 1933, amount to Rs. 27.84 crores or Rs. 80 lakhs MORE than the figures for the corresponding period of the previous year and Rs. 62 lakhs LESS than the corresponding period of 1931-32.

Comparisons of figures of wagon loadings on Class I Railways for the week ending 29th July, 1933, and for the cumulative period from 1st April to 29th July, 1933, with the corresponding periods of the previous year are as follows:—

During the week ending 29th July, 1933, there were loaded on the broad gauge 62,218 wagons, being 5,104 MORE than in the corresponding week of the previous year, or an increase of 8.94 per cent. On the metre gauge there were loaded 39,159 wagons, being 3,282 MORE than in the corresponding week of the previous year, or an increase of 9.15 per cent.

For the period from 1st April to 29th July, 1933, there were loaded on the broad gauge 1,269,297 wagons, being 102,269 MORE than in the corresponding period of the previous year, or an increase of 8.76 per cent., and on the metre gauge 827,338 wagons, being 115,858 MORE than in the corresponding period of the previous year, or an increase of 16.8 per cent.

Working Expenses.—The following are the approximate ordinary working expenses including suspense but excluding appropriation to and from depreciation fund of the principal State-owned railways from 1st April to 31st May, 1933, as compared with the actuals of the corresponding period of last year.

Books by the following Authors.

SHAW.—Ready-Reckoner. Containing Tables from 3 pies to 100 rupees, for ascertaining the value of any number of articles. By James Shaw, Late of the Public Works Department, Government of India, etc. Third Edition. F'cap 4to. Cloth, Rs. 4.

Specially designed for use on Indian Railways but suitable for any business.

THACKER'S Rupee Discount and Commission Tables. From 1/16th per cent. to 95 per cent. on amounts from 1 pie to 1 lakh of Rupees. Royal 8vo. Art Canvas. Rs. 2-8.

WALLACE.—The Romance of Jute. A Short History of the Calcutta Jute Mill Industry 1855—1927. By D. R. Wallace, Late of the Howrah and Reliance Jute Mills, Calcutta. Second Edition revised and brought up to date with 30 Illustrations and Map. Crown 8vo. Cloth Gilt, Rs. 5-10.

It is a matter for no little wonder that this little book, by Mr. Wallace, should still be the Locus classicus for a description of the Bengal Jute Industry. The first edition of Mr. Wallace's book was well-known to an older generation of merchants—and others—interested in the jute industry, but for many years it has been difficult to procure. Mr. Wallace has now published a new and up-to-date edition in which his figures have been brought to 1927.—The Times of India.

W. R. M.—Statement of Looms, required to make 1 lakh bags (Twills and D. W.'s) against available working days. By W. R. M. Crown 8vo. Cloth, Rs. 2.

Extracts from Directors' Report:

The directors of the Premchand Jute Mills submit the audited accounts of the company for the year ending April 13, 1933. Owing to the continued economic depression, and after providing full depreciation for the year ending April 13, 1933, amounting to Rs. 1,76,225 and after paying Rs. 78,870, the balance of the amount that was required for depreciation last year, the mills could not make a sufficient margin of profit out of which to pay a reasonable dividend. The balance Rs. 44,686 standing at the credit of profit and loss account is proposed to be carried forward. Mr. J. N. Basu retires from the board but offers himself for re-election.

EMPIRE JUTE COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	16,00,090	Block (nett) ...	25,83,586
Reserves ...	16,90,000	Stores ...	1,50,941

		Cash balance ...	4,08,245
Total ...	44,24,329	Total ...	44,24,329

Extracts from Directors' Report:

The directors of the Empire Jute Company (Messrs. McLeod and Company) submit their report and the audited statement of accounts for the half-year ended June 30, 1933. Revenue account shows a profit of 1933. Revenue account shows a profit of Rs. 1,46,502, which sum has been transferred to the credit of profit and loss account. Profit and loss account including the balance brought forward from last half-year and after making sundry adjustments and providing for debenture interest, commissions and taxation, shows a credit balance of Rs. 1,03,098, which sum, the directors recommend should be dealt with as follows:—Pay the dividend due on the Rs. 10,00,000 7 per cent. cumulative preference shares at June 30, 1933, free of income-tax, Rs. 35,000; pay a dividend on the Rs. 6,00,000 ordinary shares at the rate of 12½ per cent. per annum, or As. 10 per share for the half-year, Rs. 37,500; carry forward Rs. 30,598. Jute stocks are shown at or under cost. Stocks of gunnies, none of which are unsold have been calculated at contract sale price. Buildings, power plant and machinery have been kept in thorough repair and the mill continues in a high state of efficiency. As permitted under the terms of the Indian Jute Mills Association agreement, the making up of the balance of time lost due to the strike in October-November, 1932, was completed on May 19, and thereafter the mill worked for forty hours per week, fifteen per cent. of the total looms remaining silent throughout the period.

KELVIN JUTE COMPANY.

Extracts from Directors' Report:

The directors of the Kelvin Jute Company (Messrs. McLeod and Company) submit their report and the audited statement of accounts for the half-year ended June 30, 1933. Revenue account shows a profit of Rs. 2,04,875, which sum has been transferred to the credit of profit and loss account. Profit and loss account including the balance brought forward from last half-year and after making sundry adjustments and providing for commissions and taxation, shows a credit balance of Rs. 2,67,982, which sum the directors recommend should be dealt with as follows:—Pay the dividend due on the Rs. 10,00,000 7 per cent. cumulative preference shares at June 30, 1933, free of income-tax, Rs. 35,000; pay a dividend on the Rs. 7,00,000 ordinary shares at the rate of 25 pe rcent. per annum, or Rs. 12-8 per share for the half-year, Rs. 87,500; carry forward Rs. 1,45,482. Jute stocks are shown at or under cost. Stocks of gunnies, none of which are unsold, have been calculated at contract sale price. Buildings, power plant and machinery have been kept in thorough repair and the mill continues in a high state of efficiency. As permitted under the terms of the Indian Jute Mills Association agreement, the making up of the balance of time lost due to the strike in October-November, 1932, was completed on May 19, and thereafter the mill worked for forty hours per week, fifteen per cent. of the total looms, remaining silent throughout the period.

KHAS KAJORA COAL COMPANY.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.
Capital	3,31,400	Block (nett) ...	3,78,301
Reserve ...	20,000	Stocks	7,517
Loans	31,527	Stocks	5,208
Unpaid dividends ...	242	Outstandings ...	49,257
Debts	31,582	Investments ...	2,196
Profit	28,612	Cash balance ...	884
Total ...	4,43,363	Total Rs. ...	4,43,363

Extracts from Directors' Report:

The managing agents of the Khas Kajora Coal Company (Messrs. Shaw Wallace and Company) submit their report and accounts for the half-year ended June 30, 1933. The working for the half-year shows a gross profit of Rs. 29,840, to which has to be added the amount brought forward from last half-year, Rs. 14,404, making a total of Rs. 44,244. After providing for depreciation Rs. 8,813, reserve for taxation and manager's commission Rs. 6,819, there remains a balance of Rs. 28,612 which the managing agents recommend should be, dealt with as follows:—In payment, on application, of a dividend on the preference shares at the rate of 8 per cent. per annum, free of income-tax, Rs. 8,000; in payment, on application, of a dividend on the ordinary shares at the rate of 8 per cent. per annum, free of income-tax, Rs. 5,256, leaving to be carried forward Rs. 15,356. Raisings and despatches of all grades of coal for the past two half-years compare as follows:—June 30, 1933,—Raisings—49,111 tons; despatches, 50,337 tons. December 31, 1932—Raisings—40,957 tons; despatches, 38,783 tons. Prices for Kajora coal continue weak and there appears to be little prospect of any improvement during the current half-year. The output of the colliery is well sold to the end of the year.

Extracts from Directors' Report:

The managing agents of the Patrakola Tea Company (Messrs. Duncan Brothers and Company) submit the audited accounts for the year ended December 31, 1932. The result of the season's working is a profit of Rs. 3,51,205, which has been transferred to profit and loss account. After sundry adjustments there is a balance at credit of that account of Rs. 7,65,462. Conditions were favourable at all divisions except Rampore which was severely damaged by hail on three occasions in March. Dividends on the preference shares were paid on November 1 and May 1, leaving Rs. 6,93,462, now to be dealt with. The managing agents propose to pay a dividend of 25 per cent. on the ordinary shares and to carry forward Rs. 3,93,462. The total area under cultivation remains at 5,337.90 acres. Estimates for 1933 provide for a total crop of 54,625 maunds at a cost of Rs. 11,34,301 including inland freight and the charges.

Extracts from Directors' Report:

Report for the half-year ended 30th June, 1933.

Revenue Account—shows a profit of Rs. 71,465-2-2, which sum has been transferred to the credit of Profit and Loss Account.

Profit and Loss Account—after providing for interest, Debenture Interest, etc., and including the balance brought forward from last half-year, shows a credit balance of Rs. 86,560-10-6, which sum, we recommend, should be dealt with as follows:—Pay a dividend on the 500,000 Ordinary Shares at the rate of 2½ per cent. per annum, or Anna 1 per share for the half-year, free of Income Tax, Rs. 31,250, white off to Depreciation Rs. 40,000, carry forward Rs. 15,310-10-6, total Rs. 86,560-10-6.

Jute Stocks are shown at or under cost. Stocks of Gunnies, none of which are unsold, have been calculated at contract sale price.

In accordance with the Agreement to which all Members of the Indian Jute Mills Association were signatories, work throughout the period under review has been on the basis of 40 hours per week with 15 per cent. of the total looms silent.

The 7 per cent. Debentures fell due for repayment on the 30th June, 1933, and the Directors have arranged a new 5 per cent. Debenture issue of Rs. 8,00,000 for a period of 10 years from the 1st July, 1933.—H. H. Burn. F. M. Leslie, N. B. Elias, Chhotaylal Kanoria, Directors. McLeod & Co., Managing Agents. Calcutta, 8th August, 1933.

Other funds ...	93,64,740	Cash balances ...	2,84,777
Contribution from outside parties for town expenditure ...	2,29,334		
Total Rs. ...	17,76,50,677	Total Rs. ...	17,76,50,677

Extracts from Directors' Report:

The directors of the Tata Iron and Steel Company submit their report with the audited statement of accounts for the year ended March 31, 1933. The company's nett profits for the year ending March 31, 1933, after setting aside a sum of Rs. 78,00,000 on account of depreciation on block other than collieries, and a sum of Rs. 4,00,000 on account of depreciation on collieries block, amount to Rs. 39,84,596 which with the sum brought forward from last year's accounts Rs. 9,109, makes a total of Rs. 39,93,705. From this is to be deducted a sum of Rs. 12,956 paid to the agents as additional commission for 1931-32 on account of adjustments made in the accounts at the general meeting last year leaving available for distributions Rs. 39,80,748. Out of this sum the directors recommend the payment of the following dividends for the year ending March 31, 1933:—On first preference shares at Rs. 9 per share, which will absorb Rs. 4,50,000; on second preference share at Rs. 5 per share, which will absorb Rs. 34,68,785. Both these payments will be subject to deduction of income-tax. After making these payments, there will remain a balance of Rs. 61,964, which the directors recommend be carried forward. In accordance with the terms of the circular, dated July 15, 1932, a sum of Rs. 1,93,618 recovered as income-tax from dividends declared last year has been adjusted in the appropriation account, and from there transferred to income-tax reserve account.

KARACHI ELECTRIC SUPPLY CORPORATION, LIMITED.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	33,00,000	Block (nett) ...	61,47,607
Reserves and other funds ...	32,95,478	Stores ...	2,34,544
Unpaid dividends	6,562	Stocks ...	38,960
Debts ...	2,62,625	Outstandings ...	1,47,474
Profit ...	2,55,960	Advances ...	3,952
		Work-in-progress ...	899
		Investments ...	2,65,544
		Cash balances ...	2,81,648
Total Rs. ...	71,20,625	Total Rs. ...	71,20,625

Extracts from Directors' Report:

The directors of the Karachi Electric Supply Corporation, Limited, submit the audited accounts for the year ended March 31, 1933. There is an increase in the gross revenue of Rs. 47,470 (4 per cent.) over the figures for the year 1931-32. The revenue from lights and fans shows an increase of only Rs. 1,148 (.17 per cent.), motive power has gone up by Rs. 22,804 (8 per cent.) and public lighting by Rs. 14,484 (9.5 per cent.). Income and super-tax continue to increase apace, the total amount paid during the year being Rs. 95,439. Owing to the existing generating sets last installed having failed to give satisfaction, general overhauling and increasing demand, it has been found necessary to purchase two Swiss loco. sets of 500 kw. each. These sets may be expected to be in commission within a few months. The additional capital issue of 3 lakhs referred to in the last report was heavily oversubscribed, the lowest tender accepted being at a premium of Rs. 42-4 per share. From the balance-sheet it will be observed that the total premium on the issue was Rs. 1,27,339. The premium on shares account is being transferred to reserve fund. The balance at credit of profit and loss account is Rs. 2,55,959. Out of this, the directors recommend the payment of a final dividend of 5 per cent. free of income-tax, making with the interim dividend of 4 per cent. a total of 9 per cent. free of tax for the year, absorbing Rs. 1,65,000; to reserve fund of Rs. 50,000; bouns to the staff of Rs. 17,000; and carrying forward Rs. 23,959.

CENTRAL HYDRAULIC PRESS COMPANY.

Forfeited share and interest ...	833		
Total Rs. ..	1,09,13,623	Total Rs. ...	1,09,13,625

Extracts from Directors' Report:

The managing agents of the Mymensingh Bhairab Bazar Railways Company (Messrs. Gillanders Arbuthnot and Company) submit the audited accounts of the company for the year ended March 31, 1933. The capital expenditure to March 31, 1933, amounts to Rs. 1,06,09,840. The total paid-up capital of the company on March 31, 1933, was Rs. 86,00,000. The nett earnings for the year amounted to Rs. 4,34,889 as compared with Rs. 3,69,316 for the previous year. A satisfactory increase in both goods and passenger earnings took place during the year, the increase being more marked in the case of goods than passengers. This increase was almost entirely due to improved jute traffic consequent on a large crop of good quality jute being grown in the districts served by the raliway. The improved revenue resulting to the cultivators had its effect in turn on the passenger earnings. This class of earnings, however, still leaves much to be desired and a much higher and more sustained level of jute prices than obtained throughout the year will be necessary before passenger earnings can once more attain a satisfactory figure. During the year interim dividends at the rates of Rs. 1-8 and Rs. 2-4 per share, less income-tax, on the guarantee and rebate shares, respectively, were paid. The amount available for final distribution on March 31, 1933, was Rs. 2,27,607. The managing agents now propose to pay final dividends at the rates of Rs. 2 and Rs. 2-4 per share, less income-tax, on the guarantee and rebate shares making Rs. 3-8 and Rs. 4-8 per share, respectively, less income-tax, for the year. This distribution will absorb Rs. 1,77,750 which leaves, after payment of the managing agents' commission a balance of Rs. 40,998 to be carried forward.

BURN & CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	70,00,000	Block (net) ...	55,32,394
Ressrves ...	29,00,000	Stock-in-trde ...	21,87,251
Debts ...	13,49,620	Stores, etc. ...	9,71,008

		Cash & Invest. ...	13,84,728
Tatal ...	1,14,39,642	Total ...	1,14,02,642

Extracts from Directors' Report:

Report for the year ended 30th April, 1933, showing a profit after allowing for depreciation of Rs. 1,77,339-9-9, to which has to be added the credit balance from last year Rs. 96,349-0-11, total Rs. 2,73,688-10-8. Out of this amount we have paid the Dividend on all Preference Shares to 31st December, 1932, which absorbed Rs. 1,20,666-10-8, balance Rs. 1,53,022. Out of this sum we have since paid the Dividend on the undernoted Preference Shares for four months ended 30th April, 1933, free of Income-Tax:—1st Issue 7 per cent. Preference Rs. 14,000, 2nd Issue 7 per cent. Preference Rs. 16,333-5-4, 3rd Issue 6 per cent. Preference Rs. 30,000, total Rs. 60,333-5-4, and propose to carry forward the balance of Rs. 92,688-10-8.

Conditions in the engineering trade continue depressed, but since the Accounts for the year were closed a slight revival in trade has been noticed.

During the year under review, owing to lack of orders, particularly from Government, the Sleeper Shops and the Main Wagon Shops were closed throughout the year.

Every possible economy has been effected in the management of your various Works.

Staff and labour has been reduced to the absolute minimum.

Competition in the engineering trade is still so keen that in many instances contracts have to be accepted at prices below cost in order to keep your Works partially employed and retain the services of skilled labour.

Orders received from Government Departments were noticeably small, but some improvement has taken place since the closing of the Accounts.

Mr. T. Leslie Martin having proceeded on leave does not sign the Report.—Sir R. N. Mookerjee, A. E. Mitchell, Srigopal Bhattacharji, B. N. Mookerjee, Directors, Burn & Co., Managing Agents.

COMMERCIAL PROPERTIES, LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.

Reserve ...	65,000	Outstandings ...	36,397
Debts ...	24,772	Cash & Deposits ...	12,250
Profit & Loss ...	14,453	Investmenls ...	1,04,506
Total ...	4,82,275	Total ...	4,82,275

Extracts from Directors' Report:

Report for the year ended 30th April, 1933.

In the year under review there was no improvement in general business but the purchase of M. Elias' business and fleet in July, 1932, has enabled the Company to show improved results. Revenue Account shows a profit of Rs. 15,652-12-4 and after crediting Rs. 7,137-4 account Appreciation of Investments, etc., making provision for Depreciation and Commissions and deducting Rs. 9,451-4 on account of Interim Dividend paid in December last there remains a balance of Rs. 14,452-8-10 for disposal.

In spite of the fact that general conditions show no improvement your Directors consider that the financial position of the Company warrants the payment of a small final Dividend and they therefore recommend a final Dividend of 2½ per cent. absorbing Rs. 9,451-4 and making a total of 5 per cent. for the year. There will thus be a balance of Rs. 5,001-4-10 to be carried forward to the next year's account.

In order to effect the purchase of M. Elias' fleet it was necessary to realise some of the Company's investments and securities to the value of Rs. 85,000 (Face value) were disposed of during the year. The remaining securities appear in the Balance Sheet.—A. N. Wardley, C. R. Sumner, E. L. Watts, Directors. Calcutta, 9th August, 1933.

WORLD OF INDIAN FINANCE

Calcutta, August 25.

Money has been extremely easy both in Bombay and Calcutta. Business has been of an extremely restricted character, due to the week being cut into by holidays in the Western Capital. Interbank call money has been on offer at ½ per cent. without interesting borrowers. It will be recalled that the Treasury Bills *communique* of last week announced a tap rate and vouchsafed the information that intermediate Treasury Bills would be sold at this rate, the Government, however, rataining the right to withdraw intermediates at any time. By this week-end, intermediates sold by the Treasury came to so large a figure that information was given to the market that no more intermediates would be accepted. This factor in itself was calculated to emphasise the easy money phase. From the Imperial Bank return received on Thursday for the week ended August 18, it would appear that the major part of intermediates must have been taken up by the Bank. Investments are up by Rs. 3.12 crores. This means that there has been but slight dislocation in the cash position of other banks.

This suspension of intermediates earlier than the tender day is our second experience of this kind. This has an important psychological effect on the money market. Whatever the circumstances may be that have led to the suspension of intermediates, the market only sees that the ways and means position of the Treasury does not require any further replenishment of cash on any large scale. The present policy of the Government would appear to be that their cash balance with the Imperial Bank should not be allowed to swell to any large figure. On the one hand, they would try, as far as possible, to reduce the occasions for recourse to ways and means advances from the Bank. On the other hand, they do not wish to see Public Deposits pile up to beyond Rs. 10 crores limit. We should think that the policy pursued in this connection is scientific and extremely suitable to the money market. This means that the instrument of Treasury Bills is being made more and more adaptable and flexible.

The Treasury Bills Maturities in September come to Rs. 9½ crores. Rs. 4 crores has to be paid out on September 1, in respect of 5 per cent. 1933 bonds. For the repayment of Treasuries in October, nearly Rs. 10 crores would be required. Thus nearly Rs. 24 crores has to be found in the next two months. On the basis of weekly sales on the tender day at the rate of Rs. 1½ crores. The total thus secured would be only Rs. 12 crores. It follows that it would be necessary to revive intermediate Treasury Bills sometime in September and withdraw them after the requisite funds have been roped in. We have seen that in regard to ways and means advances, this device is being made more and more elastic. On the side of the bank, the device of borrowing from the Currency Department against rediscount of inland trade bills is also being made more and more flexible. In Treasury Bills policy also we are now seeing considerable flexibility. We should consider that all this is gratifying evidence of improvement in the technique of the monetary operations by and on behalf of the Government. By operations conceived in a more scientific spirit, the money market is assured of a freedom from unnecessary complications arising from ill-timed or unduly large operations of the Treasury. Likewise, the giltedge market is also sure to respond to the new and better policy. The essence of this policy is that an equipoise must be maintained at all times in the money market. And what the giltedge market needs more than anything else is such an equipoise. Apart from the Government securities benefitting from the reinvestment of the funds already released or to be released from maturing loans, the assured continuance of easy conditions in the money market (due to adroit handling of the monetary machinery by the Finance Member and his lieutenants) must be construed as an important bullish factor for government securities.

We are only anxious that just as the technique of the money market operations of the Government has shown marvellous improvement in recent months, the technique of Government's borrowings must be improved in a similar fashion. As it is, we are not satisfied that the Government have understood, properly, the technique of borrowing operations. The yield which they offer on new loans has been such as to disrupt the prices of existing securities. Nor can we say that the new loan issues are properly-timed. A tragedy like the 4 per cent. sterling issue following a 3½ per cent. rupee issue bespeaks poor appreciation of sound credit policy. As regards open market operations with a view to support the securities market, our authorities have been uncouth,

clumsy and ineffective. We do wish to see a far more striking improvement in this regard.

We have always attached the greatest importance to a healthy and properly functioning giltedge market. We believe that lively giltedge market inspires confidence all round. It is the prime duty of the Government to see that nothing is done which causes any deterioration in giltedge. The Government have not understood their responsibility in this light. They are concerned with the giltedge market only in the sense and to the extent that its support is secured at the time of new loan issues. This fitful attention to the giltedge market is a suicidal policy. The health and well—being of the giltedge market should never be absent in the thoughts of the Finance Member and his lieutenants. On his arrival yesterday in Bombay from his London mission, Sir George Schuster gave vent to bullish sentiments as regards the future of giltedge. He referred to the comfortable position of the Government and to the prospect of easy money. He felt that due to these factors, government securites must have a favourable future before them. Since early 1932, giltedge has been having a steadily improving future. If reverses have occurred now and again, it is Sir George Schuster that should take the blame. Now that he is so hopeful of the future, we strongly urge that he should be far more careful about the effects and repercussions of the various measures he undertakes.

So far as financial policy and financial operations are concerned, the utmost our authorities can claim is that they are in the process of learning. Their learning, as is true of all learning, has its full share of mistakes and bunglings. Who are they, then, to demand that the IndianFinance Minister of the new regime would not show equal aptitude to learn in the same way and in the same sense? Who are they to suggest that the mistakes which the Indian Finance Minister will commit will be more numerous and the bungling more grievous than has been the case with themselves? A feeling of self-righteousness is not justified if one scrutinises the financial operations of the present regime for two decades. Yet, this feeling of self-righteousness is at the bottom of the demand for financial safeguards. This feeling pervades the entire scheme of the Reserve Bank now proposed. In sheer self-respect, we should take exception to this insinuation. In sheer respect for truth, we should ask our authorities to study their own record with more humility and with a fuller realisation of realities.

The Reserve Bank proposal—and the connected issue, the ratio-came in for considerable attention in the current week in the cource of speeches delivered on important occasions. Mr. Khaitan argues for a ninepence ratio; he is prepared to compromise on a twelve-pence ratio. The old cry of sixteenpence has received impetus and emphasis from the six years experience of eighteenpence and from the action taken by the governments of countries like the United Kingdom, the United States of America and Japan. President Roosevelt has been given vast powers which, if he uses them to the full limit, would result in the dollar being in the vicinity of 6.80. Britain, which prided herself on puritanism in finance, is unashamedly happy over a sterling which has lost more than a fourth of its old value. Japan is defying the world with a yen forty percent depreciated. Australia and New Zealand, though of the sterling group, have followed independent policies as regards the exchange parities of their currencies. Why should India be forbidden from benefitting from this lesson? The ratio question must be mooted at the time when the Reserve Bank Bill is discussed. Else, no change can take place without the consent of the Governor-General. If nothing is done now, the fate of the ratio is doomed. The time to act is NOW. Evasion of the issue on the present occasion would be fatal. Mr. Khaitan is perfectly right in bringing up the matter at the present moment. In our "Topical Extracts" section, we have quoted the relevant passage from his speech, wherein he urges a plea for a ninepence ratio. Even stalwart opponents of the lower ratio like *Capital* and the *Statesman* have come to revise their ideas. Why should the Government alone persist in their folly? Mr. Amritlal Ojha, speaking at the quarterly meeting of the Indian Chamber of Commerce, lent further support to this plea in the following words:

> "I am afraid that so far as the Government is concerned, my cry would be a cry in the wilderness and they would very likely accept the recommendations of that Committee. Notwithstanding this possibility in view of the present miserable economic condition of the country, I am tempted to put forward my suggestion because I also find the following sentence in the Report of the same Reserve Bank Legislation Committee:—'Exchange obligations incorporated in the Bill must necessarily be in accord with the Rupee-Sterling ratio existing at the time the Bill is introduced'. I wonder whether I can rely on this sentence to hope that at long last Government is inclined to do some justice to the country? I have clearly stated above that commodity prices in this country are low, and it is, therefore, imperative that the prices of agricultural commodities should be doubled. It naturally follows that the Exchange value of the Rupee has to be lowered by at least 50 per cent. to attain this object."

Mr. Nalini Ranjan Sarker, as head of the Bengal National Chamber of Commerce, quoted Sir Basil Blackett himself against the "Blackett ratio." The following quotation, though longish, deserves careful thought at the hands of those who have the destiny of the Reserve Bank Bill in their hands.

> "The exaggerated regard for exchange stability to the exclusion of other considerations which has been the outstanding feature of the Government's policy is in most countries of the world a discredited theory. Without minimising the importance of a fairly stable exchange ratio especially for a country which has extensive foreign trade relations and heavy foreign obligations, I feel that the Government of India have erred grievously in ignorning the more important consideration of internal prices. Sir Basil Blackett, an ex-Finance Minister of the Government of India, in his recently published treatise, Planned Money, holds that it is not necessary for any country of the sterling group to have a fixed ratio of exchange, and that the final objective of the group should be the maintenance of internal prices at par. The decision to establish a fixed rate of exchange or have one which varied slightly 'would be a matter of expediency not one of principle.'
>
> Even if we concede that exchange stability should be achieved and maintained, the ratio at which it should be fixed is a matter on which Indian opinion has differed acutely from the Government. The rupee to-day is demonstrably over-valued, and the maintenance of its artificial exchange value stands in the way of achieving what is eminently more necessary and desirable—namely, the raising of internal prices. If a higher price-level is considered necessary for economic revival, the artificially high exchange value of the Rupee is the surest device of delaying it. The Rupee requires to be immediately devaluated after examination by a small expert committee. Under the changing conditions of the future, if further reconsideration is necessary, the Bill must make a provision empowering the Finance Minister to do so in consultation with the Reserve Bank."

Exchange has been featureless. On the weekly tender day, applications came to £213,000 at 1s. 6 1/16d., and the allotment was in full.

The closing rates are: 1s. 6 1/32d., August-September T. T.; 1s. 6 3/64d. October-January T. T. and 1s. 6 1/32d., March-April T. T.

Bills may be quoted: 1s. 6 1/8d., right to the end of the year.

Money was easy, the rate for interbank call money being ½ per cent. Union rates for call, three days and seven days notice money was ½ per cent. Onemonth, twomonth and threemonth deposits were quoted 1,1, and 1¼ per cent. respectively.

OTHER INDIAN MONEY MERKETS.

(By Wire.)

(From Our Correspondents.)

Karachi, August 24.

Exchange is easy and quiet with small buyers for any position, at 1s. 6 1/32d. and reluctant sellers at 1s. 6 3/16d. The general selling rate is 1s. 6 1/32d. upto January. Three Months Bills 1s. 6 1/8d. Money is in very plentiful supply with no borrowers of call even at half per cent.

Madras, August 24.

Money conditions are comfortable. Exchange was steady until yesterday; but thereafter market eased slightly owing to outside advices. Remittance enquiry from import houses is negligible. There are small sales of Ready T.T. at 1s. 6 1/16d. by export houses and no buyers at this rate now for any position this year.

Bombay, August 24.

Money has been easy and exchange somewhat quiet. The week was cut into by holidays; and most people have not been in the mood for business. Credits have been in plentiful offer, with takers barely keen at ¾ per cent. The withdrawal of intermediate Treasury Bills is bound to accentuate the slack money conditions.

Exchange may be quoted 1s. 6 1/32d.; there has been very little business doing. Neither have there been any export bills nor remittances. Bankers have been just marking time.

Securities have been steady, with a rising tendency. But the market is still susceptible to "bear" tactics. There has as yet been no tangible indication of the inflow into the giltedge market of the funds released on August 15 from 6 per cent. 1933-36 bonds. There is, however, a confident feeling that as and when investment on this account takes place, giltedge prices must show a good response.

GOVERNMENT OF PUNJAB

The attention of all holders of the 6¼ per cent Punjab Bonds, 1933, is invited to the terms on which these Bonds can be converted into 4 per cent Punjab Bonds, 1948. The terms are as follows:

6¼ per cent. Punjab Bonds, 1933, will be accepted in subscription to the 4 per cent. Punjab Bonds, 1948, as the equivalent of cash at their full maturity value, that is to say, at Rs. 100 per Rs. 100 nominal of the Bonds tendered. If the nominal value of the Bonds tendered is not an exact multiple of the issue price per cent. of the loan applied for, the tenderer will receive in cash at the time of issue of the new securities, the amount by which the value of the Bonds tendered exceeds the nearest lower multiple of the issue price. In addition, the following cash payments will be made at the time of issue of the new securities:—

(*a*) interest accrued on the 6¼ per cent. Punjab Bonds, 1933, tendered for conversion upto the end of August, 1933, at the rate of 6¼ per cent. per annum; and

(*b*) advance interest on the new Bonds in accordance with paragraph 4 of the loan notification.

Holders of the 1933 Bonds are reminded that these terms are open only upto and including the August 31st. They are also reminded that the new Punjab 4 per cent. Bonds already stand at a premium of two rupees above the issue price (Rupees 96 per rupees 100). The advantages of conversion are thus obvious.

FINANCE ABROAD

EXCHANGE CLEARING AGREEMENT.

Sterling Balances of Bank of France.

The repayment of the British Credits by France, some of the details of which were considered in these columns in the last two issues of 'Indian Finance,' has, it appears from the latest airmail papers to hand, a greater significance to the French financial policy. In the returns of the Bank of England for the week ended August 10, private accounts showed a further fall of nearly 16 million pounds. This evidently reflects a further repayment of the French credit. The decline over a period of a fortnight, thus amounts to nearly 10 million pounds, which suggests that a weekly payment of approximately 5 million pounds is being made. It was suggested in these columns last week that the French Treasury was able to effect the repayment of British credits by the sale of francs by the British "control," in its attempts to maintain the sterling-franc rate and that in such sales, the interest of British banks in French treasury bills had also a large place. An examination of the statements of the Bank of France for this period tends to call in question the validity of this suggestion. The statement shows that the Bank has transferred to the Treasury about 415 million francs of its foreign balances against the payment of this sum into the bank by the Treasury. It would be seen that the £15 million, which is all that the French Government have now attempted to re-pay out of the total credit of 30 million pounds, represents 1,300 million francs. The British banks who lent this amount, it is understood, transferred the British treasury bills to the French treasury only in three lots, of which repayment of the first lot alone is reflected in the Bank's statement for August 4. When the other two lots are repaid, there would, doubtless, be a further decrease in the foreign balances of the Bank of France to the tune of 900 million francs. It has been calculated that these foreign balances will thus stand at about 2,500 million francs, and when the second half of the sterling credit is repaid in early November, these holdings will dwindle to 1,250 million francs.

France's Holdings of Foreign Currencies.

The fluctuations in the Bank's holdings of foreign exchange are interesting by themselves. A year ago they stood at over 5,000 million francs, and two years ago at over 27,000 million. After September, 1931, when Britain went off the gold standard the bank had to write off the losses on sterling which amounted to nearly 3,000 million francs. At the end of the year the balances amounted to 20,000 million francs. When at the first half of 1932, France for various reasons launched her attacks on the dollar, she had necessarily to liquidate her dollar holdings and convert the American balances into gold. The Governor of the Bank of France then stated that at the time of Britain going off the gold standard the amount of sterling held was £60 million or roughly, at par, some 7,500 million francs, when the total of foreign balances stood at about 25,000 million francs. With the full repayment of the British credits, France has come to a position in which she has little of foreign currency holdings except certain advances, nearly all of which are frozen, to Central European countries.

Canalising of Exchange Transactions.

The break up of the World Economic Conference and its failure to remove the manifold obstacles to free international trade have, curiously enough, been followed, not only by an increase in the complications of exchange control, but also by an excess of the faith in their reasonableness and their efficacy. There have been for a long time attempts to translate to the sphere of exchange, the bilateral agreement that has been actually followed in the sphere of trade and commerce. Strictly speaking, there should be little or no difference between attempts at balancing the exchange of commodities between any two given countries and equalising the balance of payments between the same. And it should be easy to recognise that just as bilateral trade agreements follow from the insuperable difficulty of giving it a wider range and scope, in the sphere of exchange also, the attempts to offset payments between two countries results from the lack of any other means of regularising the commercial and financial transactions between two countries. It will be remembered that even in a country like Great Britain, where London is at once the financial and commercial entrepot of world trade, the suggestion was made by the Federation of British Industries that a system should be devised, by which no foreign countries would be allowed to devote its sterling credits gained by its exports to Great Britain to the purchase of other than British commodities and services. The details of the scheme do not matter ; but the principle that financial transactions, even like the commercial should be canalised as between each set of two countries, gained the benediction of no less a body than the Federation of British industries. The financial genius of the German people working under the special stimulus of untold handicaps and suffering has of late invented numerous ways of securing the help of un-orthodox expedients, while apparently preserving the principles of orthodox finance. The system of receiving payments for Germany's exports in the shape of depreciated German bonds issued in foreign markets which are quoted at high discounts, has not only brought about a veiled form of currency depreciation but has also created a purchasing power in foreign countries, which Germany could monopolise. The various moves by which Dr. Schacht expanded the amount of blocked Reichsmarks are also another way of creating an artificial purchasing power which cannot be devoted to the purchase of other than German exports.

Agreement between Hungary and Switzerland.

The latest development in this line is the conclusion of an agreement between Switzerland and Hungary to provide for the disposal of Switzerland's claims against the latter, which are so far uncleared and which are more or less un-clearable by the ordinary methods of international trade and finance. The exchange clearing agreement between Switzerland and Hungary is one of the latest that has been concluded under pressure of the present depression, but during the years, in which it has been enforced, Hungary has had a persistent adverse balance of trade, with the result that the National Bank of Hungary had been accumulating large balances to the credit of Swiss exporters. There was little or no chance of Switzerland setting up a demand for Hungarian imports, the value of which would be equal to the amount held by the Hungarian National Bank. Negotiations were, therefore, undertaken with a view to a special sale of Hungarian goods. As finally agreed, Switzerland is to accept five hundred thousand quintals of wheat, whose value would off-set the 6,530,000 francs held in the Hungarian Bank at the end of July last. Strangely enough, in this deal Hungary has got the better of her creditor. The price agreed on for the exports of

C. E. RANDLE,
General Manager.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

BUY

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 89/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 3⅜ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 2 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3 per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 3½ per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

For further particulars please apply at any one of our Branches.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE.

(From Our Correspondent).

Calcutta, Thursday Evening, August, 24.

There were only three working days during the week under review, Monday and Wednesday being holidays. On the whole, dull conditions have obtained in the Stock Exchange and trading was on a limited scale.

The Government Securities market has been quiet. 3½ per cent. Government Paper fluctuated within narrow limits and at the time of writing quoted Rs. 84-13. 4 per cent. 1960-70 are now quoted at Rs. 97-9; while 5 per cent. 1945-55 remained steady round Rs. 112-15. The only good feature is the 4 per cent. New Punjab Loan 1948 which changed hands up to Rs. 92. The Bank rate remained unchanged at 3½ per cent.

Jutes.—This section opened steady on Tuesday, but afterwards improved slightly owing to outside support. Howrahs opened at Rs. 48-6 and fluctuated within narrow limits. Kamarhattys changed hands at Rs. 450. Amongst Rs. 10 priced stocks, Clives and Nationals remained unchanged at about last levels. Trading in the higher priced denominations was confined to small lots only.

Cotton.—This section was practically neglected with sellers of Bengal Nagpore at Rs. 18-8, while there were no declared buyers.

Coals.—There has been a fair general enquiry and rates remained fully steady. Amalgamated Coals changed hands freely round Rs. 13-4, Burrakur accounted for a few deals round Rs. 11-2 while Kalapahari quoted at Rs. 10-4. New Beerbhums are wanted at Rs. 9-10 and Raneegunge at Rs. 33-8, Rewa is quoting Rs. 9-12. The conditions in the coal fields, according to the latest report, still remain unchanged.

Miscellaneous.—Sugar Shares were easier. Carew & Co. changed hands at Rs. 14-4, Cawnpore Sugars at Rs. 27, New Savan at Rs. 18-12, Ryam at Rs. 41-8 and Samastipur at Rs. 15-2. Some enquiry was in evidence in Electrical issues. Benares Electrics accounted for a deal at Rs. 11-12 and Dacca Electrics at Rs. 15 while Patna Electrics and U. P. are steady at Rs. 12-12 and Rs. 119 respectively.

Engineering shares remained practically neglected. Bengal Iron changed hands at Rs. 2-8 and Indian Iron & Steel were marked down further to Rs. 3-12.

Amongst others, Assam Match kept steady at Rs. 15 while Indian Wood Products were easier at Rs. 30. Bengal Paper were marked at Rs. 72-8.

Banks and Railways.—Imperial Bank's fully paid up shares were unchanged at Rs. 1,197 and Contributories at Rs. 294. Central Bank's shares were quoted at Rs. 23 ex-dividend.

Very little business was put through in Railway shares; Sahadara Delhi Saharanpore changed hands at Rs. 115.

Teas.—This section was kept steady and fair turnover resulted.

Bishunath improved to Rs. 24-4 and there are buyers for Eastern Cachars at Rs. 11-12 and New Terai at Rs. 11-8.

MADRAS STOCK EXCHANGE.

(From Our Correspondent).

Madras, August 24.

The securities market was steadier on account of investment enquiry. 4 per cent. 1960-70 and 5 per cent. 1939-44 loan attracted most attention with rates a few annas up compared to the opening prices. The enquiry for shortdated securities was good. 3½ per cent. paper was neglected. 5½ per cent. Mysore State Loan noted several deals at Rs. 112 and 5 per cent. 1933 at Rs. 113-4 and 5½ per cent. at Rs. 114-12 with buyers over.

In the Banking section, Imperial Bank paids were taken up at Rs. 1,200, Contributories at Rs. 295; Bank of Indias at Rs. 105.

Textile shares were weaker. Bunckinghams shed further two points and were down at Rs. 185 cum-dividend; and Cambodias after business done at par had sellers down to Rs. 9-12.

Other shares noted no transaction in the absence of sellers. There was no interest taken in Electrics and Cements. Sugars were a weak counter on rumours of Deccan Sugars not paying an interim dividend. In rubbers, Cochin Malabar Preferences were taken up at Rs. 20 and the ordinary shares at As. 6. Tea Shares were steady. Peermades were absorbed at Rs. 20-4 with possible buyers over, while a good outside enquiry was noticeable for both Peria Karamalais and Devasholas.

Sterling shares attracted more attention and a large parcel of National City Bank of New York Shares was taken up as also Venezuela Oils and Randfonteins in Kaffirs. Rupee Shares were neglected.

BOMBAY STOCK EXCHANGE

(By Wire).

(From Our Correspondent).

Bombay August 24.

Giltedge securities maintained a steady tone. 3½ per cent. Government Loan from its previous close of Rs. 84-7 touched the lowest at Rs. 84-6. The highest was Rs. 84-13 but it closed at Rs. 84-10. Business transacted was very limited.

With the intervening holidays the share market was quiet. Mill Shares showed a slight improvement.

	Previous closing	Lowest touched	Close to-day
	Rs. A.	Rs. A.	Rs. A.
Bombay Dyeing ...	771 4	770 0	780 0

JUTE AND JUTE GOODS

JUTE.

Like last week the market has ruled quiet, but steady without any business of importance passing. The highest and lowest for October futures were Rs. 31 and Rs. 29-12 respectively.

Small business has been done by the mills at the previous week's quotations. While business in firsts ready was done at Rs. 28-4 and Rs. 27-4 for new and old crop respectively.

The arrivals of new crop are showing an increase. The market is waiting the final forecast figures to be released on Tuesday September 5. Unless the figures are very bullish the market is likely to decline after the publication of the report.

JUTE MANUFACTURES.

The market during the week under review has ruled easy without any appreciable change in values. Ready hessians have been steady due to holding of a strong bull while the forward positions are distinctly easier. Mills are not pressing sales but the demand is slow and the heavy goods market under sheer pressure of stocks is showing no signs of improvement.

COTTON AND COTTON GOODS

COTTON.

(By Wire.)

(From our correspondent).

Bombay, August 24.

In Cotton market, New York recorded huge advance, 66 points being touched last Thursday but thereafter the market has been quiet. After a rapid rise this burst was quite natural. It was, however, thought that Government would take some inflationary steps to prevent the utter collapse of their avowed policy of raising commodity prices. Until some definite action was taken by the Government the advance could not proceed further as hedge selling appears at every advance.

Textile industry was lethargic. For a while the market underwent narrow fluctuations with about half cent with gradual advancing tendency, the local trend was definitely inclined for longside and Broach April-May, the rate coming up from Rs. 199½ to Rs. 205.

Karachi, August 24.

The cotton market is featureless and quiet but the understone appears steady on better foreign position. The latest quotations are as follow:

Sind Desi (Ready)	...	...	Rs. 15 12 0
Sind Desi (January)	...	...	,, 16 8 0

Calcutta, August 24.

The market during the week has remained easy and narrow, values having fluctuated between Rs. 200 and Rs. 204. Big operators both, at home and abroad have remained out of the market pending further developments in U.S.A. The Indian crop forecast had a slightly bullish effect on the market. The market at the moment seems to remain featureless.

COTTON FORECAST.

The All-India cotton forecast for 1933-34 issued by the Department of Commercial Intelligence and Statistics yesterday, gives the total acreage under cultivation as 14,031,000.

This represents an increase of five per cent. in comparison with the corresponding forecast (revised) last year.

The total is made up of the following trade descriptions (in thousands of acres):—

Oomras	...	...	9,509
Bengals	...	...	2,504
Americans	...	...	788
Others	...	...	1,230

The weather conditions at the time of sowing were not quite favourable but the present condition of the crop is reported to be fairly good.

The following are the quotations:—

PIECEGOODS.

The undertone of the market has remained steady. Enquiries have been better but the actual business resulting has been comparatively small.

In Indian goods fair business is reported in regular lines such as dhooties, shirtings and fancies. Stocks in Bombay and Ahmedabad are showing better clearance, though the prices are said to be not so satisfactory.

Japan has as usual remained out of the market for forward business, small business being reported in spot goods

Better enquiry in Lancashire mills and shirtings is reported and a fair business is reported done.

The total number of packages imported into Calcutta from all producing countries, including those from Indian ports, during July are returned at 34,588 packages, viz., 13,353 packages from Indian ports and 21,235 packages from outside ports. This compares with 43,938 packages for the corresponding period last year; 34,160 packages for June, 34,721 packages for May and 29,996 packages for April. It will be seen from the following comparative figures that Great Britain has improved her position slightly during July, as compared with June, while Japan continues to make steady progress:—

	From Gt. Britain Pkgs.	From Japan Pkgs.	From Indian Ports Pkgs.
January ...	6,340	11,687	22,399
February ...	5,269	9,740	19,999
March ...	8,683	12,553	14,380
April ...	6,922	10,418	10,577
May ...	4,772	14,129	10,097
June ...	2,994	15,382	10,938
July ...	3,211	15,592	13,353

IMPORT OF PIECEGOODS INTO INDIA IN JUNE

There was no change in the imports of cotton yarn into India during the month of June as compared with the previous months, but there was a substantial fall in the imports of piecegoods, says the Secretary of the Bombay Millowners' Association in his monthly note. The total imports of cotton piecegoods in June amounted to 71 million yards as compared with 87 million yards in May. The takings of Bengal, Bombay and Sind were 20.7 ; 22.2 and 13.1 million yards respectively, as against 26.0 ; 23.9 and 23.6 million yards in the previous month.

The total quantity of grey goods imported into the country was 27 million yards, and showed a slight falling off from the previous month's figure of 28.2 million yards. Of this total, 17 million yards were plain greys and 9.8 millions were bordered greys, mostly Dhoties. Japan increased her share of the trade from 18.4 million yards in May to 21.3 million yards in June ; while the United Kingdom's imports were lower than in the previous month and stood at 5.5 million yards.

There was a substantial fall in the imports of bleached goods from 32 million yards in May to 21.2 million yards in June. The decline is accounted for by a substantial fall in the imports from the United Kingdom which sent 22.6 million yards in May but only 13.2 million yards in June. The falling off in the imports from Japan was not so great ; her share of the trade being 7.7 million yards during June as compared with 8.9 million yards in May. The imports of coloured, printed and dyed goods at 20.1 million yards were also lower by nearly 4 million yards as compared with those of the previous month. Japan sent 10.5 million yards and the United Kingdom 9.4 million yards in June as compared with 11.2 and 12.6 million yards respectively in May.

ARTIFICIAL SILK.

The imports of artificial silk piecegoods at 5.2 million yards compared with 6 million yards in the previous month ; imports from Japan amounted to 4.7 million yards as compared with 5.2 million yards in May. Of the total imports of artificial silk goods, 4.6 million yards were entirely made of pure artificial silk, while 555,000 yards were artificial silk mixtures.

A comparison of the import figures for the first six months of 1932 and 1933 reveals that the total imports of cotton yarn were lower by 1.3 million pounds. There was, however, an increase of nearly half a million lbs. in the imports of grey singles in the first half of this year as compared with the first half of 1932. Of the total quantity of 12½ million lbs. of grey singles yarn imported during this half year, no less than 7 million pounds imported from China were of 31s. to 40s. counts, as against 4½ million lbs. last year ; while Japan sent 2.5 million lbs. of the same range of counts as against 2 million lbs. in 1932.

Imports of grey folded yarn at 2.2 million lbs. remained practically stationery as compared with the first half of 1932. There was a substantial fall in the imports of bleached yarn from 2.4 million lbs., in the first half of 1932 to 1.7 million lbs. during the half year under view ; while mercerised yarn imports were also lower by about 500,000 lbs.

There was a substantial increase of nearly 25 million yards in the total imports of cotton piecegoods during the first half of this year as compared with the imports in 1932, the totals being 528 million yards against 503 million yards.

The imports of both cotton yarn and cotton piecegoods in Bombay during June were lower than during May. The total imports of cotton yarn were 860,000 lbs. as compared with 1.1. million lbs. in May.

The total imports of cotton piecegoods at 22.2 million yards were lower by 2 million yards as compared with the imports for May. Japan's share of the trade was 13⅛ million yards, or an increase of one million yards as compared with the imports for May, while the United Kingdom's share at 7¾ million yards were lower by 2¾ million yards. While there has been a progressive decline in the United Kingdom's share of the trade from 11.7 million yards in April to 7¾ million yards in June, Japan has increased her share from 9 million yards in April to 13⅛ million yards in June.

There was a slight improvement in the imports of artificial silk piecegoods which stood at 4 million yards as compared with 3.8 million yards in May. Japan's share of the trade was 3.7 million yards as compared with 3.2 million yards in May.

A comparison of the imports for the first six months of 1933 with the imports for the first six months of 1932 shows that, while the imports of cotton yarn were lower by about 2 million lbs., there was an increase of 11 million yards in the imports of piecegoods. The total imports of cotton yarn for the first half of this year were 5.7 million lbs. as compared with 7.9 million lbs. during the first half of 1932.

The total imports of cotton piecegoods during the first half of 1933 were 141.5 million yards as compared with 130.5 million yards in the first half of 1932.

There was a considerable improvement in the imports of artificial silk piecegoods from 34 million yards in 1932 to 36 million yards in 1933. Japan's share of the trade was 32.4 million yards in 1933 as against 31.5 million yards in 1932.

BULLION

GOLD.

(By Wire)

(From our correspondent).

Bombay, August 24.

Gold rates rose up again due to bank's buying for ready and Bhadrapada and quoted Rs. 31-0-6 and Rs. 31-1 respectively.

There was a slight improvement in the gold market during the week under review, values having improved from Rs. 30-12 to Rs. 50-15 per tola. The improvement was due to weakness in London Paris Cross Rate and better export enquiry. Arrivals of gold from upcountry markets continues fair. Stocks have gone up to 5 lakhs tolas while the daily offtake remains poor at 3 to 4 thousand tolas.

London (Air Mail Week).

The Bank of England gold reserves against notes was £190,155,514 on the 2nd instant, showing a slight increase over the previous Wednesday's figure (£190,054,120).

Bar gold purchased by the Bank during the week amounted to £6,931.

In the open market gold was available in substantial amounts. Though there was a keen demand from the Continent, the destinations of a fair portion of the supplies are not disclosed.

THE UNDERWOOD
PORTABLE

Ranks foremost in writing machines because of Lightness in touch—Quickness and ease of action—A type impression which is sharp and distinct—An Alignment of type which long and hard use will not alter.

It is quiet, because of a new carriage return, a new shift key mechanism and a generally subdued key action. It is fast, because incorporated in it are exclusive features that, for years, have made Underwood typewriters the speed typing machines of the world.

Fuller particulars promptly furnished on request or better still, ask for a demonstration.

SILVER.

(From our correspondent)

By Wire.

Bombay, August 24.

London Silver was only 8/16d. during the week after desultory trading. New York prices fared no better the market being lifeless. The rates for Ready and Bhadrapada being Rs. 54-14 and Rs. 55-5.

Ruling weaker during the earlier part due to American and Chinese unloading the silver market had a small rise towards the close of the week. The rumours about the reduction of imports duty in India being less persistent the difference between the first and second settlement has narrowed down to eight annas from one rupee. Stocks remain unchanged at 10 thousand bars, the daily offtake has been a little better at 50 bars.

London: (*Air Mail week*).

During the week a quiet and steady tone ruled. Price variations were small. Though Continental selling continued, America was less disposed to offer and gave support on occasion. Re-sales were made by Indian bazaars and speculators, but they also bought. At the present price level, China has been inclined to buy.

Though at the moment the appearance of the market is fairly steady, the tendency is uncertain.

The following were the United Kingdom Imports and Exports of Silver registered from midday on the 31st ultimo to midday on the 5th instant:—

IMPORTS.

	£
Soviet Union (Russia)	57,000
Germany	23,500
Netherlands	21,310
United States of America	56,577
British India	26,835

SUGAR

The market during the week under review has ruled quiet but steady without any appreciable change in values.

Bombay :

The apprehension that Java would reduce limits for the West Coast of India in competition with Mozambique sugars referred to in our last duly materialised during the week,, and the same have rather been of a drastic nature, unusual to the mild policy of the Java selling Agency; inasmuch as the cut in price goes from F. 6 to F. 5¾. This has affected our market in no material way as values were already much below Java parity. It has been significant in our market that the Importing House who took advantage of the pisition, were the Japanese Firm who sold about 4,000/5,000 tons Javas for West Coast and other Ports, previous to the decline.The European House hoding 1,400 tons of spot Mazambique followed by disposing of same at around Rs. 4-12-3 F. B. H.

It is reported that the selling Agency's limits in Java stand for spot sugars only in order to counteract competition with Mozambique which have since the past 6 weeks been coming to the extent of 2,500 tons monthly and may continue on this scale until end October. Meanwhile the same easy tendency prevails and although it is believed on all hands that sugar prices are ridiculously low in London and in Java, yet there is an all round apathy to operate to the surplus in the latter centre and the subsidized position in the former. However, it can safely be said that present values at neither of the said markets can continue for any long stretch of time.

Sugarcane Crop Forecast.

The total area planted with sugarcane this year is estimated at 3,349,000 acres as against 2,982,000 acres at this time last year or an increase of 12%.

Weather conditions at the time of planting were favourable and the present condition and the prospects of the crop on the whole are reported to be generally good.

The details for the provinces and States are as follows :—

Provinces and States	1933-34	1932-33	Increase (+) or Decrease(−)
United Provinces (a) ...	1,791,000	1,652,000	+139,000

INDIAN TEA SALES.

At the London auctions on Aug. 16, 23,700 packages of Indian tea were submitted for sale.

There was a good demand but sellers were more inclined to sell old crop. Medium sorts showed no change but common kinds were sometimes easier.

At the London auctions on Aug. 21, 27,700 packages of Indian tea were submitted for sale.

New season teas met with very quiet demand but later the demand improved and good teas met with satisfactory prices. Common sorts were easier.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 9¼d., to-day's auction 9½d. lb.; Common Broken Pekoe last auction 9d., to-day's auction 9½d. lb.; Common Orange Pekoe last auction 9¾d., to-day's auction 9⅝d. lb.; Common Broken Orange Pekoe last auction 9¼d., to-day's auction 9⅝d. lb.; Common Broken Pekoe Souchong last auction 10d., to-day's auction 9½d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 9⅞d., to-day's auction 9⅝d. lb.; Clean Common Broken Pekoe last auction 10⅛d., to-day's auction 9⅞d. lb.; Clean Common Orange Pekoe last auction 10⅛d., to-day's auction 10⅛d. lb.; Clean Common Broken Orange Pekoe last auciton 10¼d., to-day's auction 10¼d. lb.; Clean Common Broken Pekoe Souchong last auction 10d., to-day's auction 9⅝d. lb.

JAVA TEA SALES.

At the London auctions on Aug. 17, 9,200 packages of Java and other teas (including Sumatra) were submitted for sale.

The tendency of the market was irregular. Common and low medium sorts were slightly easier but leaf grades were rather higher.

The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day auction per lb.
Common Pekoe	7½d.	8d.
Common Broken Pekoe ...	6⅞d.	7d.
Common Orange Pekoe ...	7⅛d.	7¼d.
Common B. O. Pekoe ...	7⅛d.	7¼d.
Common B. P. Souchong ...	7¼d	8d.

The following were the value prices:—

Clean Common Pekoe ...	8d.	8⅛d.
Clean Common B. Pekoe ...	8d.	8⅛d.
Clean Common O. Pekoe ...	8⅛d.	9⅛d.
Clean Common B. O. Pekoe	8⅛d.	8⅛d.
Clean C. B. P. Souchong ...	8d.	8d.

TEA AVERAGE PRICES.

The following were the average pirces of Tea in the London market during the week:—

	Last week lb.	This week lb.
Indian Tea (Northern) ...	11.11d.	11.30d.
Indian Tea (Southern) ...	10.92d.	11.50d.
Ceylon Tea	14.78d.	14.89d.
Java Tea	9.18d.	9.36d.
Sumatra Tea	8.91d.	8.33d.

Quantities to Sale Next Week.

Indian 46,700 packages of which 45,800 are on Garden Account; Ceylon 25,000 do. 24,900 are on Garden Account.

GRAINS AND SEEDS

WHEAT.

(By Wire)

(From our Correspondent.)

Karachi, August 24.

Wheat has developed a healtheir feeling and there is inclination to hold on in view of international efforts to regulate this commodity. Also there is improved ready demand.

Quotations are as follows:—

Ready	...	Rs.	24 0 0
September	...	... ,,	23 14 0
November	...	... ,,	25 4 0

Due to the general weakness in the grain and other commodity markets in the world, the wheat market in Calcutta has ruled easier and values on the whole have been slightly down.

The export activity is small and the demand for internal consumption is poor. The recent rains in the wheat-growing districts had further weakening effect on the market.

World markets on the whole have remanied very dull. On comparatively easier conditions ruling the grain markets. The wheat conference negotiations have so far inspired very little confidence in the market. It is however expected that workable agreement will be reached between the various countries concerned.

At the moment of writing the tendency of the market is weak.

AMERICAN CROPS.

The United States Department of Agriculture to-day published an August 1 estimate for the winter wheat crop of 340,000,000 bushels, compared with the 336,000,000 bushels' estimate of July 1.

The estimate for maize is 2,273,000,000 bushels, against 2,384,000,000 bushels on July 1, and that for spring wheat is 159,000,000 bushels, against 160,000,000 bushels.

These estimates are in line with general anticipation except for maize, which is unexpectedly bullish.

CANADIAN WHEAT CROP.

The Dominion Bureau of Statistics' preliminary estimate indicates a yield of fall wheat of 14,143,000 bushels, compared with 15,062,000 bushels in 1932.

The condition of the crop on July 31 is given as 57 per cent. of average, which, with the exception of 1931, is the lowest for that date in the records of the Bureau.

It is remarked that drought and heat took a heavy toll of the crops, especially in Ontario and the Prairie Provinces.—Reuter.

HUNGARIAN WHEAT CROP.

Budapest, July 22.

The 1933 wheat crop now being harvested is officially estimated to-day at about 22,000,000 cwt., compared with a crop of about 17,000,000 cwt. in 1932. This year's rye crop is estimated at 9,100,000 cwt., the barley crop at 7,200,000, and the oats crop at 3,000,000 cwt.—Reuter.

EUROPEAN CROPS.

The remarkably fine weather which has prevailed over practically the whole of Europe for the past few weeks, has been extremely favourable to the current wheat harvest, which promises to provide a record for quantity, quality and forwardness.

Broomhall estimates the 1933 wheat crop of Europe, excluding Russia, at 193,000,000 quarters, which is about 7,000,000 quarters larger than last year's crop, and fully 15,000,000 quarters over the average of the past five years.

Even those European countries whose wheat crop will not exceed the average report exceptionally good quality, and the forwardness of harvesting may be judged from the fact that the U. K. markets have been flooded in the past two days with offers of European wheats, especially German, French and Russian.

GROUND NUT CROP FORECAST.

This forcast is based on reports received from the three provinces of Madras, Bombay and Burma, and the State of Mysore which together contain over 86% of the total area under ground nut in India. The report does not include information regarding the main crop of Madras, but relates only to the Summer and the early varieties grown in that province.

The total area so far reported, is estimated at 2,080,000 acres (including 151,000 acres for the Mysore State from which report has been received for the first time), as against 1,681,000 acres reported at the corresponding time of last year. Excluding the area for Mysore which is not available for the last year, the present estimate of area shows an increase of 15%.

Weather conditions at sowing time were not quite favourabe, but the present condition and prospects of the crop, on the whole, are reported to be fairly good.

Details for the provinces and state are as follows:—

First Forecast, August.

Provinces and State	1933-34		1932-33	(Increase (+) or Drcrease(−)
Madras (Summer and early crops) ...	243,000		227,000	+16,000

Thursday the 24th Aug., 1933 ..	24 14 quiet.

Rates for weekly margin payment announced on Saturday the 19th inst. Rs. 25-4 per md. Sept. Dely.

London:

During July there has been a decline in the market, due to natural reaction after the sharp rise of the previous month, and a certain amount of speculative liquidation combined with lack of demand through the holiday season. The market has been extremely steady at the decline and shows every prospect of a return to higher values on the least indication of renewed interest, which at the moment seems to be emanating from Calcutta. A feature of the Calcutta market is the very high premium asked for November shipment over prompt shipment, namely, 6 per cwt.

T. N. Orange on the spot is Rs. 63 per cwt., while August delivery is Rs. 61, October Rs. 62, December Rs. 63, and March Rs. 64-6 per cwt. Fine Orange, Button and Garnet lacs have moved in proportion to the decline in Orange.

Deliveries from the wharves total 2,886 packages, while landings were 3,910 packages showing an increase in the stock of 1.024 packages.

WORLD SUGAR MARKET AS VIEWED IN JAVA

CONDITIONS IN JULY

During the period under review, the Sugar market generally has been void of any encouraging features for the future market, and the uncertain trend of the pending negotiations for the stabilisation of the sugar industry has created a nervous atmosphere in the main markets. Buyers have been encouraged to hold back, whilst holders of sugar positions have become discouraged, and in some markets, have liquidated their holdings. This has been the most evident in the New York Market where the Futures market has been subjected to regular declines. Actual sugars were sold also at the declining levels but the sales during the last fortnight have totalled only about 25,000 tons, indicating that the pressure has been mainly from the futures positions which reflected overbought conditions.

The decline in New York commenced on the July 19, when the Washington Sugar Conference broke up without reaching an agreement on the major point on which the discussions were based.

The London market was again affected by exchange fluctuations. The losses on the Raw Terminals in London for the fortnight were only $1\frac{3}{4}$d. per cwt.

The Java market remained unchanged and the main business passing has been in sugars rejected for export, in which some 10,000 tons has been sold in the interval. A small business was done in Browns for export.

Export business has been disappointing. Moderate business was reported to Hongkong, and sales have again been possible direct to the Calcutta market which is an encouraging feature in view of the fact that no direct sales have been possible for many months to this market. The other markets in India have entirely held aloof, the main difficulty of uncertainty being in exchange. Java sellers' prices were increased in line with the fall in sterling, but the ideas of the buyers in the Indian markets remained unchanged and the disparity in values only widened.

The only event of interest for the week was the sale of the balance of this year's outturn of Molasses sugar. The total production of this assortment is guaranteed not to exceed 65,000 tons during the present season, whilst a much smaller quantity is to be expected next year owing to curtailment of the crop to only about 500,000 tons total for all assortments. Supplies of Molasses sugar will, therefore, not be abundant. Sales by NIVAS during the period under review amounted to about 56,000 tons, which figure includes the above mentioned transaction in Molasses sugar and a line of 5,000 tons Browns for Japan. There is hardly anything doing in the SECONDHAND and prices are going down, buyers being reluctant to operate and confining themselves to covering their requirements with rejected sugar ex-crop 1931.

The total sales by the NIVAS were about 9,256 tons Whites, 4,725 tons Browns and 200 tons Softs, making a total to date of :

			Tons.
Whites	...	...	783,640
Browns	...	...	297,863
Softs	...	...	8,939
Molasses	...	...	17,527
Total		...	1,107,969

Price—limits remain unchanged as follows :—

Whites ex crop 1932 for export	...	F. 6
,, for local consumption (unsuitable for export)	...	F. 5.75 basis
,, for local consumption-full quality	... ...	F. $6.12\frac{1}{2}$
Browns ex crop 1932, for general export	... ...	F. 5.50
,, for local consumption	...	F. $5.62\frac{1}{2}$

All prices at per 100 kilos ex warehouse terms.

Hongkong.

A fair business was concluded for July and first half August shipments in Whites at F. 4.—and Browns at F. $3.67\frac{1}{2}$ per picul CIF. Exchange uncertainty latterly also affects this market and buyers are inclined to await further developments before undertaking further commitments.

British India.

Business was done in Whites to Calcutta for shipment for the "Silverguava" early August at $7/10\frac{1}{2}$ and 7/11 per cwt. C.I.F. There are further buyers at this basis but for special mill marks.

Colombo had buyers for Whites July at 7/7. Bombay buyers continue to divert early shipment commitments to out-ports such as Cochin, Calicut, Tellicherry, evidently reselling to these markets under the direct Java prices.

Karachi reports sales of some 2,000 tons Whites for export to Afganistan. There was a small interest in evidence from this market also, which was checked on the fall in exchange, and buyers again held off. Stocks were advised on the 29th instant as :—

			Tons.
Calcutta	...	...	4,300
Madras	...	...	1,600
Rangoon	...	...	1,700
Bombay	...	...	6,000
Karachi	...	...	5,000
Bhavnagar	...	...	5,200
Bedibunder	...	...	2,800

On the present Java prices and exchange we quote CIF. per cwt.

	Aug./Sept. shipment
Calcutta, Madras, Rangoon ...	7/11
Colombo, Bombay, Karachi ...	$7/11\frac{1}{2}$

London.

No special features were reported from this market. Exchange fluctuations unsettled the market. August tenders were also pressing but these were taken up by Refiners at around $5/3\frac{3}{4}$ CIF U.K. The fluctuations in Raw Terminals were not important at any period, the buyers' closing prices on July 28 showing a decline of $1\frac{3}{4}$d. against the prices ruling last fortnight. The closing prices ruling on July 29 were :

December	...	...	$5/6\frac{1}{2}$
March	...	...	$5/9\frac{1}{4}$
May	...	...	$5/11\frac{1}{4}$
August	...	...	$6/2\frac{1}{2}$

New York.

The main cause of the decline in sugar values has been the selling on the Futures market. The optimistic feeling in this market was maintained until July 18. On the 19th, when there was nothing definite on the anticipated decisions at the Sugar Conference in Washington, discouraged longs hastened to liquidate, and a steady decline followed. A slight recovery was registered on the 24th, induced by the strength of other markets, but this could not be maintained, and further easiness was reported on the 28th.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

IN GRATITUDE, AND IN HOPE.

The release of Mahatma Gandhi is one of those few events in political history which afford relief to one and all. For the consequences of his continued detetsion in jail are by no means happy to contemplate, either for the Government or for those who do not believe in the possibility of India reaching her destiny merely on the good graces of the Government. Now that Gandhiji has been released and Government and people are alike relieved of the necessity of speculating on the consequences of his unnatural demise, the issues, on which the differences between Mahatmaji and the Government arose, lose what little significance they had a few days ago. Even then, Mahatmaji for his own part, felt impelled by the Government's obduracy to undertake the fast unto death—an ominous phrase which has gained increasing currency during the last few months—the principal questions of public importance ranged, not one or two additional facilities for *Harijan* work, but on the temper of the government which that dispute indicated. We do not mean by saying this to indicate that Gandhiji's demand for the same degree of freedom to do propaganda for the depressed classes as he had enjoyed on the former occasions had other ulterior motives. Nor did Government intend, by refusing Gandhiji such facilities, to retard the progress of the depressed classes, in so far as it can be achieved within the next few months or even years. While to Gandhiji a greater amount of freedom could well serve to give that zest in public life which adverse developments of Congress politics might well nigh have killed in him, the Government's refusal clearly indicates the desire to deprive Gandhiji of the privileged position which he had enjoyed even as a State prisoner in earlier times.

* * *

Such anxiety, which is natural enough in all political conflict, is less defensible in a struggle in which both parties are alike agreed on the need for and the value of co-operation for what are recognised to be common ends. The point we seek to urge is that the relation between the Government and Mahatmaji need not be conceived as one of a clear-cut conflict. At no stage did the former aim at the extirpation of the latter; and it may be said of Lord Irwin, at any rate, that he looked forward at various times to Gandhiji turning his influence to the channel of constructive co-operation. In so far as the up-lift of the depressed classes is part of the social amelieration, which Government claims to have near its heart, and in so far as Gandhiji has been rendered innocuous by his incarceration for other political activity, that conflict between the two may be said to have been minimised, if not altogether eliminated. There was nothing except, perhaps, a legal quibble arising from a technical offence, to prevent Government from leaving Gandhiji in the same status as on previous occasions. Such a course would have spared the Mahatma the privations of repeated fasts. It would have saved the country the agony of contemplating the occurrence of the unthinkable tragedy in jail. And Government would not have found themselves in a position in which they would have to explain inconsistent policies and actions. No one in his senses could have thought that mere persistance in the denial of the facilities asked for would induce Gandhiji to end his avowed fast unto death. Nor is it easy to see how Government could have faced the opprobrium of allowing a universally respected leader to die in their custody when they would well have helped that tragedy. And apart from the superior moral obligations, even the jail rules do not countenance such avoidable deaths in prison. The alternative of forced feeding in the case of a personality like the Mahatmaji's would be an enormity worse than what it is intended to avoid. The *Statesman*, which, through its own columns and the columns of its weekly auxiliary, had given currency to all nauseous brag about the technique of forced feeding and preparedness for Gandhiji's death now roundly condemns the former and rules out the latter.

* * *

The event as well as the merits of the case show that the excruciating agony of last week could well have been avoided. But what is the significance of this episode—and we have said enough to indicate that it is no more than an episode in the epic of current Indian politics? Did the Government's attitude to Gandhiji's demands betoken an indecent haste in ringing off Gandhiji's predominance in Indian Nationalist politics? Or a desire to humilate him by forcing him to recognise the change in his position in the country, and, therefore, *vis a vis* the Government? Before we take up the former question we may point out that to Gandhiji, who, however egotistical he may seem in his political plans, has eliminated all thought of ego in his personal life, there is no such thing as personal humiliation. And so far as his position in the country is concerned, we believe he recognises, more than even his political opponents, that the country is no longer fit for those campaigns with which he may claim to have advanced the cause of Indian nationalism. The break-up of the Congress organisations and the abandonment of Civil Disobedience in its old form are conclusive proof of his freedom from those illusions which he is often charged with entertaining. To the Government all that matters is that Gandhiji should not be free to start a guerilla campaign of civil disobedience; and this objective could well be secured by his imprisonment on the same terms and conditions as before.

* * *

With the release of Gandhiji following the unfortunate impasse over the question of facilities for *Harijan* work, the pieces may be said to have been put back on the board again. If this experience should prove fruitful, we might look forward to a period of comparative peace. There is every sign that the present lull in Indian politics is all-pervasive. The Joint-Select Committee is believed to have done its task, whatever it was, and whatever the Committee may have conceived it to be. That it has only added to the irrelevant mass of material, relative to the Indian problem, that has been gathered during the last few years' is of little relevance to the question we have on hand. What is important is that Sir Samuel Hoare's attenuation of his own proposals has enabled him to make up with the critics of his policy in his own party and there would not for some time be any more and pother about losing the Empire. The exposure of the White Paper proposals in all their naked reactionarism and even the complacent repudiation of the much talked of "pledges" has failed to affect the Liberal attitude. The virtual acquiescence of all co-operating sections, taken together with the paralysis of the non-co-operators, leaves no room for doubt that the next few years will be spent in leisurely attempts to solve the riddles of the Federation in some indeterminate and by no means rational order. The time-table, which was regarded a year or two ago as of the essence of the whole reforms,

has sunk into utter obloquy. Meanwhile, a number of financially decrepit provinces for whom autonomy has no practical meaning will have come into being.

* * *

The Government in India can rest on the laurels which they have won from the Congress. And Gandhiji, too, must recognise that nationalist sentiment is in one of those ebbs which past history has shown to occur with a decennial periodicity. There is little spirit in the country to back any bellicose programme sponsored by the Congress or other organisation. In these circumstances, it seems to us that we are on the eve of a period in which natural forces, rather than the deliberate policy of any party, will determine the current of events.

* * *

But we are confident that this period of apparent helplessness will prove to be the most formative in our national history. The communal parties will for the first time recognise the utter futility of their wrangles, when provincial autonomy lacks the means by which it can function. The powerlessness of provincial governments will be realised at the same rate at which the public increases its demand for economic amelioration and reconstruction. Those, who are prepared to figure in the central legislature, regardless of its power or its composition, would be alive to the need for a more complete transference of responsibility in the interests of efficient and smooth working. It would become more evident to the States that the chaos of British Indian politics is not without its repercussions on themselves. All this should coincide with the return of the tide of nationalism and the advent of a Labour party in Britain.

* * *

It would be interesting to speculate on the course of British politics in the next few years. It may seem that the National Government is now firm on its saddle and that it has acquired, whether by the fortuitous coincidence of circumstancess or by sheer merit, a prestige which might stand it in stead for some long time to come. For, as was pointed out in these columns some time ago, the National Government has, to all intents and purposes redeemed its pledge to save the pound and balance the budget. It has in the past few months brought about a reduction in the volume of unemployment. It has buttressed British trade with a series of trade pacts with Empire and non-Empire countries; and more, including even France, are reported to be waiting for the valuable privilege of trading on a definite basis with Britain. There is, no doubt, in the backgound the formidable problem of war debts, and the threat, vague but, for the same reason, more dangerous, contained in the exchange policy of Mr. Roosevelt's administration. As regards the former, Great Britain has progressed with slow and steady steps to the stage at which she can default without allowing her integrity to be called in question. With regard to the latter, the Government have already come to an understanding with the other members of the British Commonwealth on the need for a common Empire monetary policy.

* * *

All these are satisfactory from the standpoint of the pressing problems. But the fate of Governments, in representative democracies is decided, not so much by their achievements of the moment, as by their ability to keep in touch with, interpret and answer the deeper demands of the common people. In the first place, it is by no means certain that the present economic policy will succeed in bringing about a substantial mitigation of unemployment. Secondly, the policy is bound to result in a fall in the real wages of the people, for which no popular electorate can be expected to excuse its nominees in the Government. And more than all, the National Government have to their credit more than one act which has deeply wounded the suceptibilities of the working class. The operation of the "means test"

has wrought much avoidable suffering on the people. Recently, the Moyne Committee report, which is examined at length in the "Overseas" section of this issue, has shown a singular unreadiness on the past of of the Government to utilise the resources it can command for the purpose of clearing the slums. There is also disarmament and other questions of international peace, in which the people would like the Government to be more liberal and go-ahead than they have so far shown themselves to be. So far as we can see, there is little or no chance of a trade revival occuring in time to enable the National Government to claim it as one of its achiemements.

* * *

The achievements of the National Government are but achievements of an efficient administration. There is no doubt that in the face of any problem calling for qualities of imaginative statesmanship, the present government in Britain will be found to be sadly ivanting. This is not were speculation or guesswork. The Indian political problem is an instance which should be convincing to any but the most prejudiced. The world economic conference is another, more steependans and less open to question. All critics in Britain and elsewhere are agreed that the British Government failed to give an impressive lead every time that it was needed ; and that, if the Government had shown more imagination, the world economic conference need not have been such a sad faflure. In the constant shift of national and international politics similar situations may arise any day and provide the occasion for the return of Labour to Government.

* * *

There is thus, from the Indian point of view, every reason to welcome what at the moment seems to be a helpless bell in Indian politics. When the forces we have examined work themselves out the time will then be ripe for a more satisfactory regulation of political life in India than is now possible. With the parties in India developing a stronger sense of national solidarity, as a result of the trials of this period of Federal gestation, with the British Government in the hands of a party more alive to the requirements of national justice and not less of national interests, the work of devising a constitution for India will be more smoothly and more efficiently carried out.

* * *

It still remains a question whether during the next few months to come the country will be spared the unsettlement of further sporadic outbursts. There is no hope left that Congress may be able to revive public opinion to the extent of its being able to alter the scheme and race of the now imminent reforms. Nor is there chance, so long as the present temper of the Government continues, of the Congress being reorganised in a manner in which it can preserve its identity and effectively function in the consolidation of public opinion. From this standpoint the voluntary break up of congress organisations shows a sense of realism which cannot be too highly commended.

* * *

A great step forward will have been if the Government and Gandhiji can devise some means by which further clashes between them could be avoided and a basis on which common and agreed objectives could be worked for. We had been of the opinion that Mahatmaji would, without giving the Government cause to arrest him again, engage himself in consolidating the nationalist opinion in the country, so that the new constitution, when it is inaugurated will not deliver the country into the hands of those who have been attracted to politics only by its material prizes. Such hopes were dispelled by the announcement of individual civil disobedience and the arrest which quickly followed on it. Now that the release of Gandhiji has come about in a manner which neither be, nor any one else could have ex-

pected and Government have been able to give him freedom without any loss of prestige, it may be hoped that both would explore the path of peace. The gist of a long interview which Mahatmaji has given to the Associated Press and which is just to hand as we write this shows that our hope is not a vain hope.

* * *

Gandhiji is reported to have said that he seeks peace much more eagerly than imprisonment and the repetition of the fast, and would, therefore, use his unexpected release from imprisonment, for the sake of exploring avenues of peace.

* * *

He has also added his discharge having come upon him absolutely unexpectedly, he confessed he had no knowledge of how he would shape his movements after his convalescence, and that he would repeat what he had so often said, before, that this time he would be continually praying for light and guidance. The nation is full of gratitude to-day that once more Mahatma Gandhi has been spared for its service. It lives in the hope that he may be enabled to render it by a timely peace with the Government. Time and again his appeals for an interview with His Excellency the Viceroy have been rejected. May it not be that the trials of the last two months will bear fruit in a happy reconcilation?

"PASSIVE REVOLUTION."

The second week of August witnessed the beginning, and the end, in Cuba, of what ex-President Machado described as a "Passive Revolution." The island state was in turmoil, all of a sudden. It is too early to divine the genesis of the present insurrection or its its ramifications.

* * *

As the New York Times says:—

"At the beginning of this year Cuba was the centre of considerable disturbance. The island was in a state of excitement for many months, and eventually martial law was proclaimed. The agitation was directed against General Machado, who was re-elected President in 1928. It was thought at one time in the early summer that the United States would intervene. Eventually constitutional guarantees were restored. This was followed by a general road transport strike at the beginning of this month. It started in Havana, and spread throughout the country."

* * *

However sudden the mutinous revolt of the Services against their President, its march was surely precipitated into a stampede by the temper of Mr. Machado. The President grew steadily unpopular. There were allegations against him, of misappropriation of public funds. Apart from the truth or otherwise of this ugly affair, the island was for sometime surging with labour unrest. The spread of strikes was construed by the President as a passive revolution against his regime. It looks like a case of guilty conscience. He was notoriously untrustworthy in his promises, and tyrannical in his military administration. He, however, met the strike attitude of the people with military rule.

* * *

Annoying as this turn of events was, the system of secret police, which perpetrated his plans, proved galling, beyond endurance, to the people. The news spread to the interior, where serious rioting took place. But, the telegraphists struck work; and traffic and communication was paralysed. When the military took possession of the city, the public gave vent to its inimical feelings by rejoicing at the reports that the President had resigned. The President had lost his temper, and gave the order to open fire on the crowd. Several persons were killed, and many more wounded. The tragic event has set the stage for subsequent happenings, which happily for the islanders, culminated in the flight, by aeroplane, of President Machado to Nassau in the Bahamas and of Dr. Ferrara, the Secretary of State, to New York.

* * *

In between the two events, the inconveniences, discomforts and privations of disorderly times; the protests of ambassadors and Ministers; the rush of the United States' warships to the spot; and the ultimatum of rebel leaders, all these have been enacted in quick succession.

* * *

The fundamental causes of the mutiny were serious and deep. For, the Cubans are far too enlightened a community to indulge in cheap, revolutionary parades. The major part of the population is

White, about 68 per cent. of the total. They have enjoyed the fruits of education. The University of Havana, founded in 1721, turned out about 5,000 students in 1930 ; and the children at school numbered well over 4 lakhs, out of a total population of over 36 lakhs. Fifty daily newspapers, forty-four weeklies and forty-six monthlies in so small a place point to a high average of general intelligence. It is no small credit to spend over 9½ million dollars annually, nearly as much as on war and marine departments, out of a total revenue of nearly 52 million dollars.

* * *

It should be clear, therefore, why the mutiny was directed by the intelligensia. The students' organization, was one of the staunchest opponents of the Machado regime and the Administration. The rebel leadder was Captain Menier, Chief of the Aviation Corps. That the Army, the Navy and the Air Force should have acted swiftly and smoothly, without firing a single shot, puts the ex-President's case in the wrong. The miseries of the population could have been averted, if M. Machodo had listened to the advice of President Roosevelt or complied with the demands of the Revolutionary leaders, to abdicate.

Cuba, though it speaks Spanish has its contacts with the United States and is as dependent on the American market, as Ireland on the English. The message of President Roosevelt, that "the problems of starvation and depression are of such immediate importance that even political problems should be met in a patriotic spirit, in order to improve conditions as early as possible," was taken to heart by the Revolutionary leaders. Any mischief that had occured after the exit of M. Machado in the nature of sacking the houses of the Ex-President and 50 Government officials, was the natural outburst of popular fury at the escape of the "miscreant," whom it had charged, in the criminal court, with murder and misappropriation of public funds.

* * *

But, the machine-gunning of the house of the provisional President, Senor Cespedes Yortiz, the former Minister for Education, which obviously was the work of Machado's men, could not be so easily brushed aside. But, the shooting of Col. Antonio Jimeney, Chief of the Secret Police and a creature of M. Machado, and his unnatural exit from the scene of his mischievous activities is a fitting, and certain, end to the upheavel of his unwitting creation.

* * *

The people of Cuba gave evidence of their patriotism when they rebelled against the Spanish domination in 1898. The armed intervention of the United States was a God-send for the transition period. A convention of the Cubans adopted the constitution early in 1901. In May of the same year, the control of the island passed into the hands of the national republican Government. In June, the conditions of the United States, not to conclude treaty with a foreign Power, not to contract debts beyond the capacity of the current revenue and the claim of the States to intervene and to use the naval stations, were accepted. In July, 1903, the coaling station of Guantanamo Bay was leased to the United States for 2000 dollars annually. In December of the same year, a reciprocal Commercial treaty strengthened the ties of both nations.

* * *

But, political disturbances, soon after, necessitated an American Commission to assume the role of provisional Government in 1906. The National Government, however, resumed the administration in 1909, since when there has been smooth sailing. In March, 1928, a Convention was held, and it restricted the President's term of office to 6 years without right of re-election, as well as conferred on women over 21 years of age the right to vote. The presidentship of General Gerardo Machado Y. Morales, whose term should have normally expired on May, 1935, was an aftermath of this constitution Convention. But, he degenerated quick and fast, by overriding popular rights.

* * *

During the height of the political warfare, Mr. Roosevelt was reported to be ready with proposals for a new deal for the island. It is said to deal with a sweeping revision of Cuba's debt with a view to reducing taxation, reciprocal tariffs and a quota, limiting Cuban sugar exports, to American markets, to 175,000 tons annually. But the deal that the island needs is political.

* * *

There was also a talk of revising the Cuban Constitution on the model of the Constitution of Switzerland. Cubans should do well with a constitution, providing for a compulsory referendum or a popular vote at the request of a definite number of voters. Such a scheme would provide the intellectual and insular people of Cuba with a ready-made machinery for driving dictator-Presidents into wilderness.

THE IRISH SITUATION

The events of the last few days in the Irish Free State have revealed the perils, from which it has still to be saved. Attacks have been launched against it, externally and internally. The repudiation of annuities by the Free State supplied Great Britain with a pretext for declaring an economic war against it. The dubious results, thereform, have encouraged the Free State to go ahead with reconstruction programmes, with a view to attain, more or less, self-sufficiency. Emigration was stopped ; and the industrial employment was meagre. The population is on the increase.

* * *

The Government has, therefore, embarked upon a policy of providing more employment on the land. With a view to increase its power over the Irish land, a new Land Bill was framed. The Land Act of 1923 provides for the compulsory purchase of land, acquired by tenants under Land Purchase Acts, in order to relieve congestion. The present Bill extends the power of compulsory purchase in favour of other classes of the population.

* * *

This latest innovation in the Land Law gave rise to a sense of insecurity among the tenant population. In spite of the concomittant payment of adequate compensation, the fact of the transfer of functions of the Land Commission from judicial to executive officers has given a handle to internal enemies of the existing Government to excite, and then exploit, discontent among the tenents, in order to overthrow the present Government, and reinstate a submissive administration in fascist rehabiliments.

* * *

The recent uproar and heckling in the *Dail*, against President De valera, was the work of the farmers' deputies, among others. Outside the Parliament, the Army Comrades' Association, formed last year as a counterpoise to the Irish Republican Army, was transformed by General O'Duffy, the former Chief of Police who was removed from his post by Mr. De Valera, into the National Guard, with the distinctive uniform of the blue-shirts. Its members include ex-officers, farmers and middle-class elements. Thus, it bears the indelible imprint of a burgoise organisation. The National Guards were supplied with arms, and heavy importing, by them, of arms and ammunitions began.

* * *

As the head of the State, Mr. De Valera took measures against the carrying of arms by the Opposition, whom he charged with conniving at the activities of the National Guard. He, moreover, created

an adjunct to the regular Civic Guard, with a view to safeguarding public buildings. These precautionary measures were defied by the National Guard by holding a parade in uniform to the cenotaph, erected in memory of Griffiths, Collins and O'Higgins. These three persons were the victims of political murders in the past. The whole affair, was, thus, calculated to bring about a breach of peace. Mr. De Valera promptly passed prohibitory orders against holding the parade in uniform. The National Guard organisation was not then ready for military action. They ate the humble pie, and were content to have the parade in white shirts. But, Mr. De Valera was not to be outwitted glibly. His Government promptly declared the National Guard as illegal, and a Military Tribunal has been set up under the Public Safety Act, which will have the power to inflict drastic penalties, including flogging and death, for political offences.

* * *

The Rublic Safety Act was enacted by the Opposition which was in power, before Mr. De Valera's party won at the polls, and formed the Present Government. This drastic Act was employed against the members of the Irish Republican Army, an unofficial force of whole-hoggers. They form the mainstay of Mr. De Valera's forward policy.

* * *

The supreme interests of the Irish Free State are being steadily advanced by Mr. De Valera's Government. The introduction of Bills to abolish the right of Irish subjects to appeal to the Privy Council as a final Tribunal, to transfer the power of appropriations from the Crown to the Irish Executive, and to abolish the Royal Assent to bills,—all these coming, as they do, in the wake of the Irish repudiation of annuities—is an eyesore to British political interests, which light-heartedly launched the economic war on the Free State. The Irish bid for economic independence through the establishment of an industrial Credit Corporation with a Capital of £5,000,000, to manufacture cement and industrial alcohol, and through a £2 million company for the erection of three new sugar-beet factories and the acquisition of one existing factory, have, no doubt, alarmed the authors of the economic war.

* * *

What is more, Ireland has started the development of new lines in agriculture, increasing the tillage, so far, by 5½ per cent., and decreasing the number of cattle. The choice of beet as a crop ensures a greater rate of employment on land, while providing livestock with feeding stuff, at an additional cost of half-penny, to the consumer, in the price of sugar. The schemes of electrifying rail transport will cut out imports of British coal.

* * *

The frustration of the various economic measures will be the result of General O'Duffy's antics. Because the economic ruination of the Free State was found to be impossible of achievement, a civil war is felt to be necessary. General O'Duffy is out to perform the feat, if time and funds are permitted to serve his ends. In fact, even after the National Guard was declared illegal, a conference of its members in blue-shirts was held at Cootshill, in utter defiance of the Government ban, where Gengeral O'Duffy was present. A National Government, such as that of Mr. De Valera, can not look upon the National Guard's activities with indifference. The patience of Mr. De Valera, will, however, be amply rewarded, as his care not to provoke passions is much appreciated. But, not until the National Guard is disarmed thoroughly, can the Free State be free to carry on her economic programme and attain real independance on all fronts. The events of the immediate future will be watched with interest and sympathy from manyy parts of the globe.

(*Continued from page 515*)

The following table gives the results of the five important mills of the Currimbhoy group for the year ended March 31, 1933:

Name.		Capital.	Loss.
Currimbhoy	...	22,00,000	4,25,461
Fazulbhoy	...	18,00,000	4,63,231
Pearl	...	20,00,000	3,77,000
Crescent	...	15,00,000	4,00,550
Ebrahim Pabaney	...	20,00,000	4,00,850

In all cases there has been heavy loss. The managing agents have foregone their commission. These results have had a depressing effect on the market for mill shares. The Currimbhoy management is one of the best and cleanest in the city. But the managing agents have had various embarassments since their having taken up half a dozen additional mills from Mr. Mathradas Goculdas. Since then, the strain for managing colossal sales and providing colossal finance has been severely taxing the management. It is this strain which has made it difficult for Currimbhoys to take full advantage of cheap prices of cotton to accumulate heavy stocks or to hold on large stocks of manufactures till better prices are possible.

Nor has the world been too kind to this family of great industrialists. They came into trouble entirely because of their seeking to do a great friendly act by another family of great industrialists.

But the most unkindest cut is from the Imperial Bank on whose Board, Sir Fazulbhoy Currimbhoy has been a Director for nearly a decade. His advice should have been most valuable to the Imperial Bank in regard to the proper understanding of the creditworthiness of the various businessmen and businesshouses of Bombay. After all this service, it was an ungracious act to replace Sir Fazulbhoy by Mr. R. M. Chinoy. The two men are not in the same street. Sir Fazulbhoy in his his worst days is still, in the language of the vernacular saying, a recumbent elephant lying down which is superior to any other quadruped upstanding.

The P. and O. English mail steamer "Mooltan" which sailed from Bombay on Saturday, carried bar gold of the value of Rs. 1,38,22,685. Out of this consignment, Rs. 31,61,006 worth of gold was for London option New York, Paris and Amsterdam, Rs. 2,09,508 worth for London, option Amsterdam; Rs. 11,10,749 worth for Amsterdam, option London; Rs. 2,08,456 worth for London, option Paris, and Rs. 42,96,136 worth for Amsterdam, via London.

Clive Street Gossip

As I look over what I wrote last week in this section, I do feel that I have been extremely slipshod. For various statements and sentiments therein, I have been pulled up by friends who bear me nothing but goodwill. Mr. Amal Kumar Mukherjee, to whose appreciation of the *Year Book* I referred to, has written in to complain that I have not quoted his letter correct. The fact is, that I was quoting him from memory as I had mislaid his letter at the time of dictating my Gossip. The result is that there have been quite a few bloomers in this communication. For one thing, Mr. Mukherjee passed his B. Com and not M. Com. For another, Mr. Naren Mukherjee is not his uncle but cousin. I must apologise to Mr. Mukherjee for the misstatements I had fathered on him. Another slip of mine in last week's Gossip is my reference to the Moslem binder. My friend, Mr. H. G. Franks, Editor of the Star of India, has taken me to task for this phrase. What was the necessity for particularising that the binder in question was a Moslem?—he asks. I may assure him that I meant nothing more than to indicate that all binders are mostly Moslems and that one of the most difficult jobs in connection with the preparation of a book is binding where the entire work is manual. Far from having any complaint with my Moslem binder, I have every cause to feel gratified that he did his part of the work with the utmost expedition.

* * *

Of the *bukshees* that I distribute annually after the *Year Book* amongst those who have laboured for it, the first person to receive his share happens to be the Moslem binder.

Another charge against me is that I was unusually flamboyant and unnecessarily extravagant in my statements. This comes from one of the kindest friends I possess in Calcutta. What is all this tall talk about a hundred telephone calls a day?—he asks. He wants to know whether Eavesdropper had lost his sense of proportion or whether he was out of sorts when he started writing his column. I would straightaway plead guilty and own that I was feeling fagged and beaten after all this bother over the Year Book. This fatigue, possibly, accounts for the lack of precision and of careful weighing of each word. I appreciate nothing so much as friends putting me up whenever I go astray. I have always believed that the best joke is one against myself. I have no doubt that the kindest friend is to be found in the sincerest critic. I am, therefore, grateful to all those who have deemed it necessary to pull me up and to warn me that I had better be more careful.

I may, however, urge one important circumstance in extenuation. My mother, whenever she happens to be away in South India, makes out, from a look at the size of and advertisements in Indian Finance, whether I am in a happy mood or otherwise, prosperous or the reverse of it. So have I felt that in this section, my readers have a personal message from me; and through this column a personal link with me. I need not, from this point of view, be elaborately apologetic if even my fatigue and whimsicality are aptly portrayed on occasions in the very tenour of my writings. I have taken liberties in this column only because my readers have extended to me great indulgence. True to the motto of this journal, I have claimed a charter as large as the wind; and my readers have granted me the claim in full. If the liberty thus given sometimes turns out to be "license", it is a lapse for which I am always prepared to express my regret. But the reader himself cannot escape his share for my lapse. It is he that has encouraged it.

* * *

I am yet in the midst of the desperate stir and fever of the Year Book distribution. Lest I stumble as in the last week, I would hasten to close to-day's Gossip with the following letter which I have received from Prof. A. C. Fernandes, M.A., St. Xavier's College, Bombay, with the assurance that I certify it to be a true and *bonafide* copy:

Dear Sir,

I am a regular reader and admirer of Indian Finance which supplies to the student of Indian Monetary Problems a long and much felt want. The recent improvements in Indian Finance have enormously enhanced the practical and scientific value of the periodical, and as a humble student of Indian finance, I have been feeling that your paper by no means suffers in comparison with English or American financial papers.

But I must congratulate you on your Annual publication which, without exaggeration, is matchless in the world of similar Indian publications.

I must also thank you for your generosity to the student world. Thirty-eight of my students of St. Xavier's and Davar's Colleges have requested me to ask you to send them copies of the Annual publication of 1933-34 which is just out and which you are offering to the students at Rs. 2-8 per copy. The books may be sent by Railway Parcel to the above address. You may send the Railway Receipt per V.P.P.

I believe you have a book on Indian Finance, explaining Indian fiancial terminology and Indian financial machinery. I shall thank you to send me a copy of this book which, if found suitable, I would recommend to my students.

THE GATEWAY OF INDIA

(From Our Correspondent).

Bombay, August, 23.

Our unremunerative Developments works are, like the poor, always with us. We are vouchsafed recurrent and irritating reminders. We simply cannot indulge in the luxury of forgetting.

On your side, you have the Victoria Memorial as the proud token and resplendent sign of the æsthetic attributes of Lord Curzon. On our side, we have the desert of reclaimed land, the howling wilderness of unoccupied chawls and the Sukkur Barrage, as the final and unforgettable testimony of Lord Lloyd's folly and of Bombay's inability to resist the folly in time.

The latest one to rub this into us is the Accountant General, Bombay. Mr. N. B. Deane's report on the Appropriation Accounts of the Bombay Government for 1931-32 has served to pull us up and despair if ever we can be a solvent Presidency again.

The little municipalities, which Lord Lloyd referred to in lofty contempt and derision, have every chance of recovery at an early date if only they would pull themselves up. And, I dare say, most of them would pull themselves up.

But the province bankrupted by Lord Lloyd would appear to be beyond the limits of recovery. So thoroughly has Lord Lloyd done his devastating work! That after so piteous and damaging a record as an administrator in India, this bungler could throw stones at others who could have neither the capacity nor opportunity for bungling on so vast a scale or with such far-reaching effects, only proves that the British public do not look at the credentials of those who seek to influence and guide them.

Earlier reports of Accountant Generals on Bombay Appropriation Reports would seem to have exhausted all the nasty attributes that language abounds in. For a change, Mr. Deane tries the unduly restrained style. What is the use of rubbing it in over and over again?—Mr. Deane would seem to have argued to himself in this wise.

In sheer mercy or out of sheer realisation of the futility of posthumous reprimand, Mr. Deane applies the lash with a consideration which the Government had not known for nearly a decade. Despite the Accountant General's temperate language, it is obvious that, in relation to earlier reports, no improvement of any kind is visible; and that, on the other hand, there has been further deterioration. So far as the debt position of the Presidency and Sind is concerned, the unfortunate fact is stressed that the assets created out of the borrowings contribute no surplus revenue to meet general Government charges. The development operations are looked upon as definitely unremunerative and the established irrigation systems are working at a loss.

The Lloyd Barrage, which is not included in the above description, must be considered, at the best, a dark horse. With its separate and heavy debt, this undertaking remains a problem of the future.

At the beginning of the reforms period the debt of the Presidency stood at Rs. 21,45,94,000 and was made up as under:

> Public Loan of Rs. 9,38,93,000 of which only Rs. 2,43,93,000 were retained by the Government.
>
> Pre-Reform Provincial Loan Account debt Rs. 3,16,40,000 which was covered by equivalent outstandings in that account.
>
> Pre-Reform Irrigation Capital outlay Rs. 8,90,61,000.

At the end of 1931-32, the debt had increased to Rs. 80,39,33,000. The lion's share of this increase is due to Lord Lloyd's high-sounding plans. The additional debt represents capital operations, on an extensive scale, undertaken by the Government in the shape of Irrigation, Development and Civil Works and the money borrowed to be loaned out again to the city corporations.

The following description of the annual liability in respect of debt service shows the gravity of the position:

> "Excluding the repayments made by these corporations, which are merely passed on to the Provincial Loan Fund and the interest on the Lloyd Barrage Scheme borrowings, which is capitalised, the debt charges of the Presidency during 1931-32 amounted to Rs. 2,08,82,000 or 15.1 per cent. of the ordinary revenue and Provincial Loan Accounts receipts.
>
> Apart from the Lloyd Barrage the borrowing programme of the Bombay Government up to the end of 1934-35 will increase the annual debt charges by Rs. 22,14,000 and the amortisation arrangement for the Development Department borrowings, when they are undertaken, will add another Rs. 3,37,000. Against this, however, the payment of the last instalment of the pre-Reform Provincial Loan Account debt will release an annual sum of Rs. 31,14,000!"

Let it not be forgotten that, for the time being, the interest on the debt incurred in respect of Lloyd Barrage is debited to the capital account. When provision has to be made in the current budget for the service of the borrowings against the Barrage, then will be the real day of-reckoning.

In some respects, the top-heavy debt incurred by this Presidency is analogous to the loan which has been given to the Bawalpur State by the Government of India for its irrigation scheme. The State now finds that it is loaded with a debt far beyond its capacity to repay at any date in the future, however remote. The Government have no other alternative than to own up their colossal financial folly and remit a substantial portion of the loan.

When the day of reckoning for the Bombay Presidency (and/or Sind) comes, a like solution may be found unavoidable. Except for occasional chidings from the Accountant General and others of his kind, the Government officials in Bombay are content to live in a Fool's Paradise.

The Accountant-General's report points out that the reserve with which the Presidency opened the post-reform period was finally exhausted and overdrawn by the revenue deficit of 1930-31. During 1931-32 the Government of Bombay could not—or would not—effect retrenchments needed for the avoidance of a further deficit. The result was that the year closed with expenditure in excess of revenue to the extent of Rs. 47,35,000.

It was only at this stage that the Government woke up to the urgent need for bringing expenditure within the compass of income. This has been the subject of "expert" examination by a special reorganisation committee that has been working since July, 1932. Its recommendations are under the consideration of the Government who have not yet made up their mind in the matter.

On the present working, the real adverse balance of future years would be, in the opinion of the committee, about Rs. 1¼ crores and the problem which the committee set itself was the devising of measures whereby there would be a betterment of the Presidency's finances to the extent of Rs. 2 crores. The margin of Rs. 75 lakhs must not be considered as erring on the side of extravagance.

The recommendations of the committee, even if accepted in total, would not result in the immediate balancing of the budget. Of the Rs. 2 crores in possible prospect, some Rs. 60 lakhs only lie within the power of the Local Government and the Legislature to secure in the near future, of which roughly Rs. 20 lakhs consist of new revenue and Rs. 40 lakhs of reduction of expenditure. Of the Rs. 40 lakhs, much, of course, cannot be immediate gain and the early attainment of really balanced budget, therefore, is unlikely.

But the Committee points out that there is a great difference between the unbalanced budget without the prospect of equilibrium and one qualified by a policy that will secure not only equilibrium but a surplus in a known number of years. At the same time, the Committee is careful to add:

> "It has, however, to be borne in mind that the Lloyd Barrage debt is still a problem of the future and that, even if it be assumed that the burden of its amortisation will fall eventually to the lot of a separated Sind, the financial repercussions on the Presidency of such a separation itself will require early visualisation and interpretation in the future policy".

All the stalwarts of economic experts could produce no more than a vision of a balanced budget in the very dim future. Can the Bombay Presidency be satisfied with such a flickering vision? Or can the Central Government allow a Government to carry on on so unsatisfactory a basis?

Mr. K. R. P. Shroff, who has been the President of the Bombay Stock Exchange for a number of years, has made it his habit to celebrate his regime by an annual speech on the lines of the Chairmen of Chambers of Commerce. There is usually a lot of horse-sense in all that he says, though, occasionally, Mr. Shroff shows undue leanings to placating the higher deities of the Government.

At the annual general meeting of the Exchange held last week, Mr. Shroff expressed, at the outset, his gratification at being able to see the first faint indications of a turning point in the world's trade. He was in a far less happy mood in referring to the plight of the cotton industry. He admits that the industry has been suffering from many adverse factors, namely, great reduction in the purchasing power of the population, resultant slackness in demand and unfair competition from Japan. On the credit side, the industry was helped by heavy protective duties, extensive propaganda for swadeshi and nationalist fervour in the country. On balance, the industry has been carried on as though intensely adverse conditions continue to persist. What is this due to? This is the question which Mr. Shroff addresses to himself for a detailed discussion.

His opinion—and, Mr. Shroff adds, the general opinion—is that, as it is, the industry is not organised on sound, healthy basis. A thorough overhauling is necessary. In the absence of such overhauling, any amount of protection can do no good. Nor can patriotism be exploited endlessly.

As for protection, Mr. Shroff thinks that it is not a healthy remedy at all. It must also be recognised that extensive protection is a burden on the consumer "who is already overwhelmed with heavy emergency taxation". The remedy lies, therefore, in the direction of adequate and scientific reforms at as early a date as possible.

The Bombay Shareholders Association, with which Mr. Shroff is intimately connected, has put forward important suggestions in this connection. Mr. Shroff would like to know what the Government propose to do about these suggestions. Mr. Shroff believes that the very foundations of commercial morality can be laid only on a thorough reform of the Companies Act. He says:

> "It is imperative that the Government should no longer postpone energetic action in the matter, if trade, commerce and industry are to return to that sound and healthy condition which existed some years ago. It is, in my opinion, owing to this unaccountable delay on the part of the Government that commercial morality is at its lowest ebb."

Turning to the credit policy and operations of the Government of Inda, Mr. Shroff makes the facile statement that the new loans have fully established public confidence. A detailed discussion of the havoc caused by the mis-handling of the last Rupee loan and the ill-timed issue of the sterling loan should have found place in the speech. In this connection, it is note-worthy that while the 3½ per cent. New Loan of the Government of India is even now quoting 1¼ per cent. below issue price, the recently issued loan of the Punjab Government is quoting 2¼ per cent. premium.

While it does not appear that Mr. Shroff has lodged his complaint on this point, he makes out a grouse that proper secrecy has not been maintained regarding the loan operations. It is a fact that, in respect of each new loan, the speculators on the Bombay market did manage to get more or less correct information a few days ahead. How does this happen? Is there any leakage through the brokers employed by the Government or the Imperial Bank for open market operations? Or do the operators have any access to the information through the underlings employed in the Public Debt Office? This is a matter which requires careful and thorough investigation.

Mr. Shroff claims that the facilities which the Stock Exchange in Bombay affords for free trading in Government securities have enabled the Government to borrow money time after time at a lower rate of interest. While the Government are thus benefited by the vogue of forward dealings in the Bombay market, Mr. Shroff complains that they have abused this privilege. The forward market was taken advantage of for unloading large blocks of securities during the 20th April settlement of this year. The following passage from Mr. Shroff's speech is of great interest:

> "I am personally strongly of opinion that such facilities for forward trading in giltedge securities should no longer be permitted so that Banks, Insurance Companies and others holding large blocks of such securities or large cash balances at their disposal may be successfully prevented from controlling the market at the expense of ignorant operators. A withdrawal of such speculative element from giltedge market is imperative. For, it would be to the ultimate advantage of this section of investors. There would be far less erratic price movements accompanied by greater stability".

If forward dealings are good enough for shares, why should they be deemed bad for giltedge?—this is the question which Mr. Shroff has to answer before his simple remedy of closing down forward dealings in giltedge could find general acceptance. From the point of view of the brokers on the Bombay exchange, giltedge operations have kept a good many of them going just from the time when transactions in shares began to dwindle. Without a forward market for one selected scrip, lively conditions in giltedge could not prevail. It is not that every scrip of the Government is included in the forward list. Dealings in futures are confined to 3½ per cent. Rupee Paper. Without seeking to do away with forward dealings altogether, Mr. Shroff would do well to think of the steps that should be taken for keeping speculation within bounds.

The brokers at your end are supposed to hold puritanic views as regards the forward market. But quite a large number of members on the Calcutta Stock Exchange do business in forward giltedge through their agents in this city. In fact, within the last half year, inter-change of business between the two centres especially in forward transactions has gone up by leaps and bounds. I have even heard it suggested that, ere long, arrangements would be made in Calcutta for forward dealings in 3½ per cent. Paper.

The remedy suggested by Mr. Shroff is, therefore, not the correct one. He is, however, right in insisting that neither the Imperial Bank nor the Government should, quietly, unload large quantities of securities through the forward market. The Bombay market has stood by the Government and enabled them to achieve bigger and bigger success in their New Loan operations. It is far from graceful on the part of the Government to reward Bombay by inflicting unpleasant and unexpected shocks.

(Continued on page 511)

OLYMPUS

(From Our Correspondent).

Simla, Aug. 23.

Dr. John Mathai, President of the Tariff Board, has been here for some time ; and he has, doubtless, everything ready in such a manner as to enable him to proceed, at Punjab Mail speed, with the steel enuqiry as soon as the *personnel* of the Board is announced. There has been far greater delay in this announcement than most people were prepared for. Many of the Assembly members now here receive enquiries from their friends as to whether they could enlighten them in regard to the real cause of this delay.

It would appear that it was more or less settled that Mr. N. R. Sarker was to be invited on the Tariff Board for this special enquiry. Sir Joseph Bhore had every reason to feel that Mr. Sarker's choice would give satisfaction to all interests. But a hitch seems to have occurred in this plan.

The Provincial Government in Bengal do not appear to be exactly keen on Mr. Sarker. And it is difficult for the Government of India to appoint anyone when the local government has strong objection.

In this context, it will be recalled that Mr. Manu Subedar, whose appointment to the Taxation Enquiry Committee in 1925 was nearly a hundred per cent. certainty, lost his chance because of the adverse view put forward by the Bombay Government. Sir Basil Blackett, who was then Finance Member, had told Mr. Subedar about the impending appointment. A newspaper forecast to this effect appeared soon thereafter.

Then started the row. The Bombay Government wrote and complained that their opinion should have been taken before any such offer could be made. They took so strong an attitude in this matter that Sir Basil had to plead his inability to carry out his earlier wish. Mr. Subedar was greatly upset. Thus began the feud between Sir Basil and Bombay.

It will also be remembered that in the Assembly discussions on the unsatisfactory nature of the terms of reference of the Taxation Enquiry Committee, Mr. Subedar supplied copious briefs to the opposition members. He took the rebuff to heart. I am sure, however, that Mr. Sarker is not likely to consider this a rebuff or that he would be greatly worried.

For, the fact is that Mr. Sarker has reached a position in which it is not the Government that oblige him by appointing him as a temporary member on the Tariff Board, but it is Mr. Sarker that obliges the Government by agreeing to serve on the Committee. One may go so far as to suggest that as President of the Federation of the Indian Chambers of Commerce, Mr. Sarker might not even condescend to accept an invitation of this kind. It is only a sense of duty that would have impelled Mr. Sarker to serve on an enquiry of this nature.

It is now more or less certain that Mr. Sarker will not be on the Tariff Board to be constituted for the purpose of the steel enquiry. The question is: Who is likely to be the member selected for this purpose? It may be taken as certain that a Bengalee will be appointed. I understand that amongst the names under consideration are Dr. N. N. Law, the Hon. Mr. B. K. Basu and Rai Bahadur A. C. Bannerji, C.I.E.

Dr. Law served on the Provincial Banking Enquiry Committee ; and he was also one of the delegates to the first and second Round Table Conferences. Of his erudition there can be no doubt. Of his integrity and long association with business interests there can be equally no doubt. But he has not so far made any name for adroit cross examination or shrewd eliciting of relevant information. Dr. Law may be good in research ; will he be as good in the investigation of a practical problem?

From this point of view, the chances of the Hon. Mr. B. K. Basu are far brighter. Mr. Basu has made a tremendous hit in the Council of State as the one non-official member who has a firm grip on the fundamentals of public finance and economic problems. In all budget discussions, Sir Moncrieff Smith used to call upon Mr. Basu to lead the debate. Mr. Basu has always something new and arresting to say. He makes out his points well. He speaks forcibly and to the point. And he never takes part in discussions unless there is a purpose.

His legal skill and his knowledge of practical finance should be invaluable if he is selected as a member of the Tariff Board.

Moreover, while the Simla Gods have no personal contact with Dr. Law and Rai Bahadur A. C. Bannerji, they have ample opportunities of knowing Mr. Basu and assessing his worth. He was selected to go to the League of Nations last year but was prevented from going by illness. Now is the chance for the Government to utilise his services.

Sir George Schuster will be back by the end of this week. He has every cause to feel vastly pleased with himself. He has been able to pilot the Reserve Bank and the Railway Board schemes in a manner that unanimous reports have been signed, bar a few dissents in details. He is sure to reckon this as a great triumph for himself.

Having achieved this in a conference in which there were stalwarts like Sir Purshottamdas Thakurdas and Mr. A. Rangaswami Iyengar, he should, consider it child's play to negotiate the Reserve Bank Bill through the Assembly constituted as it is at present.

But, even as it is, there are a number of points on which final decisions have to be taken in India. For instance, the actual wording of the Parliamentary Paper gives hope that the question of the ratio admits of negotiation. By the same token, the arrangement as between the Reserve Bank and the Imperial Bank has to be formulated in concrete terms. On all those matters in which final decision is hereafter to be made, Sir George will have to make up his mind as early as possible. For, the intention seems to be to rush the Bill through so that it is placed on the Statute Book before the end of the year.

The news that is filtering through from London is extremely disquieting so far as the issue of Imperial Preference is concerned. On behalf of the Indian cotton mills, curiously enough, a band of Parsees bas been in much prominence. Mr. H. P. Mody, Sir H. M. Mehta, Sir Cowasji Jehangir, Sir Pheroze Sethna and Sir Ness Wadia (the latter not quite a Parsee) have been consulting and discussing as to the best way of securing British support as against Japan.

Sir Purshottamdas Thakurdas would appear to have found himself in a difficult *role*. He was not very much taken into confidence by his Parsee friends. Perhaps because his sympathies were likely to be more for the Indian cotton growers than for the mill-owners.

Anyway, it should be no matter for surprise if in the coming triangular discussion between India, Japan and Lancashire, Japan and the cotton growers stand on one side ; and Bombay, Lancashire and Simla on the other side. If such a combination should eventuate, the result is easy to foresee. That is, the cotton grower is doomed.

I understand that the official delegates from Japan would be arriving in Calcutta by the middle of September and reaching Simla by the 18th. The business delegates would land in Bombay on the 16th and join the official delegates at Simla. In the latter half of September, Simla should be quite lively with a series of intrigues and counter-intrigues, of bargaining and counter-bargaining, of secret pacts and back-door negotiations.

HILL-BIRD.

SOUTH INDIA

(From Our Correspondent.)

Madras, August 16.

South India has of necessity to view the problems of the tea industry differently from North India. The Nilgiris and Travancore are the centres of tea production in this presidency. Their output is not inconsiderable compared to that of the gardens of Assam and Bengal. While the tea gardens in North India are owned by joint-stock companies, the majority of the gardens in the South are owned privately. This difference in their constitution has led to a difference in their outlook and a diversity in their interests. While the company-owned estates with their large scale production, vast resources and London connections look up to the foreign markets for the sale of a greater part of their produce, the smaller proprietory estates look up mainly to the Indian market.

With the Indian Tea Control Bill to be taken up by the Government in the present session of the Assembly, the position of the small South Indian planters has assumed one of importance and anxiety. The bill which is to give effect to the Tea Restriction Scheme agreed to by the Governments of India, Ceylon and Dutch East Indies mainly applies to restriction of exports. But as a necessary precaution, the Bill is also to restrict further addition to the acreage under tea. The Government had taken care in the steps for restriction they are taking to have the support of an overwhelming majority of Indian Tea producers. It is, however, felt that unless there was also restriction of production side by side with export restriction the Indian Tea Planters would not stand to gain much.

Under the new Bill India's exports are restricted to 325 million lbs. But even taking the current and future production at the average of the last six years it will be 405 million lbs. It may be possibly more as in some at least of these years the production has reached as much as 430 million lbs. Thus there will be an excess of a minimum of 80 million lbs. that will have to find a sale in the Indian markets.

Now the consumption of tea in India is estimated at 56 million lbs. out of which 4½ millions is exported over the land frontiers. So the nett consumption is 51½ million lbs. In spite of vigorous propaganda, this consumption is not likely to be increased appreciably in these times of economic distress.

The effect on prices of a supply of 80 million lbs. on a market that cannot absorb more than 51½ million lbs. need not be dilated upon. It has so alarmed the producing interests that they believe that whatever they may stand to gain by the higher prices they may obtain in the foreign market as a result of export restriction will be lost by the disastrous fall in prices at home.

The planters have, therefore, been busy evolving schemes for a restriction of output; and here it is that the interests of the larger company-owned estates and the smaller proprietory interests have come to a clash.

Any idea of restritcion of production is naturally repugnant to small holdings for they have to produce to their full capacity if they are to exist at all. Unlike the larger amalgamated interests they have no reserves to fall back upon. And with exports restricted and without any agreed restriction of production ruin stares the smaller estates. For competition in the local market is bound to increase as a result of the excess of production over the normal consumption.

During recent months opinion has been gaining ground amongst these small planters that it is much better to agree to a restriction scheme as the lesser of the two evils. But here again there has been no perfect agreement between the two interests. The smaller estates rightly feel that in any scheme of restriction of production, they should be treated on a preferential basis. They have gone so far as to memorialise the Government of Madras that their case should be represented to the Government of India.

In fairness to the larger interests, it must be said that they have been at pains to satisfy the demands of the smaller planters. The latest scheme evolved is a step in this direction and it is hoped that the deadlock would soon end. The new scheme provides for a production of 87 per cent. of their "best year's" output by estates under an average of 320 lbs. of manufactured tea per acre and smaller estates manufacturing under a thousand maunds annually, the larger estates to produce up to 77 per cent. of their "best year's" output.

From our Readers :

JAPANESE COTTON BOYCOTT

(A reply to Mr. Varjivandas Motilal)

To The Editor,
Indian Finance.

Sir,

I have seen the various letters of Mr. Varjivandas Motilal in this connection in your recent issues and elsewhere in the Press. I share fully with Mr. Varjivandas his sympathy for the Indian farmer. But I would request Mr. Varjivandas not to thrust the "poor" farmer into the picture at the moment. For, as Mr. Varjivandas too well knows, the farmer's cotton was marked long before the Japanese boycott came in ; and he, therefore, cannot have lost Rs. 6 crores as a result of boycott as Mr. Varjivandas would like us to believe.

The loss, if any, and whatever it is, comes from out the pockets of Mr. Varjivandas and his fellow middlemen who hold the cotton at present. In fact, the farmer will hardly come into the picture till November when the new crop will come into the market.

Secondly, Mr. Varjivandas' estimate that Indian cotton has gone down by Rs. 20/- per candy as a result of Japanese boycott is quite arbitrary and needs proof. Is it to be supposed that as soon as Japan lifts her boycott Indian cotton would take a big jump of Rs. 20/-? New York May contract closed on 18th instant at 9.92 cents per lb. At the exchange rate on the date of writing (19th), this works out to Rs. 233 per candy (784 lbs.). Broach May contract ruled to-day (19th) at Rs. 203 per candy. Against this we have to take into consideration the difference in quality between American middling cotton and Fully-good Broach cotton which is the respective basis for the two contracts. Taking this difference at Rs. 35/- per candy, we find that May Broach contract is Rs. 5/- higher in parity with the American contract. At any rate it is not lower in parity. In the light of this, it is difficult to understand Mr. Varjivandas' contention that Indian cotton has suffered a loss of Rs. 20/- per candy as a result of Japanese boycott.

However, it is consoling to note that Mr. Varjivandas has no quarrel about the need and the propriety of the measures we have taken in self-defence. All that he is upset about is the Japanese retaliation. Now, my point is : Here is a question of most vital principle involved—Are we to assert our right to frame our fiscal policy in accordance with our needs or submit to foreign dictation for fear of losing Rs. 6 crores annually at the worst (taking for granted Mr. Varjivandas' own figures)?

Let me say that both in the ordinary sphere of life as well as in the domain of high politics to which this question belongs, no sacrifice can be too great to save a vital principle. This is how I view the whole question. That is how any self-respecting country would decide on a fundamental matter of such vital importance.

Now, quite apart from the above, are we so defenceless against Japan that we simply must yield to her dictates? India is, at present, a very lucrative market for all the Japanese industrial products ; and if we only have the courage to turn Japan's weapon against herself and boycott all her goods, we should be solving this problem more in consonance with our needs and self-respect.

Again, even from the point of view of the grower, the mill-industry is of no less importance to him than Japan and deserves to be saved, from being ruined by Japanese dumping as the following figures of the purchases of Indian mills and Japan will show :—

	Japan (bales)	Indian mills (bales)
1929-30 ...	1,640,000	2,373,094
1930-31 ...	1,686,000	2,269,359
1931-32 ...	1,080,000	2,345,078

Yours, etc.,

Bombay, 19th Aug., 1933. X.

THE READING ROOM

The I. L. O. Year Book 1932: International Labour Office, Geneva: Price 10sh. 6d.: pages 459.

The third issue of the I. L. O. Year Book is in many respects a significant improvement on the earlier editions. While formerly there was a division into two parts—"General Activity of the International Labour Organisation" and "The Social Movement"—there are eight chapters with a general introduction which covers the subject-matter of the five chapters of the former first part. The *Year Book* attempts not only to give the developments from a labour point of view in each country, but also to sketch the activities of the International Labour Organisation. Special problems of certain categories of workers are also dealt with in detail in a chapter wholly devoted to this subject. To facilitate a comprehensive understanding of the position, there is a general introduction running into 37 pages. The survey of the Economic situation, which forms the first chapter is replete with statistical tables which are of interest not only to those who have developed a special interest in the condition of the workers but also for the students of economics. At the end of the work is a tabular statement showing the number of ratification of the I. L. O. understandings which each country has to its credit. A point of touching personal interest, which the *Year-Book* poignantly recalls is the death of M. Albert Thomas, the founder of the I. L. O. and its inpiration not only during his life time, but ever after. To those who are concerned in the problems of I. L. O., whether employer or sympathisers of Labour, the Year-Book is an indispensable means of reference.

The Theory of Unemployment: By A. C. Pigou: Macmillans: Price 15sh: Pages 319.

Professor Pigou's latest work on "The Theory of Unemployment" has, as may be guessed, nothing in common with the numerous publications of a propagandist nature, which either advocate policies of radical transformation of economic society or inveigh against them in tones of hysterical excitement. It is a purely objective examination of the factors affecting the volume of unemployment and the relation that subsist among them. As each of these factors has its impact on others and economic life generally, Prof. Pigou's theses may justly be described as a study in short period changes. As such, it is marked off from the rest of the scientific literature in economics which is devoted to the study of long period changes. It may be said that in the latter sense economics has attained to very near scientific perfection. But the reason why it is found to be of so little help in the solution of the numerous practical problems with which modern economy is now faced is to be found in its failure to tackle properly the character and content of short range changes. It is more than doubtful whether the problem of unemployment, as it confronts us to-day, may be viewed as mainly a question of adjustments the necessary in the chaos of short period effects. It may well be with some of the so-called short period effects have so serious an impact on the economic organisation that the long period effects on which economists confidently rely for healthy re-adjustment are rendered well nigh incapable of fulfilment. There is every reason to think from the magnitude of the unemployment, which obtains in almost every country of the world to-day, that statesmen can derive little help from a study of short period economics in their task of solving the problem of unemployment, which, viewed from a common sense stand-point, is only a question of an adequate distribution of work and the fruits of work.

Nevertheless, it is idle and dangerous to detract the value of an objective examination of the factors affecting unemployment in themselves and in their inter-relation, especially as such study pertains to a field which has not only been neglected but whose importance was not even recognised till a short time ago.

From what has been said to indicate the nature of Prof. Pigou's work, it could be guessed that it is largely a clarification of the relation between the factors that affect the volume of unemployment. In the short period view the theory of the wages fund which as been discredited for a long time comes to possess an altogether new significance. In this analysis the wages fund may rightly be regarded as having a fixity which, from the stand-point of long period effects, seems altogether nonsensical. For it is difficult to adjust at short notice the out-put of goods consumed by wage earners; and the total real wage bill, which is deducible from the volume of employment and the level of general wages, is determined by the proportion of consumed goods which is devoted to wages, as distinct from which is consumed by the producers themselves. That part which is exported abroad or devoted to the benefit of the unemployed exerts comparatively little influence on the wages fund as it is here conceived. But the outlet of the unemployment benefit has the effect of increasing the elasticity of demand for labour, which suggests that a fall in real wages may be conducive to a proportionate increase in employment.

This argument, shorn of the crudity inevitable in this undue compression and invested with the full details of the enquiry, constitutes the first part of the book. And it leads to many sidelines, of which the question of the possibility of enlarging the wage fund through State action is by far the most interesting and the most topical. Prof. Pigou seems to incline to the view that his anlaysis does not argue against State action in case of extreme severity of economic conditions at any given time. It is the demand for labour in particular industries that has come for the greatest attention in the first part of the book, and this is also responsible for the most distinguishing feature of the work, namely, its plenitude of mathematical formulae. Those who lack the equipment necessary to follow economic reasoning and conclusions set out in this particular form might well complain that Prof. Pigou has incapacitated a large body of economic students for an adequate appreciation of his thesis. In his preface, Prof. Pigou has attempted to answar this charge in anticipation.

> I am aware that there are writers on economic subjects, unacquainted with this tool, who resent its use by others. To them it is sufficient to reply with Pareto that persons ignorant of the German language are ill-qualified to criticise German literature. There are, however, other writers, themselves masters of all the relevant technique, who, neverthless, deprecate the introduction of mathematical symbols into economic discussions. Marshall, for example, a great part of whose work was built up round a mathematical skeleton, was at extreme pains to keep the skeleton concealed. By so doing he made his *Principles of Economics*, not only a great work of science, but also a great instrument of general education. Nonetheless, I venture a doubt how far those many readers of Marshall, who leave the skeleton unwrapped—who, perhaps, are even unaware of its existence—really grasp this thought. Would they not in the end have been better off had mathematical ideas been presented to them in mathematical form; and had they been advised to acquire a mastery of these few and simple tools? However that may be, I have in this book deliberately discarded cotton-wool and said what I had to say in a direct manner."

Prof. Pigou may feel that the readers of Marshall may have been better off if mathematical ideas have been presented to them in mathematical form; but it is relevant to recall that Marshall himself chose to imprison his mathematical formulæ and diagrams in short foot-notes rather than allow them to fill the whole picture of his treatise, not because he

wanted his publications to be instruments of general education, but because he felt that the bare bones of economic theory, which are expressible in mathematical form, are extremely easy compared with the economic interpretation of the complex and incompletely known facts of experience and lead one but a very little way towards establishing useful results. His remarks on Jevons' *Political Economy* are apposite :—

> We owe several valuable suggestions to the many investigations in which skilled mathematicians, English and Continental, have applied their favourite method to the treatment of economical problems. But all that has been important in their reasonings and results has, with scarcely an exception, been capable of being described in ordinary language. The book before us would be improved if the mathematics were omitted, but the diagrams retained."

Though I must count myself amongst those who are unfamiliar with the 'tools' employed by Professor Pigou, I must confess that the economies contained in his mathematical economics does not always carry conviction.

In the second half of the book one finds more familiar and less abstruse matter. Professor Pigou has postponed the consideration of monetary factors to a late stage, as he was anxious that the whole problem of unemployment should be examined from what he calls the "real end", namely, the goods, rather than its make-believe of money. He examines the implications of the standard monetary system which he defines as "one so constructed that, for all sorts of movements in the real demand function for labour or in real rates of wages, whether they last for a long time or a short, the aggregate money income is increased or diminished by precisely the difference made to the number of workpeople (or other factors of production) at work multiplied by the original rate of money wages." Its fundamental characteristic is "such regulation of the rate of money interest charged by the banks that variations in the money required by industrialists to pay for labour are always balanced by equal and opposite variations in the expenditure of themselves and the people from whom they borrow upon wage-goods or imported non-wage-goods."

The working of any monetary system is difficult to understand or to analyse as there is the disconcerting feature of the same stock of money appearing at one time as expenditure and at another as income. This difficulty Professor Pigou has minimised with his suggestion of a Mathematical Model which he describes as below :—

> Let us imagine a number of thick tubes bent round in a circle and closed. Each tube is of a length in inches equal to a number of days that it takes for the money inside it to pass from being income once to being income a second time. In every tube there is fitted a series of metal cylinders, each of them one inch long and capacious enough to hold the maximum quantity of money ever put into it, and all of them together occupying the whole tube. These cylinders move round the tubes at a constant speed of one inch per day. Every tube is open on one side, so that it is possible at any point in it to insert money into the cylinder opposite the point, or to take money out of it. The tubes are suspended vertically in a line in such wise that an imaginary horizontal plane one inch thick intersects all of them. Where the plane intersects any tube, the money, if any, in the cylinder there embraced is income. Thus the total income of any day is equal to the quantity of money in all the tubes that is standing in the plane on that day. The total stock of money on the day is equal to the quantity of money standing in the whole of all the tubes, and not merely in those parts of them that are in the plane.

Even this helpful model has proved in Professor Pigou's hands to be the source of more mathematical formulæ. But the wails of the non-mathematical students of economics should not detract the value of a study, whose possibilities are to be judged rather from the stand-point of the detached scientist than from that of current tasks, however pressing they may be.

GREAT BRITAIN

MOYNE REPORT ON SLUM CLEARANCE

The Moyne Committee Report on the problem of slum clearance is an instance of the failure of present policy to face up to the requirements of national economy even when the resources are quite sufficient for the purpose. There can be little to say against the recommendations of the Committee if the major premises of the present economic policy are granted. And yet, there is substantial agreement on the principal facts relating to this question of ridding the urban areas in Britain of the wretched hovels, which have continued, despite the striking progress achieved in many directions during the last few years. The aptest comment on the prevalent attitude to the slums was made only recently by Mr. J. M. Keynes, though he was only dealing with the larger problem of national self-sufficiency. He put his hand to the weakest point in current economic theory and policy, when he said that 'the whole conduct of life was made into a sort of parody of an accountant's nightmare. Instead of using their vastly increased material and technical resources to build a wonder city they built slums; and they thought it right and advisable to build slums because slums, on the test of private enterprise, "paid"; whereas the wonder city would, they thought, have been an act of foolish extravagance which would, in the imbecile idiom of financial fashion, have "mortgaged the future"; though how the construction to-day of great and glorious works can impoverish the future, no man can see until his mind is beset by false analogies from an irrelevant accountancy . . . . Wt have to remain poor because it does not "pay" to be rich. We have to live in hovels not because we cannot build palaces, but because we cannot "afford" them.'

Present State of Housing.

The Moyne Committee Report shows no sign of freedom from the false analogies referred to in such trenchant language by Mr. Keynes in the above quotation. For the present position is that as against seven to eight million houses in existence before the war, two million new houses are being built in the post-war period; and according to Mr. Rowntree another million and a half will have to be built in the next few years. Owing to the development of quick transport and the provision, through the expenditure of vast sums, of good roads, vast areas have been opened up; and houses have sprung up in suburban areas which answer the demand for a better type of housing accommodation than is ordinarily available in the working class areas in the heart of the cities. Though this is no doubt a welcome development, offering relief to the housing problem, no one can compare, as the *Economist* points out, a professionally planned garden city with the horrors of ribbon development." Secondly, the slum problem is not merely one of relieving the congestion of population in certain areas, but also of making the dwelling houses of the working classes attain a higher standard. Not the least of the objectives of an enlightened housing policy is the the improvement from an aesthetic and from a health point of view. For a proper attack of the problem, one has to rid oneself of the notion that the exploitation of slum areas and of the demand for cheap houses by private owners is part of the sacred principle of *laissez faire* and non-interference of the State in the domain of private enterprise.

Terms of Reference to Moyne Committee.

The legislation that has so far been effected by way of solving the problem is confined to the Acquisition of Land Act of 1919 and the amendment effected thereon by the Housing Act of 1930. It must be remembered that the availability of cheap surplus capital, low prices of building material and the awakening of the public consience in respect of providing habitable dwelling houses for the poor render it possible to effect adequate improvement, even with the restrictions imposed by the orthodox canons of sound public finance. But it is unfair to blame the Moyne Committee for its apparent failure to solve the problem because the Committee's hands were tied by its terms of reference, which restricted its scope of enquiry and recommendation, to (1) the steps necessary for maintaining a proper standard of fitness for human habitation in working class houses which are not suitable for clearance or demolition under the Housing Act of 1930 and (2) steps that are necessary or desirable to promote the supply of working classes without public charge through public utility societies or otherwise. The necessity of obviating every manner of public charge effectively precluded the Committee from considering schemes which would have solved the problem without in the long run imposing additional burdens on the taxpayer.

Main Recommendations.

The main recommendations of the Report are summed up in the following: "Local authorities are to be encouraged or compelled to purchase under statutory powers semi-slum properties and to hand them over to public-utility societies to be reconditioned and managed on the Octavia Hill principle, under the supervision of a central public-utility council. These public-utility societies are to be responsible not only for reconditioning but also for the rehousing of tenants who have been dispossessed in order to get rid of overcrowding. For rehousing purposes they are to receive a small subsidy and a loan at a cheap rate up to 90 per cent. of the cost of building, and they are to be given an advance from public funds of the whole of the sum necessary for reconditioning up to a specified total, but no subsidy."

Regrettable Half Measure.

The problem of depreciating property according to the Committee, has assumed its present gravity partly because local authorities have failed to take action against landlords who have not maintained their property properly, and partly because there is a close connection between bad management and slum building. There can be no doubt that management will improve in the hands of public or quasi-public bodies empowered to purchase houses compulsorily. The provision for compulsory purchase is, in fact, the most heartening part of the recommendations of the Committee. But the principle of compensation is manifestly inequitable, in as much as it makes no difference between those who have effected periodical repair, though hardly the maximum necessary, and those who have allowed the houses to fall into virtual ruin. Apart from this, the resources available to-day for the provision of dwelling houses of a reason-day for the provision of dwelling houses of a reason-able standard are so great that the authorities can have little excuse for resorting to a half measure like the reconditioning of old houses. For such reconditioning, however welcome it may be, as an improvement on the present state, is bound to lower the standard and retard progress in the future. The anxiety to avoid any draft on public funds has thus been responsible for tinkering with a problem which is of direct importance not only to the health of the people but to the efficiency of the national economy.

Air Mail Week.

Nationalisation of "Big Five".

The Moyne Committee's report and the suggestions for the clearance of slums should provide new fuel for Socialist wrath. But for the present it is impotent. For the party is under the electoral eclipse; and all that it can do now is to turn these years to the purpose of constructive thought. Thoughtful observers have agreed for a long time that the questionable means adopted at the last election to outwit Labour can only have effect of accentuating its extremism. One development in that direction is already visible. The nationalisation of the Bank of England has long been a principal plank of Socialist reconstruction. Now comes the demand that the Big Five should be acquired by the State and amalgamated into a single Banking Corporation. To admirers of the British Banking System, and particularly the Big Five, the proposal outlined in the Labour Party Policy report on "Socialism and the Condition of the People" may come as a shock. It may be said that there is no grave indictment against these banks as such. But the part played by big banking in British industrial finance generally, and in the present depression in particular, is by no means calculated to satisfy labour. And big finance in Britain is no more social in its outlook than elsewhere. The report points out the need of drastic reorganisation for the benefit of productive industry. The report continues :

> "Too many people and too many private financial institutions are getting a living in the City and elsewhere as financial middlemen, many rendering no real social service and some, by anti-social speculation and otherwise, rendering actual dis-service to the community. There are too many soft jobs in the City for influential people. As recent investigations in America have shown, the world of capitalist finance is dominated by little rings of 'insiders' 'who skim off the cream' from the labours of others and enrich themselves through a system of illegitimate privilege."

Speaking with reference to the Big Five in particular, it is urged, that they have a virtual monopoly of deposits. The shares form only five per cent. of total capital, the rest having been found by the depositing public. They should, therefore, be got at a reasonable and equitable price. Though the management of the new Banking Corporation should have freedom of action in details it should be open to Parliament to discuss its policy and direct it where necessary. To avoid the danger of loss of liquidity by the Banking Corporation," says the Report, "while furnishing the necessary credits for industry, a new credit institution should be created as recommended by the Macmillan Committee, but under public ownership and control, to grant intermediate credits to approved industries and to agriculture." This institution should take over, it is suggested, at a reasonable valuation, the frozen credits which the Banking Corporation will inherit from the joint-stock banks and which have so greatly impaired the liquidity of its assets.

The Report suggested that the new Corporation should have a small directorate appointed by Government on grounds of ability and willingness to carry out the work under the new conditions, in place of the five large existing directorates and that the Government would indicate the general lines of banking policy and would require the Banking Corporation to co-operate with the socialised Bank of England and the National Investment Board in giving effect to it, in conformity with the National Plan of Development and that part of the saving in directors' fees could be devoted to the creation of a "really efficient statistical and research department". Even suggestions as to details are made, as in the proposal that public authorities both national and local, should have an option to purchase redundant branch premises, which would often be well adapted for use for public purposes. How far such radical proposals are near to the realms of practical politics would depend solely on the temper of the people at the time of the next election. For there can be no doubt that, if Labour secures a majority, it will not repeat its old mistake of following an ultra moderate policy and giving the opportunity for backsiders to dig its grave.

Unemployment in July.

Employment figures continue to be encouraging. On July 24, there were 8,000 more employed in Great Britain than a month before; and as compared with a year ago the increase is as much as 549,000. The number of employed in July 24, totalled as much as 9,800,000 which is exclusive of approximately 20,000 insured persons in Scotland and in certain textile centres in Lancashire and Yorkshire, who though registered at Employment Exchanges are temporarily stopped were not at work on account of local holidays.

The improvement shown in the past few months continued in iron and steel manufacture, engineering, shipbuilding and ship repairing, metal goods manufacture, the woollen and worsted and hosiery industries, and in the shipping dock and harbour, hotel and boarding house services.

On the other hand, there was some further decline in coal mining, the motor vehicle industry, and in tailoring, together with a slight falling off in boot and shoe manufacture, building and public works contracting.

The numbers registered as unemployed showed an increase in the cotton and jute industries as the result of local holidays.

Threat to British Shipping.

Serious unrest and disquiet have been caused in British Shipping circles by an order of the German Government subjecting shipping passage money, which may be transferred abroad to "approval" of the foreign exchange control authorities. The order proposes to limit permission to transfer money abroad per passenger to (*a*) the amount which may be freely sent abroad—generally RM. 200 (about £10 at par), or in some cases RM. 700. (*b*) An amount "approved" by the foreign exchange control offices.

An important exception to the order, however, is made for countries with which passenger traffic agreements have been concluded. In those cases permission will be given to transfer amounts up to the limit prescribed in the agreements. Otherwise, the order is meant to be applied rigorously to all foreign companies; and it is felt unanimously that with the rigorous application of the order most of the passenger lines trading to Germany will be compelled to close down. In anticipation of foreign criticism and opposition, an official statement was issued suggesting that the order is not a new departure, but merely a proper application of the currency law hitherto violated, in so far as foreign shipping has been given privileged treatment over "travel companies". Indeed, it is even suggested that reducing them to a basis of equality is not merely an act of justice, but a "substantial concession". A more charitable interpretation of the motive of the German authorities than the assumption that they are anxious to hit foreign shipping is contained in the suggestion that the Government are only seeking to compel German jews to travel by German ships, which, since the Hitlerite persecution they have virtually boycotted, with dire results to German lines.

Contravention of Trade Treaties.

Whatever the plans of the German Government may be against the Jews, there can be no doubt that foreign and, especially British, shipping would be hard hit by these new rules. On the side of the British, it has been contended that exchange control is only a pretext for this action and that apart from the ethics, the regulations are in contravention of the Anglo-German Commercial Treaty 1924. Artical 18 which is the relavent clause in that treaty runs as follows.

Air Mail Week.

"Each of the two Contracting Parties shall permit the importation or exportation of all merchandise which may be legally imported or exported, and also the carriage of passengers, from or to their respective territories, upon the vessels of the other; and such vessels, their cargoes and passengers shall enjoy the same privileges as, and shall not be subjected to any other or higher duties or charges than national vessels and their cargoes and passengers or the vessels of any other foreign country and their cargoes and passengers.

It is agreed that the foregoing provisions preclude either of the contracting parties from imposing differential flag duties or charges on goods or passengers carried in vessels of the other . . . . ."

In further articles dealing with shipping—Nos. 19 to 25 embody the same principle of reciprocal equal treatment. It is clear that the restrictions now sought to be enforced are against the spirit, if not the letter, of this treaty. The British Government are, therefore, asked by the shipping interests to take to reprisals. Even such an extreme step as the closing of British ports to German shipping has been made in certain quarters, while others ask for a termination of the recent Anglo-German Trade Treaty. The former requires formal legislation, which is out of question as Parliament is not sitting at present; and the latter would involve the loss of the advantages to British coal which are far from negligible. Considering the gravity of the step taken by Germany and the indignation it has aroused in British shipping circles, it is certain the Government will watch the working of the order and take suitable action, if and when necessary.

Demand for 40 hours Week.

A faint echo of Mr. Roosevelt's programme of recovery is now audible in Britain in the demand made by a special conference of the engineering and shipbuilding unions for a 40 hour week. Propaganda had been carried on for some time in support of this demand; and it must be said to the credit of the workers in the engineering industry that they are not slavishly imitating Mr. Roosevelt. They had always led the way in the reduction of working hours, as in the case of nine hour day in the latter Victorian period and for the 48 hour week after the war. In this instance they have thought of the 40 hour week not only as a considerable advancement of working conditions, but also as a means of the expansion of employment. But they had been feeling a marked hesitation, as they recognised that, in view of the serious competition to which British was now exposed, the reduction of working hours would do positive harm, unless it was effected as a result of common international agreement. Hopes in this regard have been sadly disappointed; and Mr. Roosevelt's appeals in America provide a valuable opportunity for pressing the demand with more vigour. There is, of course, no hope of immediate victory. But the unions have decided to canvass support vigorously. The answer of the employers is a flat negative; and while the engineers are prepared to discuss the question and have actually held a conference with the unions, the shipbuilding industry has urged that the proposal would mean an increase of 20 per cent. in costs and would, therefore, constitute "economic needness".

UNITED STATES OF AMERICA

A DULL WEEK

There was little or no development, during the week, which may be said to be decisive of the fate of the Recovery Administration. It has to be said that facts rarely present themselves in a manner facilitating clear-cut conclusions. It seems to be most true of conditions that are now ruling in the United States. Opponents and well-wishers alike of the Nira have a lot in the present position with which to twit each other. The impartial observer will only find that the scales of chance are evenly balanced between a thumping success and ruinonus failure. There was, indeedd, a lot in the scope and violence of the recent break in stock market prices to afford some justification for those who had been asserting that a collapse was imminent. Likewise, the promptness with which the rot was arrested, and the failure of this breakdown to spread to other departments of the national economic life afford a reasonable ground for the optimism of the advocates of Mr. Roosevelt's policy. But there is no gainsaying that the time has come when the basis of the programme should be examined more carefully than before to afford re-assurance to all parties concerned that the ends of the Administration are laudable and the means by which they are sought to be achieved are sound. Last week had shown that the threat to the Government's programme might just as well come from the ranks of labour, which have been emboldened by the policy of the Government to put forward somewhat stiff demands for increased wages and decreased hours, as from the recalcitrant sections of American employers. Here, too, before the detractors of the National Industry Administration could have time to point to the instance of the miners' strike as an instance of the numerous maladjustments which the Administration had to put right before they can feel themselves out of the wood, the dispute has been settled ,and the Pennsylvania miners accepted a new settlement and returned to work early in the week. The truce was, in fact, announced on the previous Saturday, August 5. But within a day or two it was reported that the miners refused to accept the settlement brought about by the intervention by President Roosevelt and decided to continue the strike for another week. But the lovers of peace lost no time in revising the old settlement and converting the truce into a long-standing peace between capital and labour in the mining industry. The truce was contained in a joint declaration by leaders of industry and labour, and approved by the President, in which both the industry and labour avowed their intention of keeping peace in all disputes pending the advent of the codes and banning all strikes and lock-outs. Other developments of the week-end have been favourable. The codes submitted by the electrical and clothing industries have been approved and duly signed by the President. The code formulated by the meat-packing industry has met with the approval of General Johnson. Mr. Ford, whose delay in signifying his approval of the new economic policy has been held abroad as betokening the lukewarmness of big business, has now announced that he would reinstate the 40 hours week as against the 43 hour week which the Company had been working for the past months and would also maintain the present output. Messrs. J. P. Morgan & Company, it is now announced, will also adhere to the blanket code.

Adherence to Code "in letter and in Spirit."

Other essentials for the success of the Recovery programme are being attended to with enthusiasm and care both by President Roosevelt and by General Johnson. The latter has made it clear that the Administration will look to the codes being observed both "in letter and in spirit". In other words, the Administration would be on the look out for instances of evasion of the obligations of the code, by a mere adherence to its specific injunctions. For instance, it would be open, under the strict letter of the blanket code, for retailers to shorten shop hours in order to avoid added labour costs imposed by the Nira. The tendency to do so in many classes of establishment has been already evident throughout the country.

Air Mail Week

Threat of Test Case.

A more militant form of opposition to the economic policy is the threat of the Southern coal miners that they would fight the proposed coal code up to the Supreme Court. The grounds of their contention would presumably be that under the American constitution the Federal Government could never have the authority to regulae the internal conditions of industry in the manner now contemplated by the Administration. It is naturally difficult to foresee the issue of any such process of litigation. If, as is by no means unilkely, the Supreme Court should feel impelled to give adverse decision on the constitutional aspect of this question, then the resulting situation would be very embarassing to he President. There can, indeed, be no question of Mr. Roosevelt giving up the cause of industrial recovery on the emergence of the first obstacle, in the shape of an adverse decision of the Supreme Court. But, at the same time, the alternative to the abandonment of the blanket code and all that it stands for is the deliberate over-riding of the Constitution, for which Mr. Roosevelt might, perhaps, not be quite unprepared himself, but which, nevertheless, will have to be taken with the utmost circumspection. In America, the constitution has a sanctity which even the depth of the present crisis will not induce the people light-heartedly to impair. It might mean political suicide for Mr. Roosevelt to attempt to over-ride the constitution.

Government Custom denied to Recalcitrants.

Without betraying undue nervousness at these reports of impending litigation in the Supreme Court, the Administration are attempting to convey to the minds of recalcitrant employers the impression that the authorities have other weapons in their armoury with which to fight. One is the virtual reservation of all Government contracts for only those employers who have given the Administration sufficient co-operation in their economic policy. It is necessary to remember in this connection that on account of the public works schemes which are part of the recovery programme and which have been duly approved by Congress, the Government will in the coming years have far more of patronage in their hands to dole out to business, big and small, than at any time in the past except the war period. It is doubtful if for the sake of a technical victory in the courts businessmen in America would be prepared to forego the immense profits that might accrue to them by the receipt of huge contracts from the Government. The publicity campaign, that is now being carried on by General Johnson to induce people to buy now, may be described as the second spring to Mr. Roosevelt's bow. Confident that the Administration have enjoyed public support and enthusiasm in their efforts to engineer a revival, General Johnson is also attempting to impress upon the public that it is for them to bring additional pressure to bear upon employers who are either slow, or who refuse, to fall in with blanket code. If the average man could be induced to place his custom only with the recovery employers, then the hands of the recalcitrants could be forced by the fear of losing public and private custom alike.

Expansion of Consumptive Demand.

It will thus be seen that the "buy now" movement carried on by General Johnson has two sides. One is the facility of coercing unwilling employers into the blanket code. The other is setting in motion a large buying movement which will help to restore equilibrium between supply and demand at a new point. For at present the expansion of demand, which may be expected from the increase in wages and employment already effected, bears little proportion to the increase in productive activity. This disproportion has been often pointed to as the danger spot of the whole recovery Administration, and most of all by General Johnson himself. It is, therefore, believed that a large buying movement artificially created by a popular government would set up a new demand, increase in prices, better profits, more production and, inevitably, easier expansion of employment. As yet there is no means of testing the effectiveness of this propaganda which is only just begun.

The business reports during the week have been of a varied nature. The steel operating rate and the car loading figures which are the two major items of business news are somewhat discouraging in that steel activity declined a point in the week and car loadings are down by 10,518 to 638,396. But the American Iron and Steel Institute reports that steel output during July totalled 3,203,810 tons which is the largest figure since August, 1930 and compares with 806,722 tons in July, 1932. General Motors have announced excellent sale, figures for July last. Chevrolet cars and trucks have had record numbers delivered for July sales, it must be noted, were the largest since 1929. Class I rail roads for May show a net loss of only 3 million dollars as against 29.8 million dollars in May of last year. The production of automobiles, exclusive of Fords, in July was 204 per cent. above that for July, 1932. Steel production for this week is believed to be unchanged. The *Iron Age* is of opinion that the decline in steel activity, such as it has been in recent weeks was naturally due to the complications connected with the Recovery Act. Once these complications are smoothed out, there might well be a few price concessions and increase in output.

FRANCE

WOOLLEN STOCKING MOBILISED

The Finance Minister was deservedly jubilant over the success of the issue of the 4½ per cent. French Treasury Bonds, offered at 96½ and repayable in ten years at 10 per cent. premium. The terms were rather expensive. But the proof of popular confidence was worth the recompense.

Soon after the lists were closed, he announced to the representatives of the Press that over 3,000,000,000 francs had been subscribed as against the 2,000,000,000 francs, asked for. He denied that the success had been engineered by enlisting the support of public institutions, and stressed the number of small applications through the post offices. He also pointed out with satisfaction that, during the period the lists were open—a full month—,deposits in the savings banks had increased, and the prices of certain rentes had risen. Finally, he asserted that the 3,000,000,000f would be put away against the rainy days of the late autumn, when the other half of the sterling credit, extended to the French Treasury, will fall due for payment, besides certain internal maturities.

The announcement that the Government is repaying the bank loan to the British bank has stimulated subscriptions appreciably. Much of the success of the loan was due to the preponderance of small amounts offered. The greater proportion of the subscriptions came particularly from the Provincial districts, and they were paid with hoarded banknotes. The traditional "French Woollen stocking" was called in to aid the public credit. This magnificient response is regarded by the Treasury as an indication of the return of confidence, which has manifested itself since the firm stand taken at the

Air Mail Week.

World Economic Conference by the French delegation on monetary matters.

Of the 10,000 million francs authorised, over 1,500 millions still remain available for issue, if, and when, necessary. The first portion of the issue in March last was for 3,000 millions, but it realised over 5,200 millions. The portion of the issue, which had recently closed, realised over 3,000 millions. The Chamber Finance Committee was reassured that nothing of the yield from the loan would be required by the Treasury.

Financial Position.

The Treasury is in funds, as indicated by the Bank of France statement for August 4, showing a credit balance of 900,000,000f, due to heavy income-tax collections and better demand for Treasury bills, caused in part by British banks' purchases. The easy position, at present, is much appreciated. The balance in early March was only 50,000,000f. It is commonly held that the Treasury should be free from embarrassments till November. At present, Treasury Bills are popular, especially with London banks. Even if the limit of Treasury Bill issues is reached, still there is the margin of well over 1,500 million francs under the authorised long or medium-term borrowing.

The steady shrinkage in the foreign balances of the Bank of France is viewed with satisfaction, both by the Government and the Bank, as a deliverance from the risk of loss on sterling. All that is aimed at is that the Treasury should be able to pay the Bank for its sterling in francs, and not francs borrowed from the Bank.

Imports: Twice Exports.

In spite of the multitude and variety of restrictions on imports from foreign countries, they are almost double the exports. The exports are, moreover, diminishing at a greater rate than imports. The trade returns for the first half of 1933 show the imports to be 11,672 million francs, and the exports to be 6,022 million francs. Imports in the first half of 1933 were less by 864 million francs ; than in the corresponding period of 1932 ; and exports were less by 1,070 million francs. As compared with the same period last year, the imports declined, according to the *Board of Trade Journal,* in value by only 0.8 per cent., while the exports fell by 11 per cent. The balance of trade for 1933 was unfavourable to the extent of 6,129,000,000f, as against an import excess of 5,156,000,000f, a year earlier.

But, the heavier buying of raw materials was responsible for the high level of imports. The reasons for the heavy imports of raw materials are, perhaps, precautions against political complications on the continent and the stimulation, by the rise of world prices, to purchases. Better business may come in for a share also. Marked rise is noticed in the imports of cotton, wool, copper and other metals. The Government index of production for May is 108, the base-year being 1913.

The only exception to the improvement in all branches of industry is building, which has been overdone in recent years. The activity in steel trade is pronounced, the production, during the first half of this year, being 20 per cent. above that of the first half of 1932. The textile trade returns are encouraging.

Negotiations for a new tariff agreement between France and Great Britain are nearly complete. The quota for British Coal is the only item that remains yet to be settled. It is also believed that the 15 per cent. sur-tax, imposed on British goods since gold and sterling parted company, is likely to be removed.

Wheat Consumers Cavil.

The fixation of the selling price of wheat at 115 francs has raised quite different kinds of difficulties. The middlemen and smaller merchants have memorialised the Government that they will not co-operate with the Government, and will even refuse to pay taxes. Their disadvantage is that millers and other bigger merchants would pay only 115 francs per quintal of wheat, and nothing more.

The Minister of Agriculture has had to notify the prefects that frauds are practised in the matter of wheat purchases. These merchants have indirectly reduced the selling price by deducting commissions and transport, which is against the intention of the Government. Otherwise, while paying the producers the minimum fixation of 115 francs per quintal, they press them to sell other grains at below the market quotations.

Besides, holders of large stocks of last year's wheat have not been able to clear them, in spite of the 80 per cent. export bounty, especially in the face of the earlier harvest of this year. In view of the import duty of 80 per cent. on foreign wheat, the consumer of French wheat in foreign countries has to pay very much less than the French consumer of any wheat. To the French consumer, this state of affairs is rather annoying, and is giving room for vigorous protests.

Unbalanced Budget.

The continued adverse balance and sluggish revenue receipts below the estimates have been causing anxiety with regard to the budget. Even the budget estimates for 1933 could not wipe out the estimated deficit of some 3,500,000,000f. Revenue returns for the first half of this year are very discouraging. Normal and permanent sources have yielded 673,000,000f less than for the corresponding period of last year ; indirect taxes fell short of the estimates by 765,000,000f ; customs yielded 240,000,000f below estimates ; and the business turnover gave 170,000,000f less than the estimates.

Preliminary figuring on expenditure, in the light of these figures, has widened the gulf of the budget deficit. Some 7000 to 8000 million francs of additional revenue or reducing expenditure by that amount can alone balance the budget. While hopes of larger revenue depend upon external factors, the reduction of expenditure is impossible of achievement. To give but one instance, the 10 per cent. cut in the allowances made to civil servants had to be postponed as a result of their deputation waiting upon the Premier and other Government officials. The matter has been referred to a commission.

Since prices have remained stationary for a year, the Government can find no excuse to cut wages or hope for additional revenue from taxes, such as business turnover. Thus all eyes are turned to the American experiment for a recovery of general business and prices. Meanwhile, commissions may study the entire taxation system with a view to reform. But, it is a tedious process, not to speak of the delay and maiming likely to be caused by the Chambers.

These factors lend colour to the belief that the French Premier is understood to be planing a capital levy, as part of his retrenchment scheme, to be laid before Parliament in October.

In the absence of a sharp and steady recovery of business and prices, the avoidance of inflationary tactics and the maintenance of the gold standard is well-nigh impossible.

Lottery in September.

The budget law of 1933 sanctioned the organisation of State lottery, a novelty in tax-farming, which has shortly to take its chance. The pensions, or annuities, to ex-soldiers amount to 1,250,000,000f this year, and this sum automatically rises in the next twelve years, by about 100,000,000f a year.

Air Mail Week

Rather than insisting on reduction of the burden, the Government seeks relief for the budget through the good offices of the lottery. The one in September is the first of a series, authorised by law, for inauguration during the current financial year.

The lottery will be divided into portions, and the first portion will consist of 2,000,000 tickets of 100f each, representing a total capital of 200,000,000f. The first drawing of prizes in connection with this portion of the lottery is fixed to take place not later than November, 30. The prizes will consist of 120 million francs, divided up as follows: One prize of 5 million francs; 15 prizes of One million francs; 20 prizes of 500,000f; 200 prizes of 100,000f 200 prizes of 50,000f; 2,000 prizes of 10,000f; and 200,000 prizes of 200f. There will be 202,436 money prizes, or about one prize for every ten tickets issued. The prizes will be paid free of all taxes.

Of the 40 per cent. of the proceeds accruing to the State from this and succeeding lotteries, the first 100,000,000f is earmarked by law for the Fund for Agricultural Disasters, and the balance goes towards the paying the cost of pensions, allowed to ex-combatants of the Great War, able or disabled.

School Teachers' Pacificism.

The step, taken by the Communist Elementary School Teachers' Association, in this year's congress in Paris, is a move in the right direction for the formation of peace mentality in the rising generation. The teachers' resolution may or may not be ignored. But their every-day influence over the coming generation cannot be gainsaid. The *syndicate National des Instituteurs* comprises of about 25 per cent. of the primary school staffs, and is affiliated to the National Trade union body. There was an animated discussion at the recent Congress session on the best "positive means" for the prevention of wars. The teachers advise the launching of a general strike movement to coincide with the issue of mobilisation orders; universal refusals to enlist in the army; and the capture of munition factories and depots, electrical generating stations, aviation centres, and public administration offices. These suggestions were acclaimed with unanimous approval. The event augurs well for the coming disarmament conference, however indirectly. This is an indicator of the spirit of the times, however sectional and small at present. Its significance is all the greater, coming as it does from teachers, and that, French ones. Though their tradition has never been militarist, the French people are, to-day, the best equipped for war. But to advocate the seizure of munition factories and other places smacks of the spirit of waging civil wars to end international wars. A war to end a war is to remain war-like. The General strike and refusal to join colours are, however, ample to put a damper on the ardour of warlike governments. But, the cult has to be popularised, and none other than the teacher can so aptly perform the task.

AUSTRIA

NAZI MENACE.

The aftermath of the Peace treaties at Versailles was the economic ruin of Austria. But, in 1923, the League of Nations came to its aid, financially. The guarantor nations made it their business to keep her afloat. Without sound economic foundations, Austria could not be on her legs. In 1931, the projected Austro-German Economic Union, if alarming to France, rendered an eminent service to Austria by opening the eyes of the guarantor nations. They realised that a closer interest was necessary, if Austria should maintain her political and economic independence. France was, however, in high umbrage, and she insisted on on Austria declaring against any idea of an economic union with Germany.

Nazi rule in Germany forced the pace of affairs. It assumed a stampeding attitude towards Austria. Air-raids for showering leaflets on Austrian territory, broadcasting propaganda against the existing order of things, and terrorist outrages by Nazi irregulars, made up the German attack. The Four-Power Pact stayed the hands of Herr Hitler. But, the revolutionary forces, raised by Herr Hitler, were not easily and promptly to be brought under dicipline and strict control. Such was the experience of Signor Mussolini in Italy after the Fascist Revolution played its role. He is, therefore, for giving time for Herr Hitler to settle down. Herr Hitler may not be leading, but led by, his party in the matter of spreading the Nazi cult. His overt drive against socialists, communists, pacifists and Jews placed him at the mercy of the Nazi Party. While Italy is charitable enough to visualise difficulties in the path of Herr Hitler, France and Great Britain wish to exercise their patience to the utmost, lest that any step, that they may take, have the appearance of attempting, in any way, to coerce or humiliate Germany. But, the French Government is rather prone to quick rousing against German excesses; even the British Government would, in due course, make its views known in no uncertain manner, if the German Government should fail to implement its assurances to the Italian Government with regard to the prevention of air-raids and terrorist outrages, and the censoring of propaganda from wireless broadcasting stations. The only course open for Italy, France and Great Britain, the other signatories of the Four Power Pact, is to refer the matter to the League of Nations under Article 11, paragraph 2 of the League Covenant. Article 11, provides the League members with the right to bring to the attention of the League Assembly any circumstance whatever affecting international relations, which threatens to disturb international peace or the good understanding between nations, upon which peace depends.

The signatories to the Four-Power Pact have decided to take action, towards a clear indication of their attitude towards Germany. Co-ordinated but separate representations are to be made by Great Britain, France and Italy to the German Government. A joint representation may take the colour of partisanship amongst three Powers against one. This arrangement is the strongest proof of the desire to maintain peace in Europe. The gesture of true friendship with, and real concern for the welfare of, Austria was evidenced by the floatation of the Austrian loan, the British, French and Italian tranches of which were already issued. Sympathy for Austria was further shown by the favourable reception, accorded by them and by the *little Entente*, to a request from the Austrian Government for permission, according to the Treaty of St. Germain, to establish a special anti-terrorist police force of 8,000 men. Nazi Germany should be fool-hardy to strain relationships, even after these clear pointers. But, Nazi non-descripts may be slow to recognise their weakness, but sure to feel the pressure from the external supporters of Austria. The attitude of the three Powers has aroused feelings of general satisfaction and gratitude in Austria. This favourable impression was augmented by the issues of the loan in the respective countries.

The Bank of England, however, came to the rescue by agreeing to make an interim advance. This advance, of 150,000,000 schillings, has been renewed from time to time, although Austria had repaid 50,000,000 schillings by the end of 1931. It is the balance of 100,000,000 schillings that will be repaid out of the present issue.

(*Continued on page 527*)

INDUSTRIAL LIFE ASSURANCE.

SIR BENJAMIN COHEN COMMITTEE'S REPORT.

(Concluded from the last issue).

For reasons of space the consideration of some more of the salient points in the report submitted by the Industrial Life Assurance Committee to the British Treasury had necessarily to be postponed.

The report is divided into three parts. The first part gives a full description of the working and conduct of Industrial Life Assurance by Insurance companies and Friendly Societies. The second part contains a number of valuable amendments and additions to the existing statutory provisions, namely the Industrial Assurance Act of 1923 and the Industrial Assurance and Friendly Societies' Act of 1929. The third and last part deals with the assurance on children under 10 years of age.

The report states that there is at present much abuse, probably within the knowledge of the Industrial Life Assurance Companies, of the "Life of Another" policies. Before the Assurance Companies' Act of 1909, industrial life offices allowed the insurance on others' lives even outside the permitted range of relatives, namely, children's lives. Examples of evasion of the law by proposers of "Life of another" policies are quoted. Numerous cases of "Life of another" policies, where the lives assured were completely unaware that their lives were being backed up, are quoted in the report. To remedy this, the Committee have suggested the following amendments to the law.

1. 'Life of another' policies can be granted only to a maximum of £20 and the list of relations on whose lives such policies could be taken to be increased slightly.

2. A policy on the life of another should not be effected without the knowledge of the person whose life is to be assured and the proposal form should contain the signed consent of the person whose life is to be assured.

3. The proposer should give a written declaration stating his relationship with the life assured and the amount which he has already assured on that life.

Both the companies and the agents are naturally opposed to the insistence on the signature of the life assured in the proposal. For this would mean a loss of a good portion of this kind of insurance busines, which is now being carried on.

The Committee then deals with the question of expenses. Of course, the expense ratio of all industrial life offices has decreased from 41 per cent. during the period 1912-17 to 34 per cent. during 1930. But the expense ratio of many offices and Friendly Societies is still very high; and the above reduction was made possible only by the drastic deduction of expenses during the recent years of two of the big companies (The Prudential having reduced its expense ratio from 39 to 28 per cent. and the Pearl from 42 to 33 per cent). To this, the report discusses various remedies. The question of Nationalisation of Industrial Liffe Assurance is discussed elaborately; and the Committee has come to the conclusion that it is impracticable under the present conditions. The "Post Magazine" of London says on this point "To have this unqualified verdict against nationalisation will be a genuine satisfaction to the Insurance world as a whole, for, apart from the proved failure of nationalisation in the late Post Office Scheme, many will share in our appreciation that, once the principle of nationalisation was applied to Industrial Assurance, there would arise a strong demand for the transfer of other forms of Insurance to a State Department". Then it gives out the following three alternatives and prefers the third one as the other two present formidable difficulties in their practical application.

1. The transference of all Industrial Assurance business by whomsoever conducted, to a Public Utility Corporation which will then have a statutory monopoly.

2. The grouping of larger companies and Societies into a limited number of compact bodies, the small local societies being at the same time restricted as to the areas in which they can operate.

3. The statutory imposition on companies and societies of a general limitation of expenditure otherwise than in benefits to the Assured.

Having preferred the third alternative as the most suitable one, it has recommended that expenses of management should be limited to a maximum of 30 per cent. of the premium income from industrial business, the requisite reduction to be effected under the supervision of the Commissioner not later than 7 years after the commencement of the Act; and that at least two-thirds of the valuation surplus should be required by law to be distributed among industrial policy-holders subject to certain provisos regarding interests of the shareholders etc. The 'Post Magazine' criticizes this proposal of the committee as arbitrary, rigid and typical of bureaucratic tendency. It says: "These various figures have behind them no special authority but are merely so many arbitrary compromises adopted to provide the exactness beloved by the official mind, with its indifference to all the varying needs of individual citizens and all the complications of business administration. With the introduction of such arbitrary limitations the quality of the service would invariably suffer. Flexibility of administration would be sacrificed to a mechanical routine."

The Committee have made several amendments and additions to the statute to ensure more safety and justice to the huge mass of the insuring public.

The third section deals with the assurance of children under 10 years of age and the Committee makes the following, among other, suggestions. 1. All existing statutory provisions on this subject should be repealed and a new comprehensive Statute enacted. 2. No person other than parents should be permitted to assure for their own benefit the life of a child under 14 years of age.. 3. The total premium on any child's life under 10 years of age should not exceed 1d. per week. 4. The policy should be capable of transfer to the child at any time after the child has attained the age of 14 as in Children's deferred assurances.

THE CROWN LIFE INSURANCE COMPANY.

The Crown Life Insurance Company of Toronto, Canada, was established in 1900 under a Charter from the Dominion of Canada. The rapid growth of its business in recent years is noteworthy. It is the largest company of its age in Canada and stands eighth in rank among the 28 Life Insurance Companies of Canada. The President of the company is the Rt. Hon. Sir Robert L. Borden, P. C., ex-Premier of Canada. Until 1930 the company confined its business to Canada and the United States of America ; but in that year it extended its activities to the United Kingdom and to Egypt, China and India in the East.

The following tabular statement shows the growth of the company :—

In thousands of Dollars (U. S. Gold.)

Year.	New Busines	Total Business in force.	Total Life fund.	Total Assets
1901	221	221	7	81
1911	2,507	7,083	807	991
1920	8,298	25,746	3,159	3,390
1925	18,585	60,041	6,262	7,427
1932	23,001	137,181	16,475	17,893

Its premiums are low ; but no fair comparison can be made unless its bonus rates are known. Its policy conditions regarding cash surrender values, loan values, paid up values, automatic Non-forfeiture provision etc. seem to be liberal. The interest rate earned by the company on its investments has averaged more than 6.5 per cent. over a considerable number of years and it was 6.19 per cent. in 1931 and 5.96 per cent. in 1932. The Crown Life office pays cash bonus ; and, if desired by the policy holder the dividends are accumulated with compound interest and paid at maturity. During the years 1926 to 1931 it has paid 5¼ per cent. compound interest on dividends left with the company, and guarantees that its rate will never be less than 4 per cent. The bonus may also be drawn immediately as a cash payment or may be utilised to reduce the future premiums. A minimum of 90 per cent. of all the surplus earned of participating policies is to be given to the policy holders. The expense ratio at about 28 per cent. is rather high compared with those of British Life Offices. The prospectus says that the company maintains a Rupee reserve for all Rupee policies.

Coming to the Revenue accounts of the Company for the year 1932, the total premium income of the Company amounts to $3,923,520. The other chief source of income is "interest and rents," which stands at $967,777. In the disbursements side, claims by death amounts to $760 thousands, claims by maturities $1,328 thousands, general expenses for $1,116 thousands and cash bonus to policy holders accounts for $295 thousands. The new business of the year amounted to $23 millions nearly as against $21.76 millions in the year 1931. The total business on force on 31st December, 1932, has increased to $137.18 millions.

The balance sheet of the company as on December 31st, 1932 shows that the assets and liabilities of the company come to a total of $17,893 thousands. On the liabilities side the capital of the company amounts to $230 millions nearly, the accumulated surplus of the policy holders bonus to $335 thousands, claims due and unpaid to $120 thousands. The life fund at the end of the year is shown at $16,475 thousands. Coming to the Assets side, the most important item is Mortgages on Real Estates which amounts to $7,469 thousands, nearly 41.7 per cent. of the total assets. There is no doubt that this kind of asset is capable of earning a higher rate of interest than the other forms. But it should be remembered that the risk undertaken to be shouldered by the company is decidedly greater than in most of the other usual types of assets. Provided the properties and borroweres are properly chosen, the proportion of the loan advanced to the correct assessed value of the properties is well within the common accepted ratio of 50 to 60 per cent., and the properties periodically revalued and the needful done, there can be no denying that this is one of the best types of investments. But the investment of a great proportion of the policyholders' money (Life Fund) in mortgages is not favoured, if only because the public have no means readily available of assessing the changes in that values. Giltedged securities and loans on company's policies amount to nearly $3½ millions each, that is 19½ per cent. each of the assets. Preference and ordinary shares amount to $427 thousands, house and other properties account for $ 520 thousands nearly. The outstanding and deferred premiums at $ 850 thousands seems to be rather high. It is noteworthy that the interest overdue at $ 4 thousands is exceptionally low.

On the whole, the Crown Life is in a strong financial position and, despite the heavy depression in the industrial world, it is gradually growing in strength and size.

(*Continued from page 525.*)

The loan is being issued, pursuant to the Protocol of Geneva of July 15, 1932. By that Protocol, which was accepted by the Austrian Government representatives, the political undertakings in the Protocol of October 4, 1922, which forbids the conclusion of an Anschluss, were renewed. The conditions of issue, it was provided, would be subject to the approval of the guarantor States.

The present loan has its origin in the events of June, 1931, following the Credit-Anstalt crisis. Then, a number of Central Banks agreed to support the Austrian National Bank by placing at its disposal a foreign exchange credit.

But the French interests, at the eleventh hour, demanded, as a condition to their subscribing to the loan, that the Austro-German Anschluss project should be abandoned.

Arrangements were made for portions of the loan to be issued in :—

	Austrian Gold Shillings.
Switzerland	... 7,400,000
Belgium	... 5,000,000
France	... 100,000,000
Great Britain	... 100,000,000
Italy	... 30,000,000
Netherland	... 3,000,000

The British issue of £4,514,200 is 3 per cent. Sterling Bearer Bonds, 1943-53 carrying the full guarantee of the British Government, eligible for trustee investment, and offered at 96. The application instalment was £10 per cent., with £ 31 payable on August 21, and £55 on September 1. No particular pains were taken to make the loan attractive by easy calls. As far as the capacity of Austria to meet the payments is concerned, the prospectus stated that, so long as no serious blow was dealt to the Republic, there was a fair chance of the service being paid. The loan is secured by a charge upon the gross receipts of the Austrian Customs and Tobacco Monopoly. Proceeds of the loan will be devoted to repaying the advance of 100,000,000 gold schillings made by the Bank of England in June, 1931, to the Austrian Government, for the consolidation of Austria's existing short-term debt position, and for the reinforcement of the monetary reserves of the National Bank of Austria.

The subscription lists were closed within a minute after opening. Of the small applicants, those up to £500 were ruled out ; those requiring from £500 to £1,900 received £100 ; and from £2,000 to £3,000, £200. The general basis of allotment for the larger applicants was 7½ per cent.

At the same time as the issue of the British portion of the Austrian Government International guaranteed loan, the lists for the French and Italian tranches were opened in Paris and Rome respectively.

Topical Extracts:

AMERICA JUSTIFIED

IN REFUSING DOLLAR STABILISATION

VIEWS OF LLOYDS BANK MONTHLY.

The following is from the August number of Lloyds Bank monthly (received by Air-mail) :—

If America had agreed to peg the dollar at $4.05 to the £, it would have to forego the further rise in dollar prices which they desired, and which has since occurred, or submit to the early and increasing over-valuation of the dollar.

Was Sterling Over-Valued?

For many years past discussions have been proceeding as to whether sterling is over-valued or under-valued in respect of other currencies, while during the last two months the question of the true equilibrium rate (or purchasing power parity) between the pound and the dollar has come very much to the front. Both these matters are really concerned with the relation between the internal level of prices existing in each of two countries and the rate of exchange between them.

A simple case of a single commodity is taken by the writer. He says :—

"Let its price in England be £2 and its price in the United States be $8. Then, neglecting questions of freight and tariffs, if the rate of exchange is $4 equal £1, both the American and British commodity will obviously sell at the same price in both countries, and neither the British nor the American producer will have an advantage over the other.

The Equilibrium Rate.

"Hence $4=£1 is the equilibrium rate of exchange calculated solely from the British and American prices of this single commodity. If the exchange is $4.5=£1, then sterling is said to be over-valued. This means that the British manufacturer is at a disadvantage, for he can only sell in the United States at $9, while his American competitor can sell in Great Britain at £1.78. The natural result is an invasion of the British market by the United States, which normally speaking should (*a*) raise the price of the American article due to the new British demand; (*b*) lower the price of the British article, as the result of the new American competition; and (*c*) depreciate sterling against the dollar owing to the payments made by Great Britain for the imports of the American article. Equilibrium might be established at prices of $8.2 and £1.9, and an exchange of $4.31=£1.

"Conversely, if the exchange falls to $3.5=£1, then the dollar is over-valued, and the British manufacturer gains the advantage. Equilibrium might in this case be established at prices of $7.8 and £2.1, and an exchange of $3.72=£1.

Prices in General.

"So far, everything is simple enough and would remain so if only we could confine ourselves to a single commodity produced and sold in both countries. Unfortunately, we come to the level of prices in general, and it is manifestly impossible to give a single figure in pounds or dollars and say that it is the current price-level in England or the United States. We cannot add up the sterling prices of a bushel of wheat, a sack of potatoes, a yard of cotton cloth and a ton of steel rails and so on, without arriving at a meaningless result. Instead we rely upon index numbers."

After describing the methods of procedure, the "Review" says that until quite recently it appears that the dollar has been over-valued; the article then adds a warning against undue dogmatism.

"In each case," it says, "the turning point, either upwards or downwards, in the actual quoted exchange rate was reached some two or three months before the corresponding turning-point in the theoretical equilibrium rate calculated from price index numbers. This suggests that every time a major exchange movement occurred, whether due to seasonal purchases of dollars, to big capital movements across the Atlantic or even to political or psychological causes, it tended to make the course of prices in both countries conform.

"This is only to be expected as both countries are engaged in a big international trade.

"In the current year, the exchange curve was the first to move upwards, owing to general and well-known reasons, and American prices only followed at the end of February. British prices were still slower to move, so that during the intervening weeks the curve of the equilibrium rate began to move upwards. Then came the United States departure from gold, and the big advance in American prices, due partly to psychological causes such as belief in impending inflation and partly to the depreciation of her exchanges, which increased the dollar cost of imported raw materials. At the same time, her merchants and manufacturers began to restock, in anticipation of a further price increase, and in doing so drew upon their normal sources of supply all over the world. This began to pull up sterling prices as well, but the rise was far slower than the simultaneous American rise, and, therefore, the equilibrium rate of exchange continued to advance, until it at last reached very approximate parity with the quoted rate of exchange."

Making a Guess.

In his conclusions, the writer says "that it is impossible to define the true equilibrium rate of exchange, except within very broad limits. If and when the time comes for *de facto* stabilisation, the most that can be done is to make as good a guess as possible at the true rate, stabilise there and see how it works. If either the pound or the dollar turns out to be seriously over-valued, the fact will soon become apparent just as it gradually appeared that the pound was over-valued from 1925 to 1931.

"It is impossible to lay down the law either that prices determine the exchange or the exchange determines prices, for in actual fact each reacts upon the other. This again makes it necessary to insist upon the need for caution and freedom from dogmatism, and even implies that a *de facto* stabilisation rate may have to be altered after a relatively short period of time.

American Attitude.

"Finally," the article says, "it makes it easier to understand the American attitude towards the June stabilisation conversations, if we start from the hypothesis that it is part of American national policy to bring about a further big rise in internal dollar prices. Let us assume that last June $4.05 was a reasonable equilibrium rate between the pound and dollar, and that the exchange was pegged temporarily at that point.

"Then let us assume that a further rise of 20 per cent. occurred in American prices, but that British prices remained unchanged.

"The equilibrium rate would automatically go up to $4.86, but the actual exchange would remain pegged at $4.05, with the result that the dollar would become seriously over-valued and American producers would be placed at a disadvantage and the rise in American prices would be checked and possibly reversed. The American attitude, therefore, was that if they agreed to *de facto* stabilisation, they must either forgo the further rise in dollar prices which they desired and which has since occurred, or else submit to the early and increasing over-valuation of the dollar.

Only Escape.

"To them, the only escape from this dilemma was an equivalent rise in sterling and other prices, which we and other countries were unable to guarantee. In fact, the only attraction the suggested rate of $4.05 had to them was that it was probably somewhat above the equilibrium rate between the pound and dollar existing last June, so that for the moment we were offering a temporary over-valuation of sterling to be eliminated as the further rise in American prices took place.

"Even so, we were asking them to submit to an upper limit to the rise in their internal prices, and this did not fit in with their declared policy."

BRITAIN MUST LEAN ON DOMINIONS.

"We are living at a time when nationalism seems to be running mad, but don't let us forget that with all the troubled periods that we have passed through, and with the trouble that exists in the world to-day, the one bright spot that stands out unshaken and unshakeable in the whole of the world is the old British Empire."

This statement was made by Mr. J. H. Thomas, Secretary for the Dominions, at the opening at Brighton of the South African display at the Empire Marketing Board's shop.

"There is no nation in the world to-day," continued Mr. Thomas, "but is envious of our position. If I wanted to stress one point it would be this, that whatever may be the future of this country, the one thing that is certain is that the natural and inevitable outlet for the British people must be through our Dominions.

"When you remember that for the past thirty years the average number of men and women leaving these shores for overseas has been between 150,000 and 200,000 every year, and that for the first time in history, instead of any going out, over 6,000 returned last year, you will get some idea of the important part that emigration must play in the solution of our problems in this country.

"Therefore, to secure that we must make our Dominions prosperous, and when we can combine duty with pleasure, and get satisfaction from both, we shall be on what I would call, in a sporting phrase, 'an absolute certainty.'"

SIR A. SALTER ON IDLE MONEY.

Sir Arthur Salter, speaking at the Liberal Summer School at Cambridge, said: "I am convinced that unless Great Britain adds to the policy of cheap money some kind of stimulus that will increase the demand for that money, we shall have a very much slower recovery

Topical Extracts:

and increase of employment than would otherwise be possible."

"Now we have recovered from our financial crisis," he continued, "we have established all the conditions which make it safe to proceed with the policy of public expenditure that was dangerous in 1931."

AGAIN NATIONALISM.

Mr. Maisky of the Soviet Delegation to the World Economic Conference said:—

"One can hardly doubt that the failure of the conference will be the point of departure for a new and even more headlong development of economic nationalism. This means in practice only universal economic warfare elevated into a theory, a war of all against all. But an embittered economic war of all against all is not yet the last word in the dangers which now beset the world. Economic wars, as history teaches us, have even in more peaceful times frequently resulted in wars with guns and rifles. This is still more true to-day. World political equilibrium at the present time is so uncertain and unstable, there are so many 'dangerous zones' and 'explosive problems' in various corners of the globe that a comparatively small shock may be sufficient to let loose the terrible disaster of war.

FOR NATIONALISM.

Mr. George Glasgow, writing in the August number of the Fortnightly Review, sees no evidence that the World Economic Conference "did harm by its failure to agree upon any single matter before it. Rather was it a cause for satisfaction that it thus failed."

Had British, French and American delegates agreed on some plan of currency stabilisation, "many serious merchants throughout the world would have been assailed by feelings nearer to panic than to pleasure."

President Roosevelt "accidentally" saved the world from "danger".

AGAIN, THE RATIO!

Speaking at the All-Bengal Unemployed Youths' Conference, Mr. D. P. Khaitan revived the ratio question. A lower ratio than the old sixteen pence is now urged.

"Our misery is so great, that Government should not stand on prestige on the question of the exchange value of the rupee, but lower it so as to give immediate relief to the country. Necessity requires that the exchange ratio be reduced to 9d. instead of maintaining it at 18d. That will have the effect of doubling the prices of agricultural commodities. When that happens, trade will become brisk, there will be more people employed, and many industries can be successfully started.

"If and when the world prices rise, the exchange may be allowed to rise also, so that people may not suffer due to high prices.

"In case Government be not prepared to agree to our demand for 9d. Exchange, the least that should be done is to lower it to 12d. which will open the possibility of a 50% rise in the price of agricultural commodities. The position would even then be better than what it is today. The exchange ratio may then remain stable as there is ample margin left for a rise in the world prices before the level of double prices is reached in India.

"I am laying so much stress on the exchange questions not only because it is the only way in which we can obtain immediate relief, but also because it enables the country to obtain funds to give effect to a permanent scheme for increased manufactures and trade and better standard of living without resorting to any increase in taxation. Incidentally I may mention that it furnishes a good solution also for the difficulties created by Japan in the way of our industries."

MACKINNON MACKENZIE & CO.

16, STRAND ROAD, CALCUTTA.

STATISTICAL INFORMATION

The overseas import trade of Calcutta in private merchandise in July, 1933, showed a slight improvement over that of the previous month, the value rising from Rs. 2.47 crores to 2.64 crores, against Rs. 2.87 crores in July, 1932. Exports too, advanced from Rs. 4.6 crores to Rs. 4.89 crores against Rs. 3.52 crores in July, 1932.

IMPORTS.

A comparison of the values of the principal imports which the figures for July, 1932, is indicated below, the figures in brackets representing the increase or decrease as the case may be:—

	In lakhs of rupees.
Machinery and millwork	48 (+11)
Cotton goods	42 (−26)
Iron and steel	14 (−1)
Oils, mineral	13 (+1)
Other metals	11 (level)
Chemicals and chemical preparations (excluding chemical manures and medicines)	8 (level)
Hardware	8 (−1)
Electrical instruments	7 (level)
Paper and pasteboard	6 (−2)
Drugs and medicines	5 (+1)
Liquors	4 (−1)
Betelnuts	4 (−1)
Sugar	3 (−10)
Rubber manufactures	3 (+1)
Tobacco	2 (−2)

The total yardage of cotton piecegoods decreased from 32 millions to 20 millions and the value receded from Rs. 50 lakhs to Rs. 27 lakhs. The heavy fall under cotton goods was mainly due to lesser imports of Grey, White and Coloured piecegoods from the United Kingdom and Japan.

EXPORTS.

The variations in the values of the principal exports as compared with the trade of July, 1932, are indicated below:—

	In lakhs of rupees.
Jute manufactures	170 (+24)
Jute, raw	91 (+41)
Tea	89 (+3)
Hides and Skins	34 (+24)
Seeds (non-essential)	26 (+22)
Lac	12 (+4)
Pig Iron	9 (+5)
Opium	8 (+8)
Grain, pulse and flour	6 (−4)
Coal	5 (+1)

DIRECTION OF EXPORTS.

Germany continued to be the chief buyer of raw jute and hides. The United Kingdom was the principal customer for tea. Manganese ore and pig iron went mostly to Japan. Gunny cloth, lac and skins were chiefly shipped to the United States of America. Gunny bags went mostly to the Commonwealth of Australia. Rice which formed the bulk of the trade under the head "grain, pulse and flour," were chiefly shipped to the Union of South Africa.

TRAVANCORE EXPORTS.

The export statistics for the month of June, 1933, have been published by the Travancore Chamber of Commerce, which also give comparative statements of exports for the 12 months, 1st July to 30th June, in 1931 to 1932 and 1932 to 1933. It is now possible to have a general view of the trade position of Alleppey, the principal export centre of the Travancore State, for a full year. Although the export figures are not complete so far as the whole State is concerned, they are fully representative of the general trade condition of the State.

With the exception of a few commodities, there has been a general decline in shipments of staple exports, as may be seen from the following figures:—

	1931-32.	1932-33.	
	cwts.	cwts.	Minus.
Coir yarn ...	314,177	291,683	22,494
Coir mats ...	158,000	147,383	10,617
	lbs.	lbs.	
Rubber ...	1,408,121	628,108	780,013
	cwts.	cwts.	
Ginger ...	69,370	63,430	5,940
Poonac ...	44,042	40,591	3,451
	yds.	yds.	Plus.

			Minus.
Cashew kernals ...	15,968	15,169	799

PORT OKHA.

The total import of merchandise at Port Okha during July, 1933, amounted to 4,340 tons valued Rs. 2,47,039 consisting of 102 tons G.C. and G.P. sheets valued Rs. 19,749, 3,587 tons coal at Rs. 53,805 and machinery, etc., valued Rs. 1,73,485. The total export during the same period amounted to 3,477 tons consisting of 1,600 tons cement, 6,489 tons salt, 88 tons seeds, 300 tons cotton, etc. The number of vessels that entered the port was 7.

The total import during the corresponding period amounted to 5,139 tons valued Rs. 3,13,489 consisting of 500 tons sugar valued Rs. 1,00,400, 57 tons G.C. and G.P. sheets valued Rs. 8,633, 4,210 tons coal valued Rs. 75,780 and machinery, etc., valued Rs. 1,28,676. The total export during the same period amounted to 9,291 tons consisting of 2,200 tons cement, 6,875 tons salt, 197 tons seeds and 19 tons skin, etc. The number of vessels that entered the port was 10.

MADRAS.

The total value of imports from foreign countries into the Madras Presidency during July, 1933, was Rs. 1,16,52,682 against Rs. 1,53,00,621 in the corresponding period last year, showing a deficit of Rs. 36,47,939. The principal commodities that were responsible for the deficit were:—Iron and steel 2,910 tons, Rs. 5,47,508 (−1,765 tons, −Rs. 1,75,042); Kerosene-in-bulk 808,768 gallons, Rs. 5,18,117 (−2,655,841 gallons, −Rs. 13,78,960); cotton raw 20 tons, Rs. 21,920 (−554 tons, −Rs. 4,50,861); cotton twist and yarn 422,394 lb., Rs. 4,20,582 (−324,456 lb., −Rs. 2,84,405); piecegoods grey (unbleached) 3,431,462 yds., Rs. 4,79,648 (−1,496,122 yds., −Rs. 2,75,924); while (bleached) 2,705,382 yds., Rs. 5,44,892 (−1,506,505 yds., −Rs. 3,03,120); coloured (printed or dyed) 1,320,175 yds., Rs. 3,01,053 (−432,071 yds., −Rs. 81,259); artificial silk Rs. 2,04,163 (−Rs. 3,03,499); other articles Rs. 66,83,962 (−Rs. 9,54,983).

The total value of exports of Indian produce and manufactures from the Madras Presidency to foreign countries during July, 1933, was Rs. 2,18,40,902 against Rs. 1,59,20,863 in the corresponding period last year showing an increase of Rs. 50,20,039. The principal commodities that contributed to the increase were: coffee 6,719 cwts., Rs. 3,76,386 (+6,322 cwts., +Rs. 3,54,069); fruits and vegetables dried, salted or preserved 571 tons, Rs. 5,86,332 (+378 tons, +Rs. 5,39,736); goat skins 140 tons, Rs. 3,02,373 (+84 tons, +Rs. 2,01,504); cow hides 901 tons, Rs. 16,35,481 (+419 tons, +Rs. 7,09,885); manganese ore 13,350 tons, Rs. 1,80,600 (+13,350 tons, +Rs. 1,80,600); ground-nut cake 5,345 tons, Rs. 3,36,357 (+3,845 tons, +Rs. 2,36,302); castor seeds 8,374 tons, Rs. 10,55,731 (+6,444 tons, +Rs. 8,06,024); groundnuts 48,478 tons, Rs. 65,15,329 (+36,750 tons, +Rs. 4,471,974); cotton raw 2,718 tons, Rs. 16,95,244 (+2,111 tons, Rs. 13,59,806); tobacco unmanufactured 2,988,847 lb., Rs. 10,10,066 (+1,862,263 lb., +Rs. 5,49,429).

BURMA.

The following is a report on the principal variations in the foreign trade of the Province of Burma, during the month of July, 1933, as compared with the corresponding period of 1932:—

The combined value of imports and exports was Rs. 203.75 lakhs as against Rs. 236.77 lakhs, showing a decrease of Rs. 33.02 lakhs.

IMPORTS.

The total value of merchandise decreased from Rs. 101.82 lakhs to Rs. 66.05 lakhs. The following were the principal articles which showed decreases, the value and the amount of decrease being noted against each:—

Provisions and Oilman's stores, etc.—

	Value.	Decrease.
	Rs. lakhs.	Rs. lakhs.
Provisions and Oilman's stores, etc.—		
Milk, condensed, etc. ...	2.16	1.20
Textiles—		
Cotton manufactures—		
Piecegoods, White ...	5.32	8.58
Piecegoods, Coloured ...	7.34	10.86
Artificial silk—		
Piecegoods made entirely of artificial silk	0.20	1.19

There were no imports of "Turbo-generating sets" during the month under report, while in the previous July, imports recorded under this head were valued at Rs. 1.16

lakhs. Sulphur (Brimstone) to the value of Rs. 1.77 lakhs was imported during the month as against Rs. 0.12 lakh recorded in the corresponding period of last year.

EXPORTS.

The total value of Indian merchandise recorded during the month was Rs. 137.71 lakhs as against Rs. 134.95 lakhs, showing an increase of Rs. 2.76 lakhs. The following articles accounted for the increases, the value and the amount of increase being noted against each :—

	Value. Rs. lakhs.	Increase. Rs. lakhs.
Leather—Cow hides ...	1.31	1.06
Metals and Ores—		
Copper others (matti) ...	3.32	1.10
Pig lead	19.26	8.48
Tin ore	2.95	1.16
Zinc or spelter, all sorts ...	2.75	1.25
Paraffin wax	18.09	7.81
Teakwood	5.24	2.97

The following articles showed decreases, the value and amount of decrease being noted against each :—

	Value. Rs. lakhs.	Decrease. Rs. lakhs.
Fodder, bran and pollards—		
Rice bran	2.71	4.05
Jade stones	0.18	1.16

There were no exports of "Paddy" during the month under report while in the previous July exports recorded under this head were valued Rs. 3.08 lakhs.

Exports of rice increased by 13,478 tons to 117,188 tons in quantity, but decreased by Rs. 11.55 lakhs to Rs. 67.09 lakhs in value.

Exports of United Kingdom.

"The Board of Trade Journal" states that in the current year there has been a slow but steady expansion in the value of the exports of the United Kingdom and having regard to the decline in txhe average value of exported goods, it is probable that for May and June as well as for July the volume of shipments have exceeded those of the corresponding months of last year. Though the volume of retained imports is normally much smaller in summer than in the early months, there has been a tendency this year for retained imports also to increase in volume, this being mainly due to raw materials.

Regarding the distribution of overseas trade, it is stated that the imports into the United Kingdom from British countries in the first six months of 1933 were valued at 38.78 per cent. of the total imports from all sources as compared with 36.23 per cent. and 31.36 per cent. in the corresponding period of 1932 and 1924, respectively.

The exports of the United Kingdom produced to British countries accounted for 44.12 per cent. of the total value of shipments to all destinations as against 44.82 and 40.71 per cent. respectively.

It is added that the slight decline from 1932 was much more than accounted for by the small purchase this year by the Irish Free State.

FALL IN TRADE OF MADRAS PORT.

Decrease in Revenue.

Madras, August 18.

The value of the total trade of the Port of Madras on private account, during the last financial year, as furnished by the Collector of Customs, representing 45 per cent. of the aggregate trade of this presidency as against 44 per cent. in the previous year and amounted to Rs. 2,794,93 lakhs or a decrease of Rs. 250.64 lakhs as compared with the previous year.

Imports accounted for Rs. 1,682,67 lakhs and exports Rs. 1,112,26 lakhs as against Rs. 1,672,44 lakhs and Rs. 1,374,12 lakhs respectively in the previous year.

Foreign traffic (imports and exports combined) declined from Rs. 2,266,44 lakhs to Rs. 2,062,52 lakhs and coasting cargo from Rs. 779.13 lakhs to Rs. 732.41 lakhs.

These figures are exclusive of Government transaction, says the Administration Report for 1932-33 of the Madras Port Trust, just issued.

The port's actual revenue receipts for the year amounted to Rs. 29,86,394, a decrease of Rs. 3,75,715 from the previous year. The fall in Revenue is due to the fall in tonnage of both imports and exports at this port. The gross expenditure of the year was Rs. 32,12,510 as compared with Rs. 32,67,262 of the previous year.

Retrenchment.

During the year under review a retrenchment committee went into the question of the working of the engineering department. As a result of the inquiry, the posts of the Trust's Chief Engineer and the Second Engineer of the dredger Madras were abolished. The post of the Senior Assistant Traffic Manager was also abolished.

The general trade depression, which began in the year 1931, continued during the year. No new capital works worth mentioning were taken in hand. The budget appropriation under Engineering Maintenance was examined and, by means of economies in some cases and deferring expenditure in others, the appropriation was reduced from Rs. 10,43,050 to Rs. 7,87,300 in the revised budget estimate for 1932-33.

(*Continued from page 484*)

wheat is nearly 2½ francs above the world market price. But these are days in which an insolvent debtor is far more powerful than a creditor, patient or impatient.

Will Great Britain follow suit?

But the principle question about this exchange clearing agreement is, whether it would tend to depress the exchange of commodities between two countries to the lower level or to pull it up to the level of the country which makes the exports of larger values. There are enough agreement already in force to afford the experience on which discussions can be carried on; but unfortunately each side can find enough in the past history of this measure to support its own case. In this instance of the agreement between Hungary and Switzerland it is possible to argue that Hungarian exports have been pulled up to the level of her imports from Switzerland rather than Switzerland's exports being dtpressed to the level of her imports from Hungary. But it must be recognised that this process of equalising the exports of each country at the higher level does not work itself out in any automatic manner, but has actually to be negotiated for between the countries concerned. Once international trade becomes a matter of hard bargain between the governments of countries, then political factors are bound to play a larger part with obvious effects on the character and the volume of the dealings. It is too much to expect that on the basis of such clearing agreements every two countries can have even a rough balance of payments. Once this is granted, it would be seen that international trade will be reduced to a series of financial deadlocks between the countries and escapes therefrom through deplomatic negotiations of an ad hoc character. Considering the adverse balance of trade in merchandise, which Great Britain has with most countries and with the rest of the world as a whole, it is possible that before long Great Britain also would be casting lingering looks on these heretical methods of dealing with the exchanges. So far the Government has been content to explore the possibilities of bilateral trade pacts and when these trade pacts and when these trade treaties fail to solve the problem of the adverse balance of trade in merchandise, attempts might very possibly be made to force Great Britain's customers to use all their sterling credits for the payment of British, and only British, exports. But as observed already, this process if it at all comes about, will start after the government have dealt with what they call the "waiting list" of countries who are anxious to negotiate trade pacts with herself.

COMPANY REPORTS

DEAMOOLIE TEA CO., LD.

The Company harvested a crop of 1,161,194 lb. in 1932 (compared with 1,166,865 lb. in 1931). Of this 867,898 lb. were sold in London at an average gross sale price of 1s. 0.61d. per lb., 94.119 lb. were sold in Calcutta at an average gross sale price of 4.92d. per lb., and estimating the proceeds to be received for the quantity remaining, the resulting total average price is 11.43d. per lb. (against 1s. 2.19d. per lb.). The Indian cost was 8.83d. and the London cost 2.26d., making a total cost for the year of 11.09d. per lb. (against 11.69d.). The accounts show a net profit of £2,605 (against £13,684). A dividend of 10 per cent. is recommended (against 20 per cent.), which will leave £28,701 to be carried forward, against £32,096 brought to the accounts (after adjustment).

ROHILKUND AND KUMAON RAILWAY CO., LD.

Net earnings for half-year ended 31st March, Rs. 18,65,653 (against Rs. 17,89,985 for the corresponding period of 1931-32). The ratio of expenses to gross earnings was 44.65 (against 45.35). The Company's share of the net earnings, after Indian Income-tax and net Indian charges, etc., was £55,302 (against £55,844). As already announced, an interim dividend of 4 per cent. and a bonus of 2 per cent. have again been declared.

BENGAL AND NORTH WESTERN RAILWAY CO., LD.

Net earnings for the half-year ended 31st March, amounted to Rs. 92,58,610—a decrease of Rs. 19,705 compared with the corresponding period of 1931-32. The Company's share of the net earnings, after deducting Indian Income-tax and net Indian charges, was £347,755 (against £354,748). As already announced, an interim dividend of 4 per cent. and a bonus of 4 per cent. (both unchanged) have been declared. The ratio of working expenses to gross earnings for the half-year rose by 1.31 per cent. to 45.07 per cent.

TARA TEA CO., LD.

Net profit for 1932, £2,598 (against £14,060 for 1931), to which is added £42,304 brought forward (after adjustment). A dividend of 10 per cent. is to be paid on the Ordinary shares (against 32½ per cent.) and £39,052 is to be carried forward. The outturn was 1,085,921 lb. (against 1,100,190 lb.), of which 819,978 lb. were sold in London at a gross average sale price of 1s. 1.53d. per lb. and 106,115 lb. were sold in Calcutta at a gross average sale price of 4.80d. per lb. Estimating the amount to be received for the balance remaining unsold, the average gross price resulting is 1s. 0.36d. per lb. This compares with 1s. 3.01d. per lb. for 1931. The total cost was 1s. 0.18d. per lb., of this the Indian cost accounted for 9.77d. per lb., and London expenses 2.41d. per lb. The cost in 1931 was 1s. 0.18d. per lb.

Extracts from Directors' Report:

Report.—For the half-year ended 30th June, 1933, shows a nett profit of Rs. 25,152-8-9, after providing for interests, Debenture interests and Managing Director's commission and also setting apart Rs. 16,656-9-9 for depreciation on machineries, buildings and other items of capital expenditure.

There was a balance of Rs. 29,834-4-10 at the debit of the Profit and Loss Account as per last account, against which the said profit of Rs. 25,152-8-9 being adjusted, the balance at the debit of Profit and Loss Account comes down to Rs. 4,681-12-1.

It will be found from the Report that machineries to the total worth of Rs. 23,707-1-3 have been added during the half-year. These include a few more looms which have been installed during the period under review.

It is gratifying to note that the Company has been able to make a profit and to practically wipe off the debit balance. The position has been steadily improving, and your Directors, it is hoped, will be able to present before you a more encouraging report for the next half-year.—Dayaram Pzddar, Prabhu Dayal Himatsingka, Baldez Das Sarzwgi, Madan Lal Saraf, Directors. Calcutta.

SOORAH JUTE MILLS CO., LD.

Synopsis of Balance Sheet:

Extracts from Directors' Report:

Report.—For the half-year ended 30th June, 1933.

Revenue Account shows a profit of Rs 61,384-1-10, which sum has been transferred to the credit of Profit and Loss Account.

Profit and Loss Account. After providing for Interest, etc., and taking into account the balance brought forward from last half-year, shows a credit balance of Rs. 43,918-12-9, which sum, we recommend, should be delt with as follows:—Pay the dividend due on the Rs. 10,00,000, 7 per cent. Cummulative Preference Shares at 30th June, 1932, free of Income Tax Rs. 35,000, carry forward Rs. 8,918-12-9, total Rs. 43,918-12-9.

Jute Stocks are shown at or under cost price. Stocks of Gunnies, none of which are unsold, have been calculated at contract sale price.

Buildings, Power Plant and Machinery have been kept in thorough repair and the Mill continues in a high state of efficiency.

In accordance with the Agreement to which all Members of the Indian Jute Mills Association were signatories, work throughout the period under review has been on the basis of 40 hours per week with 15 per cent. of the total looms silent.—H. H. Burn, E. Studd, Kanai Lal Jatta, Chandmull Kanoria, Directors. McLeod & Co., Managing Agents. Calcutta.

Total	...	1,23,90,558	Total	...	1,23,90,551

Extracts from Directors' Report:

Report.—For the year ending 31st December, 1932, shows a Net Profit of Rs. 2,00,427-8-11 which together with the sum of Rs. 1,135-11-9 brought forward from the last account amounts to Rs. 2,01,563-4-8. To this amount of Rs. 2,01,563-4-8 the Directors recommend that Rs. 19,000 be added out of the Credit Balance of The Equalization of Dividendy Fund, making in all Rs. 2,20,563-4-8. The Directors have declared and paid an Ad-interim Dividend for the half-year ending 30th June, 1932, at Rs. 11 per share which absorbed Rs. 2,20,000 leaving a balance of Rs. 563-4-8 which they recommend to carry forward.

The Directors further beg to recommend that a Final Dividend of Rs. 8 per share be declared out of the Credit Balance of the Equalization of Dividend Fund.

The Directors beg to state that the Company was unable to shows better results during the year under report as Mills had to work under adverse circumstances owing to the depression of the Cioth and Yarn Markets.

The Profits and Fixed Charges for the Current Year have been insured for the sum of Rs. 8,00,000 against fire, and an insurance for Rs. 8,00,000 has been effected against Breakdown of Machinery.

The Mill Building and Machinery together with Cotton, Yarn, Cloth, Stores, Waste, etc., are insured against fire for Rs. 86,41,525.—FAZULBHOY CURRIMBHOY, Chairman.

MOHINI MILLS, LD.

Synopsis of Balance Sheet:

Total	...	27,42,890	Total	...	27,42,890

Extracts from Directors' Report:

Report.—For the year ended 31st December, 1932.

Account.—The audited accounts for the year under review show a profit of Rs. 3,22,942-7-8 at their disposal. After deducting therefrom the sum of Rs. 1,37,588 for depreciation on a safe and adequate basts and making provisions for income and super taxes amounting to Rs. 50,000, there remains a nett profit of Rs. 1,35,354-7-8. To this has to be added Rs. 992-13-5 carried forward from last year's account, making a total divisible nett profit of Rs. 1,36,347-5-1, which subject to approval, propose to allocate as follows:—To declare a dividend at the rate of 6¼ per cent. (free from income-tax) on Rs. 13,98,660, Rs. 87,416-4-0, to set apart for Debenture Redemption Fund Rs. 30,000, to transfer to Reserve Fund Rs. 10,000, to carry forward to next year's account Rs. 8,931-1-1, total Rs. 1,36,347-5-1.

They beg to point out that unfair competition in the cloth market and general depression in the prices of agricultural products, which is undoubtedly responsible for the reduced buying capacity of the public, have affected the sale of piecegoods in Bengal and consequently the profit-earning capacity of the mills.

Buildings and Machineries.—Besides what were mentioned in our previous reports, the folowing additions of Buildings and Machineries have been made during the year under review:—

Buildings	Machineries	
Calender shed.	Dry Doubler of spindles	324
Darwans' cook shed.	50 ins. R. S. looms (for replacement) ...	1
Oil and Stores Godown.	Twist Ring Frames ...	10
Storage tank.	Seven-Bowl Calander ...	2
Emergency ward for medical aid.	Flat Card Engines ...	4
Shed for cotton bales.		4

RYAM SUGAR CO., LD.

Synopsis of Balance Sheet:

LIABILITIES.		Rs.	ASSETS		Rs.
Capital	...	4,00,000	Block (net)	...	7,79,523
Debentures	...	3,75,000	Sugar & Molasses	...	8,73,952
Reserves	...	7,20,578	Stores & Spares	...	74,639
Other Debts	...	4,66,800	Outstandings	...	49,734
Profit & Loss	...	1,90,674	Cash & Invests.	...	3,75,204
Total	...	21,53,052	Total	...	21,53,052

Extracts from Directors' Report:

Report.—For the year ended 30th June, 1933, shows a profit after providing for Debenture Interest and Commissions, of Rs. 5,58,122-10-8, add balance brought forward from 1932, Rs. 61,801-0-8, total Rs. 6,19,923-11-4, deduct amount placed to Debenture Sinking Fund Rs. 18,750, Depreciation Rs. 2,00,000, Renewals and Improvement Fund Rs. 1,00,000, Taxation Reserve Rs. 1,10,500, total Rs. 4,29,250, leaving at credit of Profit and Loss Account Rs. 1,90,673-11-4.

This balance they recommend should be disposed of as follows:—In payment of a dividend of Rs. 3 per share (free of Income Tax) Rs. 1,20,000, carry forward Rs. 70,673-11-4.

Cane supplies were plentiful and in a season of 179 working days the Factory crushed 3,102,841 mds. cane with a recovery of 8.71 per cent. sugar, as against 2,471,000 mds. and a recovery of 9.39 per cent. sugar during the previous season.

The sugar content of the cane crushed and the purity were again inferior as compared with the previous season and, although an additional mill of three rollers was installed the full advantage therefrom was not obtained as efficiency had to some extent to be sacrificed to increased crushing capacity, to take off a crop of exceptional magnitude.

Due to the large increase in the production of indigenous sugars, the price of imported sugar has ceased to be the determining factor regulating selling rates of Indian-made sugars, and in spite of the continuation of the surcharge of 25 per cent. on the protective import duty of Rs. 7-4 per cwt. the prices realised were much below those for the preceding year. It is expected that the keen competition between Indian factories will be greatly intensified during the coming season and will still further adversely affect prices.

The expansion of the Indian Sugar Manufacturing Industry continues and next crushing season it is anticipated that the number of cane sugar factories operating in India will have increased to over 100 as against less than 30 operating in Season 1931-32. The Directors, therefore, consider it advisable to continue the policy of building up reserves against the probability of diminishing profits in the future.

The progressive increase in the production of molasses and the decreasing demand from the principal consuming markets have caused prices to fall still lower, and it is apprehended that with the continuing expansion in the number of factories, this by-product may cease to have any value.

Climatic conditions for the growing cane crop have been favourable although recent flooding may affect prospects. Sowing have again been extensive.

Stocks of sugar and molasses have been valued for balance sheet purposes at contract rates and at or under market values. No stocks remain unsold.—J. M. Lownie, A. Hoon, Ram Narain, Directors.

MYMENSINGH BHAIRAB BAZAR RLYS. CO., LD.

Synopsis of Balance Sheet:

LIABILITIES.		Rs.	ASSETS.		Rs.

			Cash	...	19,143
Total	...	1,09,13,623	Total	...	1,69,13,623

Extracts from Directors' Report:

Report—For the year ended 31st March, 1933.

Capital.—The Capital Expenditure to 31st March, 1933, amounts to Rs. 1,06,09,840-0-7.

The total Paid-up Capital of the Company on 31st March, 1933, was Rs. 86,00,000.

Net Revenue.—The net earnings for the year amounted to Rs. 4,34,889-11-6 as compared with Rs. 3,69,315-15-6 for the previous year. A satisfactory increase in both Goods and Passenger Earnings took place during the year, the increase being more marked in the case of Goods than Passengers. This increase was almost entirely due to improved jute traffic consequent on a large crop of good quality jute being grown in the districts served by the Railway. The improved revenue resulting to the cultivators had its effect in turn on the Passenger Earnings. This class of earnings, however, still leaves much to be desired and a much higher and more sustained level of jute prices than obtained throughout the year will be necessary before Passenger Earnings can once more attain a satisfactory figure.

During the year interim dividends at the rates of Re. 1-8 and Rs. 2-4 per share, less income tax, on the Guarantee and Rebate Shares respectively, were paid. The amount available for final distribution on 31st March, 1933, was Rs. 2.27,607-7-7. They now propose to pay final dividends at the rates of Rs. 2 and Rs. 2-4 per share, less income tax, on the Guarantee and Rebate Shares making Rs. 3-8 and Rs. 4-8 per share respectively, less income tax, for the year. This distribution will absorb Rs. 1,177,750 which leaves, after payment of the Managing Agents' Commission, a balance of Rs. 40,997-15-4 to be carried forward.—W. Hunter, T. S. Gladstone, R. N. Mookherjee, Adamjee Hajee Dawood, Directors. Gillanders' Arbuthnot & Co., Managing Agents.

BUCKINGHAM AND CARNATIC CO., LD.

Extracts from Directors' Report:

Report.—For the year ended 30th June, 1933, shows a profit, after providing for Debenture Interest and Commissions, of Rs. 4,77,293-5-1, add balance brought forward from 1932, Rs. 50,053-10-9, total Rs. 5,27,346-15-10, deduct amount placed to Debenture Sinking Fund Rs. 20,000, Depreciation Rs. 1,40,000, Renewals and Improvement Fund Rs. 75,000, Taxation Reserve Rs. 1,00,000, total Rs. 3,35,000, leaving at credit of Profit and Loss Account Rs. 1,92,346-15-10.

This balance is recommend to be disposed of as follows:—In payment of a dividend of Rs. 1-4 per share (free of Income-tax) Rs. 1,49,875, carry forward Rs. 42,471-15-10.

Cane supplies were plentiful and in a season of 176 working days, the factory crushed 3,249,574 mds. cane with a recovery of 8.71 per cent. sugar as against 2,122,000 mds. and a recovery of 9.53 per cent. sugar during the previous season.

Stocks of sugar and molasses have been valued for balance sheet purposes at contract rates and at or under market values. A small percentage of the Company's sugar production has still to be sold.

Mr. G. P. Danby, being absent from Cawnpore, has not signed the Report and Accounts.—J. M. Lownie, Ram Narain, Directors.

CHAMPARUN SUGAR COMPANY.

Extracts from Directors' Report:

The managing agents of the Champarun Sugar Company (Messrs. Begg, Sutherland and Company) submit the audited accounts for the year ended June 30, 1933, showing a profit, after providing for debenture interest, commissions and bonus to cane growers, of Rs. 11,07,598; add balance brought forward from 1932, Rs. 55,182; total Rs. 11,62,780. Deduct amount placed to debenture sinking fund, Rs. 30,000; depreciation, Rs. 2,00,000; renewals and improvement fund, Rs. 1,50,000; taxation reserve, Rs. 3,07,000; reserve fund, Rs. 1,00,000; leaving at credit of profit and loss account, Rs. 3,75,780. This balance the managing agents recommend should be disposed of as follows:—In payment of a dividend of Rs. 2-8 per share (free of income-tax), Rs. 3,00,000; carry forward, Rs. 75,780. The company's new branch factory at Chanpatia operated from the commencement of the season and has contributed in no small measure to the profit earned by the company as a whole. The older established factory at Barrah crushed 3,349,917 maunds cane with a recovery of 8.37 per cent. sugar during a season of 179 working days, as compared with 2,748,355 maunds cane with a recovery of 8.89 per cent. sugar during the preceding season. The new factory at Chanpatia crushed 2,809,039 maunds cane with a recovery of 9.23 per cent. sugar, over a season of 172 working days. At Barrah the sugar content of the cane crushed and the purity were again inferior as compared with the previous season and, although certain improvements were made in the plant, efficiency had to some extent to be sacrificed to increased crushing capacity to take off a crop of exceptional magnitude. At Chanpatia, although the quality of the cane was superior to that at Barrah, efficiency had to be sacrificed to capacity. Due to the large increase in the production of indigenous sugars, the price of imported sugar has ceased to be the determining factor regulating selling rates of Indian-made sugars, and in spite of the continuation of the surcharge of 25 per cent. on the protective import duty of Rs. 7-4 per cwt., the prices realised were much below those for the preceding year. It is expected that the keen competition between Indian factories will be greatly intensified during the coming season, and will still further advarsely affect prices. Stocks of sugar and molasses have been valued for balance-sheet purposes at contract rates and at or under market values. No stocks remain unsold.

CYCLONES IN THE SUGAR WORLD

Though the Indian sugar industry is, according to all standards, a fully sheltered industry, it is necessary to survey the main features of the world position and to examine in their light the policy which India is pursuing and may pursue in the near future. Developments of serious significance as to the present and far-reaching importance as to the future have happened of late in the sugar world. And the interest of India in the position, which is now developing at a somewhat disquieting rapidity, is that for the first time India's action has affected the fortunes of a major industry and India is placed in juxtaposition to the biggest producers of a manufactured product.

A fortnight ago it was announced that Java had decided to declare a rate-war in India with a more drastic cut in prices in Western India than in the Eastern ports. Later it was stated that the object of the Javanese attack is not so much the Indian producers as Java's competitors from Mauritius. Though this report might for a moment seem to dispel the fear of serious competition from producers who have been maddened by continued misfortune it would, by no means, be wise to shut our eyes to the serious developments in the sugar industry of the world.

The sugar market is unique in the number, variety and strength of the cross currents that have affected its fortunes since the time sugar began to be traded on an international basis. The invention of beet sugar was itself due to the necessity created by the naval blockade in the Napoleonic wars; and since beet sugar became a serious competitor to cane sugar, there has been an alternation in the fortunes of these two rivals not dissimilar to the fate of the precious metals in the bimetallic days, prior to the firm establishment of gold as the accepted international standard of payments. The abolition of slave labour in tropical plantations, the extermination of big white producers in native risings, the fostering of beet sugar production in Europe through bounties and tariffs, these are among the most important factors that affected the course of the world's sugar industry in pre-war times. The war itself had the effect of choking off the production of beet sugar in Europe and creating a scarcity which the producers of cane sugar were not slow to take advantage of. The evils of the scarcity felt in the war period were, in fact, nothing compared to the privations caused by the increase in equipment which resulted from such scarcity. When after the war the European nations were impelled by their sufferings during war time to rear, and protect with zealous care, their own indigenous sugar industries, the position was not unlike that which necessitated the Brussels Convention of earlier days. We have dilated on these aspects of the early history of the sugar industry only to show that throughout its apparently triumphant career the sugar industry has been subject to extraneous forces more powerful than those which have affected the other staple industries of the world.

The recent history is by no means less chaotic or sensational. Much of the deadlock experienced of late could have been avoided, if Java and Cuba had been enabled to reap the fruit of their improvements in the technique of both cultivation and manufacture. It is natural that they should think that, as a result of the economies they had effected by way of the introduction of a high-yielding variey of cane and the installation of improved machinery, they would be able to retain the markets which had formerly supplied themselves with beet sugar. The European nations sheltered their own beet sugar industry, with the result that the production of beet sugar has not exceeded its pre-war level. The United States, too, followed a similar policy in the regions in which it exercised its political control. In the East, Java was unable to get her proper share of the market, because of the production in Formosa under Japanese encouragement. It is this circumscription of world competition into comparatively small areas that is responsible for the difficult conditions of the sugar industry. Not only did prices fall to a low extent but the increase in supplies from 5.9 million tons in September 1, 1930 to 7.3 million tons in 1931 was a clear indication that the basis of the world's sugar industry was thoroughly unsound.

It is this condition that necessitated the Chadbourne Plan; and it is the difficulties in the working of the Chadbourne Plan that have accentuated the elements of instability which it sought to eliminate. In the first place, the Plan failed to satisfy the elementary condition of any scheme of restriction, namely, that it should embrace a substantial proportion, if not the whole, of the world's producing units. Though the Plan attempted to cure the position through a combination of progressive restriction of output and export quotas for the participating units, it was found later on that the consumptive capacity of the available foreign markets had been seriously over-estimated. Total stocks as well as the portion thereof which was as segregated alike rose markedly through the three years 1930, 1931, and 1932.

The latest factor of unsettlement in the world market for sugar is the publication by the International Institute of Agriculture at Rome of the figures of world production of beet and cane sugar for 1932-33. The significant feature of this report is the increase in beet acreage as compared with 1932. In this increase Russia is foremost, as she has an area under beet equal to the whole of the rest of Europe put together; and if the acreage of Europe and Russia be taken together it accounts for $\frac{7}{8}$ths of the world's acreage under beet in

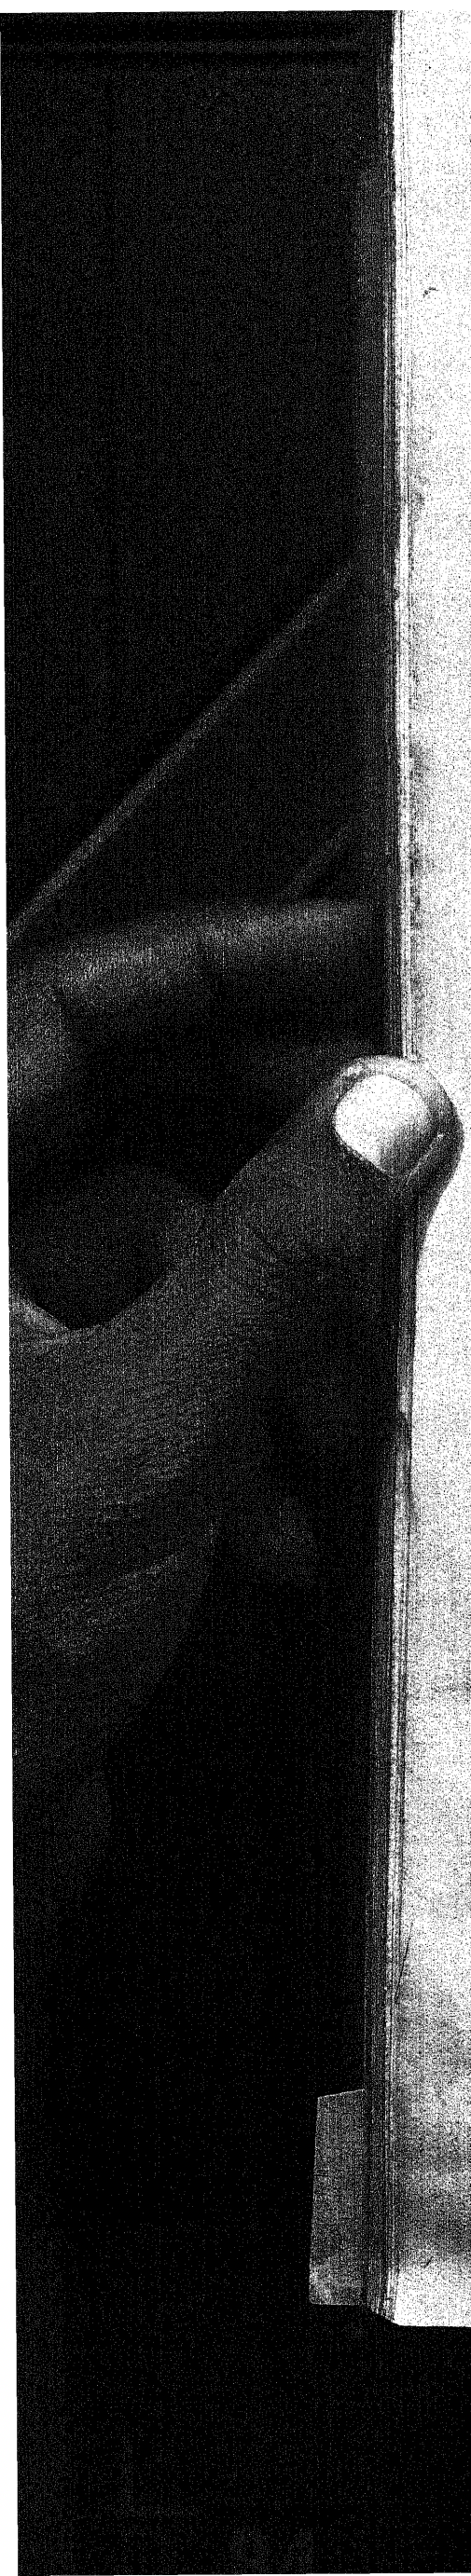
1933. This figure represents an increase of 5 per cent over the annual average for the period 1927-31. The 1/8 of beet acreage which is found outside Europe, it must be said, represents a significant increase of 172 per cent. in Asia over the annual average for the period referred to and of 134 per cent. in the csae of the United States. And what is more, not only has the acreage been considerably expanded all over the world, but the crop has also been improved; and its yield of sugar may lead to an increase in beet production in 1933-34 to well over the previous year's figure of 8.7 million metric tons.

The figures of cane production reflect clearly the havoc brought by artificial restriction amongst the bigger and the more economic producers, on the one hand, and on the production of countries with high protectionist tariffs and other devices necessary for speeding up uneconomic production. Broadly speaking, the position as it is revealed in the figures in the International Institute of Rome, may be stated thus: That on the one side, Cuba has had to persist in severe restriction of output without any balancing advantage whatsoever, in asmuchas the United States is endeavouring more and more to supply her needs from protected beet sugar at home. On the other side, the reduction in Java has been more than offset by the increase in acreage and production in India. The Cuban production has been cut down to 77 per cent. of last year and only 46 per cent. of the yearly average of the period 1926-27 to 1930-31, while the American output stands at 88 and 74 per cent. respectively. According to the Chadbourne Plan, Cuba will have to effect further reduction in 1934 from the level of 2 million tons in 1933 and the extent of the sacrifice, which she is called upon to make, may be guessed from the fact, that the output in 1930 was no less than 4.7 million metric tons. In the East, while Java curtialled her production to 52 per cent. of 1931-32, India increased it to 117 per cent.

In such a position, the fate of the Chadbourne Plan after its allotted span of life is hardly open to doubt. It must be said to the credit of the sponsors of, and participants in, the Plan that they did their utmost during the time of the World Economic Conference in London to patch up the position and to arrive at some agreement by which the present process of healthy restriction of output could be continued till more natural conditions emerge. For reasons that are not difficult to understand, the nations, which were called upon to give the necessary support to this scheme, found themselves unable to comply; with the result that already some of the members of the Chadbourne Plan have already signified their intention not to continue it beyond the originally agreed date. The gravity of the present situation lies, not so much in the threats signified in the long view but in the desperation which present conditions have induced amongst the principal producers. The Cuban revolution, which was chronicled in detail in our columns last week, was, assurredly, the result of the economic distress prevalent in a country, which is dependent to such an extent on the fortunes of the world's sugar industry. While Cuba is up against the United States where every economic question is being fitted into the straight jacket schemes of Mr. Roosevelt, Java has to face an India, which is equally determined to develop her own indigenous sugar industry. The reduction of 75 cents. in Western India and 25 cents. in the Eastern ports, which was announced a fortnight ago, and which, during the last week, has been somewhat explained away, is only to be expected from the acute position that is developing in Java.

Thus it will be evident that both in Java and in Cuba, the increasing gravity of the position of the sugar industry must lead to developments, of which

(*Continued on page 563*).



SUGAR INDUSTRY OF INDIA
ITS PAST, PRESENT AND FUTURE.

BY M. P. GANDHI, M.A., F.R.E.S., F.S.S.

Secretary, Indian Sugar Mills Association.

The following is the first chapter of a projected publication of Mr. M. P. Gandhi. As Secretary of the Indian Sugar Mills Association, Mr. Gandhi has devoted much time to a study of the questions connected with sugar manufacture; and his writings will be read with interest.—Ed. I. F.

Though there is a large volume of conclusive evidence to show that India is the home of Sugar Cane, there is room for diversity of opinion as to when exactly the manufacture of sugar began in this country. These questions are not, strictly speaking germane to the primary aim of this monograph which is to discuss the problems pertaining to the modern sugar industry. It is of interest, however, to note that sugar cane has been known to India for over 2,000 years; and there are, besides, several indications that Northern India is the home of sugar cane. The earliest reference to the sugar cane crop of India dates back to 627 A. D. when sugar figured among the spoils taken by the Byzantines after their conquest of Dastagerd in Persia. It is also on record that the Chinese Government during the reign of Emperor Tai Tsing (627 to 650 A. D.) sent a few people in Bihar to study the method of cultivation of sugar cane and manufacture of sugar. From the Mohammedan writers we learn that sugar cane was introduced by the Arabs into Sicilly about A. D. 703 and that it spread to other Western Countries, especially Spain, as early as 755 A. D.

It would thus be clear that India is the birth place of the manufacture of sugar from sugar cane. Sugar (Sarkar) is mentioned in the shastras as one of the five 'Amritas' *i.e.* selectual sweets. We learn from the testimony of the Mohammedan writers that first class white sugar was produced from 'Gur' throughout Northern India, Burdwan and Murshidabad Divisions in Bengal up to Gorakhpore in Oudh, 'now in U. P.'

About the 13th century sugar cane cultivation spread over all the countries round the Mediterranean; and these places became the sources of supplies of cane sugar to Europe and Africa. It also appears to be fairly certain that, about the time of the second voyage of Columbus, cane was introduced into America; and it is extremely probable that the local type now used only as a chewing cane in Brazil was the variety known as "puri" in Bengal. Later, with the introduction of Sugar Cane cultivation in many parts of America by the Spanish, the Portuguese and Dutch, the production of sugar increased so rapidly that it became an article of common consumption.

The sugar industry in India throve fairly well up to the time of Napoleon; and a large quantity of sugar was exported to European countries even then. But, when Napoleon was starved of sugar supplies from outside owing to the naval blockade he engaged scientists to find out from the sweet vegetables growing in Europe a crop capable of producing sugar. This research and subsequent improvement in cultivation led to rapid expansion of sugar. Beet cultivation proved an obstacle to further growth of manufacture of cane sugar in India, but even at the end of the 19th century almost all the villages in India produced a sufficient quantity of cane and sugar for their wants. With the spread of civilization, however, the people of India gave up their prejudice against imported sugar and started consuming it in preference to the indigenous sugar, which was more costly. The increasing importation of cheap refined sugar from abroad operated to the detriment of the sugar manufacturing industry of India.

The history of modern sugar may be said to begin from 1791, in which year, due to the massacre of almost all the white population in the black rebellion in Hayati and San Domingo, disappeared the largest producers and exporters. The price of sugar rose rapidly ; and the East India Company took advantage of this rise to export sugar from India to England, not as producers but merely as merchants, buying in the open market and exporting. In 1791 four parcels were exported from Bengal to serve as loaf sugar for tea. This sugar was sold at Rs. 88-6 to Rs. 156-6 per cwt. Even then the East India Company lost money on the first parcel and gained only 6% on all the four.

The economic policy of the British Empire now began to influence the sugar industry in India. There were two groups of producers, the West Indian Merchants and Planters and the East India Company. The former seemed to have been more influential because the duties favouring the West Indian Producers were in force for many years. An ad valorem duty of £37-16-3 was levied on sugar, being manufactured article. This was much in excess of the duty specifically levied on West Indian Sugar. In 1821 there was a modification of Duty and in 1836 East and West Indian sugar entered England on equal terms.

Following on the emancipation of the Slaves, the West Indian Planters were faced with the dislocation of business and this change of policy naturally evoked a violent protest from that quarter. As a consequence of the equalization of duties, considerable capital was invested in India, and West Indians and Mauritian planters were attracted here. So much so that by 1846 the export of sugar from India to Britain had reached 60,000 tons. Factories started at Azizpore, Motihari, Belsund, Barachakia, Gorakhpore and Rosa on the West Indian plan, aiming at producing sugar direct from sugar cane.

Enterprises depending on Gur Refinery were started in Bengal and of this, those at Doola at Cossipore, Albion and Ballicoll seem to have been the largest. Doola, which in one year turned out 7,000 tons of sugar, was believed to be the largest and the best equipped in the world. About this time enterprices were started in Madras under Messrs. Binny & Co., which still exist and the Aska Factory which was started by Messrs. Binny & Co. in 1865 developed into the first cane sugar diffusion factory.

In 1846, under pressure of the Manchester School, British tariff policy swung violently towards free trade. The Slave-grown sugar was admitted into Great Britain on equal terms with that produced by free labour; and in a few years the industry in India entirely disappeared. It took another 50 years for a revival of interest in the Sugar Industry of India. Modern Sugar Factories were started in Bihar, from about 1903. Since then there has been a slow and steady growth of the industry, although it must be said that no help was given by the Government either by a protective tariff or by any other means. The imports were increasing considerably from 1900 onwards and the only check that they suffered was in the War Years when the import was reduced considerably. In 1900-1901 the import of sugar was reduced, amounting roughly to 200,000 tons; but by 1909-1910 it had gone up to 630,000 tons. There

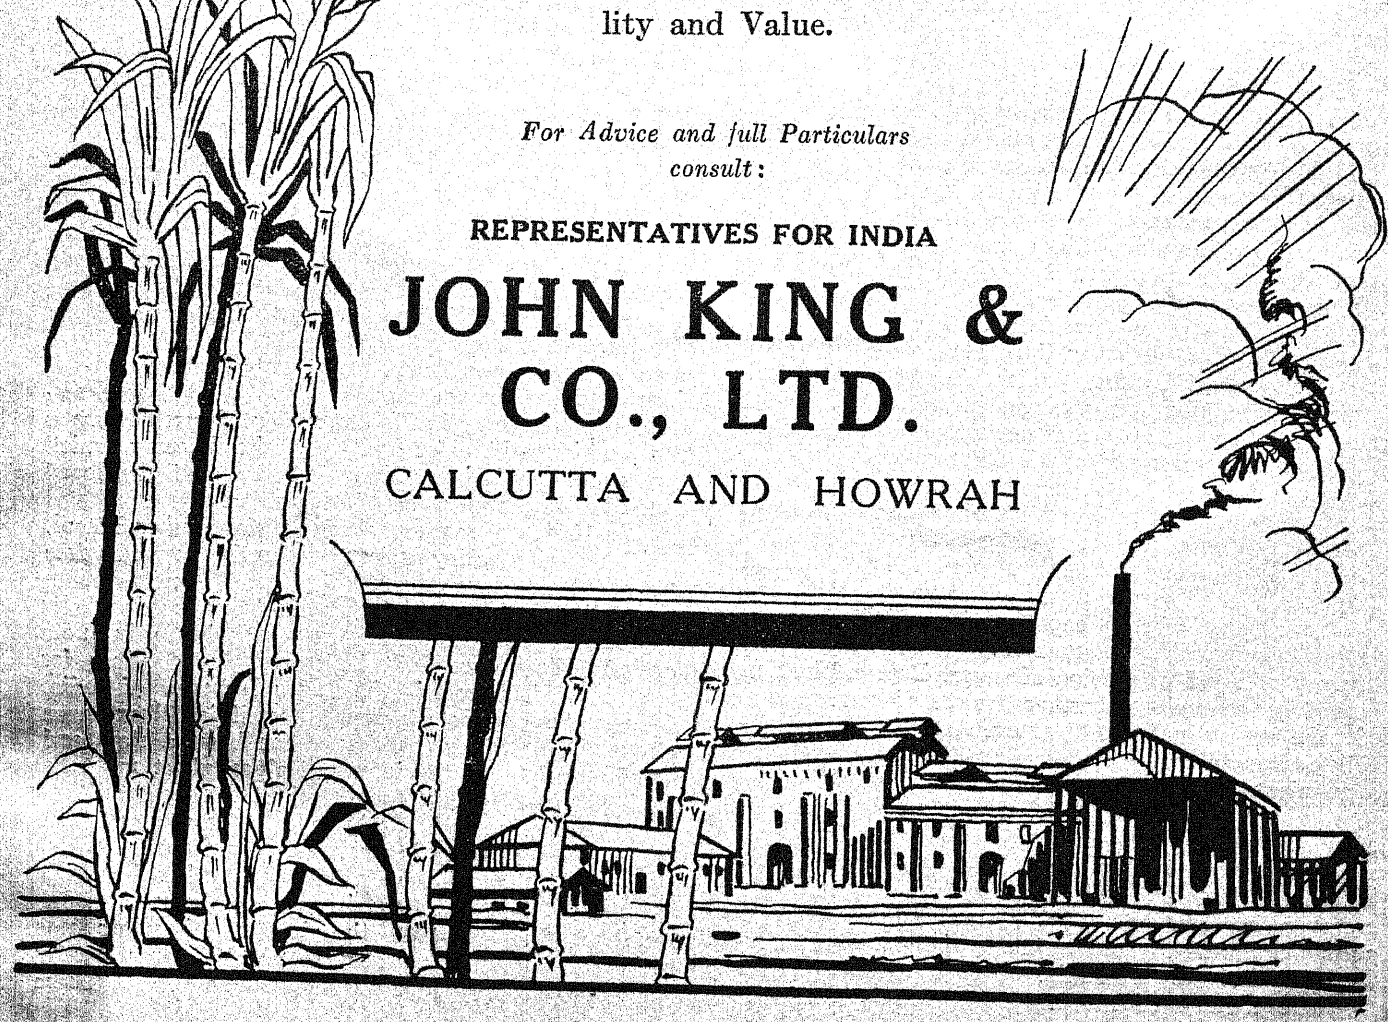
REPRESENTATIVES FOR INDIA

JOHN KING & CO., LTD.

CALCUTTA AND HOWRAH



was a considerable decrease during and after the War; but the tendency to expansion began again in 1923-1924.

With these preliminary observations, we may now turn to the History of the Industry during the 20th century, to the tariff duty on the imports of sugar during this period, to the circumstances which led the Government to investigate into the possibility of the establishment of a sugar cane manufacturing industry in the country and to the advantages and disadvantages of the Sugar Industry in the country, etc.

The import duty on sugar in India from 1894-1895 to 1915-1916 was only 5% and was a revenue duty. In March, 1916, the duty on sugar was increased to 10%; in March, 1921, it was again raised to 15% and in March, 1922, to 25%. In June, 1925, the Import Duty on sugar which was on an ad valorem basis was converted into a specific one and the rate was raised to Rs. 4-8 per cwt. This remained in force up to February, 1930. It was raised to Rs. 6 per cwt. in March, 1930, and to Rs. 9-1-0 from 1st September, 1931. Even to-day the duty is Rs. 9-1-0, of which Rs. 7-4-0 is the protective duty, and Re. 1-12-0 is the surcharge.

It should be observed here that from 1916 onwards sugar has been subjected to an increasingly heavy duty in India; and further it can be seen from a able given elsewhere that the increase in the quantity of sugar imported from abroad has taken place in spite of a heavy Import Duty ranging from 50 to over 160%. The duty on sugar has yielded a vast amount of money to the Government of India. The Import Duty on sugar in 1900-1901 yielded only 53 lakhs whereas the amount produced in 1929-30 was 870 lakhs. It must be observed here, however, that the high Duties on the Imports of sugar in India were by no means exceptional, as still higher duties were found in various other countries of the world. A statement has been given elsewhere about the Import Duty on sugar in several countries of the world.

Although such revenue duty existed on sugar its effects on the Sugar Manufacturing Industry of India were not examined by the Government before 1929. The National importance of sugar in the country was not paid any attention, until after the War, when the desirability and possibility of utilising the sugar resources of India were examined without any intangible result by the Government of India. In February, 1919, Mr. Wyne and Mr. Sayer of the Indian Agricultural Service were appointed to compile relevant data, statistical and otherwise, as regards the best way of exploiting the advantages which India possessed in respect of sugar cane. Immediately after that in 1920 the Governor-General in Council appointed the Indian Sugar Committee. The resolution of the Government dated 2nd October, 1919, in appointing this Committee stated that regarding the desirability of expansion of the sugar cane and sugar manufacturing industry, there could be no doubt, that the annual consumption had been increasing steadily for many years, etc."

It was also recognised that the sugar cane was indigenous in India which until very recent years stood first of all countries in the world in the area under cane. It is notorious that the yield both of cane and raw sugar per acre and the percentage of available sugar extracted from cane are depressingly low. While, therefore, India should be in a position, as she was in the past, to produce all surplus of sugar for export, she had, in fact, had to supplement her own supplies by imports, whose tendency to increase had been checked by the War. The Government were also aware of the difficulties in extending the sugar industry, apart from the difficulties attending the cultivation and manufacture of cane sugar in all countries. There were several problems with which the Indian industry was confronted which were peculiar to India. The systems of land tenure exhibit great variety and are complicated by the customary laws of inheritance and joint ownership. The bulk of the sugar produced in India is consumed in its crude state as Gur or Jaggery and this fact has an essential bearing on the prospects of a successful venture for the production of factory sugar in any particular locality. The Government of India feel that the time was opportune for the appointment of a representative Committee to investigate into the problem in all its bearings and to advise whether a definite and co-ordinated line of policy could be laid down for the promotion of further development and appointed a Committee under the Chairmanship of Mr. J. MacKenna, Agricultural Adviser to the Government of India, to examine the various sugar cane growing tracts of India with a view to determine the nature of the expansion possible in such tracts either by the development of a factory industry or by improvements in the existing indigenous methods; to review the position of India with regard to the world's sugar supply and to formulate the recommendations for the improvement of that position, etc.

The Sugar Committee submitted a very favourable and comprehensive report laying great stress on the importance of sugar in the National Economy of India. It is a matter of great pity, however, that the recommendations of this Committee appointed by the Government were pigeon-holed.

The next stage in the progress of the Industry opened in 1929, due to the existence of the remarkably high revenue duties of sugar imports. The high Import Duty on Sugar subsisted for many years, but it must be observed that the Government never comprehended the full significance of the development of sugar-manufacturing industry in the agricultural, rural and industrial economy of the country. They did evince some interest in this matter spasmodically, but no sustained effort was made to raise the sugar-cane and the sugar industry to their legitimate place in the National Economy. As a result of several fortuitous circumstances, conditions were created which were propitious for the establishment of a sugar industry in the country. The Imperial Council of Agricultural Research deserves considerable credit for inviting the attention of the Government to the possibility and necessity of the establishment of the Industry in the country.

The establishment of the Imperial Council of Agricultural Reserch may well be regarded as an epoch-making event in the History of the Agricultural

SUGAR CANE TRUCKS

improvement in India. The inaugural meeting of the Council was held in June, 1929, and at this meeting representatives of the various provinces reported the progress made by the provincial governments in the preparation of a scheme for assisting the Sugar Committee. In this Committee the Council has a qualified and a representative body to which are referred all questions affecting the welfare of the sugar-cane industry in the country. The Sugar Committee meets generally once a year, and has had five sittings up till now (September, 1933). This committee has received a general mandate from the Council to examine and report on measures, necessary for the development of the sugar-cane industry in India. One of the recommendations of this Committee, which met for the first time in October, 1929, was that the Government should be asked to institute an enquiry through the Tariff Board in regard to the question whether protection should be given to the Indian sugar-cane industry. This recommendation was accepted by the Council, and its representations were successful in inducing the Government to order a Tariff Board enquiry into the question whether protection was required, and if so in what measures for the Sugar Industry in India. This enquiry was referred to the Tariff Board in May, 1930. In making this application, the Indian Council of Agricultural Research had taken into consideration the fact that the three provincial governments, which were widely interested in Sugar Industry, viz., the U. P., the Punjab and Bihar & Orissa, together with the Government of Bombay, had asked for a Tariff Board enquiry.

The Sugar Committee of the Imperial Council recognised in 1929 the fact that a steady increase in the import of White Sugar had occurred in the recent years in spite of the existance of a certain measure of protection which had been afforded by the existing specific duty on Sugar. Despite an increase in the cane area, and the yield per acre in same tracts and the amount of the White Sugar manufactured in the country, India was very little nearer to being self-supporting in 1929 in regard to sugar produced, than in 1919 when the Indian Sugar Committee reported. The magnitude of the issue will be clear from the fact that the area under sugar-cane in India in 1929 was 2¾ million acres or about 25% of the total area under sugar-cane in the world. The value of sugar-cane products produced in India in 1929, on the basis of the prices prevalent in that year was approximately Rs. 42 crores, whilst, in addition, Rs. 21 crores were paid annually for imported sugar.

The Sugar Committee also considered that the time had come when the Import Duty should definitely be made a protective duty instead of a revenue duty, and further that definite protection to the sugar-cane growing industry should be given for a period of 10 years or so in the first instant. They also felt that Indian Agriculture was passing through a period of reconstruction and the time was opportune for the development of the Indian sugar-cane industry. It was also pointed out that a good deal of the preliminary work, necessary for placing the Indian Sugar Industry on a sound foundation, had been carried out. As a result of the work of the Coimbatore Cane-Breeding Station and the Shahjahanpur Sugar Research Station and the Sugar Bureau, seedling canes of real merit have been produced, and distributed and are being grown on considerable areas. These improved canes covered nearly 300,000 acres *i.e.*, well over 1/10th of the total suar-cane area of the world.

As a result of the Tariff Board Enquiry, which was conducted in 1930, the Government have accorded protection to this industry for a period of fifteen years. About 100 factories have since been established, and it appears certain that by the next year, Indian Sugar Industry will produce the full quantity of sugar required in the country. This remarkable rapid development of the industry is beyond expectation and has brought to the forefront very urgent problems, like those of the disposal of molasses, cane supply,

'Castrol' gives just that little extra which makes all the difference between an oil that is merely good, and one that is *better*. Try a Wakefield INDUSTRIAL Oil for your Plant and Machinery and obtain satisfaction.

INDIAN COTTON MILLS VERSUS JAPANESE COTTON MILLS.

Our Bombay correspondent writes :—

In an early letter of mine to the regular number of *Indian Finance*, I referred to Sir Lalubhai Samaldas' impressions of industrial conditions in Japan, with special reference to the fierce competition offered by Japanese goods in Indian markets. Good treatment accorded to labour; pride of the Japanese labourers in their work; proper technical equipment on the part of those in charge of management; efficiency of the organisation; resultant economy in costs—these were the causes, in Sir Lalubhai's opinion, of the competitive power of Japanese industry.

In this communication, I would refer to the views of Mr. Sasakura, who is associated with the Toyo Poddar Cotton Mill of Bombay. This mill was formerly known as the Diamond Mill. It was one of the boom flotations; but only in the sense that a company started in the boom period bought up an old mill for an inflated price. The mill passed through severe ordeals; and, when finally it was put up for sale, a syndicate consisting of Indian and Japanese capitalists bought the concern. This mill is, therefore, interesting as an instance of Indo-Japanese co-operation in capital and active management.

The Japanese element in the ownership has been responsible for vast changes in machinery and organisation. This mill may be said to be the one mill where real "rationalisation" has been carried out on a definite plan and with knowledge. The views of Mr. Sasakura, as the active spirit in a concern which has been rationalised and which is associated with Japan, are of piquant interest.

In his opinion, the sorry plight of Bombay cotton mills is due to three causes :

1. Accumulated stock due to overproduction in India and heavy increase of imported cloth in 1932.
2. *Higher cost of production of Bombay mills* in comparison with upcountry mills (combined with more favourable situation both for production and consumption) and foreign mills (Japanese and English).
3. Lack of control against reckless competition among Bombay Mills.

In 1932, Indian mill production increased by 20 per cent. There was also an increase of 58 per cent. in imported cloth. The result is that 1932 supplies were higher by 500 million yards over 1931 supplies. This will be equal to 10 per cent. of India's consuming capacity. If the situation is to be remedied, Indian mills should close down for a month and a half, or imports of cloth should cease for a half-year.

As regards production cost, Indian mills incur higher expenditure on wages, power, stores, and miscellaneous (such as taxes). Dr. Hirendra Lal Dey has given figures for average Bombay and upcountry mills in *The Indian Tariff Problem*. And Mr. Sasakura has furnished figures for his own "rationalised" mill in Bombay and for Japanese mills.

The following tables tell their own tale :

Average Spinning charges per Spindle per day.

	Bombay mills	Up-country mills	Japanese mills Ex. @ 83		Bombay rationalised mill
	Pies	Pies	Pies	Y.	Pies
Wages ...	5.04	3.86	1.57	.0098	4.25
Power ...	1.87	2.25	1.09	.0068	1.30
Store ...	1.16	1.29	0.44	.0027	0.75
Mis. ...	1.90	2.56	1.28	.0080	0.55
Total ...	9.97	9.96	4.38	.0273	6.85

Average Weaving Charges per 100 Looms per day.

	Bombay mills	Up-country mills	Japanese mills Ex. @ 83		Bombay rationalised mill
	Rs.	Rs.	Y.	Rs.	Rs.
Wages ...	165	132	52	43	111
Power ...	34	29	7	6	15
Store ...	36	39	22	18	45
Mis. ...	29	45	33	27	11
Total ...	264	245	114	94	182

As compared with Japan, Bombay mills pay double for spinning and treble for weaving. As compared with upcountry mills, they are at a disadvantage as the former are more favourably situated for production and consumption, can work longer hours in Native States, and incur 10 per cent. less charges in weaving.

The dearness of labour in Bombay is better illustrated by the following tables in which the above tables are reduced to percentages :

Percentage (Share) of Spinning charges.

	Bombay mills	Upcountry mills	Japanese mills	Bombay rationalised mill
Wages ...	50%	39%	35%	62%
Power ...	19%	22%	25%	19%
Store ...	12%	13%	10%	11%
Mis. ...	19%	26%	30%	8%
Total ...	100%	100%	100%	100%

Percentage (Share) of Weaving charges.

	Bombay mills	Upcountry mills	Japanese mills	Bombay rationalised mill
Wages ...	61%	55%	46%	61%
Power ...	12%	12%	6%	9%
Store ...	14%	16%	19%	25%
Mis. ...	12%	17%	29%	5%
Total ...	100%	100%	100%	100%

The following description of Mr. Sasakura in regard to comparative efficiency of labour is interesting :

> "It requires 19 hands in Bombay Mills for a bale of 20s. against 11 in Japan ; and one Japanese weaving girl can attend 8 looms while a stout Indian male weaver generally handles two looms and recently three or four looms are given to him in a few mills. In a Japanese automatic loom shed, it is not strange to see a girl attending forty looms with comfort, and in spinning, generally a piecing girl attends 1,200 spindles for 40s. against 360 to 400 spindles in Bombay.
>
> Of course, I admit that climatic conditions may effect some difference, but still the gap is so wide that unless Indian labour will co-operate for higher efficiency, the present deplorable plight will not be remedied. However, I confidently believe that even in India, if a little more attention be paid and endeavour made by the supervising classes, the result would be otherwise. As instanced in the example of a certain rationalised mill in Bombay, the condition can be improved considerably namely, 31% in spinning and 32% in weaving."

Illiteracy is at the root of inefficient labour in India. "In a certain mill, only 20 per cent. can read and write. Social backwardness such as early marriage, heavy debt, drinking, gambling and lack of responsible spirit can be greatly improved if education prevails in all working classes".

Literacy is the fountain source of the efficiency of Japanese labour. There is practically no illiteracy in Japan. Mr. Sasakura's description of the conditions in which labourers live and work in his country must serve as an object lesson :

> In Japan, mill-hands are mostly young girls, who have completed their course of compulsory education at

the age of fourteen. They come up to the cotton mills to earn the money necessary for preparation of marriage and so they seldom serve the mills longer time than four or five years. Being educated they can learn the work quickly and even try to study how to handle the machine better than before. They wish always to work better and try hard with the spirit of responsibility. They live in boarding houses attached to the mills and are well fed and cared for with comfort. It is a conspicuous contrast that Japanese working girls are easily adaptable to new methods while Bombay workers obstinately reject any new system regardless of its merit, *i.e.*, they are so old and accustomed to routine that any new things do not suit their temperament. It is also noticeable that Indian workers have no inclination for advancement ; and stagnancy is their ideal."

Shanghai cotton mills have benefitted considerably from Japan's example. Rationalisation has been effected in all possible ways. Production costs have gone down rapidly. The following three tables show how Japan and Shanghai have progressed and India has more or less stood still :

	Japanese (20s)	Shanghai (16s)	Bombay (20s) Rationalised	Bombay (20s) Other estimate
	Yens.	$	Rs.	Rs.
1929 ...	43.70	15.25	52	52
1930 ...	40.76	16.21	52	52
1931 ...	29.77	15.08	45	54
1932 ...	27.91	12.19	44	54
1933 ...	27.06	...	42	49

Millhands per 10,000 Spindles.

	Japan		Shanghai		Bombay Rationalised	
	Average counts		Average counts		Average counts	
1929 ...	16.25s	177	15.12s	180	17.52s	170
1930 ...	18.48s	134	14.85s	156	16.58s	163
1931 ...	17.80s	121	15.01s	153	16.84s	162
1932 ...	18.90s	95	14.86s	107	16.87s	165
1933 ...	19.11s	78	15.00s	96	16.10s	162

Weaving charges per 100 looms.

	Japanese "A" Mill	Japanese "B" Mill	Shanghai Mills	Bombay Rationalised	Bombay (others) Estimate
	Yens.	Yens.	$	Rs.	Rs.
1930 ...	126.37	155.51	99.19	299	299
1931 ...	77.10	131.92	104.10	278	278
1932 ...	73.76	121.46	74.84	253	278
1933 ...	68.65	125.40	67.73	247	269
1933 ...	68.65	125.40	67.73	247	269

Japanese "A" Mills have changed 70% into Toyodo Automatic Looms since 1931, hence there is a big saving in the weaving cost.

Mill hands employed per 100 looms.

	"A" Mills Japanese	"B" Mills Japanese	Mills Shanghai	Rationalised Bombay
1930 ...	26	50	59	94
1931 ...	22	42	55	89
1932 ...	20	44	43	88
1933 ...	18	37	42	61

An additional handicap of Bombay Mills has been the antidiluvian nature of machinery in most mills. Lack of capital and lack of *himat* or enterprise is responsible for the continued use of old machinery instead of their being replaced by new. Ahmedabad presents quite a different state of affairs.

Spindles installed in India :—

SUGAR INDUSTRY

RAPID GROWTH

MR. SINGHANIA'S SPEECH

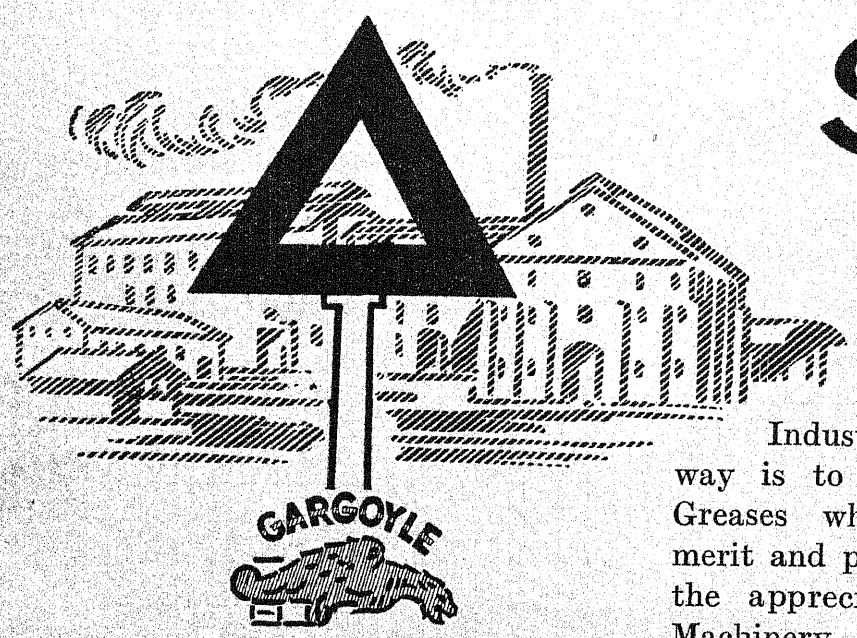
Presidential Address of Lala Padampat Singhania, delivered at the First Annual General Meeting of the Indian Sugar Mills Association, held at Gorakhpur on Sunday, the 6th August, 1933.

GENTLEMEN,

I have great pleasure in proposing the adoption of the Annual Report of the Association already circulated to you.

I take this opportunity of offering a few remarks on the state of the Sugar Industry during the last year. Thanks to the policy adopted by the Government of India of giving adequate protection to the Sugar Industry for a period of fifteen years, a large number of sugar factories have been established and plants for several more have been ordered. The response has been quick, and this industry has demonstrated that with adequate protection the country can soon become self-reliant as regards the supply, and internal competition operates to reduce the price of manufactured goods for the benefit of the consumer. It has come as a great relief to the agriculturists. The sugar-cane crop to-day is almost the only profitable crop. The factories mostly purchased cane at 0-5-0 per maund as against 0-2-0 annas per maund realised by the growers when cane was sold to others.

I feel it my duty to draw the attention of the public to the possibility of there being a larger production of sugar during the coming season than the average yearly consumption during the last three years. While I am no pessimist, I do not expect any such revival in trade and industries during the next year as would warrant the assumption of a higher figure of consumption of sugar in the country. According to the estimate of Mr. R. C. Srivastava, Sugar Technologist, Imperial Council of Agricultural Research, there will be an over-production of sugar in the year 1934-35 to the extent of about 6,000 tons. I cannot help feeling, however, that the estimate of Srivastava errs on the side of over-cautiousness. There are several factories which are producing more sugar than the capacity stated as a result of the working of the season for a longer period than is generally assumed and of the higher daily production. I regret I have not before me the actual figures of the consumption of sugar province by province but considering the number and the capacity of the factories situated in the United Provinces and in Bihar, I cannot help feeling that the production of these two provinces will be so great as will necessitate their capturing distant markets in the country for the sale of sugar produced by them. Till, therefore, the consumption of sugar in



Safety first

In selecting Lubricants for Sugar Mills, as in any other Industry, the safe and economical way is to rely upon those Oils and Greases which, by their outstanding merit and proved performance, have won the appreciation and commendation of Machinery Manufacturers and Plant Executives alike.

LUBRICANTS

the country increases as a result of the improvement in the economic condition of the country or of a change in the taste of the people, I feel that the time has come when we may cry a halt to the establishment of more factories in the country and particularly in the United Provinces and Bihar.

I may now turn to the various important questions connected with the industry that came up for prominent consideration at the Sugar Conference held at Simla on the 10th July, 1933. Having been invited by the Government of the United Provinces as a representative of the manufacturing interests, I attended the Conference. I regret that important questions for the stabilisation of the industry in the interests of the grower, the manufacturer and the consumer hardly found a place in the discussions in spite of our having made serious efforts for the purpose. Almost the whole time was taken up in the consideration of a proposal put forward by the United Provinces Government for fixing a minimum price for cane, zoning, licensing of factories, licensing of contractors, etc. The representatives of the manufacturing interests as also of some provincial Governments opposed this proposal as being fraught with dangers and difficulties and calculated to do more harm than good. I do not propose to deal with it in an exhaustive manner. Mr. H. C. Prior, I.C.S., Secretary to the Government of Bihar, rightly observed that it would be absolutely impracticable to enforce by legislation the payment of any minimum price for the cane. The reasons he adduced, were cogent. Firstly, against whom is the minimum price to be enforced? While you may be successful in enforcing the minimum price against the factories, you cannot fix the price to be paid by the contractor to the cultivator. Secondly, for what reason is the minimum price to be fixed? As you are well aware, cane varies in quality. Fresh cane is of more value than old dried cane, etc. On what basis then can the price be fixed? The problem of distance and of the amount of Railway freight also intervenes. What is more, it is not generally remembered that only about 5.8% of the total cane production of India is consumed by the mills and the fixing of the price of cane, even if it were practicable, will not touch the fringe of the problem, *viz.*, ensuring of a proper price being paid to the cultivator. A fixed minimum price will remove all incentive from improving the quality. It is to the interest of the manufacturer to pay the cane-grower well and to bring about an improvement in cane cultivation. Any legislation therefore which will fix the price of cane will be unworkable, impracticable and retrograde.

Regarding the Zone System, the Government of the United Provinces suggested that an area may be allotted to a factory from which alone it would buy its cane and which should not be allowed to buy cane from outside and further the cultivator should not be allowed to sell cane to any other factory. Will this not compel the cultivator to sell his cane to a particular factory and will it not open up the possibility of there being competition between ryots, where there is an excess of supply as to which of them is to be allowed to sell the cane. What little competition there is between factories will disappear and the result will be that the cultivator may suffer. From the manufacturers' point of view, too, there is a grave defect in the Zoning System, there being no guarantee that enough cane will be grown within the Zone of a particular factory.

The suggestion for the licensing of contractors was the most poisonous. It would place the factories under the thumb of contractors.

Since the Tariff Board reported, the industry has gained fresh experience. It is obviously necessary that the factories should be able to supply all the markets in India with white sugar as cheaply as possible. The first question that confronts us is that the price of sugar depends upon the price of cane, and the percentage extraction of sugar there-

Head Office: 93, Clive Street, Calcutta.

from. If we are to benefit the grower, the manufacturer and the consumer, it is necessary that the cultivation of cane should follow the lines of Java. There each acre of land yields 50 tons of cane with 12 per cent, sugar, *i.e.*, 6 tons of sugar per acre. In India one acre gives 13 tons of cane with about $8\frac{1}{2}$ per cent. sugar, *i.e.*, 1 ton of sugar per acre. If all the interests are to be benefited, there is no escape from the conclusion that agriculture must be improved. Then a much lower price per maund of cane will bring more money to the grower per acre, and the manufacturer will be able to sell sugar at a much lower price. It is in this direction that the Government, the public, the manufacturer and the grower should concentrate their efforts, and carry on vigorous research.

The most important question is the disposal of the bye-product *viz.*, molasses. The Tariff Board assumed a price of Rs. 1-8-0 to Rs. 2 per maund, but as you are all aware the removal of molasses has now become a burden to the manufacturer. The last annual meeting of the Federation of Indian Chambers of Commerce and Industry held at Delhi, a resolution* was passed asking the Government to take suitable measures for the production of power alcohol in the country, especially admixture of alcohol with petrol as a fuel for the internal combustion engines. The Sugar Conference also laid stress on it. I sincerely trust that the Government of India will take steps in this direction at an early date.

Another question that I wish to refer to is the question of Railway Freight. The bulk of the sugar factories in the country are situated in the United Provinces and Bihar, while the markets for sugar are distant. It is therefore necessary that sugar should be carried over large distances and unless the Railways give suitable facilities by reducing the rates of freight on sugar, it will not be possible for Indian sugar to compete with imported sugar in various markets. I therefore trust that the Railways will look at this problem of rates sympathetically and devise a suitable and scientific rate system by which factories situated in particular localities will be able to consign their sugar to particular markets with advantage, minimising unnecessary competition.

*This Federation invites the attention of the Government of India to the great handicap felt by the Sugar industry owing to the increasing difficulty experienced by factories and refineries in the disposal of molasses produced by them.

This Federation suggests that the Government of India should give full encouragement and assistance to the Sugar industry for production of power alcohol, especially admixture of alcohol with petrol as a fuel for the internal combustion engines. In particular, the Federation suggests that every measure should be adopted by Government in order to over-ride difficulties of a merely technical character, (*e.g.*, the existing denaturing rules) or relating to revenues, (*e.g.*), revenues derived by the Central Government from petrol or provincial Governments from country liquor).

The Federation recommends to Government that the import duty on rectified spirits, on molasses and on "rab" be increased to such an extent as would ensure adequate protection to subsidiary industries dependent on the Sugar industry in India from foreign competition.

In this connection, I would also like to mention that the rates of freight on cane are also high and admit of some reduction. It is preposterous to think that 12% of the price of cane has to be paid in its transportation over the Railways to a distance of about 25 or 30 miles. I wish the Railways concerned will give this matter their careful consideration with a view to effecting a reduction in the rates of freight on cane.

Early this year there were persistent rumours about the imposition of an Excise Duty by the Government of India on the production of sugar or alternatively of the removal of the surcharge. The Association has had some correspondence with the Government of India on the subject and I wish to point out once again that any such action by the

Government will seriously cripple the industry and constitute a considerable handicap on it. Either of the courses will adversely affect the cane grower, and the imposition of an Excise Duty will raise the price of sugar to the consumer. The absence of any realisation from the sale of molasses and the increase in the transportation charges owing to the necessity of sending sugar over large distances are factors which should not be lost sight of. I urge with all the emphasis at my command that the Government of India should take no steps which would impair their policy of protection to the industry during its period of infancy.

GENTLEMEN, when the Association was established last year, we had about 10 members. By the quality of the work that the Association has been able to do during the very first year of its existence, it has been possible to induce 32 other members to join the Association—thus bringing the total to 42—during the very first year. I am particularly glad to welcome among the members of the Association the mills situated at a great distance, *viz.*, Mysore Sugar Company, Limited, Mysore; Modi Sugar Mills, Begamabad; Ravelgaon Sugar Farm Limited, Ravelgaon, (Nasik); Marsland Price and Company Limited, Bombay and Pioneer Sind Sugar Mills, Limited, Karachi. Only a short while ago, two sugar mills in Bengal have joined the Association. The latest to join has been the Belsund Sugar Mills under the Managing Agency of Messrs. James Finlay and Company, Limited, Calcutta. The Association, I am glad to observe, has thus become fairly representative of the industry, including as it does in its membership mills from practically every part of the country;—22 mills from the United Provinces, 12 from Behar and Orissa, 2 from Bombay, 2 from Bengal, 2 from the Punjab, 1 from the Sind and 1 from Mysore. The membership also comprises mills having both European and Indian capital and management. I cannot help observing that the joining of the Association by these and other members is a mark of their appreciation of the work done by the Association during the brief period of its existence. In order to make the Association still more representative of the sugar industry, I extend a cordial invitation to all sugar mills to join the Association without any further delay. I hope that with the co-operation of a larger section of the industry, the Association will be able to display a still better record of work for furthering the interests of the industry which we represent.

As you will observe from the Report, the Association has done immense service to the cause of the industry by getting the rates of freight reduced, by removing differences between various factories, by supplying information to the members on various important matters, by bringing to the notice of the public the probable over-production in the industry if the establishment of factories is not checked, and by taking up matters affecting the sugar industry with the Central and Provincial Governments from time to time. It is no small achievement that the representative character of the Association was recognised within a few months of its establishment by the Imperial Council of Agricultural Research, by the Government of India and also by the Bihar Government which invited the Association to nominate a representative to the Sugar Conference at Simla. I take this opportunity of thanking the Government of India, the Provincial Governments and also the Imperial Council of Agricultural Research for the help that they have given to the Association willingly at all times. I also take this opportunity of assuring them that the Association will always be glad to co-operate with them in any way it can.

I would be failing in my duty if I did not observe that the Association is greatly indebted to Mr. B. M. Birla, our Vice-President, who has discharged his duties very conscientiously and zealously, and to the members of the Committee who have given their wholehearted co-operation.

WORLD SUGAR MARKET AS VIEWED IN JAVA

CONDITIONS IN JULY

During the period under review, the Sugar market generally has been void of any encouraging features for the future market, and the uncertain trend of the pending negotiations for the stabilisation of the sugar industry has created a nervous atmosphere in the main markets. Buyers have been encouraged to hold back, whilst holders of sugar positions have become discouraged, and in some markets, have liquidated their holdings. This has been the most evident in the New York Market where the Futures market has been subjected to regular declines. Actual sugars were sold also at the declining levels but the sales during the last fortnight have totalled only about 25,000 tons, indicating that the pressure has been mainly from the futures positions which reflected overbought conditions.

The decline in New York commenced on the July 19, when the Washington Sugar Conference broke up without reaching an agreement on the major point on which the discussions were based.

The London market was again affected by exchange fluctuations. The losses on the Raw Terminals in London for the fortnight were only 1¾d. per cwt.

The Java market remained unchanged and the main business passing has been in sugars rejected for export, in which some 10,000 tons has been sold in the interval. A small business was done in Browns for export.

Export business has been disappointing. Moderate business was reported to Hongkong, and sales have again been possible direct to the Calcutta market which is an encouraging feature in view of the fact that no direct sales have been possible for many months to this market. The other markets in India have entirely held aloof, the main difficulty of uncertainty being in exchange. Java sellers' prices were increased in line with the fall in sterling, but the ideas of the buyers in the Indian markets remained unchanged and the disparity in values only widened.

The only event of interest for the week was the sale of the balance of this year's outturn of Molasses sugar. The total production of this assortment is guaranteed not to exceed 65,000 tons during the present season, whilst a much smaller quantity is to be expected next year owing to curtailment of the crop to only about 500,000 tons total for all assortments. Supplies of Molasses sugar will, therefore, not be abundant. Sales by NIVAS during the period under review amounted to about 56,000 tons, which figure includes the above mentioned transaction in Molasses sugar and a line of 5,000 tons Browns for Japan. There is hardly anything doing in the SECONDHAND and prices are going down, buyers being reluctant to operate and confining themselves to covering their requirements with rejected sugar ex-crop 1931.

The total sales by the NIVAS were about 9,256 tons Whites, 4,725 tons Browns and 200 tons Softs, making a total to date of :

	Tons.
Whites	783,640
Browns	297,863
Softs	8,939
Molasses	17,527
Total ...	1,107,969

Price—limits remain unchanged as follows :—

Whites ex crop 1932 for export ...	F. 6
,, for local consumption (unsuitable for export) ...	F. 5.75 basis
,, for local consumption-full quality	F. 6.12½
Browns ex crop 1932, for general export	F. 5.50
,, for local consumption ...	F. 5.62½

All prices at per 100 kilos ex warehouse terms.

Hongkong.

A fair business was concluded for July and first half August shipments in Whites at F. 4.—and Browns at F. 3.67½ per picul CIF. Exchange uncertainty latterly also affects this market and buyers are inclined to await further developments before undertaking further commitments.

British India.

Business was done in Whites to Calcutta for shipment for the "Silverguava" early August at 7/10½ and 7/11 per cwt. C.I.F. There are further buyers at this basis but for special mill marks.

Colombo had buyers for Whites July at 7/7. Bombay buyers continue to divert early shipment commitments to out-ports such as Cochin, Calicut, Tellicherry, evidently reselling to these markets under the direct Java prices.

Karachi reports sales of some 2,000 tons Whites for export to Afganistan. There was a small interest in evidence from this market also, which was checked on the fall in exchange, and buyers again held off. Stocks were advised on the 29th instant as :—

	Tons.
Calcutta	4,800
Madras	1,600
Rangoon	1,700
Bombay	6,000
Karachi	5,000
Bhavnagar	5,200
Bedibunder	2,800

On the present Java prices and exchange we quote CIF. per cwt.

	Aug./Sept. shipment
Calcutta, Madras, Rangoon ...	7/11
Colombo, Bombay, Karachi ...	7/11½

London.

No special features were reported from this market. Exchange fluctuations unsettled the market. August tenders were also pressing but these were taken up by Refiners at around 5/3¾ CIF U.K. The fluctuations in Raw Terminals were not important at any period, the buyers' closing prices on July 28 showing a decline of 1¾d. against the prices ruling last fortnight. The closing prices ruling on July 29 were :

December	5/6½
March	5/9¼
May	5/11¼
August	6/2½

BABCOCK BOILERS

A WARNING

The name "Babcock & Wilcox" as applied to boilers, is of such long standing and is so well known that to many people it denotes a type rather than the specific make of boiler.

As a result we wish to point out that boilers bearing our name can only be obtained from us or our licensees. There are some boiler manufacturers who, for want of any intrinsic merit in, or originality of their own designs, describe their products as being "Babcock & Wilcox Type". Whilst we appreciate the compliment, we wish to warn prospective purchasers that only genuine Babcock & Wilcox Boilers, designed and manufactured by us, have the advantage of Babcock Engineering, Babcock Experience, Babcock Patents, and Babcock Service in looking after the installation when it has been made.

GO-AHEAD JAPAN

In spite of the adverse situation in foreign markets and possible reaction in the export trade, the keen and enterprising islanders in the Pacific are heady in expanding their cotton textile business. The fall in the value of Japanese Currency in the last eighteen months has been fully availed of by the industrial captains of Japan in enlarging markets.

That Japanese mills could consume, during the first half of this year, 93,000 bales of cotton more than in the corresponding period of last year, gives a picture of the progress. The purchases, during the second quarter of this year, increased by 55 per cent. in American cotton, and 60 per cent. in Indian, as compared with that in the first quarter. But, the figures for the first eleven months, ending June, 1933, supply a more reliable data. During this period, the purchase of American cotton decreased by 722,000 bales, and that of Indian cotton increased by about 566,000 bales, as compared with the same period of the last season.

The increase in the purchase of Indian cotton was partly due to speculative contracts, in anticipation of boycott, consequent upon the protective tariff against Japanese cotton goods. Had it not been for the preferental tariff as regards the Lancashire goods, it is highly problematical if the shrewd Japanese spinners would have declared a boycott of Indian cotton.

The cotton producer in India should suffer, if the Lancashire businessmen would prosper. In what manner Lancashire renders compensating help to the Indian cause, if not to that of Indian cotton, baffles understanding. The earlier the boycott, by Japan, of the Indian cotton is called off, the sooner will the Indian producer be happy and prosperous. As a price, at least, for India's sacrifice, why should India not expect Lancashire Members in the British Parliament to be more solicitous of her welfare? In the absence of any such avowal from the Lancashire *bloc* in the House of Commons, efforts should be vigorously made, during the visit of foreign cotton delegations next month, to place Japanese manufacturers on the same footing as Lancashireans.

Apart from this sorry *impasse,* into which the Indian producer finds himself, his anguish is all the keener, as news of the rapidly increasing consumption, by Japan, of raw cotton reaches him. But for the boycott, how much more cotton would Japan be importing from India, at a progressive rate in the coming years? All this promise of prosperity for the Indian producer will go in vain, as India is not free to act in her best interests.

Japan has equal cause for consideration as regards her exports of cotton goods to India. Though the grand total of the export of Japanese cotton goods has been steadily increasing from about 1,414 million square yards of cloth in 1931 to about 2,032 millions in 1932, and judging from the figures for the half-year, possibly to 2100 millions this year, the share to India has had a sharp fall from about 645 millions last year to about 538 millions this year. This stupendous fall is in utter contrast with the phenomenal rise in exports of Japanese cotton goods to India from about 404 millions in 1931 to about 645 millions in 1932. Considering that India is one of the biggest markets of the world, it is to be hoped that Japan will exercise all her resources in coming to an understanding with Great Britain, in whose hands India is as mere dough, in spite of her so-called representative institutions.

MERCANTILE BUILDINGS—CALCUTTA

The other country, which is nearly as big a market as India and where Japan, in her exports of cotton goods, is not faring well, is China. In this instance, unlike India, it is not due to the helplessness of China. Japan had to face the rebuff of China, who imported about 303 million square yards of cloth in 1931 but reduced the imports to about 217 millions last year, and perhaps to about 167 millions this year, judging from the half-yearly figures. The progressive decline in the case of China synchronises with the period of Japanese inroads on Chinese territorial integrity. But the figures, given for China, are inclusive of those for Hongkong, which, by the way, is not under Chinese control. Thus, the actual figures for China show even a sorrier state of affairs from the Japanese stand-point.

But, political and military Japan is separate from business Japan. Though helpful, in every way and all possible manner, to business interests, political Japan is, in many respects, the counter-part of Great Britain in the East. Of all things it caught the contagion of imperialism from the West. The lessons of history have nothing to teach Japan. But, she is more likely to be obsessed with the phenomenal increase of exports in cotton goods to Manchuria from about 38 million square yards of cloth in 1931 to about 98 millions in 1932 and about 187 millions this year, than to be impressed with their diminution to China. The population of Manchuria is not Manchu, but Chinese. How soon or how late, would they take to boycott Japanese cotton goods is difficult to prognosticate? But, sooner or later, Manchuria may let down Japanese business.

As for the dealings with other countries, Japan is doing eminently well, more especially in the Dutch East Indies and Egypt. Here, there is nothing, so far, which can antagonise these countries against Japan. But, in the modern race for national self-sufficiency among the nations of the world, any nation can develop or start its key industries, among which clothing is a major item, and then, self-interest must veto all other considerations, such as cheapness or quality. For the nonce, Japanese interests are secure.

It is to be hoped, however, that Japan will yet realise that international popularity, and not international imperialism, is the secure road to lasting happiness and prosperity. Her grasp of spiritual values, in the long run, should yet re-establish balance in her otherwise, keen, enterprising and affable people. The sooner that day dawns, the more permanent will Japan's success and the peace of the world be.

(*Continued from page 546*).

neither the consequences nor even the nature can be foreseen with any degree of accuracy.

In this position, there is need for India to recognise that, in the coming months and, probably, years, she will have need for all the determination she can command to support an industry which has come into being, as the cumulative effect of a variety of forces and considerations. We have always held, and with increasing conviction during the last few months, that the fortunes of India's economy, and her industries particularly, can be, and should be, shaped only with reference to the conditions in this country.

SUGAR CANE
and the
CATERPILLAR
DIESEL TRACTOR

A Steady Supply for the Mill

WET OR DRY—cold or hot—the grower who is equipped with "Caterpillar" track-type Tractors has power to keep the mill's cane supply steady. When wagons are also equipped with tracks—huge loads are hauled by the "Caterpillars" even through mud. Thus are mills kept operating at their most efficient capacity—cane spoilage is minimized—preparation for the next crop proceeds on schedule.

WORLD OF INDIAN FINANCE

Calcutta, September 1.

Money conditions have been easy through the week, with practically more lenders than borrowers. Various factors have combined to create this marked ease of money conditions. In addition to the usual sales of maturities of Treasury Bills there have been in the week liberal purchases of sterling by the Government and payments by the Treasury into the market on account of the repayment of the 5 per cent., 1933 bonds. To assess these factors together, it may be pointed out that Treasury Bills Maturities in the current week were about Rs. 1 crore, as against only Rs. 70 lakhs in the previous week. This increase in maturities has not been sufficiently offset by the increase in the weekly allotment from Rs. 144 lakhs during last week to Rs. 150 lakhs in the present. As for purchases of sterling the Government accepted at the last auction £710,000 as against £213,000 in the previous week. The payments on account of the 1933 bonds, which were made to-day, amounted to as much as Rs. 4 crores. Of this, it may be assumed, nearly Rs. 2½ crores was immediately available to the market. And the balance, together with the hitherto undrawn portion of 6 per cent. bonds 1933-36 should go to swell the amount of unemployed money.

Apart from their effect on money conditions, the Treasury Bills sales of this week possess a varied interest of their own. In the first place, the total amount offered shows a steep decline from Rs. 251.25 lakhs during last week to Rs. 145 lakhs during this week. It may easily be supposed from this that the drastic decline in the discount rate to so low a level as As. 12-11 per cent. has begun to tell on the Treasury Bills position. One might, perhaps, seek to explain the fall in the amounts tendered for the Treasury Bills auction by suggesting that the surplus funds of the market are seeking an outlet in Government securities. But by all tokens, of changes in prices or the turnover in the market, it is certain that no large volume of business is being done in Government securities. Besides, we have had somewhat of a rake's progress in the decline in the rates for Treasury Bills. In the beginning of the year the rate of Rs. 2-10-5 marked the climax of the rise which began from the beginning of December, 1932. From January to the end of March there was an unbroken decline in the rate, which ultimately came down to Rs. 1-2-6 per cent. in first week of April. A slight reaction was thereafter visible and Rs. 1-3-11 was all that the market was able to obtain from the Government in the second half of May. Since then, rates have had a serious cut week after week till the rate of As. 12-11 per cent. last week was reached, an unconscionably low level. Though the market still lacks reliable outlets for more remunerative investment, it cannot easily contend itself with so low a rate. Moreover, it cannot be lost on the investors that a significant change is occuring over the ways and means position of the Treasury. As was pointed out in these columns last week, the Treasury Bills Maturities during September come to nearly Rs. 9½ crores. To this has to be added Rs. 4 crores on account of loan payments and heavy interest charges about to be paid on September 15. It is entirely out of the question for the Treasury to attempt to rope in the required funds through the usual weekly sales and at the rates hitherto prevalent. It is open to them to increase the weekly them to increase the weekly amount on offer from Rs. 1½ to Rs. 2 crores expecting, at the same time, that this increase would not appreciably alter the prevalent sentiment or the rates. But this would not help them to find all the requisite amount, and the market might, therefore, well argue to itself that before long the Government would be obliged to reintroduce the intermediates, which would be tantamount to a confession of the change in the position discussed so far. The increase in the average rate of accepted tenders during the week from As. 12-11 to As. 13-6 per cent. shows that the Government recognise the change and are prepared to meet the market in respect of the additional inducement necessary for making sufficiently large sales of Treasury Bills.

In this position the Government may well have been influenced by the steady rise in the Treasury Bills discount rate. By allowing the discount rate to rise, the Government may even succeed in preventing a too strong reaction from the decline of the last four months. At present it is a fair balance between the increased needs of the Treasury on the one hand and the addition to the surplus funds of the market on the other. It will be sometime before

an equilibrium between the two could be found. Taking all circumstances into consideration, we may venture to suggest that the proper rate which would be fair to the Treasury and would be sufficient inducement to the market would be somewhere between As. 14 and Re. 1 discount.

The increased offer of sterling during the week has been regarded by certain circles as somewhat intriguing. It has been suggested that part of it, at any rate, represents an anxiety to make remittance abroad against a probable or even imminent reduction in the exchange ratio. In the middle of the week one was confronted here and there with reports to this effect. Though attempts have been made of late, not altogether without reason, to revive the question of the ratio, there is no reason to believe that Government have taken this question on hand. Much less is there reason to believe that any particular action is imminent. At any rate, it may be said that the amount of sterling on offer during this week's tender has nothing to do with the nervous fears of the ratio. For the increase in the price of gold consequent on the drop in the sterling-franc rate is more than sufficient explanation for anticipations of increased shipments of gold and of consequent demand for cover against such shipments. Whether and how long the present level of gold prices will continue and whether gold will be forthcoming in large amounts for export, are questions to which no definite answer is possible. But the Government might well congratulate itself, as, indeed, His Excellency the Viceroy has done in his speech to the Legislative Assembly, that they have been able to get a large volume of remittance and on such easy terms, at a time when they would like to strengthen their sterling balance in view of the impending changes.

This is one of the many factors that should tend to put up the credit of India and afford new strength to the Government securities market. It is unfortunate that, inspite of the manifold reasons for a quick and sharp advance in prices, the hopes of those, who had agreed with our prognosis, have not so far been fulfilled. The cause for this disappointment is to be found, not in any latent fallacy in the reasoning adopted in these columns, but in the interference of small unexpected factors with what should otherwise have been the smooth and rapid progress of the giltedge market. During the week 3½ per cent. sterling has had a rise of £1½; and in India the 3½ per cent. paper has had a rise of Re. 1 between last Friday and this. There can be no doubt that the rise would have been much steeper if Bombay had not been overbought, and every rise had the effect of inducing jobbers to profit-taking. This tendency is bound to continue for sometime, till the weaker operators are out of the field. If this elimination should coincide with the time, when the full impact of the several crores of loan payments is felt, then there can be no doubt that price levels which are now more or less despaired would be accomplished fact. The rise of only As. 5 in the 3½ per cent. New Loan is rather disappointing; but till the surplus scrips of 4 per cent. 1960-70 and 3½ per cent. paper are absorbed, such a lag in the New Loan is inevitable. When 4 per cent. 1960-70 touches par, it is more then likely that the attention of investors would be diverted to this ill-starred issue. The prospects are distinctly good, the rise is certain, if, probably, somewhat slow.

A marked contrast of the 3½ per cent. loan is the Punjab Loan which to-day is wanted at Rs. 99-14 as against the quotation of Rs. 98-2 on Friday last. It would be hardly convincing to suggest that the Government of the Punjab commands a higher credit in the market than the Government of India, whose last issue is still neglected at objectively attractive levels. The rise is rather to be attributed to a possible oversold position. It is learnt that the market expected a partial allotment and speculators had got caught, the scrip being tightly held by genuine investors and there being very little available for the professional operator. When the reaction comes, as, indeed, it is bound to, it will be as fallacious to attribute the decline to changes in the intrinsic position as it is to suggest that the present rise is due to the higher credit of the Government of the Punjab.

Exchange was steady due chiefly to shipments of gold. On the weekly tender day, applications came to £710,000 at 1s. 6 1/16d., and the allotment was in full.

(*Continued on page 593.*)

OTHER INDIAN MONEY MARKETS.

(*By Wire.*)

(From Our Correspondents.)

Karachi, September 1.

Exchange was slightly steady on advices from Bombay where gold shipments are the chief factor. The strength of the rupee is not due to the improvement in business. Depreciation of sterling in terms of gold and apprehension of people still on gold standard that their resistance to participation in inflation of values through monetary devaluation cannot hold out long, are combining to create new records in the rupee price of the yellow metal. Local banks have bought in nominally.

Bank's selling rate is 1s. 6 1/32d. but important clients can get 1s. 6 3/64. An exporting house offered to sell at 1s. 6 1/16d.

Three months bills quoted 1s. 6 1/8d.

Money continues easy with no borrowers for call even at 1 per cent. Local banks are reported to be contemplating to further reduce interest on savings bank accounts.

The statement at the head of this article reflects, and also epitomises, the principal changes in the world of international finance, currency and exchange during the week under review. It will be seen that sterling has, at the same time, appreciated in relation to the dollar and depreciated in terms of the franc. From the indications of the past few months, one may reasonably conclude that both the developments are equally unwelcome to the monetary and currency authorities in London. The subject has been going into at length in an Editorial article of this week; and here it may be useful to consider in the light of these developments the possibilities of future developments. So far, the policy of the authorities in Britain may be said to be the maintenance of a stable link between the franc and the pound, and at the same time, the prevention of any appreciation of sterling in terms of the dollar.

It would not be possible for any one to suggest that in the attempt to maintain the stability of the sterling franc rate, the national resources were being unnecessarily dissipated. The problem arises, therefore, only when sterling undergoes the depression natural in the autumn. Left to itself, the Bank of England would not have minded risking some loss in the attempt to maintain the sterling-franc rate in the face of a seasonal slump. But they must have recognised that now the loss involved would be sufficiently big to induce protests from various quarters and to necessitate explanations which would not fit in with the avowed policy of the Government. The drop in the sterling franc rate, accompanied as it is by a recovery of the dollar, calls for a clarification of the monetary and exchange policy of Great Britain.

There is no sign that the authorities are now prepared to face up to this problem. In the absence of reports regarding differences of opinion between the Bank of England and the Treasury, one would have thought that there is a growing support for the understanding arrived at among the members of the British Commonwealth regarding the desirability of organising among themselves, and, if possible, with the support of other countries also, a sterling *bloc* with a common exchange policy. There can be no doubt that the interests of Britain, as well as the greater part of the world, could be well served if Great Britain decides in this stage of flux in international currencies to pursue a common understanding as to the essential features and objectives of the sterling *bloc*. Some time ago, it was pointed out in these columns that the drop, mild as it was, which was allowed to occur in the sterling franc rate a fortnight ago after the break up of the World Economic Conference, was due to the desire of the Government that the British Government have no commitments in regard to the exchange value of sterling to foreign countries. If that view were correct, the developments of the week could be regarded as a slow retreat from the position implied in the former steadiness of the sterling franc rate.

But the reports that have appeared during the week lead us to suppose that the present pre-occupation of the British Government is not so much the fate of the sterling franc rate or the gold value of sterling in the immediate future, but the future course of the dollar and the fate of the cross rate. For, Mr. Roosevelt and his advisers are of late credited with the desire to regularise their monetary policy and the position of the dollar. It is true that the recovery programme has not arrived at a stage, in which the Government may take definite action without the fear that the further progress of the programme might be in danger. But the last one month has, to some extent, separated the problems of the recovery of internal industrly from the external value of the dollar.

From Mr. Roosevelt's point of view, the questions calling for immediate solution are (1) the definite reduction of the gold content of the dollar by exercising the power granted to him under the Inflation Amendment; (2) the establishment of a free gold market in New York and (3) the provision of additional currency to sustain prices at the levels now attained. The week's news has shown that, barring the first, all these questions have had a tentative solution. The question of a free gold market has been solved by the proposal described in the leading article of this week, A preparation for this end had been already made a fortnight ago by the decision of the American administration that the export of gold amalgams and precipitates to foreign countries by American mines was not covered by the embargo as it was originally imposed. But now that the Treasury has been authorised to buy gold from American mines at a rate equivalent to the best gold price aborad, with due deduction on account of freight and insurance chances, there is little or no incentive for American mines to export the amalgams and precipitates to foreign countries. But it must be recognised that the new regulations do not limit the value of the dollar in the future as the authorities are content to assure the gold mining companies a fair price in dollars for their output. As regards inflation, it is learned that the Federal Reserve Banks have under the authority of the Treasury bought large amounts of Government securities and thereby increased the volume of surplus funds in the market. For nearly a month, the open market purchases by the Federal Reserve Banks have been virtually in abeyance, possibly because the Government felt at the time that any addition to the resources of the market would have the undesirable effect of encouraging speculation in the stock and grain exchanges. There can be no doubt that during the period, in which there was a pause in the purchase of securities from the market, the American Government were definitely of the view that any further rise in stock and commodity prices was far from welcome. Such an opinion was expressed by more than one important member of the Government. Now the Government probably feel that inasmuch as the speculative fever has run its course, inflationary action might be relied on to produce more wholesome effects. There are now two sides to the policy pursued by Mr. Roosevelt. One is the addition to market resources resulting from the pursuit of the policy of open mafket purchases on a large scale. The other is the grant of compensation to farmers who agree to a reduction in acreage. The latter is a more longstanding, and, therefore, a more potent, factor in the course of future prices.

But the Administration has also to reckon with the intrinsic strength of the dollar in the exchange market in this part of the year. The last fortnight has shown that the authorities are powerless in the face of the seasonal slump in sterling unless it be that they deliberately favour a decline in the cross rate. It cannot be that the Recovery Administration are prepared to forego the advantages of a low dollar. Nor can it be that the Administration is capable of changing the dollar except through the crude instrument of wild talks of inflation. They are less and less disposed to the latter; and it has become more necessary, therefore, that the Administration should devise a machinery, through which changes in the external value of the dollar within short ranges could be effected as desired. We We are, thus, led to the view that the next step in American monetary policy will be the establishment of an Exchange Equalisation Fund. And the is undoubtedly, what has drawn Mr. Montague Norman all the way from London to New York.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE.

(From Our Correspondent).

Thursday, August 31.

This market has been featureless except for very good enquiries for Coal. The Government Securities market has been dull and uninteresting. 3½ per cent. Paper kept steady at Rs. 85-8, 4 per cent. 1960-70 loan was marked up to Rs. 98-8, 5 per cent. 1940-43 quoted Rs. 107, 5 per cent. 1939-44 loan Rs. 107, 5 per cent. 1945-55 Rs. 113-5, 3½ per cent. New Loan Rs. 94-14 and the 4 per cent. Punjab Loan Rs. 99-6. The Imperial Bank rate remains unchanged at 3½ per cent.

Jute.—These shares were quiet but steady. Business in high-priced stocks being chiefly in small lots with no particular feature of interest. Howrahs fell from Rs. 49-8 to Rs. 49-2, Kamarhattys improved to Rs. 455, Anglo-Indias quoted Rs. 350 s. 1., Kanknarrah Rs. 432-8, and Nationals Rs. 21-6.

Cotton.—This section showed little or no change. Dunbars (Ordy.) quoted Rs. 100, Kesorams Rs. 3-4 and Benares Cotton and Silk Re. 1-2.

Coals.—There was quite a good turnover in this section at the commencement of the week but towards the close on account of profit-taking prices in many cases fell back after touching the highest limits. Burrakurs after quoting Rs. 13-4 were on offer at the close at Rs. 12-14. Equitables were easier at Rs. 19-4, Sendras fell back from Rs. 9-4 to Rs. 8-8. Bengals improved to Rs. 233, Raneegunge to Rs. 35-12, Standards rose to Rs. 27-12, East Indias to Rs. 16-12, New Beerbhooms to Rs. 11-10, Rewa Rs. 11-4, Ondal Rs. 10-4, and West Jamurias Rs. 8-4.

Teas.—In the auctions held on the 28th and 29th inst., quality continued to show a decline but a good selection of Assam tea were on offer. There was a good enquiry for all grades, especially leaf teas and leafy broken pekoes. Prices were not maintained, but on the basis of 3 pies below last rates the full quantity on offer was readily absorbed. Dusts met with strong enquiry. Common types were unchanged.

Miscellaneous.—In this section very few transactions took place. Bararee Coke were on offer at Rs. 10-4, Indian Galvanising accounted for a transaction at Rs. 9-8, Bengal Chemical (Ordy.) Rs. 282, Arthur Butler Rs. 4, Bengal Iron Rs. 2-13, Indian Iron and Steel Rs. 4-5, Ivan Jones Rs. 5-2, Bengal Paper Rs. 72-8, s.i. 1. B. I. Corporation (Ordy.) As. 15, Bengal Telephone Rs. 15-12, Indian Standard Wagon Rs. 43-8, Calcutta Tram Rs. 15-14, Madan Theatres As. 8, Rs. 43-8, Calcutta Tram Rs. 15-14, Madan Theatres As. 8. In Sugar share, Balarampur Rs. 11-4, Carew & Co., Rs. 14-6, Cawnpore Rs. 36, Boorah Timber Rs. 44-8 s. 1. and Murree Brewery Rs. 166 s. 1.

Banks & Railways.—In Imperial Bank shares the fully paids improved from Rs. 1,197 to Rs. 1,198 but the Contributories were unchanged at Rs. 294. Central Bank were unchanged at Rs. 23 ex-dividend. Allahabad quoted Rs. 327 and Rs. 160 respectively and the Eastern Bank Rs. 65. In Ralway shares, Hardwar-Dehra branch quoted Rs. 102, Darjeeling-Himalayan (Ordy.) Rs. 73 and Champarmukh-Silghat Rs. 71 s. 1.

MADRAS STOCK EXCHANGE.

(By Wire.)

(From Our Correspondent).

Madras, August 31.

The securities market was very active both on investment enquiry and speculative account. 4½ per cent. 1934, 5 per cent. 1935, 6½ per cent. 1935, 5 per cent. 1939-44 and 5 per cent. 1940-43 all noted transactions at full rates with buyers over. A good investment enquiry has lifted the price of 1960-70 loan to Rs. 98-8. Mysore Loans continued popular. 5½ per cent. and 5 per cent. were taken up at the improved rates of 109-4 and 113-4 respectively. Scrip is in short supply. There was no transaction in Port Trust, Municipal and joint stock company debentures owing to lack of sellers.

In Preference shares Tata Steel Second Preferences noted several deals around par with several buyers unsatisfied at the close.

Bank shares were firm. Imperial Banks fully paids were done at Rs. 1,205 and 1,210 and partly paids at Rs. 298 and Rs. 295. Mysore Banks and Bank of Indias have improved to 215 and 106 respectively.

Electrics noted no dealings.

In Cements Indian Cements were done at 310.

Cotton mills were steady. Buckingham and Carnatics were absorbed at 182-12 ex dividend with possible buyers over. Cambodias were a weak feature with sellers at par.

Sugar shares were steady. Samastipurs were taken up between 15 and 15-8 cum dividend while they were wanted at the close at Rs. 15 cum dividend.

The tea market was dull.

In rubbers a line of Cochin Malabars changed hands at 6 annas.

In the miscellaneous section, on the rise in the price of silver, Burma Corporations were a feature with good buyers up to Rs. 9-2 cum dividend. Apart from isolated deals in Kolar Goldfield group, this section was lifeless. Markets closed with a steady undertone.

Exchange remains steady for near deliveries but is a shade quieter for forward in spite of a complete absence of enquiry for remittance for these positions. A few near bills have been placed at market rates and there has also been some import enquiry for September and October.

Call money is quoted 1 per cent. and is wanted to a small etent.

BOMBAY STOCK EXCHANGE

(By Wire).

(From Our Correspondent).

Bombay, August 31.

As August 24 was a holiday the closing rates mentioned below are of the 23. Giltedge securities remained firm, the rate for 3½ per cent. Government Paper advanced from Rs. 84-11 to Rs. 85-14 and was finally quoted at Rs. 85-9. Further advance seems likely. The Share market was closed on August 25 the next two sessions witnessed an alround rise due to the release of Mahatma Gandhi. There was also an improvement in cotton rates. Later except for Bombay Trams rates have given way on bulls liquidating. Textile mills have been faring badly and cotton prices have declined. Tata Power shares on rumours of an unlikelihood dividend were also affected. The rates are as follows:

	Previous closing	Lowest touched	Close to-day
	Rs. A.	Rs. A.	Rs. A.
Bombay Dyeing ...	780 0	773 12	793 2

JUTE AND JUTE GOODS

JUTE.

During the week under review the Jute market in Calcutta has ruled quiet but steady with small day to day fluctuations. The highest and lowest for Jute October futures were Rs. 31 and 29-12 respectively.

Business has been done by the mills in Indian Jute LR and XLR at Rs. 4-12 and Rs. 4-14 per maund respectively, while there were sellers for District jute at annas two less. The selling pressure, in view of larger arrivals and clearances being due to the impending approach of Pooja festivals, is very heavy. Mills this year have purchased comparatively smaller quantities uptill now. Consequently the local sellers not having been in an advance sold position, are buying in the moffussil very cautiously. Earlier in the month moffussil dealers and holders showed sufficient resistance, but the force now seems to have been exhausted, the buyers showing no inclination whatsoever to raise their buying limits. Consequently the quotations in the moffussil have been lowered and holders are now more keen for business, but not getting on satisfactorily.

The final jute forecast is due to be out on September 5th next. If the acreage figure is correct, the out-turn of jute is not expected to be below 80 lakhs of bales, a quantity which is just enough for the year's world jute requirement, according to the present curtailed production of jute goods. However one bull operator is buying jute in anticipation of a lower forecast. The information about the jute acreage forecast is said to have leaked out and in case the information about the final forecast also leaks out, the efficiency of the department will be seriously challenged.

There has been small business in Ready Firsts at Rs. 28-4 with sellers over. The oversea markets are fully satisfied at the moment. They expect a crop of over 80 lakhs of bales. The future trend of the goods market being weak their purchases during the past few weeks have been on a very meagre scale. Continental spinners are looking forward for lower prices of jute.

Taking into consideration the present state of affairs the immediate trend of the raw jute market is far from bullish.

Quotations :—

JUTE MANUFACTURES.

After ruling fairly steady during the earlier part of the week the market has ruled very quiet towards the close. The strength in the hessians market was mainly due to speculative buying, a local bull operator buying August positions furiously. Prices of nine porters ready in consequence were forced up to Rs. 11-12 and that of November to Rs. 10-4. The squeeze was, however, oevr and values have come down to Rs. 10-2 and Rs. 9-13 respectively.

The position of the heavy goods market remains as unsatisfactory as ever. The demand from consuming centres is poor and stocks are accumulating. The tendency of the market is far from bullish. Unless world conditions in general take a turn for the better the immediate future of jute goods is far from satisfactory. Long bulls are advised to hold back from the market at the moment.

The total reported sales for the week ending Saturday the 26th August, 1933.

COTTON AND COTTON GOODS

COTTON.

(By Wire.)

(From our correspondent).

Bombay, August 31.

The Cotton market, on the whole, ruled quiet but latterly as was expected inflation in New York was not witnessed and as the crop there was expected at thirteen million bales, an easier trend re-developed Broach the previous rate of Rs. 205 touched 210 and was quoted to-day at Rs. 208-8.

Karachi, September 1.

Cotton is easier in sympathy with bearish advices from Bombay and New York. Ready demand is poor. Sind Desi is quoted 15-8 for ready and 16-3 January. Sind American is quoted 20-4 for ready and 20-3 January.

The market during the week under review has ruled featureless and fluctuations have remained narrow.

Demand from Europe has been poor, only a small enquiry being noticeable from China. Japan has been as usual out of the market. Weather conditions have been very satisfactory and having a bearish effect on the market.

Trading in July-August Broach terminated on 23rd at Rs. 185/-, and 34,5000 bales were tendered against this contract.

From the information available from Japan it appears that Turkish cotton has already reached Japan and that the quality and price do not work out unfavourably in comparison with Indian cotton. Turkey is reported to be in a position to supply 8 lakhs bales annually to Japan.

The lifting of the embargo on gold export in U. S. A. had a bullish effect on the Bombay market, but the American markets in general were weak. The bear covers were offset by long liquidation and therefore there was no change in values on balance.

PIECEGOODS.

Since reporting last week there has been very little change in this market.

The low prices of jute have not brought in Pooja demand as anticipated, consequently there has been very small business for forward positions.

A certain amount of forward business has, however, been possible but in no section has there been any serious attempt at bulk operations, the quantities involved being of a retail character. Indigenous mills appear to have transacted most of the week's turnover, contracts having been arranged in a variey of goods including greys, whites and dyed fancies. In Lancashire styles, light whites, white yarn dhooties and fancy sorts have attracted most attention, resulting in small orders.

Operations in Japanese productions do not appear to have brought out much in the way of actual forward business as traders are awaiting the results of the forthcoming Simla discussions. In the meantime, activity in respect of Japanese goods is being confined to sales of spot goods, such as grey shirtings, grey dhooties, white shirtings and fancy seasonal lines.

So far as the ready position is concerned, dealers generally report a poor offtake especially for this time of the year, when the Poojah demand is usually at its height. Up till now, however, only the merest trifles are being taken by up-country merchants, who are reported to be buying only half the quantity of goods as compared with last season's purchases. In sympathy with the quiet state of affairs, local values are somewhat weaker than those ruling in the previous week, especially for certain styles of Japanese goods.

Few signs of activity have been noticed in the yarn section and although occasional sales of moderate dimensions have transpired in certain quarters, these have been exceptional and the general turnover cannot be regarded as anything but unsatisfactory. The improvement referred to in the previous week's report has not been maintained and the market has relapsed into a state of inactivity, buyers preferring to await further developments before adding to their existing commitments.

The steady accumulation of stocks is causing a certain amount of anxiety because it is generally felt that unless some relief is forthcoming in the near future present bazaar values may be adversely affected. Such transactions as have been reported principally concern spot sales of Japanese 40s. grey and the coarse and medium counts of Indian yarns. Inquiry for Lancashire spinnings of the American and Egyptian fine varieties has not yielded any fresh orders but this was inevitable owing to the wide disparity between buyers and sellers ideas of values.

"Wanted Lady Partner with capital to join European in an old established business in Bombay. Light, congenial work. Open to every investigation." Apply Box No. 595, c/o. *Indian Finance*.

BULLION

GOLD.

(By Wire)

(From our correspondent).

Bombay, August 31.

In the gold market there have been spectacular falls in sterling-franc rate by merely three francs ; local bears and option dealers hurried their coverings. Stormy scenes were witnessed in the market and tempestuous buying took place. Since yesterday the excitement has comparatively subsided. The highest touched by gold was Rs. 32-4 and was finally quoted at Rs. 32, the touched lowest rate touched by sterling-franc was 81.05.

Following the depreciation of sterling in terms of the French Currency to 81.25 francs the gold market in London has gone up to £6-9-7 and in the local market to Rs. 32-2 per tola. The lifting of the embargo on the export of gold from U. S. A. had no effect on the markets whatsoever, the London-New York cross-rate remaining at about the same level, viz. 4.53.

The arrivals of distress gold and export thereof from India continue unabated. Stock position and internal consumption remain almost unchanged as reported last week.

(London—Air Mail week).

The gold reserve against notes of the Bank of England was £190,162,445 on the 9th August showing a slight increase over the previous Wednesday's figure of £190,155,514.

During the week the Bank did not make any purchase of bar gold.

Supply of gold in the open market was substantial and buying was mostly from the Continent. The keenness of demand persisted and a moderate premium over the franc parity was maintained in the price.

SILVER.

(From our correspondent)

By Wire.

Bombay, August 31.

The silver markets, both foreign and local, were singularly quiet undergoing only narrow fluctuations. On balance a small rise of four or five annas per hundred tolas was recorded.

The week has remained almost featureless without any events to record. Values in sympathy with gold have been slightly better, London standing at 18d. and local at Rs. 56-2. Daily offtake however remains poor as usual, and stocks are heavy. The rise has been due to bear covering. The tone of the market is however barely steady and values are expectd to remain more or less near about the present levels.

London: (Air Mail week).

Price fluctuations were small. The tendency, of the market, however, was more easy. Some hesitation on the part of buyers was noticeable.

Sales from Continental sources continued, but support was forthcoming from China because of the lower prices. Re-sales as well as occasional buying by the Indian bazars and speculators also continued. America's disposition to buy was greater in the afternoons, without, however, exerting pressure.

At the moment the market appears to be fairly steady and there is no tendency towards any important change.

SUGAR

The market during the week under review has ruled quiet but steady with a small amount of business passing.

The lowering of Java prices for India had a very little effect on the market and no fresh business is reported done either from the Eastern or from the Western Coast.

New York and London markets have been steady and there has been a small advance in values at both the places.

TEA

Sale No. 12 was held on 28th and 29th August, 1933, when 14,000 packages of leaf with export rights, 6,000 packages for internal consumption and 5,000 packages of dust were sold at anna 9-3, 4-2 and 4-2 per lb. respectively.

The buoyancy in the market that was noticeable at the opening sales of the season is waning away and for the last two or three weeks prices are showing a decline. Assam teas were especially weak.

For internal consumption the enquiry was good, but prices were 3 to 6 pies lower.

Dusts met a strong enquiry. The values were however more or less unchanged.

The following are full particulars of Sale No. 12 :—

Teas with Export Rights.

	1933.	1932.	1931.
Offered	18,618	25,400	21,100
Sold	14,009	23,335	19,849
Average	0-9-3	0-5-2	0-6-10

Teas for Internal Consumption.

	1933. Leaf.	Dust.
Offered	6,884	5,754
Sold	6,360	5,427
Average	0-4-2	0-4-2

Quotations :—

Common Broken Pekoe Souchong ...	0-7-6	0-4-0
Common Broken Pekoe ...	0-7-9	0-4-0 to 0-4-3
,, Pekoe ...	0-8-6	0-4-6

Teas for Internal Consumption.

	29th Aug., 1933.
Common Broken Pekoe Souchong ...	0-3-9
,, Broken Pekoe	0-4-0
,, Pekoe	0-5-0

INDIAN TEA SALES.

At the London auctions on Aug. 28, 19,000 packages of Indian tea were submitted for sales.

There was a strong demand for good teas at firm rates which were occasionally irregular. Common sorts were easier.

The following were the lowest prices fetched during the day's auction.

Common Pekoe last auction 9½d., to-day's auction 9¾d. lb. ; Common Broken Pekoe last auction 9½d., today's auction 9½d. lb., Common Orange Pekoe last auction 9½d. to-day's auction 10½d. lb. ; Common Broken Orange Pekoe last auction 9¾d., to-day's auction 10d. lb. ; Common Broken Pekoe Souchong last auction 9½d., to-day's auction 9½d. lb.

The following are the value prices :—

Clean Common Pekoe last auction 9⅞d., to-day's auction 9¾d. lb. ; Clean Common Broken Pekoe last auction 9⅞d., to-day's auction 9¾d. lb. ; Clean Common Orange Pekoe last auction 10⅛d., to-day's auction 10d. lb. ; Clean Common Broken Orange Pekoe last auction 10¼d., to-day's auction 10d. lb. ; Clean Common Broken Pekoe Souchong last auction 9¾d. to-day's auction 9½d. lb.

At the London auctions on Aug. 28, 25,400 packages of Indian tea were submitted for sale.

There was a good demand for most descriptions. Common qualities were often a farthing per lb. higher. Other sorts were firm.

The following were the lowest prices fetched during the day's auction :—

	Last auction per lb.	To-day auction per lb.
Common Pekoe	9¾d.	9½d.
Common Broken Pekoe ...	9½d.	9⅜d.
Common Orange Pekoe ...	10⅛d.	10d.
Common B. O. Pekoe ...	10d.	9¾d.
Common B. P. Souchong ...	9½d.	9½d.
The following were the value prices :—		
Clean Common Pekoe ...	9¾d.	9¾d.
Clean Common B. Pekoe ...	9½d.	9¾d.
Clean Common O. Pekoe ...	10d.	10d.
Clean Common B. O. Pekoe	10d.	10d.
Clean C. B. P. Souchong ...	9½d.	9½d.

JAVA TEA SALES.

At the London auctions on Aug. 24, 8,200 packages of Java and other teas (including Sumatra) were submitted for sale.

There was a quieter market. Fine and Dust teas sold at about last week's rates. Other sorts were irregular and often a farthing per lb. lower. The inquiry for export was moderate.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 8d. to-day's auction 7¾d. lb.; Common Broken Pekoe last auction 7d., to-day's auction 6d. lb.; Common Orange Pekoe last auction 7¾d., to-day's auction 9¼d. lb.; Common Broken Orange Pekoe last auction 7¾d., to-day's auction 8d. lb.; Common Broken Pekoe Souchong last auction 8d., to-day's auction 8d. lb.

The following were the value prices:—

Clean Common Pekoe last auction 8¼d., to-day's auction 8d. lb.; Clean Common Broken Pekoe last auction 8⅛d. to-day's auction 8d. lb.; Clean Common Orange Pekoe last auction 9⅛d., to-day's auction 9⅛d., lb.; Clean Common Broken Orange Pekoe last auction 8¼d., to-day's auction 8⅛d. lb.; Clean Common Broken Pekoe Souchong last auction 8d., to-day's auction 8d. lb.

TEA AVERAGE PRICES.

The following were the average prices of tea in the London market during the week ending Aug. 24:—

	Last week lb.	This week. lb.
Indian Tea (Northern) ...	11,30d.	14.96d.
Indian Tea (Southern) ...	11.50d.	10.90d.
Ceylon Tea	14.89d.	15.41d.
Java Tea	9.36d.	9.27d.
Sumatra Tea	8.33d.	8.08d.

Quantities to Sale Next Week.

Indian: 51,700 packages, of which 50,000 are on garden account.

Ceylon: 23,100 packages of which 22,900 are on garden account.

Exports from Northern India from 1st April, 1933, to 29th August, 1933.

GRAINS AND SEEDS

WHEAT.

(By Wire)

(From our Correspondent.)

Karachi, September 1.

In spite of the decisions of the World Wheat Concontrary, the outlook is decidedly more gloomy. Internal ference, there is no improvement in the market. On the price being above world parity, heavy stocks militate against any immediate optimism. Other India wheat centres are also weak. The ready market has come down to 22-8 and September is weaker at 22-5-3.

During the period under review wheat market in Calcutta has ruled quiet and values on balance are lower than those of the preceding week.

The decline may be attributed partly to satisfactory rains in the wheat districts and in consequence an anticipated good crop next season. For the same reason longholders are now getting nervous and unloading their ready stocks on the market without finding trade buyers. Another reason for the decline has been the general weakness in grains and further decline in the values of rice, barley and maize. The demand for flour remains very dull and thus does not justify the speculative rise in values which is naturally short-lived.

World markets have remained very irregular. The crop forecasts as published in our last week's issue are bullish in some places. The recent wheat agreement had a bullish sentiment but had really no effect on the market. U. S. A. and United Kingdom markets have remained weak in spite of the agreement and the official announcement by the U. S. A. Government to curtail production by 15 per cent. for the next season.

WHEAT AGREEMENT.

An agreement on the world price of wheat and on the limitation of supplies was reached on August 26, in London Wheat Conference at which 29 countries were represented.

The following were agreed:

1. The Agreement holds good for two years.
2. A price of 12 gold francs per quintal or 63.08 gold cents per bushel be asked from the importing countries on which level they have to adjust their tariff.
3. The exporting countries have agreed to limit their exports during 1934 to 560 million bushels.
4. With the exception of Russia and the Danubian countries, the others are to reduce the production by 15 per cent. in the year 1934-35.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

EDDIES OF INTERNATIONAL FINANCE

The waters of international finance are now eddying with the emergence of strong under currents that have, doubtless, been flowing for some time. The violent fluctuations and the steep fall in the sterling-franc rate, with their corresponding changes in the sterling price of gold, considerable as they, are, reflect but inadequately the changes that are occuring in the monetary and currency policies of the principal countries and those that are indicated thereby. The broad fact of the present situation is that, while sterling is depreciating in terms of the franc and the gold currencies, the dollar is making an unexpected recovery, tending to put up its value in terms of sterling. It is only to be expected that, with every fall in the sterling-franc rate, the price of gold in sterling goes up, and more so because the tendency to pay an extra premium in sterling for gold, over and above the price justified by the prevalent sterling-franc rate, continues owing to the anxiety, with which the fate of the gold currencies is generally regarded in Europe and elsewhere.

* * *

In this position, the monetary and exchange policies of the three leading countries namely, France, the United States and Britain, are directly concerned and they seem to call for a re-examination in the light of those developments which are unexpected. So far as France is concerned, there is, as yet, no indication that the French are regarding the present position as adverse to the national interests. Time and again, during the course of the World Economic Conference and since its break up, the gold standard countries have re-affirmed their intention to maintain the link between their currencies and gold at the current rates. If there should be in the future any deviation from such a policy, it would be purely because of the force of uncontrollable extraneous circumstances. Such extraneous circumstances would not be wanting, so long as America regards her currency and exchange policy as subordinate to every other requirement of her national economy. The press reports that have appeared during the week emphasise that financial authorities in Paris are watching the movement of the dollar and the pound with an eagle eye and they do not disguise the ultimate danger to the franc, remote though it may be to-day. Despite the determination of official policy and the amplitude of national resources for maintaining the stability of the franc, there is in the background the ultimately dominant question as to how far France will be able to face the depreciation in two such major currencies as the British and the American. This analysis would seem to suggest that the fate of the franc, for purposes of speculation as to its future fate rests more with the monetary authorities in Britain and America than with those of France.

* * *

Turning to Brtain, it would be useful and necessary to toke note of the more objective facts of the situation. Firstly, one must disabuse one's self of the notion that the activity witnessed recently in the foreign exchange markets is the result of any improvement in international trade, of which we have been hearing a little too much in the last month or two. As the City editor of the London *Times* is reported to have pointed out, it is due to the speculation which the existence of numerous paper currencies inevitably encourages. Secondly, sterling has in the middle of August entered the phase of seasonal depreciation, particularly as against the dollar. It follows from this that the dollar is also subject during this season to a seasonal appreciation. The change, that has occurred during the last fortnight in the sterling-dollar cross-rate, is partly due to a depreciation in sterling and an appreciation in dollar, relatively and absolutely. It is naturally a difficult matter to decide how much of the change that has come in the cross-rate is due to the former and how much to the latter. The impression prevalent in most circles is that when the cross-rate is steady it is subject to control from one end or the other and that, when it fluctuates, the artificial restrictions imposed on it have been withdrawn.. There is little warrant for holding this to be true in all conditions and on all occasions.

* * *

However, that may be, the question for the British monetary authorities is two-fold. On the one side, they have to determine the relation of sterling to the franc and to gold currencies generally and on the other, to determine when, and how far, they would let sterling follow the dollar. The former question, from all accounts, would seem to have been a mater of considerable difference of opinion between Mr. Montague Norman and the banking interests on the one hand and the Government and the Industrial and political interests on the other. The banking interests have felt, ever since the sterling-dollar rate touched the old parity level, that sterling had entered the pre-stabilisation phase. It is obviously unreasonable to hold any such pre-conceived view, especially in the face of the major uncertainties of America's economic and monetary policies. But the banking interests are obsessed by the idea that the wheel of financial fortune has turned once again in favour of London and that the possibilities indicated thereby should be seized with both hands by the authorities, without being distracted by other considerations. For the history of international finance in the post-war period has shown that London is cut out, more than any other monetary centre, for the leading *role* in international finance. In the post-war years, when sterling was off gold, America had a golden opportunity for appropriating to herself the lucrative business of financing international trade. That opportunity was let slip, mainly because of the lack of training for American bankers. Again when Great Britain abandoned the gold standard in September 1931, the dollar gained an unprecedented prestige, as the only currenccy which has not known any vicissitudes in its gold value within the memory of the present generation. And it is learned that during these times British bankers had been actually called upon to provide dollar credits suggesting thereby the inferiority of sterling to the dollar for such purposes. The traditional luck of Great Britain consists at this stage in the fact that the complications of America's internal economy necessitated a devaluation of the dollar in terms of gold. This action, accompanied as it was by wild schemes of inflation and reduction of the gold content of the dollar, resulted in a restoration to sterling of all its old prestige. The banking interests, therefore, are justified in arguing that to maintain a fair measure of steadiness in the gold value of sterling would help London to retain the fortunes which chance has again thrown in her way.

* * *

Mr. Montague Norman is the spokesman, champion and instrument of this view point. As a writer in the *Financial News* has aptly remarked, his position in the Bank enables him to pursue unostentatiously the policy to which he inclines.

He has a large field in which the Government or the Treasury is not competent to restrict his discretion; and it may be said that during the last two months, while Government have been disavowing all intention of maintaining the stability of sterling in relation to the franc, Mr. Norman has seen to it that the range of fluctuations in the sterling franc rate is not more than that between any two gold currencies. The Government, unlike Mr. Norman, has not to reconcile a number of conflicting view points, appease certain sections of public opinion and lay claim also in the face of the Empire nations to full freedom of action in regard to exchange value of sterling. That is why the Government have felt obliged on more than one occasion to suggest that no conclusions as regards the policy of the Government should be made from the state of the exchanges alone.

* * *

It would seem from the reports in the London press that at a stage the differences between the Treasury and the Bank of England came sowewhat to a head. They were not so serious as to lead to the resignation of Mr. Montague Norman. For, for one thing, the predominance of banking interests in the Directorate of the Bank of England is sufficient assurance for Mr. Norman that he can continue for 1934-35, should he desire to do so. Is it possible to infer from the visit of Mr. Montagu Norman that the Government and the Bank alike seek an escape from their differences in an understanding with America as to the sterling-dollar rate. For America would perforce have to devise a machinery for the control of exchange. Looking back on the fate of the exchange value of the dollar during the last month and more, it is surprising that the authorities in America had not instituted an Exchange Equalisation Fund earlier.

* * *

Considering the intimate bearing of the state of the exchanges on stock and commodity prices in America and their relations to the entire programme of industrial and economic recovery of Mr. Roosevelt, it is essential that the Government should have the means by which they could effect the desired changes in the value of the dollar abroad. On Wednesday evening, the news was received that America had lifted the embargo on gold and had authorised the Treasury to receive one consignment for sale, through the Federal Reserve Bank, of gold newly mined in America. He has also ordered owners of gold coin, bullion and gold certificates to file a statement, within a fortnight, of the amount held and the reason why currency could not be used instead. According to the regulations now decided on, sales of gold by the United States mining companies will be made, firstly, to foreign producers and secondly, to persons licensed to acquire gold for use in the arts, industries and profession. Such sales shall be at a price determined by the Treasury as being equal to the best price obtainable in the free markets of the world after consideration of incidental expenditure, such as shipping costs and insurance. The anti-hoarding regulations permit the Treasury to license the use of gold in all foreign transactions and of withdrawals of gold from banks in the country. An exception is made for amounts under 100 dollars, and returns are to be made to the collectors of internal revenue and a license would be required on account of the acquisition of gold by any person or corporation except the Federal Reserve Bank. After 30 days no person will be allowed to hold any coin, bullion or certificates. These regulations will obviously have the effect of enabling the United States mining companies to obtain the higher prices prevailing in the foreign countries.

* * *

It would be seen that to describe this action of President Roosevelt as a lifting of the embargo on gold is a needless exaggeration. This action only marks the end of a question, which has been long hanging fire, namely, the establishment of a free gold market in New York. The advantages and disadvantages of such action have been discussed in our "overseas" columns before. What is important to note in this connection is that the present regulations form a *via media* between the continuance of the conditions which have hitherto prevailed and the acceptance of a free gold market with the danger of encouraging an uncontrollable bid for gold within the country and a consequent danger to the internal and external value of the dollar. It cannot be pretended that this action of President Roosevelt connotes any degree of stability in the dollar, as it leaves the Treasury the power to fix the dollar price of gold, on the basis of the exchange value of the dollar in any gold standard currency. It is regrettable that in spite of these developments the world should still be in the dark about what transpires between Mr. Montague Norman and the monetary authorities and the Treasury in America.

* * *

To return to the sterling-franc rate, we have seen that over a period of nearly three to four months the sterling-franc rate had been maintained at a stable level by the Bank of England, probably without the full and hearty support of the Government. There was no occasion for a clash, because on the one hand, Mr. Norman was acting in a sphere, in which his discretion was unfettered and on the other, the Government could claim that they have no intention to maintain the stability of gold value of sterling, the stability of the sterling-franc rate being only an incident of other actions of the "control", in themselves considered desirable. With the entry of sterling into the phase of seasonal depreciation this pretence was rendered more difficult. For to maintain the stability of the sterling-franc rate even during the autumnal depression would involve a dissipation of national resources which could be justified only on the basis of an avowed and accepted policy. From the manner, in which the break in the franc rate has been allowed, it is possible that the attempt has been given up and that the Government view point has gained the upper hand over the viewpoint of Mr. Montague Norman and the banking interests behind him. The next week would probably show what other significance is latent in the developments of this week.

JAPANESE OFFSETS.

In entertaining hopes of arriving at an understanding with Japan next month with regard to inducing her to remove the boycott of Indian cotton, it is necessary to take note of another factor which hardens Japanese feeling against the plea. If it were only India, Japan may be approached with confidence. But, the general attitude of Empire-countries is taken objection to, by Japan.

* * *

To wit, Japan cannot be expected to feel anything but resentment at the way the South African Union is placing handicaps on Japanese trade in that Empire-country. The Government decided, on August 18, to impose a dumping duty on hats (men's), paints and matches from Japan, and this is in addition to the ordinary duty. But the dumping duty must not exceed half the value of goods ; and for the purpose of computation, the yen is to be valued at 23.35d.

* * *

Japan is not likely to feel gratified with these small mercies. Considering the long distance between Japan and South Africa, and the petty character of the articles of merchandise, affected by the dumping duty, it is rather going too far in the policy of Empire self-sufficiency. It is possible to appreciate a dumping duty on behalf of key industries of South Africa, or the major industries of any other part of the British Empire. So, the unhappy repercussion is that Japan's reprisal measures will not only recoil on South Africa, but it will also tell upon the fortunes of other parts of the British Empire.

* * *

In fact, Japanese industrialists are urging the Government to replace the imports of Austrialian wool. They recommend the grant of subsidies to shipping concerns, in order to facilitate the import of wool from South America. Their argument for advocating this measure is the anti-Japanese trading policy in the British Empire.

* * *

To antagonise a good purchaser of foreign stuff, raw and manufactured, is not a wise policy. But, when trade jealousies are buttressed with outbursts of misrepresentation, it is transgression of decent limits. The stock arguments, against Japanese dumping of cheap articles, are State subsidies to industry, and sweated labour. Mr. Kadono, the Economic Adviser to the Japanese delegation to the World Economic Conference, gave the lie direct to the theory of State subsidies to industry. This statement of fact may be accepted without any reservation. For, every conceivable article, made by Japan, sells at a phenomenally cheap price. For the State to subsidise one and all, the Japanese Government should possess the wealth of Midas. If the commercial services of the Japanese nation co-ordinate their respective policies, and co-operate with one another, a new page is being added to the history of economic reconstruction for the benefit of the world, in general ; and any and every competing nation is welcome to adopt, or adapt, the Japanese trick, if it is one.

* * *

The other stock argument in favour of discriminating against Japanese industry is sweated labour. Japanese workmen, intelligent, efficient and educated, do get less wages than their fellow-workmen in the West. But they find their wages ample enough for their purposes, somuchso that harmony marks the relationship between the employer and the employed. In the mill or the workshop, excellent team spirit prevails. In their creature comforts, nothing is left to be desired. Otherwise, the International Labour Office of the League of Nations would not have testified to the "generally very good" conditions which Japanese Labour enjoy in the matter of housing and feeding.

The secret lies in the culture of the East, which has always enjoined plain living and high thinking. Judged by Western standards, the Eastern way of living may seem low. But, have not economists like Mr. Keynes admitted that the West can build palaces, but cannot afford them? While the West has to learn simpler and yet sound methods of living, the East has enjoyed them as heritage, for ages.

* * *

The positive aspects of the Japanese industrial efficiency consist, however, in an intense study of the psychology of markets. When purchasers have very little to buy articles with, and when scientific improvements leap from year to year, if not from month to month, the Japanese industry is wise to produce articles of a not very durable quality. Japanese products suit the buyers' pockets ; and they maintain modernity in design and general get-up, availing of the latest improvements in research and accommodating the purchasers' taste and other requirements.

* * *

It is not the lower wage bill that enables Japan to sell cheap. But, rather it is the wholesale production through combines or other means just enough to bring down overhead charges, as well as the development of cottage industries, with a view to reclaim the leisure time of the nation, which is otherwise, and elsewhere, wasted.

* * *

But, the most important factors that go to help, in a far greater degree, the lower production costs are the special efficiency in Japan's manufacturing and marketing system, as detailed above ; the installation of modern machinery, maintaining it up-to-date by frequent replacings ; and the availing of the temporarily depreciated exchange, to the fullest possible extent. No wonder, therefore, that Japanese manufacturers could even afford, if only to take the wind out of the sails of the jealous and inept criticism of dumping, to restrict their output by 30 per cent. without any corresponding entailment to raise their prices.

* * *

Above all, it is a sign of happy augury for the success of the tripartite business talks, next month, that Japanese trade experts are willing to discuss

ways and means to cut the Gordian Knot of the present disaprity in prices. Their suggestion pertains to the fixing of quotas and market zones. In the absence of a clearer way out of the *impasse*, the formulae of quota and zone warrant complete exploring. If the representatives of Britain, Japan and India should end their discussions with concrete results to the satisfaction of all parties, nothing better can be desired for the good of the Indian agriculturist.

* * *

Meanwhile, or even in the event of the prospective discussions proving infructuous, Japan need not be precipitate in launching upon a trade reprisal policy. She can well afford the pin-pricks of her sister-imperialist British Empire. The general indication of Japanese trade is well on the right side. During the first half of this year, her imports showed an increase of 24.4 per cent., compared with those for the corresponding period of last year, as against an increase in her exports of 50.9 per cent. This reassuring position, in view of the economic topsy-turvydom in most countries, should, for the present, suffice Japanese enterprice.

* * *

But, in one field of her textile industrial activity, Japan is forging ahead of almost all other countries. Japan has now secured the second place in the list of world producers of rayon, with a total of 18,335 metric tons during the first half of this year, an increase of 5,470 metric tons over her output in the same period of last year.

* * *

Strictly speaking, she can claim to have secured the first place, if the standard of judgment is the exporting capacity. The United States, which lead in the list of rayon producers, consume the whole output within the country and import art-silk, in addition. During the first half of this year, the total world output of rayon was 128,590 metric tons. Japan's share was roughly a seventh. The world increase, in the half-year rayon output, over that for the correspondidng period of last year, was only 20,285 metric tons ; but Japan's share in the increase was slightly less than a fourth. Thus, a progressive increase in rayon output by Japan is perceptible.

* * *

Other notable increases in the output of rayon are recorded in Germany, the United States and France, whereas Belgium, Britain and Poland have registered a reduced output.

* * *

While the cotton textile industry is claiming attention in every important country, most countries are lacking in resources and enterprise, necessary for the growth of the rayon industry. For some years to come, Japan will have more or less undisputed markets, over most parts of the world. She should, much rather, exploit pastures new, than resent, to the point of exacerbating the feelings of foreign nations by means of boycotts, the handicap to her export trade in cotton textiles. If she could bide her time in some such manner, countries advocating national self-sufficiency, will, sooner or later, precipitate to a settlement of their ends and aims in economic well-being. The arbitrary raising of internal prices by artificial restrictions, as opposed to their natural rise, impelled by an increase in demand, cannot last for ever. The day of reckoning will soon come. Only such countries, as possess natural resources for developing an industry, will benefit by protective tariff restrictions. Elsewhere, the nationals will, much sooner than later, revolt against a policy of indiscrimiate restrictions, causing hardships to them through artificially raised prices.

Tariff walls must break down, and enterprising countries will inundate. Till then, let the line of least resistance and sweet persuasion mark the attitude of countries, dependent on foreign markets ; and for Japan, *noblesse oblige* is the best policy.

THE WHEAT AGREEMENT.

The first act in vindication of the international good sense, which received a great blow from the failure of the World Economic Conference, is the conclusion of a provisional agreement between the delegates to the Wheat Conference. Its value to the wheat trade and to world economy in general can be adjudged only by a closer examination of the provisions of the agreement now concluded and the relation which they bear to the facts of world wheat position. The initial feeling, however, is one of satisfaction that, for the first time, an international economic conference has succeeded in bringing about a measure of agreement between parties whose identity of interests is by no means obvious. It will be remembered that even a year ago a conference was held in London to consider the means by which the wheat position could be improved. It ended in a dismal failure, and the question was not taken up till it came within the purview of the sub-committees of the World Economic Conference, concerned with the production and marketing of staple commodities. In spite of the encircling gloom in South Kensington, the big four exporting countries of the world arrived at a tentative agreement on the basis of a 15 per cent. reduction of acreage. Though the consent of Australia could be had only after great deal of delay and with some reluctance, the provisional agreement formed a basis on which exporting countries could initiate negotiations with the chief wheat importing countries of the world. It is common knowledge that in respect of wheat the principal countries of the world fall into three main divisions. Firstly, the exporting, secondly, the importing countries, and thirdly, countries which import at one time and at another time seek to export a part of their crop to foreign countries. The complexity of the wheat situation arises principally from the fact that during the last few years countries, which had been importing large quantities of wheat from abroad, had attempted to stimulate the production of this commodity within their own frontiers, for economic, as well as nationalistic, reasons. It is not true, as is some times suggested, that in all these cases the reason for such activity is to be found in a perverse protectionism. Countries, whose balance of trade and payments had been gravely disorganised, had to resort, of necessity, to some measure of economic self-sufficiency. Others there are, who have taken to the production of wheat merely on account of the fear that the outbreak of hostilities might involve the danger of severe shortage of food supplies. Once an elaborate facade of protected agriculture has been raised, it would be a difficult matter for the countries concerned to reduce the import duties to the old levels and hand their own indigenous agriculture to the tender mercies of a free trade regime. Though one may appreciate the difficulties of the protectionist countries, it is obvious that no progress in the correction of the world wheat position could be made, unless the importing countries offer some inducement to the exporting countries, who have already signified their readiness to make sacrifices by agreeing amongst themselves to effect a 15 per cent. reduction in acreage.

* * *

The actual progress of the wheat negotiations may be sketched in the following manner: The first stage was the agreement in principle on a policy of

MIDDLETON ENGINEERING CO.

FANS ON HIRE
OR SALE.
REPAIRS AND MAINTENANCE

39, Free School Street, Phone 2671 Cal.

regulation of production and trade between the big exporting countries, U.S.A., Canada, Australia and Argentina. The second stage was marked by the understanding between the big four and the European exporters Roumania, Yugoslavia, Hungary, Bulgaria, which constitute the Danubian group, plus Poland. The European countries accepted in the middle of this month the principle of limitation of their combined exports. And a few days were spent on arriving at the actual figure. The principal point of difference at that stage was that the European countries claimed an export figure of 53 million bushels in a good year, whereas the big four were disposed to concede them only about 45 million bushels. The next stage is marked by the attempt of the big four to bring Russia into the scheme so that they could, thereafter continue their discussions with the Danubian group and Poland. In the final stage were undertaken the discussions and negotiations between the exporting and the importing countries.

The exporting countries have now agreed to accept the price of 12 gold francs per quintal (100 lbs.) although they at first favoured an average price of about 60 gold cents.

Under the agreement—

Firstly, the exporting countries have agreed that in the year 1933-34 the total export maximum should be 560,000,000 bushels.

Secondly, with the exception of Soviet Russia and the Danubian countries the exporting countries will reduce production by 50 per cent. in the year 1934-35.

Thirdly, the importing countries have agreed to adjust their customs tariffs when wheat reaches 12 Swiss gold francs per quintal, or 63.6 gold cents, C. I. F., per bushel, while they undertake not to take advantage of the voluntary reduction of exports by developing domestic production.

With regard to the new Advisory Committee which will be temporary in character and be devoted to the task of watching the work and application of the agreement, the importing countries will be represented by representatives nominated by the respective Governments of Great Britain, Germany, France, Italy, Switzerland, Spain and one other North European country.

The chief exporting countries with Soviet Russia, will be separately represented and the Danubian countries will have two representatives.

The position which the present agreement is intended to rectify may be briefly examined. Though crop estimates are necessarily subject to various uncertain factors, the following statement would be found useful as an indication of the size of the wheat crops in the chief exporting countries this year.

(Quantities in millions of bushels).

	Crops 1933	Old crop reserves 1933	Estimated Total surplus 1933-34	Total surplus 1932-33
U. S. A. ...	490	350	840	1,089
Canada ...	350	190	540	564
Argentina ...	240	48	288	296
Australia ...	190	35	225	250
Dunube ...	311	..	311	242
Total ...	1,581	623	2,204	2,441

The position of the Russian crop was the subject of a lengthy examination in these columns on an earlier occasion; and the statistics given therein, taken together with the table above, will enable a rough appreciation of the position of stocks and crops. As for the European export countries the following statement shows this year's crop in what may be called the main "deficiency" areas.

(000's omitted)

	1933	1932	Five year average 1928-32
	(Quarters of 8 bushels)		
France	38,000	41,400	36,100
Germany	23,300	23,300	18,600
Gt. Britain and Ireland	6,400	5,600	5,750
Italy	33,000	34,500	30,500
Spain	17,500	23,000	18,400
Total ...	118,200	127,500	109,350

On the basis of the probable requirements of the importing countries the following table is constructed to show the European demand in 1933-34.

WHEAT (AND FLOUR) IMPORTS.

(Qrs. of bushels 000's omitted)

	1933-34 Indicated	1932-33 Approximate	1931-32 Final returns
Gt. Britain & Ireland ...	28,000	29,000	32,700
France, Italy & Germany ...	4,000	5,500	15,500
Belgium & Holland ...	8,500	9,000	10,100
Scandinavia & Denmark ...	3,500	3,500	4,100
Greece	1,000	2,500	2,700
Other European Countries ...	7,000	6,500	9,600
Total Europe ...	52,000	56,000	74,700
Ex. Europe ...	20,000	22,000	23,500
Grand total ...	72,000	78,000	98,200

The one important factor in the present wheat position is the shortage of the American wheat crop; but it will be found from the previous table that the decline in the probable requirements of the European importing countries more than offsets the shortage in the American crop. Moreover, the yields in the Danubian countries are reported to be very much larger than they were a year ago. The returns from countries such as Belgium, Austria, Holland, etc. may reveal increases. The agreement concluded between the countries represented at the wheat conference is not quite ambitious, in as much as it is content with export restrictions, where reduction of acreage is not possible, and with expressing a general desire for the removal of barriers, where immediate reduction in import duties is not possible to effect. In this regard, the provision stipulating for reduction of tariffs on the attainment of certain levels of prices would not secure the aim of the agreement. Surely, the wheat conference has no mere academic interest in free trade. If the objective is to restore the health of the trade by eliminating uneconomic production and facilitating the competition between countries naturally fitted for the production of wheat, it is difficult to see how any immediate relief can be expected. As for the wider question of world trade and economy as a whole benefitting by more healthy conditions in the wheat trade, the remoteness of the possibility of the latter puts the former out of the pale of consideration.

LIB-LAB LIAISON

In a leading article in its issue of August 19, the *Economist* discusses the possibility of a Liberal-Labour *rapproachment*. It is yet far from being a probability; and the only indication of such a development, however remote, is the disintegration, which has set in in the historic Liberal party, and the differences which Labour is developing under pressure of an impregnable conservative majority and the difficulty of solving many of Britain's economic problems in the ordinary way. That the Liberal Party has been disrupted beyond reprieve is certain. For, if there is anything characteristic of the party more than another, it is the devotion to the principles of free trade, not only in the abstract, but in their peculiar suitability to the requirements of Britain's national economy. And yet, Sir John Simon and Mr. Runciman are prepared to go whole-hog in protectionism, leaving no trace whatsoever of the Liberal faith which they had professed formerly. The Labour forces have suffered a similar disaffection in their ranks with, it must be added, treachery in their leadership. Its influence on the electorate had been undermined in the last general election by deliberate misrepresentation of what Labour stood for and what their rivals could achieve. Apart from this, the development of socialist thought and plans of action has been such that the conservative-minded amongst the parties of the Left will tend to draw away from the advocates of more thorough-going policies. The idea of revolutionary dictatorship has, as a result of the virtual *coup de etat* carried out during the last general election, appealed to certain sections among the Labour Party; and those who abhor the idea on its own merits and on the ground of its unsuitability to British temperament now find that they have more in common with the true Liberals than with the Left Wing of the Labour Party. If the spirit of British party government were to assert itself, then it should be comparatively easy for the Liberals to make common cause with the Right wing of the Labour Party and thereby to create a platform which would represent the greatest common measure of agreement in British politics. Such a development is fascinating if only as an escape from the political stalemate which faced most of the European countries before dictatorship became the vogue that it is to-day. And it may be admitted, too, that, failing a Liberal-Labour rapproachment, Britain, too, would have to face a dictatorship as the only means of retaining stability in political life.

But it is necessary to examine how far it remains within the bounds of probability. A decade ago, such a recognition of the common aims and principles of Socialism and Liberalism could have succeeded in stemming the tide of extreme socialism or preventing the violent reaction which is Britain's lot to-day. In an article published so early as 1928, *Indian Finance* pointed out the danger of the principal political parties of Britain proving unfaithful to the principles which had given them their identity. To-day, when popular demands have been keyed to a high pitch, it is more than doubtful if a self-conscious electorate can be persuaded to heed to Liberal-Labour programmes which according to the tests of modern socialist thought would be neither fish, flesh, fowl nor good red herring. After all, there is no reason why in the changing conditions of world economy, Labour should profess the same adherence to the doctrines of free trade as in previous years, when free trade meant the predominance of the British exporter in all the markets of the world. If support for free trade is the only condition, for which the Liberals would care to co-operate with Labour, one may be sure that the *rapproachment*, even if it were to be achieved, would not last long. For, it would militate against the national self-sufficiency which will, undoubtedly, be the keynote of national economy in the future. Even otherwise, the abandonment of the pet schemes of socialist reform is too high a price to pay for the support of Liberals in the rejection of an import duty or a quota.

CAST IRON PIPES
for Water Schemes

Extract from "RANGOON GAZETTE" on the AKYAB WATER SUPPLY SCHEME, Dated 25-4-1933.

"The Completion of a work of this magnitude in so brief a time will be a creditable achievement, and if not indeed a record, certainly an exceptional accomplishment involving a considerable amount of organisation and hard work by all concerned. The BENGAL IRON CO. supplied the bulk of the pipes used in one consignment, chartering a special steamer to do so".

The Contract comprised:—1,760 Tons—Sizes 5" to 20" diam, including specials the bulk of which was shipped within ten days of the receipt of the order.

The laying was carried out by Messrs. Clark & Greig Limited of Rangoon.

Clive Street Gossip

Eavesdropper wires from Simla:

As I write this on the last day of August, it strikes me that the month just ending has been one of hectic entertainments and furious At Homes. During the first three weeks when I was in Calcutta, the star sensations were due to Nalini becoming President of the Federation of Indian Chambers of Commerce and Sir Nripen Sircar returning from London with a record of heroic feats. Additional attractions were the visit to Calcutta of Mr. Pochkhanawala and Sir Lalubhai. There were parties galore to honour these gentlemen—bunches and evening parties and At Homes on most days, so that one like me had on few occasions as many as three engagements in one single day, wherein I had to join the throng met to honour one or other or more of them. The East Bengal Jute Assocciation was the first in the field with a party to Nalini. Dr. N. N. Law was next to honour his father's successor; and it went on, till the culmination was reached in the Lunch given by Mr. D. C. Ghosh at the Calcutta Club. Guests of honour were Sir Bejoy Prosad Singh Roy and Nalini. Look at this juxtaposition. Does it mean the celebration of the union of present Minister and prospective Minister? Look again at this D. C. Ghosh as host and Nalini as guest. Does this portend that in Bengal hereafter lion and lamb will drink milk off the same vessel? Nearly ninety guests were present; and amongst those met to do honour unto Nalini were all Ministers and members of a Government, which have always opposed him, whenever Sir George Schuster or other member of Central Government intended to select him for this conference or that committee. It was great to be an onlooker at a function which saw so many incompatibles brought together. This suggests that Nalini would, with perfect ease, negotiate the last hurdle in his aggressively onward progress to success and power.

* * *

Sir Nripen showed, during his stay in London, remarkable flair for propaganda, adroitness as pamphleteer, and single-minded devotion to the purpose he had set before himself. By two months' work in Britain he had wiped out entirely the unpopularity gathered in decades of whimsical politics in Bengal. The Indian Chamber of Commerce was first to give an At Home. In fact, the party was arranged on the evening of the very day he landed in Calcutta. Three hundred guests gave him splendid welcome and liberally punctuated his speech with applause. Look at this function also more closely. A body, which did not join other mercantile bodies on the question of the export duty on jute, was the first in honouring one who valiantly fought for the export duty. Does this function mean that it is a demonstration of the new-found identity of interests between Guzerat and Bengal and the common vogue of the name of Das in these two areas?

* * *

Then followed the At Home by the Bengal National Chamber—a proper thing in proper style. Of the other functions, I must single out Mr. Hussain's Lunch to Pochkhanawala as the most convivial and enjoyable. Old Bilimoria was fussing all over the place persuading people to drink more and more spirits (he should receive suitable commendation from those stalwarts of the World Economic Conference who resolved to advise the world to drink more wine as the only way of ending the world depression). If drinks flowed like water, feed was mountainous. There was splendid music; and altogether it was a gathering of a most happy family the sight of whose gambols should have gladdened the heart of Pochkhanawala. I do wish every institution arranges like gatherings, say twice a year.

* * *

I am afraid I have digressed into Calcutta themes while I am expected to wire of Simla doings and goings-on. The fact is Simla is extremely depressing and uninspiring. The Assembly is a miserable, pitiful spectacle. On the Opposition benches, there is howling emptiness, not only of talent and grit but even of numbers. Two middle rows of benches have not one member to wear out the cushioned seat. Puny mediocres keep fighting for front bench seats and all energy is devoted to this great purpose. Party alignments and realignments are the main occupation. Will the Viceroy extend the life of the Assembly until the next constitution?—this is the only concern of taxpayers' representatives. Government can simply do anything they like with this Assembly. A more back-boneless crowd of Philistines, it would be impossible to get together even if the Governor-General-In-Council should make up the entire Assembly by nomination and nomination only. It suits Government to keep going an Assembly of this calibre, in view of the important measures like the Reserve Bank Bill, which authorities would like to be disposed of exactly as they propose.

* * * * *

Our hopeful pigmies were looking forward to Viceroy announcing in his Wednesday's speech extension of the Assembly's life. In this, they were disappointed. Nevertheless, it can safely be said that the Assembly, of which Sir Shanmukham is President, is assured of at least another two years. This is the only Assembly in which the sole occupation of quite a few is the membership of the Assembly. These gents may feel bucked up that their occupation would continue for another twenty-four months. They are still, and will continue to be, in the ranks of the employed.

* * *

As representative of this rank, Sir Shamukham gave a banquet to the Viceroy and even his best friends have blamed him for putting it too thick in

Clear Striking Proof!

In bad times items involving recurring expenditure in maintenance charges are subject to very severe scrutiny.

Look at this graph showing a comparison between the Cement Marketing Company's dispatches of Cement in the years 1930, 1931, 1932.

The first cost in a concrete structure is the last cost. With the dissemination of this knowledge, cement is being used in increasing quantities for the construction of buildings, roads, bridges, concrete products of all kinds, and also as cement mortar instead of lime mortar.

the way of eulogy. In after Dinner speeches warmed by good feeding and heavy wining, extravagance of sentiment is up to a point permissible. Sir Shanmukham exceeded all points of propriety or requirements. He is vastly pleased with himself and the honours that have, not rained, but poured on him. His Excellency is vastly pleased with himself and the results of his firm policy. What a fine Viceroy, said Shanmukham to his (guide). What a fine politician, said Lord Willingdon to his (Godson). Self-complacency and mutual admiration can not go further. The Viceroy's speech to the joint session of the Assembly and the Council of State met with a cold reception. Tame and flat said some. Nothing new, nothing helpful—said others. Curiously enough, R. S. Sarma, famous for visualising happenings, gave me in our motor journey from Kalka to Simla a forecast of what, he believed, would find place in the Viceroy's address. His forecast was fulfilled even to the extent of likeness of language, especially in passage which deals with the the visit of Japan's delegation to India. This fact in itself illustrates the tameness and featurelessness of the Viceroy's address.

arms all suspicion of pose or pretence. If he is not spruce in dress, it is not because he regards its opposite as the mark of genius. He is a child in his bearing, manners and outlook on life. Matters, which do not pertain to his own special line are for him matters for child-like wonder. He gives to others the same credit for specialised knowledge which he himself gets, unasked. One has to see him compliment a musician or a Pandit to realise the innate generosity of his nature. The same bounteous tribute, he has always in readiness for his co-workers in the Institute. I wonder if there is any other scientist of his standing who claims so little for himself and concedes so much to those who conduct research under his guidance. His institute is somewhat unique in that one hears so little of *guruji* or the like. The value of this trait in Sir C. V. Raman is that in every organisation he is in charge of you may be sure of the utmost team spirit possible. His judgment of the men who offer to work with him is unerring. And when he tells a young man, as he often has to, that he has more enthusiasm than capacity for research, he carries conviction, and solace to atone for the disappointment.

These are qualities, as rare as they are necessary for the work which Sir C. V. Raman has now undertaken. What he will accomplish is in the future and dependent, unquestionably, on a number of other factors. We may rest assured that so long as he is there, there will be a new spirit and a fresh and active mind at work in the Institute at Bangalore. But, though I look for great things, I am not altogether happy at this reversal of medieval alchemy, trying to transform the gold of pure knowledge into a low utilitarianism.

SIR CHANDRASEKHAR VENKATA RAMAN. N. L.

CHILD IN MIND AND GIANT IN BRAIN

With his appointment to the Institute of Science at Bangalore, Sir Chandrasekhar Venkata Raman has come to possess a new significance to his country.

Ever since Sir Ashutosh Mukherjee drew him from the obscurity of a government department, he had been readily recognised as part of the intangible wealth of India. His advance in the field of pure science was noted all over the country with evident joy and pride. Every mark of recognition was a feather in the country's cap. His tours abroad were so many Caesarian campaigns, in which India's champion carried everything before him by storm. His discoveries are only less incomprehensible than Einstein's; but that only brightened the halo around him. There was little room for doubt that his recognition as an eminent scientist rested solely on the solidity of his achievement and not on a liberal employment of the faculties of a publicity expert. Years ago, it was universally felt that the award of the Nobel Prize to Sir C. V. Raman was a foregone conclusion. And when it came there was not a tinge of surprise to enhance the satisfaction.

When Rabindranath Tagore became the Poet Laureate of the world, it was felt that India received no more than her traditional due. There are many who trace some of the most enthralling parts of Gitanjali to Valmiki or Kalidasa. There are others who deny any notable break in the continuity of India's genius for poetry. But science, it used to be said, is a strange mistress, requiring at once the dreamy ardour of a lover with the drudgery of a bond slave. To the extent that the Indian mind is less at home in scientific, than in philosophic or literary, pursuits, the rise of Sir C. V. Raman is the conquest of a new world.

But the cynical head continues to shake. What good to explore the scattering of molecular light, when the scattering of vital wealth goes on unheeded? Has not India enough of the intangible treasures of a national culture to seek more food and raiment for her teeming millions? From the standpoint of human well-being, is not one successful industrialist more truly a benefactor of his country than the sagest of savants? It is no doubt Philistinism. But it breaks out, strangely enough, even in the mind of the most cultured. If the scientist is superior to the poet, so is he inferior to the man who can apply his knowledge to the practical tasks of mankind.

I do not know how it happened; but it was soon after his return from his triumphal visit to Stockholm that Sir C. V. Raman offered his gifts to the cause of applied science in India. It was in a function arranged by the South Indians to meet their eminent compatriot. In his reply, Sir Chandrasekhar made one forget the somewhat parochial character of the function; and in one of those enthusiastic utterances, which are far from rare in his case, when the voice strains, the figure jumps, and words flow with violent gesticulation in a torrent of choice phrase and noble sentiment, Sir C. V. Raman promised to turn, at great personal sacrifice, if need be, to the cause of India's industrialisation.

The sacrifice has been obviated. Nor has it been necessary for Sir C. V. Raman to send the hat round for founding a Research Institute for the purpose to which he proposed to dedicate the rest of his life. A whole organisation, which has specialised in the line for years, lacking neither money, nor connections with the world of business, has been handed to him intact. And the whole of India will watch his activity, ready to test his success not by the standards of an international committee of academicians but by prosaic test of avenues for capital investment.

Sir C. V. Raman is thus another academisian whose powers are harnessed to industrial uplift. The subject of the last sketch in this Portrait Gallery was an economist, of whom I said, I look forward to the day when he would be at the head of a Supreme Economic Council urging India forward to the economic destiny which is, undoubtedly, hers. Is it practical to envisage our economic future as being shaped by the joint effort of economists on the one hand, and physical scientists on the other? Is there not a gap between the two which cannot be filled up either by the one or the other? For my part, I would not be guilty of exaggerating the significance of the capitalist. We have lionised far too long the modern entrepeneur, in whom, in India, at any rate, enterprise, in the true sense of the word, is conspicuous by its absence. Capital is a question of surplus wealth ; and we may be sure that, when the masses are cured of the habit of hoarding—the depression threatens to scorch it out of them—the organisation of industry will be far less of a problem than it seems to be to-day.

But that is a digression. Scientific research and economic study should go far to obviate business acumen, as it is understood to-day. What qualities does Sir C. V. Raman bring to a task which, in some essentials, is different from the one to which he has been used for years? That he had inclined to such a vocation before any one thought of him in connection with his present position is proof that the Directorship of the Bangalore Institute was as much his natural destiny as the Palit Professorship in the University of Calcutta. He had felt the call before he heard or heeded to it. The driving force, we may depend upon it, is the innate urge, not the material inducement.

And no one who knows Sir C. V. Raman will believe that he will give other than his best to the institution of which he is in charge. He is a dreamer; and looks it in his face. His attire is always neglige, and even bordering on the Bohemian. Even in the midst of a conversation his thoughts often run back to some half finished experiment in the laboratory. It is by no means rare for Sir C. V. Raman to rush unshod into the streets or to overlook a passing taxi when he is really waiting for one and then shout for it when it is out of earshot. To the stranger who does not know him by sight, his identity is clear cut between an eccentric and a seer. Most of the common jokes about the absent-minded Professor are, perhaps, so many incidents in his life.

All this only shows that with him his work is one constant, all-absorbing pre-occupation. He dis-

(Continued on page 593.)

THE GATEWAY OF INDIA

(From Our Correspondent).

Bombay, August, 23.

The ubiquity of the poor recalled, last week, the existence of unremunerative developments works in this Presidency. Their spend-thrifty character reminds one of the sad dearth of funds for improving the condition of the villages, the general homes of the poor. The Government of Bombay passed the Village Panchayat Act, and, in the last budget, Rs. 25,000 were set apart, to foster the growth of, and popularise, village panchayats.

The villages, as everyone knows, are in most cases very insanitary. There is no organisation, worth mentioning in the villages, for general improvement of sanitation, water-supply, education, arbitration, etc. But, the only organisation, that functions there to a perfection, is the Governmental one for the purpose of tax-farming and keeping law and order.

In fact, every street in a village is the dumping-ground of household refuse. The middle of the street is utilised for this purpose by houses in either row of the street. The villagers are mindful of keeping their house-fronts clean and tidy. Naturally, the central part of the street is the middle ground of both rows of houses, and as such, forms a sort of no-man's land.

Similarly, the village tank, which is, perhaps, the only source of fresh water supply, is left uncared for, from year to year, as it is not the exclusive property of any single individual or household. In fact, after the rains, each tank gets an addition of silt. If the tank is left alone for even a few years without the removal of silt, its capacity to hold water grows less and less. As the bulk of the Indian population live in the villages, the care for their welfare is the surer and more complete way of improving, and maintaining, the physical well-being of the country's inhabitants.

The urgency of providing organisations for villages, in order to look after items of common convenience and comfort, need not be dilated upon. Judged by all tokens the initial step, taken by the Bombay Government, in passing the Village Panchayat Act last year, is welcome, not so much because that it realised the magnitude of the task, but that it recognised, at least, the long overdue need of village life.

The sum of Rs. 25,000, however petty, has to be spent upon a two-fold object of planting, and strengthening, panchayats.

Luckily, there is an organisation, ready-made, to undertake the performance of this duty. The Presidency and Sind Local Self-Government Institute has bestowed much thought upon this question, and has produced a concrete scheme. They recommend the weeding out of moribund panchayats, and the strengthening of the vigorous ones. Most of the existing panchayats have an annual income, ranging between Rs. 100 and Rs. 1,000, the lesser amount being the general rule.

But, the general complaint against most of them is that accounts are not properly maintained; that arrears of taxes are not collected; and that party factions in the villages hamper progress. Hopes are, however, entertained that augmented sources of income and increased powers will go a long way towards making the institution of panchayats more popular.

It is not the popularity of the panchayats, that is in question. All village would gladly have them, provided funds were forthcoming. Most villages can boast of a few busy bodies, who would welcome increased powers. But, the moot point is how best to improve the efficient working of the panchayats. To make the village panchayats a non-official body is, in many ways, highly desirable. But, that they should have no claim on the paid Government officials of the village is impossible. In any case, the village life cannot afford a large choice of the requisite men, to undertake the efficient discharge of panchayat work.

The village accountant, who is a government official and practically the only person who knows to keep accounts in a proper manner, ought to be permitted to undertake the accounts and collection business of the panchayats, for a small consideration. As he is a government offical, it would not be possible for him to accept remuneration twice, from two different sources. So, in view of the dearth of capable men in villages, the government would be well-advised in giving permission to the village accountant, on the recommendation of the local panchayat, to work for it. It is only by some such devise, that accounts can be properly maintained and arrears of taxes promptly collected.

The defect in village life, which baffles all attempts at its removal, is its factiousness. Whatever the harmony among the villagers, ordinarily, faction among them appears almost invariably, when there is an institution with funds to operate. When once party faction raises its head in a village, it dies hard. No mediation is acceptable. But, if Government officers find the time and inclination to interfere, the party faction in the village is bound to be liquidated. Even to-day, in spite of the political awakening in rural parts, the word of the Government officer is listened to with consideration, if it refers to quasi-private affairs. Unless the Government instructs its divisional and district officers to go, out of their way, to settle party factions, as, and when, they happen to visit the villages in the course of their official tours, there is no early prospect of the village living a life of harmony.

In this connection, the advice, given by the Governor of Bombay to the Provincial Council of the Local Self-Government Institute on August 27, in the council hall, Poona, satisfies all intents and purposes:

"In all the work, undertaken in pursuance of the scheme, simplicity must be the watchword. There is no room for the ardent reformer, who is not ready to translate his enthusiasm into plain, practical work. There is also no room for compulsion in any case, as compulsion is not of the essence of the scheme. But other methods may usefully be employed to achieve the purpose in view. They are: (*i*) example, (*ii*) attraction, (*iii*) propaganda, and (*iv*) leagues. When leagues are formed, the question of a village hall will arise, but the "chavdi" may be used for the purpose. The question of the fund may also arise. There may be no government subsidy for the scheme for some time ahead. But, care will be taken to see that villages, which make special efforts to improve, are favourably dealt with; but progress will come mainly by the work which the district, taluka and village organisations put in. The scheme depends on personal and corporate effort, rather than on money."

From party factions in villages to town quarrels is not a long way. The underlying spirit is the same, whether in the village or in the city. In the village, two big men quarrel on personal grounds, and the innocents take sides with one or the other.

Just a week ago, the city of Bombay witnessed the initiation of a quarrel among two commercial bodies, the Grain Merchants' Association and the Grain Dealer's Association. The former are wholesale merchants and the latter retail dealers. The genesis of the quarrel was a petty dispute between two individuals of the respective associations.

The wholesale merchants generally give credit to the retailers, and this custom seems to have invested the grain merchants with undue importance. For a long time, a convention existed that, if a dispute should arise among the members of one or the other body, it should be settled by reference to a committee of the Grain Merchants' Association.

Recently, a retail dealer had a dispute with a merchant. The Retail Dealers Association has been feeling that to appear before a committee of the Grain Merchants' Association is *infradig*. So, they availed themselves of this opportunity, and called the merchant to appear before a committee of their own, and state his case. As this was in contravention of the long-established convention, the merchant refused to comply. Then, the Retail Dealers' Association, as a body, stood by their member, and decided to boycott the particular grain merchant. The Grain Merchants' Association's contention is that, if the dealers wanted a change in the convention, it was up to them to negotiate with the Grain Merchants' Association for the desired change. But, as the Grain Dealers' Association rashly precipitated into a drastic action against the particular merchant, the Grain Merchants' Association felt it its duty not to let down its member. Thus, a quarrel of first-class importance has cropped up in the grain market.

As the Grain Dealers' Association, by way of reprisal, thinks of importing grain directly from up-country, the Grain Merchants' Association also will retaliate with establishing shops in various parts of the city.

There are 4,000 grain shopkeepers in the city, 2800 of whom are members of the Grain Dealers' Association, which leaves 1200 grain dealers, who are not liable to carry out the mandate of the Grain Dealers' Association.. It is the object of the Grain Merchants' Association to enlist the sympathy of the non-members of the Grain Dealers' Association. It is only, then, that they will not be hit by the boycott of the retail grain dealers. But it is on the cards that the members of the Grain Dealers' Association, being of the same family as the non-member dealers, may try to recruit more members to their association, in order to make the Grain Merchants' Association feel helpless, and compel them ultimately to surrender to them.

Whatever the results of the dispute between the two associations, the public, in general, is confronted with the prospect of a rise in the prices of grain. The retailers' supply should be soon exhausted; and for them to establish contacts upcountry and import grain is largely a question of sometime at least. In the meantime, it is quite possible that, if the Grain Merchants' Association means business, new shops may be established all over the city for the retail sale of grain. It may offer advantageous terms to the non-members of the Grain Dealers' Association. In that eventuality, the retail dealers might, perhaps, lose their job, before they are ready to put up a fight against the Grain Merchants' Association.

It appears that a similar dispute arose between the two associations, a generation ago; but ultimately the grain dealers had to submit to the dictates of the grain merchants. This singular event is quite possible even in the present case. The only silver lining is that the prospect of the price of grain going up is rather remote, and that as all the merchants and dealers belong to the same caste, it is not impossible that an early settlement may be arrived at, through the good offices of the caste *panchayat*. If the happy event should happen, the consumers' joy will not be less than that of the sellers.

THE READING ROOM

World Crisis and the Problem of Peace: By S. D. Chitale: International Book Service Depot., pp. 230, Price Rs. 3/12.

The book under review comes to the reading public with a *chit* from Professor V. G. Kale, who is impressed with the attempt of a young Indian to grapple with the problems of world peace. It is natural that an Indian is led by any essay in constructive thought to the larger world problems, though in doing so, he exposes himself to the taunt contained in the old adage about removing the moat in one's eye. I have myself often thought that the future of India, as she is situate to-day, rests on the evolution of a more rational and equitable international order. It is not that Mr. Chitale finds himself led to the problems of world peace through the insoluble nature of the problems of our own country. There is little of a link between our own insular problems and the enquiry which the author has made into world problems, though this is by no means difficult to devise. The author, judging from the work on hand, has evidently developed an independent interest in the subject of his study; and it is easy to guess what are the principal problems that stand out prominent when the whole world is surveyed as one landscape. The last world war, the broad trends of political and economic history that led up to it as an inevitable denouement, the tragic heresies of reparations and war debts that were left behind and the bitter fruit of an unparalled economic depreciation which these reparations and war debts have borne, together with the new developments in the far East, naturally form the basis of any speculation as regards the future or the possibilities of founding an era of peace. Mr. Chitale is undoubtedly the kind of artist who revels in having to paint a big canvas. There can be no question either of his sense of proportion or his ability to leave out the details, which in the case of large paintings always mar the artistic value. Mr. Chitale traces the history of the Peace of Versailles and Reparations only to show how the Powers got over the abhorrence of all future wars which is the only lesson that the Great War has taught mankind. That lesson should, strictly speaking, have been more inescapable, considering that the manifold inventions and improvements in the machinery of warcraft that have taken place since the war have taken war from a national to an international sphere. What is more, the last decade and a half has also taught us that the aftermath of war is even more terrible than the sufferings during its conduct. The dislocation caused by extensive and intensive hostility, so to say, prepares the ground for yet another outbreak. The political and economic changes wrought by every war have always enough unsettlement in them to goad the nations to seek remedies in another war. In this sense every war has within it the germs of another, though, it is by no means easy to say when they will germinate.

In the earlier chapters Mr. Chitale establishes a connection between the growth of Imperialism in the nineteenth century and the first decade of this century and the catastrophe of the world war, a theme which was most scientifically developed by Mr. J. A. Hobson and has found acceptance even amongst orthodox historians of modern times. The obvious conclusion from this is that unless the world is rid of the clash of capitalist interests, capable of mobilising the national forces behind them, there is no reasonable prospect of peace. To the extent that the peace settlement has accentuated the sharpness of such conflict, it has complicated this task still further. The activities of Japan in the far East are certain proof that the war has made the world more safe for democracy of the capitalist complexion, which is the very opposite of what the world war was then supposed to be waged. Mr. Chitale devotes more than one chapter to the discussion of this menace in a part of the world which, though always seething with internal disorder, has till now been a stranger to the organised and large-scale carnage, which is glorified by the name of national war in the West.

In the closing chapters Mr. Chitale has attempted to outline an organisation for the institution and maintenance of world peace. It is a somewhat ingenuous scheme, which contemplates a body of disinterested scientists, professors and poets and acknowledged humanitarians keeping guard over the treasure of world peace. One is at a loss to find how the earlier enquiry contained in the book lead to the idea of a Board of Justice of such composition and complexion. For the curious I may, perhaps, give the names of Mr. Chitale's nominees for the World Peace Committee, though most of them can be guessed by the average man in any part of the world:

(1) Professor Einstein.
(2) Upton Sinclair.
(3) George Bernard Shaw.
(4) Rabindranath Tagore.
(5) Romain Rolland.
(6) Maxim Gorky.
(7) M. K. Gandhi.
(8) Gilbert Murray.
(9) Sidney Webb.
(10) Harold Lasky.

It would have added to the interest, use being out of the question, of Mr. Chitale's scheme, if he had afforded some indication of the manner by which the Cabinets of the world would abdicate in favour of those, whom, perhaps, they most dread, or what transformation he expects in the world's democracies which would lead the rabbles to choose an Einstein or a Gandhi to the role of a world dictator. When the most scientifically planned schemes of world peace are not able to gain even a cursory glance from statesmen who count, pious sentiments in favour of peace create only feelings of futile amusement.

"Business Organisation and Practice of Commerce." By S. M. Sen and A. K. Banerjee: The Book Co., Ltd., Calcutta: Rs. 4/-.

The field, covered by the subject, is so wide that, without such a book as this, quite a number of books would have to be consulted. The authors have given a comprehensive survey of the theory and organisation of present-day commerce within the confines of a single volume. While discussing the theory and practice of commerce as obtaining in all the important countries, the Indian conditions, so far as our peculiar customs and practices are concerned, have been fully described.

Special mention may be made of the chapters on Banking, Insurance and Stock Exchange. A short and clear account of the organisation and working of the important stock exchanges of the world—such as London, New York, Paris, Calcutta and Bombay—has been given. The authors have also fully dealt with all the legal aspects of commerce.

The book should appeal to the candidate, whom it is primarily intended to serve, and to ambitious, young business men. The glossary of commercial terms at the end of the book enhances its usefulness to the student.

G. B.

CHILDREN'S ASSURANCES.

One of the most up-to-date developments in Life Assurance business is Children's Assurances. The bewildering variety of this class of policies issued to the public in Great Britain, America and other European countries is ample testimony to the fact that there is much scope for expanding the splendid service rendered by the Life Assurance Companies in this regard. By Children's Assurance is meant that class of assurance where children figure as beneficiaries to the policy moneys and not as lives assured. Under ordinary life assurance law, children below a certain age cannot figure as lives assured. It is only in Industrial assurances that policies are issued on children's lives to cover funeral expenses within the limits allowed by legislation.

Children's Assurance Policies answer the requirements of parents or guardians desirous of providing a capital sum for a child on its attaining a certain age. This sum may be utilised for higher education, or a start in a profession or a trade, or for dowry on marriage in case of girls. The terms and conditions of these policies vary widely and more and more novel and attractive schemes of policies under this class are being devised. Under the Married Women's Property Act of 1882, policies effected for the benefit of children create a trust in favour of the objects mentioned therein; and the moneys payable under any such policy shall not, so long as any object of the trust remains unperformed, form part of the estate of the assured, or be subject to the debts of the assured. A brief history of the development and growth of Children's Assurance in Great Britain is a necessary prelude to an examination of how far Indian Life Offices have extended this kind of service to the mass of the Indian public.

The first link in the development of Children's Assurance was a pure endowment assurance providing a capital sum after a short term of years in return for a single premium or annual premiums payable during the whole term of the policy. In the event of the previous death of the child premiums paid are not returnable but they may be made returnable with or without interest by payment of a slight additional premium. The next extension of this was the sum assured was paid in a number of annual or more frequent instalments instead of in a lump sum. The sum assured was taken, for purposes of calculating the premiums, as the present value of all the instalment payments on the date of payment of the first instalment. In case of annual premiums, premiums are payable until benefits become due irrespective of whether the parent or guardian lives or dies. But if premiums are discontinued owing to the death of the parent or for other reasons, some offices allow liberal surrender values. The principle of life assurance is not involved in this, and the two main defects of this class of policies are (1) that they afford no relief to the family, which is reduced to straits by the premature death of the father; and (2) that the premiums paid for these policies do not count for the rebate of Income Tax.

The second link in the chain is the policy known as the Educational Endowment with premiums dependent upon the survival of the parent. Here also the sum assured is payable either in a lump sum or in a series of instalments on the child attaining the specified age. But for a slightly increased premium, the privilege of cessation of further premiums in the event of the prior death of the parent or guardian, is granted. Here also if the child dies before the term, another child may be substituted or the premiums paid are returnable with or without interest (at 2 to 3 per cent. compound). As the principle of life assurance is involved here, some offices require the medical examination of the parent or guardian, while others dispense with it, except when the sum assured is large or when the parent or gaurdian exceeds a specified maximum age or when the proposal form (which will be a detailed one containing queries regarding personal and family histories) reveals any serious defects. It may be mentioned that this kind of policy does not remove entirely the two defects mentioned above. The first one is mitigated as no further premiums are payable. But the family may require a capital sum immediately on the death of the bread winner, which this does not provide. Also under the existing rules governing the allowance of rebate of Income Tax on life policy premiums, premiums paid for this policy do not count for the grant of rebate.

The third link is the use of ordinary short term endowment policies for providing benefits to children. This is more suitable inasmuchas the defects mentioned previously are absent in it. This class of policies is comprehensive and not only ensures educational payments in any eventuality but also gives the widow several options which she can exercise at her discretion for the benefit of herself or any of her children. The ordinary short term endowment policies may be used in any one of the following three ways for providing educational benefits to children. (1) A short term policy taken on the life of the parent, the sum assured being payable in the requisite amount and number of instalments. If the parent dies before the selected term, the first instalment only becomes immediately payable. If the child dies, another child may be substituted and policy continued or the premiums paid are returnable with interest less the first year's premiums. (2) A series of endowment policies of different terms on parent's lives maturing in consecutive years, the sum assured being the amount required each year. Here unlike in the former case, all or the balance of the sums assured (that is all the instalments) are payable immediately on the death of the parent before the maturity of the last policy. But the disadvantage under this system is that premiums of certain policies are payable even after the commencement of the payment of educational instalment. (3) The third system is a device to combine the advantages of (1) and (2) wthout the defects of either. This is, indeed, an ideal policy and is very popular. It consists of a series of endowment assurances maturing at consecutive years, but premiums ceasing at one date (just before the commencement of payment of first educational instalment) in all policies. In fact, the first policy is an ordinary endowment one while the rest are endowments limited payment policies.

Another excellent policy admirably suited to provide the maximum amount of benefits to children, is the Children's Deferred Assurance. Here unlike the other forms of children's assurances, the life assured is the child itself but commencement of the life assurance proper or the actual covering of risk on the child's life is deferred or postponed till the child attains a minimum specified age usually twenty-one. During the deferment period no risk is undertaken by the company; and, if the child happens to die during this period, only the premiums paid are returnable with or without interest. The numerous options and benefits offered by this policy have made it one of the most useful, attractive and popular schemes of policies. I shall in my next article deal

in detail with the terms and conditions governing this class of policy.

Besides the above main schemes of policies under children's assurances, various novel and fancy children's policies have been introduced of late by the life assurance companies. Most of them, besides being novel and attractive, are really useful and help the parents a great deal in the discharge of their duties to their children. A short description of a few of such schemes is given below.

School Fee Policies are of recent introduction. It differs from educational endowments in that, while the former create a fund to provide for future education costs, the latter assure the payment of continued educational expenses in instalments where such provision has not been made. These policies are useful in cases in which money required for education may be relied upon unless the father dies prematurely. In the event of the death of the parent or guardian, the continuance of the child's education is made possible by the school fees being assured by the company for an agreed amount and being payable termly for a fixed number of agreed terms. The cost of this policy is small ; and the premiums are payable over one half of the total number of terms for which cover is required. If the parent dies at any time after the payment of the first premium, the remaining term fees, etc., will be paid by the company. If the child dies during the life time of the parent nothing is payable by the company, but, if it dies after the death of the parent, and all the instalments are not paid by the company, then the remaining instalments are payable by the company. Thus it will be found that this is merely a decreasing term assurance on the life of the parent.

Group School Fee Policy. This is only an application of group life assurance principle. If a number of parents sending their children to one particular school join together to contribute premiums (by way of very small additions to the term fees), then the company undertakes to pay the balance of the agreed number of term fees of any child whose parent or guardian dies. The premium required for this kind of policy is much smaller than that required under the individual school fee policy.

Baby Girl Policies. Here, in return for a small premium paid annually the policy provides a capital sum as dowry for a female child whenever she may marry after the age of 18. If she remains single and if the premiums are continued, it provides an annuity from her fifty-fifth year or an immediate cash payment if preferred. If on marriage the dowry is not taken either in full or in part, then it may be utilised for the purchase of a fully paid up policy on the life of the husband, subject to his medical examination. In the event of the early death of the child or the discontinuance of the policy at any time, liberal surrender values are given.

Presentation policy. This is another novel children's assurance policy which covers the cost of a girl's presentation at court and her coming out as a "debutante." The necessary expenses for dress etc. (which will cost at least £500) may prove a burden to the parent ; and he may have this sum assured, whether he lives or not, by paying annually premiums under this policy. The sum assured is payable when the girl attains the age of 18.

We are glad to note that Mr. B. K. Shah of Hindusthan Co-operative Insurance Society Ltd., has completed the Part III Examinations of the Institute of Actuaries, London, thereby becoming an Associate of the Institute. He comes of a respectable Gujerathi family and we understand that he is the first in his community to attain this distinction. We wish him every success in his career.

THE BIG FIRE CONSPIRACY CASE.

The Big Fire Conspiracy Trial of London began in the Central Criminal Court, Old Bailey, before Mr. Justice Humphreys on July 4, and ended on August 18, after a protracted hearing of one and a half months. Sixteen men and a woman were charged with conspiracy, arson, defrauding insurance companies etc., during a period of eight years from 1925 to 1933. The main charges against the defendants were that of conspiring to set fire to various warehouses, shops and other buildings with intent to defraud certain insurance companies and Lloyd's underwriters, and conspiring to cheat and defraud those insurance companies and underwriters by making false and fradulent claims as to the amount and value of goods and merchandise insured by them, which had been the subject of damage by fire, smoke and water. There were also specific charges of arson and of obtaining money by false pretences against various defendants. The case is one of great gravity ; and it is estimated that insurance companies were defrauded to the extent of £500,000 per year.

The prosecution was conducted by Mr. Roland Oliver, K.C. Nearly one hundred and sixty witnesses were examined for the prosecution, and this trial is the longest that has ever taken place at the Central Criminal Court. More than 100,000 documents were used during the course of the hearing. All the insurance companies shouldered the great cost of the prosecution exceeding £100,000. Insurance companies have long recognised that they were being duped by many dishonest and fraudulent claims by the firms concerned in this trial, but they were not able to obtain sufficient material evidence to bring them to book, until a man named Priest, who was an accomplice to the gangsters, made a statement to the effect that a fire was planned to take place within a fortnight. When the prophecy became true the movements of Priest were watched closely and insurance companies began collecting evidence gradually and the prosecution was lodged early in July last.

The trial ended on 18th August and all the accused were sentenced. The jury after retiring for four and a half-hours found all the accused guilty on varying number of counts. The judge's summing up took thirteen hours. The judge described the criminals as a gang of fire raisers and dangerous criminals and emphasised the great danger of life involved in the deliberate fires created by them. The organiser of these crimes Leopald Harris, a fire loss assessor, was sentenced to 14 years penal servitude and all the other 16 accused were sentenced to four months' imprisonment each. As a result of

this trial it is hoped that the widespread system of fraudulent fire insurance claims would come to an end and that fire claims in future would be substantially less.

LIFE ASSURANCE IN U.S.A. in 1932.

The growth of Life Assurance in United States of America during the past decade is phenomenal though the business has suffered a setback in the years 1931 and 1932. The people of U.S.A. are the most heavily insured among the peoples of the world. The average sum assured per head in U.S.A. is Rs. 3,076 (roughly expressed in rupees), whereas in India it is an insignificant figure of Rs. 5, and in Great Britain it is Rs. 970. Whereas the first half billion (50,000 millions) dollars of total insurance in force in U.S.A. was reached in 1922 after a lapse of a century and a half since the inception of life insurance in that country, the second half billion dollars was attained in 1929 within a period of 7 years making the total insurance in force in that year one billion dollars. Since then it has reached the record figure of 108,886 million dollars in the year 1931 and has fallen down to 100,154 million dollars in the year under review. The following tabular statement shows the growth of new business and total business in force during the last 10 years.

In millions of Dollars.

Year	New Business Written			Total Business In Force		
	Ord. Life Assce.	Indus & Group Life Assuranee	Total	Ord. Life Assuce.	Indus & Group Life Assurance	Total
1923	8,612	3,458	12,070	44,227	12,577	56,804
1924	9,301	3,894	13,195	49,241	14,539	63,780
1925	10,563	4,910	15,473	54,519	17,123	71,642
1926	11,845	5,416	16,461	60,031	19,613	79,644
1927	11,405	5,730	17,135	65,044	21,978	87,022
1928	12,257	6,417	18,674	70,486	24,720	95,206
1929	12,958	6,309	19,267	76,123	27,023	103,146
1930	12,604	6,416	19,020	79,775	28,173	107,948
1931	11,321	5,905	17,226	80,657	28,228	108,885
1932	8,911	5,603	14,514	73,780	26,374	100,154

It will be noticed from the above figures that the New Business of all the companies in U.S.A. had a heady progress up to the year 1929 when it reached a maximum of 19,267 million dollars. Later the effects of the world wide depression has left its mark on life assurance business also and the New Business has gradually declined to 14,514 million dollars in 1932. In spite of the large decline in New Business during the years 1930 and 1931, the total business in force was increasing steadily from 103,146 millions in 1929 to $107,948 millions in 1930 and to $108,886 millions in 1931. But at the end of the year 1932 the total business in force has decreased by $8,700 millions to $100,154 millions. This great decrease is perhaps, due to the large demand for money by policyholders by surrender and maturities of policies. This unprecedented demand for cash by policyholders was met by the life offices with ease thereby proving the increasing service rendered by them to their policyholders.

The total premium income of all the life offices in 1932 amounted to $3,504 millions as against $3,661 millions in 1931. Income from interest and rents at $1,149 millions suffered a fall of $40 millions compared to last year. The total income amounted to $4,653 millions having suffered a drop nearly $200 millions. Payments to living policyholders and beneficiaries by way of maturity claims surrenders, annuities and death claims, reached the record figure of $3,087 millions which was in excess of the figure for 1931 by $492 millions or 18.4 per cent.

The tabular statement below shows the trend of premium receipts, total income, total assets and total payment to policyholders of all life offices in U.S.A. during the past ten years.

IN MILLIONS OF DOLLARS.

Year	Total Premium receipts	Total Income	Payment to policy-holders-claims, sur-renders etc.	Total Assets
1923	1,900	2,427	1,088	9,455
1924	2,116	2,698	1,203	10,499
1925	2,384	3,018	1,246	11,538
1926	2,612	3,319	1,375	12,925
1927	2,860	3,671	1,498	14,381
1928	3,140	4,086	1,680	15,947
1929	3,341	4,330	1,950	17,471
1930	3,524	4,594	2,247	18,880
1931	3,661	4,850	2,608	20,160
1932	3,504	4,653	3,087	20,754

The above figures show that U.S.A. with a population of nearly one-third of that of India has got a total life assurance in force of about Rs. 30,000 crores (roughly) which is nearly one hundred and eighty times as great as that of India.

ECONOMIC RECONSTRUCTION

SIGNS OF IMPROVEMENT

FIGHT AGAINST UNEMPLOYMENT

(From a Berlin Correspondent)

For several months past, there have been signs of a noticeable improvement in the economic conditions of Germany, the most conspicuous of which is the fact that the number of unemployed decreased by more than two millions between January and July, as compared with a decrease of only 694,000 during the corresponding period twelve months ago. This development, however, has not been the only indication of an actual improvement.

The output of raw steel during the first half of 1933 exceeded the corresponding figure for the first six months of 1932 by some 600,000 tons. If we add the imports of raw steel, we find that the increased requirements of raw steel for the home market went up by at least 776,000 tons.

Pit-coal production rose from 50,300,000 tons in the first six months of 1932 to 52,400,000 tons, during the first half of the current year.

The comparative figures for automobile licences were 20,283 and 35,513 respectively.

The output of ready-made men's cloths increased by 3% in June, which is the first increase of production in that trade for the past three years.

The number of bankruptcies went down from over 5,000 in February/July 1932 to 2,235 in February/July 1933.

It is evident from the figures quoted that the purchasing power of the home market has undergone a marked improvement in recent months. Three reasons may be mentioned, to which this change is due, viz., the seasonal increase in requirements, the Government schemes for the provision of additional work, and the greater confidence of the people in the consolidation of political conditions. Perhaps, the greatest share in the present "upswing" must be attributed to the big orders, recently given by such public corporations as the National Railways and the Post Office; but, to a considerable extent the improvement is also due to other Government measures, such as the exemption of new automobiles from the traffic tax, the remission of taxes in connection with substitution work, etc.

The improvement is not confined to commerce and industries, but has extended to agriculture as well. Farmers are already able to feel the benefits, resulting from the Government's policy of encouraging inland production. Thus, for instance, the demand for home-produced bacon and edible fats is decidedly much larger now, than it was a twelve-month ago.

The money market presents an easier situation, and tendency on the stock exchanges is also more cheerful. At the end of July 17.5% of the shares quoted at the Berlin Stock Exchange stood above par, as compared with 10.2% at the end of July 1932. Whilst savings-bank deposits decreased month after month in 1932, they have increased during the current year—to a considerable extent, in certain cases.

The balance of trade, however, has undergone an unfavourable development, the export surplus for the first six months being valued at 291,000,000 reichsmarks only, against 602,000,000 reichsmarks a year ago.

This decrease convincingly proves the need for the restrictions, imposed upon the transfer of foreign payments introduced on July 1st.

On the basis of the average prices in 1929 the value of Germany's exports of manufactured articles went down from 4,702, 600 Rm. in the first half of 1929 to 2,947,400 Rm. in 1932 and to 2,567,300 Rm. in 1933. This development is not only deterimental to Germany herself (inasmuch as she finds herself compelled to sell her production to an increasing extent at home), but also—and equally so—to her foreign creditors.

There can be no question that the economic policy of the Hitler Government has been completely successful so far—a fact which entitles us to hope that it will be possible to prevent at least a renewed increase in the unemployment figures during the coming winter. If this hope materialises, the country's body-economic will be much strengthened thereby, so that there will be every chance of the economic depression being definitely overcome in due course. It goes without saying that the radical improvement of Germany's economic situation is bound to benefit other countries as well, this being due to the enhanced purchasing strength of the German market.

COMMERCIAL BOOKS.

BUCKLAND.—The Indian Companies Act (Act VII of 1913), with Annotation, Appendices, Forms, Cases and Rules. Complete New Edition, 1922. Revised, enlarged and brought up to date. Vol. I, Text, Rs. 16.

Indian Companies Act, 1913, Form E.—As required by Part II of the Indian Companies Act, 1913. Complete with inset, As. 8 each. Rs. 5 per dozen; extra insets, As. 4 each Rs. 2-8 per dozen.

This is a great boon to Company Secretaries making the Annual returns. The extra insets allow for any number of shareholders. It is printed on first class paper.

KINNEY.—Law Relating to Private Companies in India. By Alexander Kinney, Official Trustee and Administrator-General in Bengal. 2nd Edition. Rs. 5.

When this book was originally published it fulfilled a want, as there was no book relating to the law of private companies in India, as distinguished from public companies. This new edition contains references to cases not included in the first edition, and many of the chapters have been revised. The references given include both the sections of the Indian Act as also the English Act.—The Pioneer.

OLYMPUS

(From Our Correspondent).

Simla, August 31.

Viceroy's Speech—Hint of Federation in 1940—Government attempt at equality of both Houses of Legislature—Opposition to Reserve Bank Bill—Sir George Schuster plays on the Assembly-Weak Opposition in cotton question—Road-rail and Sir Joseph Bhore—Private railways not to run bus services.

This week, the Assembly has managed to rope in, into its discussion, many matters of financial and commercial interest. The Viceroy's speech was, of course, the chief topic of the week. But from the point of view of any peep into the future, it is of little or no use. It gives no indication of when the Reforms might be expected, while his suggestion that the Reserve Bank would be successfully operating "long before" the new constitution comes into being is interpreted by politicians in Simla as meaning that the Federal constitution will not come till 1940.

* * *

The Viceroy also passed over an important budgetary factor, namely, the serious fall in customs revenue, and tried, on the other hand, to draw happy conclusions from the fact that 19 crores worth of sterling have been remitted during the first four months, compared with 1½ crores during the same period in the last year. However, one statement of the Viceroy would provoke considerable protest, namely, that the Reserve Bank Bill will be referred to a Joint Select Committee of both Houses. This practice of joint committees was started by Sir Frederick Whyte. But President Patel did not entertain it, and every time the Government made an attempt to restore that procedure, it was foiled by the Opposition. Now the Government thinks it can run the Assembly as it likes, and has, therefore, come forward with its proposal for a Joint Select Committee.

* * *

Another proof of the Government's anxiety to bring the Upper House to a footing of equality with the Assembly is that, this time, after many years, the Viceroy agreed to waive his inaugural address to the Assembly and wait till the two Houses met, with a view to address them in a joint session. Moreover, the Government thinks that the only way to pack the Select Committee with its nominees is to have a Joint Committee of both Houses. When the Select Committee is appointed from the Assembly it has to be representative of both the Government and the Opposition and generally, the Opposition parties have a majority, or at least a balanced representation. If Joint Committee is appointed, the Government would have an equal number from either House; and the result would be that sixty per cent. at least of the members of the Committee would be Government men, and the Committee, so loaded, would give the Government whatever results it wants.

* * *

Opposition to the Bill is expected to be in various directions: First, the question of a State Bank is not dead, in the opinion of the Opposition; secondly, they would try to insist on nomination being excluded, or at least restricted in the matter of shareholders and directorate; thirdly, they would insist on the directors being nominated by the Government of India, and not the Governor-General; fourthly, they would declare against the Imperial Bank being given a privileged position.

* * *

There is another plan of the Government, which may materialise shortly, namely, that Mr. Pochkhanawalla of the Central Bank of India and Mr. Cook of the National Bank of India may be nominated members of the Assembly and the Council of State respectively, to enable them to become members of the Select Committee of both Houses, and thereby give the Committee the benefit of their expert knowledge.

* * *

Sir George Schuster is not afraid of the Assembly particularly, as he is always ready with the offer of membership of some special committee to discontented members. Already, he has suggested the appointment of an expert committee to go into the question of cut currency notes, and considering the kind of experts" sent from the Legislature for the Reserve Bank and the Railway Board discussions in London, he can be sure of using this argument to his best advantage.

* * *

Another question of importance, dealt with this week in the Assembly was the Japanese boycott of Indian Cotton. Mr. Abdulla Haroon was not quite up to the mark in presenting his case for prohibiting the import of foreign cotton, or of prohibiting the import of foreign cloth, and others who backed him were equally ill-equipped. The result was that Sir Joseph Bhore had a very easy task in meeting the Opposition. His point was that boycott, far from being effective, had led to Japan importing much more of Indian cotton than before, during last July and August, when the boycott was supposed to be most effective. He certainly pleaded well his case, and defended the Indian Mill Industry creditably. But, he threw out a hint that the import duty on foreign cotton might be raised, sometime, for revenue purposes, or that the question of raising for protective purposes might be seriously considered in future. He did not wish to rule out these possibilities.

* * *

Another matter of intense interest to the commercial community was that relating to cut currency notes. Sir George Schuster knows how to deal with the Assembly. While he hinted at tightening up the present rules further, his offer of the examination of the subject by an expert committee with narrow terms of referrence seemed to persuade the non-official members of the House that he had made a gesture and so, they withdrew their opposition.

* * *

Finally, I should like to refer to the question of the Road-Rail competition. Sir Joseph Bhore created some stir in the European camp by suggesting that this privilege would not be extended to private companies operating railways in India. The debate showed that the members were generally sceptical about the railways even making a success of road transport and felt that, even if powers were given, railways would mismanage their affairs in such a way as to leave the private lorry-owner master of the situation. The experience of the Tramway running its own bus services was mentioned as striking proof of this, and Sir Joseph Bhore had no other argument except that all that they wanted was the power to run their own services. As to whether those services would be run and, if so, where and how, would be determined on the merits of indivdual cases.

* * *

Non-official members of the Assembly were certainly hostile to the idea, though the Bill will have a safe passage. They feel that the traffic on the King's highway must not be subjected to any restrictions. The Assembly, I hear, sits till the 19th September, when it disperses for two months and reassembles in Delhi to consider the Reserve Bank Bill. The Assembly has been saved the discussion on the Cotton Protection Bill in view of Japanese desire for negotiation and this matter will not come up till the Delhi session.

SOUTH INDIA

(From Our Correspondent.)

Madras, August 29.

Quite an event in the local chronicle for the week is the celebration of the sixty-first birthday of the Hon. Mr. G. A. Natesan. The warmth of affection and regard evinced by all the principal institutions of the City on this occasion must have taken the average South Indian by surprise. For neither he nor Mr. Natesan is so constituted that the fête on the latter's birthday could seem so natural. The South Indian affords in himself the most conclusive proof of the old saying that the prophet is not honoured in his own country. Nor has Mr. Natesan the qualities which stimulate one's sense of hero worship. He is prominent in public life, but often only physically. His politics is not of the type which is adored, or even tolerated. In days, in which moderation was less in popular disfavour, Mr. Natesan was dwarfed by leaders of the stature of Mr. Sastri. And the Madrasee is not charitable enough to overlook the business advantage of political connections and limelight.

Yet Mr. Natesan is to-day the recipient of the warmest tributes. The explanation is, no doubt, to be sought in his ever pleasant personality. But there is another, which appeals even to the average man, who, as I have said before, is his sincere detractor. It is a subtle appeal, the interest in Mr. Natesan as a survival of an age, which in proper perspective has its place in our national evolution and to which, in the exuberance of Gandhite politics, we are prone to be too uncharitable. It is too often emphasised that Mr. Natesan belongs to a generation which was brought up to regard Macaulay as a political thinker and Sir William Lee Warner as a Professor of Political Science. But it is forgotten that on the whole that generation asserted its independence in thought and to some extent in social life also. We still see the traces of that poison in their mental systems. But we had overlooked for long the solid service which men of Mr. Natesan's generation did to the cause of political education in India. And he himself is out and out the most powerful disseminator of political knowledge. There is rarely any among his detractors who does not owe his nationalistic sentiments to a study of Mr. Natesan's publications. When Moderates have ceased to count, we can afford to be fair, even generous to them. It is this attitude I believe that makes Madras turn in loving gratitude and appreciation to Mr. Natesan.

His personal qualities have helped this belated recognition. To watch him is to study the secret of his success, in fact, all success in material life. It is a favourite point with me that success in business requires qualities, more than capacities, by which I mean regularity, punctiliousness and care, with a little of planning thrown in, will take you farther in life than dash, imagination or any outstanding merit. Mr. Natesan is always in a bustle. He is always attention to details. He will take pains to avoid an inconvenience. He is thorough, in the sense that he is never inadvertent. His very travelling kit, with copies of every publication of his, carefully packetted in compartments, and knick-knacks of every kind each in its place is a character sketch of Mr. Natesan. And those who rate these qualities low had better think what amount of courage and imagination is required to decline a Government job in those days in favour of an independent enterprise in journalism. Ever young in outlook and in activity, jovial, studiously avoiding the type of generosity that tends to disappointment and bitterness, with but spasmodic attempts to be curt, which ill serve to hide a warm heart, comfortably hospitable, Mr. Natesan is the sort whose friendship is an enjoyment.

Writing about the position and prospects of the Indian tea industry in these columns last week, it was hoped that the latest scheme of restriction based on 87 per cent. of normal output for the smaller estates and 77 per cent. for the larger estates would meet with the approval of both the opposing sections of the industry. According to the scheme, the output available for the Indian market would be 59 million lbs. Allowing 4½ million lbs. for export over the frontier routes, the nett supply available would be 54½ million lbs. or 3 million lbs. above the present consumption. It is presumed that this 3 million lbs. excess would be sufficient to meet any contingent increase in the local demand, but if the demand should exceed this figure, further supplies could easily be released.

The industry, however, cannot for all time depend on a scheme of restriction for its profitable working. It is not a compact self-centred body like the De Beers Company of diamond fame. The industry is so scattered and the interests are so varied that the difficulties already experienced in reaching an agreement on the restriction scheme are bound to raise their heads again and again. With exports restricted the salvation of the industry lies in encouraging and enlarging the consumptive demand within the country itself.

In this connection the activities of the Indian Tea Cess Committee call for comment. This is a body specially appointed for carrying on propaganda for developing the tea drinking habit, the funds being derived by the levy of a small cess on Indian tea exports. In the past the activities of this Committee have been directed more to propaganda in the foreign markets. Its futility and the urgent necessity for concentrating on the Indian market have been well brought forth in the following extract from the contribution of a planter to the *Madras Mail*.

It seems to me that the policy followed by the I. T. C. C. in the past would have been more beneficial to the interests of Indian grown tea had greater consideration and financial support been paid to the development of indigenous markets instead of spending the bulk of finances on expensive propaganda in the West where the benefits derived from such propaganda *are shared* with other Tea producing countries but *paid* for by us.

I seem to recall a considerable feeling of opposition to the very large sum—was it £110,000 ?—allotted to propaganda in America a year or so back and it would be interesting to have competent opinion on the wisdom of such expenditure in view of the present financial-political impasse in which that country is now embroiled. Tariff walls and adverse exchange are factors which must have accounted for a great setback to the usefulness of propaganda carried out in that country. Besides, with the repeal of the Prohibition Act our American friends are more likely to slake their thirst in a fiery " high-ball " than in a cup of flowery souchong. France, too, has recently raised her tariff on Tea by 120 per cent. and our own Chancellor of the Exchequer in Britain refuses to increase the tariff on Java tea, or to alter the preferential tariff on Empire Grown teas, presumably because there is too much British capital sunk in Java tea interests. All points to the very grave necessity for concentrating on expansion of indigenous markets, for the accumulation of large stocks in this country during the period of Restriction provides the key to perpetuation of the depressing cycle, and the sooner comprehensive measures are put in force to expand the indigenous markets on a large scale, in order to absorb even part of these stocks and as a future safeguard in years to come, the less likelihood will there be of these surplus stocks undermining all the good that Restriction portends.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN

WAR DEBTS TO THE FORE AGAIN.

The approach of August end and the spectacle of an apparently indifferent Government have combined to revive interest in the question of the settlement of war debts. Past experience has shown that the two half yearly dates, on which instalments of war debts are due to be paid to America, might come upon the respective governments with the same disconcerting suddenness, rendering it difficult to devise either a tentative understanding or a permanent settlement. After these weeks since the break up of the World Economic Conference, the public is slowly recalling to its mind the Premier's promise that, if only Great Britain would hold her tongue, till the World Economic Conference, Mr. Roosevelt would help the final solution of the riddle of war debts. Indeed, Great Britain had done more than the Premier, with his undue deference, so characteristic of him, to the susceptibilities of foreign powers, had asked them to do. Here is the Conference, which, after a thorough mess of its task, is gone, to return, God knows, when ; and under this pretext, the favourable opportunities afforded by the acceptance of a token payment in silver has been thrown away. There is, as yet, a period of only three months between now and the due date for the next instalment of war debts. And all that the public has to allay its apprehensions is an announcement that the debt negotiations will be begun in early October at Washington. It is learned that His Majesty's Government has proposed to the United States Government that Sir Frederick Leith Ross, Chief Economic Adviser to the Government, shall go to Washington in October to continue conversations on the subject of the British debt to the United States. The exact date, however, of Sir Frederick's departure has not been settled but he is expected to cross the seas early in October. It would appear that the Government have not yet decided that Sir Frederick would proceed to Washington alone or be accompanied by other experts from the Treasury. Nor is anything definite about the scope of the preliminary discussions. The Government are apparently content to indulge the hope that within a couple of months the American Recovery Programme will have cleared sufficiently to enable the President, not only to give sufficient attention to this problem, but also to persuade public opinion to agree to the substantial concessions that would, doubtless, be called for.

Negotiation in Early October.

While an attitude of mere impatience in regard to the debt settlement would not be altogether reasonable, there can be no denying that the Government's programme must be judged in the light of the question, whether it will enable an understanding to be arrived at in time to avoid another deadlock at the time of the December 15th payment. From the tone and content of the reports now current, it is certain that no attempt will be made to come to grip with the problem till Sir Frederick has crossed the seas. The utmost that can be hoped for is that Sir Ronald Lindsay is already preparing the ground and exploring the avenues of adjustment between the American and the British view points. But the necessities of procedure in international understandings must not be overlooked. In a careful appraisal of the position and prospects, the *Financial News* points out the innumerable stages that will have to intervene before the public can be relieved of the anxiety in regard to the next instalment of war debt. The discussions of Treasury experts are, necessarily, only a prelude to the negotiations between the Ministers of the two countries ; and considering that, in his reply to the offer of a token payment of silver, Mr. Roosevelt emphasised that the discussions of war debts must necessarily take place in Washington, it is certain that one or more British Ministers of Cabinet rank will have to cross the seas, on receipt of the report of Sir Frederick Leith Ross that the discussions have arrived at a stage in which they can be handed over to mere formal negotiation between the Ministers. The risks of such protracted procedure in these days of unsettlement are too numerous to mention. Any upset in the domestic position in America might involve a revulsion of public feeling against Mr. Roosevelt, with fatal consequences to the cause of war debt settlement. Public opinion is, therefore, inclined to be rigorously critical of the delay which has been allowed in this case by the Cabinet.

Protest against German Shipping Orders.

The stir caused by the German Shipping restrictions announced last week has happily come to an end. From the manner in which foreign representations came pouring on Germany and the final decision of the authorities in Berlin to withdraw the restrictions, it is certain that undue pressure had been brought to bear on Germany in this matter. It is natural that British Shipping interests should have been most active in their efforts to have the German order rescinded. For already they have been hit hard by the growth of national marine in practically every free country of the world with a seaboard and most by the extreme severity of the depreciation and the decline in the volume and value of international trade. The German order, if it had been persisted in, might well have proved the last straw. The interests concerned, therefore, appealed to the Government to take up the question on hand and secure suitable redress. Early in the week rumours were current that the German order referred not only to passenger traffic but under the pretext of control of exchange transactions Germany had also been attempting to hit at the goods traffic. Such rumours have been contradicted, and even if these ideas had been entertained by the German Government at an earlier stage, they have by now been abandoned under foreign pressure.

Germany's Preliminary Explanation.

So far as Great Britain was concerned, the German order which was duly received by a foreign office from the Embassy in Berlin on April 15, was scrutinised by the appropriate experts of the Foreign Office and the Board of Trade, with a view to establish that it was in contravention of the provisions of the Anglo-German Commercial Treaty of 1924. It would appear that it was extremely difficult to establish such a case, and the Foreign Office inclined to the view that what Germany attempted to do in the matter of regulation of German passenger traffic was definitely contrary to international usage. A somewhat weak attempt was made by Berlin to answer through an official statement "the unjustified attacks of the English press." The statement, while affirming that the orders of the German Government did not contain any discriminating regulations against foreign shipping, closed with an indication that representations from abroad had had an effect. "German official quarters are," it said, at present considering how they may meet the wishes of foreign shipping companies in regard to the practical enforcement of the regulations in order to do away with certain difficulties. It is hoped to find a way of avoiding these difficulties without infringing the German currency regulations and without putting German shipping companies at a disadvantage compared with foreign companies.

"The statement adds that the new regulations, which made it compulsory for Germans wishing to

Air Mail Week.

book passages on foreign vessels to obtain a permit before they might pay the passage money to a foreign company, were introduced because hitherto the application of the currency laws gave foreign shipping companies an unfair advantage over Germans, while the new orders put them on equal terms." Nevertheless, it was made clear that no appeal to the "equal treatment" clause of the Anglo-German trade treaty will be allowed."

Foreign Shipping finds it halting.

The statement denied that assertions that the new regulations will have any effect on goods traffic, and emphasised that the new order applied to passenger traffic alone and that the transport of German goods on foreign ships had not been banned. As this statement indicated, it was a slow climb down on the part of the German Government. On August 16, the German Government issued another official explanation from Berlin repeating that the measures were only intended to prevent the flight of capital, and that they had been applied to passengers paying for their reservation in foreign currencies. Presumably, the German statement means that foreigners wishing to travel in foreign vessels may pay for their passage with foreign currencies remaining from the amounts taken with them on their entry into the country. The Minister of Economics justified the order of his government on the ground that passage money collected recently by the German office on individual foreign shipping companies exceeds considerably the amount collected during the same period last year. While this is a justification for the German Government attempting to regulate the efflux of money abroad, they must also recognise that their pronouncement referred to earlier does not alter the position at all, inasmuch as the German citizen cannot pay his passage in foreign currencies without violating the currency law and to pay it in German currency to a foreign shipping company he must have the permit of the Currency Control Department in accordance with the new order.

Contending Parties Confer.

Dissatisfied with the replies given on behalf of the German Government and emboldened by the hesitancy noticeable therein, the British Government instructed Mr. Basil Newton, the British Charge d' Affaires, to raise with the German Government the question of the German order on the ground it violates the Anglo-German Commercial Treaty of 1924. Mr. Newton was also asked to point out that, if the German order is enforced, the British Government would be obliged to study means of protecting British interests. He was also instructed to make enquiries about the press reports that the German Government contemplated placing obstacles on the export of German goods in non-German vessels. It would appear from the ready response of the German Government that Germany was nervous about the effects of retaliatory action on the part of the British Government and other governments affected by its orders. A conference was therefore held on August 18, at the German Ministry of Economics between representatives of the German Government and the representatives of the foreign shipping companies.

An official communique issued by the Ministry of Economics after the conference announced that, while, on the one side, the representatives of the shipping companies recorded their objections to the recent restrictions, the German Government pointed the necessity of adequate measures being taken for preventing the flight of capital out of Germany. The shipping company's agents thereon indicated their willingness to assist in preventing the unlawful export of foreign currencies by individual passengers, and the Ministry is drafting new regulations for the control of transfers of foreign currencies for passenger fares by the foreign shipping companies to their head offices abroad. The new order will be published in the course of the next few days, and will come into immediate effect. The German delegates at the conference showed themselves very reasonable and agreed that the order complained of by British and other foreign shipping companies should be rescinded, so that the latter's position will no no way be different from that of German shipping concerns.

Britain's July Trade Returns.

The July trade returns show but inconsiderable improvement over those of the previous month while exports are fairly well maintained at £53.7 million against £53.8 million. In June exports showed a marked improvement from £28.5 million to £29.8 million. It is noteworthy that the July figures also show an improvement, however moderate, over those of July, 1932. What should perhaps be deemed most encouraging is the increase in the import of raw material particularly cotton which shows that in the coming months the export of manufactured goods might be expected to be on the increase. If the figures warrant the feeling that a mild recovery has set in, they are also an antidote to the exaggerated reports that are often current in certain circles, because a detailed examination of the figures does not substantiate the superficial signs of a general change for the better. It must be remembered that July of last year was a particularly bad month and any interest derived from the difference between last year's figures and this year's is too slender a basis for any confusion regarding substantial recovery. The increases in cotton purchases, too, are abnormal and should form no guide to the future. The average daily turnover, however, is showing signs of increase, whereas last year it declined persistently until the end of September.

BRITISH EXPORTS.

AVERAGE DAILY TURNOVER.

(In £1,000,000's)

	1933	1932
April	1.15	1.34
May	1.14	1.21
June	1.14	1.14
July	1.15	1.13

Clearly the improvement, such as it is, has not affected all trades alike: it is not a general improvement, but a recovery in some trades only and in some markets only.

TRADES THAT BENEFITED.

In eleven trades, the July figures were above the average for the preceding six months, as the following table shows:—

	1933 July	1933 Average Jan.-June
Coal (tons) ...	3,270,000	3,150,000
Coke (tons) ...	236,000	223,000
Iron and steel (tons) ...	156,000	151,000
Non-ferrous metals (£) ...	1,436,000	792,000
Wood and timber (£) ...	94,000	75,000
Tops (lb.) ...	4,262,000	3,687,000
Wool yarns (lb.) ...	4,738,000	3,347,000
Wool tissues (sq. yds.) ...	8,912,000	7,169,000
Rayon (£) ...	326,000	292,000
Leather (£) ...	393,000	266,000
Paper (cwt.) ...	302,000	299,000

And, compared with last year, coal, iron and steel, and wool textiles are roughly as well off, while coke, non-ferrous metals and leather are better in varying degrees.

Air Mail Week.

UNITED STATES OF AMERICA

MR. MONTAGU NORMAN IN NEW YORK.

The detractors of the Recovery Administration have been disappointed about the sensational collapse of the structure which Mr. Roosevelt is laboriously building. But it looks as though it would be a few months before impartial observers wuld be able to pronounce a definite verdict on the American experiment. So far as the markets are concerned, interest centred on the rumours about devaluation, the establishment of a free gold market and exchange equalisation fund, as also the attempts of the great exchanges to obviate the limitation of maximum fluctuations. In fact, the week opened with the decision of the Chicago Board of Trade to suspend as from August 15 the pegged prices instituted on July 31. This caused a great deal of nervousness and a slump naturally ensued. The tendency to unload was further accentuated by the bearish crop reports that were made available at about the same time. In Europe big crops are anticipated ; and the official estimate of this year's carry over of wheat is 386 million bushels against 384 million bushels last year. The Canadian carry over is officially estimated at 211 million bushels. Cotton, too, lost nearly 16 points.

Modification of Embargo?

In the stock exchanges gold mining shares benefited from the rumour that the export of gold precipitates and amalgams would not come under the embargo imposed by the President. Owing to the decline in commodity prices and the recovery of the dollar the tendency was decidedly weak and would have been weaker but for the sharp covering that rose towards the end. But it must be said on the whole that Wall Street has fairly withstood two such major bear influences such as the weakness of commodities and the recovery of the dollar. The grain markets feel it as a grievance that the Government should have left the question of fixation of maximum fluctuations to the officials of the exchanges concerned. But they are thankful at the same time that, instead of knocking off altogether the crutches on which commodity prices have supported themselves, they have chosen only to widen the range within which daily fluctuations will be permitted. It was announced on Augst 15, by the clearing house of the Chicago Board of Trade that the margin for wheat has been increased to 5 cents per bushel instead of 4. and that for oats 3 cents. The idea of fixing economic prices for cotton is not favoured either by the cotton trade or the exchange authorities. It is unlikely that any action will be taken in this regard, except as a result of pressure being brought on them by the Government which, at the moment, seems highly unlikely.

As for the question of stabilisation of the dollar, reports from Washington continue to be as equivocal as ever. But it is hard to believe that the question is not on the immediate agenda of the Administration. For the last three weeks it has been repeatedly reported that President Roosevelt had been discussing the question with those members of his Brain Trust who are near to him, but that on these occasions the discussions have been inconclusive. There is reason to suppose that, left to themselves, the Administration would prefer to postpone the question to a stage at which more measurable results of their present experiments in recovery would be available. But the visit of Mr. Montagu Norman to New York seems to suggest that the innate preference of Mr. Roosevelt and his advisers is being affected by extraneous circumstances and considerations. It is, of course, not to be expected that in any mission, in which Mr. Norman is a leading figure, reliable clues of the trend of discussion and ultimate conclusion would at all be available. For the moment, all that is known of this move is that Mr. Norman is keeping in close touch with Mr. Harrison, the President of the Federal Reserve Bank of New York. The coincidence of Mr. Norman proceeding to New York with the discussions regarding the establishment of a free gold market in that city is too striking to be regarded as insignificant. But now that the Government have permitted the export of gold precipitates and amalgams, on the ground that it was not the intention of the Administration, when they laid the embargo on gold export, to prohibit them, sems to suggest that the question of a free gold market in New York is, for the moment, shelved.

Other Riddles.

Even if one accepts this view, there are other riddles which call for an answer. Since the setback in the depreciation of the dollar that occurred after the attainment of the old sterling-dollar parity, the talk of the establishment of an exchange fund, which will prevent the recovery of the dollar and keep it down to the desired low levels, has been rife in all informed circles. Likewise, it is also believed that the Recovery Administration has arrived at a state in which mere promise of inflation will fail to do the trick. The improvement in business and business sentiment which has so far been achieved, has been mainly due to the mass suggestion, which the dramatic passage of sensational legislation in the Congress has been able to make. Though, on the whole, there has been no serious setback it is sufficient to indicate the need for a fresh stimulus. It is, therefore, urged that sooner or later President Roosevelt must use the powers granted to him under the inflation amendment of the Farm Bill to reduce the gold

Air Mail Week

content of the dollar by an appreciable percentage. Such action might have the effect of intimating to the country the amount of depreciation in the dollar. Considering that a depreciated dollar cannot compare with a depreciating dollar as a lever of business uplift, it is possible that the Administration might decide in favour of the establishment of an exchange fund. In the operations of the fund, the British control are obviously vitally interested. In such a view Mr. Norman's visit to America may be regarded as betokening the anxiety of the monetary authorities of Great Britain to come to some sort of working understanding with the monetary authorities in America. The developments in this regard are highly intriguing.

Complaints against Codes.

The Administration policy in regard to the industrial codes are happily no matter for speculation. They are battling bravely with the difficulties that emerge all round and which are collectively at least quite considerable. Not to speak of gaining new adherence to the recovery programme, those which have already had the code, whether voluntarily or on a coercive basis, are finding cause for complaint. The complaints have been so numerous that it is out of the question to deal with them by a flat "No." President Roosevelt has indicated his readiness to remedy any real faults which may be discovered in these codes. The executives of railroad labour have complained that the carrier arrangements are not increasing employment at a sufficiently speedy rate. The oil industry, which had a code imposed on it on the authority of the President, owing to its inability to evolve one of its own accord, is now discontented with the provisions, which give the President supreme power to allocate prices and output. As the code has not yet had the formal approval of the President though he was largely responsible for it, it may be possible to make a few last minute changes in it. The copper code has involved a gradation of output in inverse ratio to capacity. The large companies are limited to a production of 20 per cent. of capacity, the intermediates to 25 per cent. and the small companies to 30 per cent. And the code makes provision for increase of the quotas to 65 per cent. of productive capacity of the companies signing. But the worst recalcitrance is to be found in Mr. Henry Ford and he has been given a sharp rebuke by General Johnson for keeping out of the negotiations for an automobile code.

While there is no denying that the major preoccupation of the Administration is the formulation of codes for all the industries, it must be said that they are also branching out into fresh fields of activity.

Besides pressing forward its published codes, the Administration is busy preparing others and branching out into fresh fields of activity.

The Department of Agriculture has now announced a plan to limit the production of dairy products. A fund of $30,000,000 will be set up to carry on marketing operations in butter in the hope of raising the price.

The Government is also proposing to cut the tonnage of hogs marketed next season by 1,800,000,000 lb. liveweight. This season it will purchase from 600,000,000 lb. to 700,000,000 lb. liveweight of hogs and sows as food for the unemployed and as a means of helping the farmer.

More than $200,000,000 in loans to help the farmer have been disbursed or approved by regional Agricultural Credit Corporations, with offices in thirty-four cities.

The Farm Credit Administration, under which they are administered, reported that at the close of business on July 21, the last compilation made, the corporations had disbursed $169,245,000 in loans to 132,803 farmers, that $43,239,000 more for 24,051 farmers had been approved but not disbursed, and that applications from 8,219 for $20,342,000 were pending.

FRANCE

EASY TREASURY POSITION.

Final results of the second portion of the 4½ per cent. ten-year Treasury bond issue, returnable at 110 per cent., have been published. The yield is 3,220 million francs. The first portion of the issue in March gave 5,200 million francs. The Government can yet borrow 1,580 million francs, before exhausting their powers, during the current financial year.

The Treasury thus, leaves nothing to be desired, insofar as the ways and means position of the Government is concerned. The French Public is fully cooperating with the Government in making its work as much devoid of anxiety as possible. It shows positive solicitude for the success of the administration.

A special law provided that the tax-payers, who had made insufficient tax-returns, would be pardoned on condition they submitted a correct return before July 1. In response to this considerate gesture of the Government, over 5,000 corrected returns were received. Correct statements came from every Department of France except from Gers, Drome and Lozere. The case of these districts does not raise the question whether they are the most honest of all, in that they have made correct statements at the very outset. Neither were they dishonest, because of

sending no corrected returns even in spite of the Government reminder by means of the special law. The fact of the matter is that these three districts are predominantly agricultural, and sparsely populated. Most of the inhabitants of these agricultural districts are not liable to income-tax at all.

The receipt of 5,000 correct returns or so, include over a thousand from Paris alone. In all, the Treasury benefited to the extent of 15,000,000f, during the past several weeks, from repentant taxpayers.

Industrial Recovery

The general index of industrial production for June rose to 112 from 109 for May (1919=100). Compared with the figures a year ago, the recovery is, to all purposes, 20 per cent. But, to reach the 1928 level, still a 12 per cent. rise has to be effected. The index for June showed an increase varying from 2 to 5, over that for May, in engineering and extractive industries, metallurgy, textiles and paper. The building index was stationary. Leather and motor-car showed a decline of 3 and 9 respectively, caused by seasonal influences.

The output of iron and steel, coal and iron ore, in June, was considerably larger than in June, last year ; but, that of potash was smaller.

Average weekly railway receipts during June are higher than in May, but lower than in June 1st year. Since January last, when they were lowest, there has been a rise in railway receipts.

Extreme caution governs the investment of capital in new companies. The loan issues of the Government are comparatively more attractive for various reasons. The combined share capital of the new companies, registered in July, was only 9 million francs, against a monthly average of 47 million francs in 1930-32 ; whereas, the increase of share capital by old companies amounted to 202 million francs, against 5 millions in the previous month and 93 millions in July last year. This fact affords evidence in support of the prevalence of greater confidence in well-established firms or state-controlled ones, as well as the general lack of optimism in early trade recovery. Apart from 1,392 million francs of new bonds, issued by the railway companies in June and continued in July, the new bond issues by private concerns have dwindled to 22 million francs in July, against the figures for July last year at 105 millions ; the monthly average, in 1932, of 423 millions ; those, in 1931, of 1,196 millions ; and those, in 1930 of 1,459 million francs.

Air France

A revolution in travels by air is imminent. As from September 1, the Air ministry will control "Air France," by which name the new merger of five air companies will be known. In taking this step, the Imperial Airways combine in Great Britain, some years ago furnished the inspiration. The avoidance of overlapping, an allround speeding-up with the utmost possible efficiency and economy, and adequate services to the principal centres of the world, were the motives that brought about the combine.

Only recently, a shipping merger was created. The two mergers, together, should considerably improve the transport facilities of the world. In either of them, the State is having a controlling interest. The Government is availing itself of the public confidence, expressed in the success of the loan issues. The new capital is not the result of savings, as earnings in every line are unimpressive. The traditional woollen stocking is being propitiated. If these impressive activities can bring about that change in psychology, which, ordinarily, is hoped to revive drooping trade, the venturesomeness of the State will be well justified.

The constituent companies of "Air France" are the Air Union, Air Orient, Aeropostatle, Farman and Sidna. Passengers will be able to travel from London *via* Marsailles, Italy, Greece, Syria and Bagdad right across India to Saigon in French Indo-China, in nine days.

The combine will also operate an air mail service from London to South America in ten days, whose route will pass through Dakar in French West Africa, Natal, Buenos Ayres across the Argentine to San-Diago in Chile.

One of the reforms, contemplated by "Air France" is to build up services to the Orient. By the end of this year, a new type of monoplane is to be put into service. Experiments, already made with it, warrant the possibility of passengers travelling from Croydon to India in three-and-a-half days. This service is to be extended, later on, to Hongkong.

Iraq Oil Wells

Yet another enterprise, which is financed by the Government, is the working of oil wells in Iraq. The wells now ready for the production of oil, and the pipeline from the Mediterranean port is to be completed by the end of this month. For the purpose of financing the French share in working the Iraq oil wells, the Government had formerly organised a company, by the name of *Compagne Francaise des Petroles*. This company has now to increase its share capital, in view of having reached, the stage, at which results can be attained. So far, capital has been spent in outlay. The present increase in share capital is required for the purpose of meeting the working expenses.

The original share capital was 315,962,000 francs. This amount will now be increased by 159,308,000 francs. The new shares are divided into two classes. The "A" class of shares for 698,500 francs will be issued at par, as well as "B" class of shares for 158,609 francs. The face value of all new shares is 500 francs. The proceeds of this new issue is for the purpose of furnishing further capital for the three operating companies, Iraq Petroleum Limited, Mediterranean Pipe Lines Limited, and *Compagne Francaise de Raffinage*. Of the 1,397 new "A" shares, 1,297 will be taken up by the Government. Of the 158,609,500 francs of the new "B" shares, the Government will subscribe for 55,059,000 francs. But, private participants will receive the preferential right to subscribe for "A" or "B" shares, at the rate of one new share for every two old ones.

Help to Wheat Growers

Last week, mention was made as to the manner in which middlemen circumvented the Government fixation of the minimum price of 115, by deducting the transport charges, among others. But, the Government has now prevented this abuse by introducing new laws, which were published on August 17.

They provide for a special transportation discount to be given to millers, whose grain has to be carried more than 50 Kilometres. The new wheat laws have the distinct object of helping the wheat growers. They compel the millers to use a large percentage of home-grown grain. Formerly, mills used foreign wheat for five-sixths of their capacity. But, the new laws compel them to use home-grown grain for 35 per cent. of their capacity. Thus, the quota of home-grown wheat for the use of mills has been more than doubled by Government action. All future contracts, by mills, must be made up, in accordance with the new laws.

While reconstruction schemes under State control move apace, the trade position is very disappointing. For the first seven months of this year, exports and imports show a decrease, compared with those for the same period of last year.

Exports amounted to 10,447,000,000 francs, a reduction of 1,059,000,000f, on the figure for 1932.

Imports during the period were 17,326,000,000f., a reduction of 291,000,000f., on the figure for 1932.

Thus, the excess of imports for the seven months of this year is 6,879,000,000f., compared with an import excess, in the corresponding period of 1932, of 6,111,000,000f.

It will be seen, therefore, that the adverse balance is progressive, and that exports shrink at a greater pace than imports.

GERMANY

THE NEW ECONOMIC POLICY

Fresh light has been thrown on the new orientation of Germany's body-economic, since the close of the Nazi Revolution. The Government has good reason to consider that settled conditions are within its reach. The advent of Dr. Schmidt, the Insurance Magnate, in the Ministry for Economics ushered in the watering-down process of the socialist claims of the Nazis, which carried them over the crest of popular favour during the Revolution. The burgoise creed is being fostered to-day in an unostentatious manner. The fascist State control is yielding place to a *laissez-faire* condition in industrial Rhineland, while the opposite policy of agricultural protection and forced labour is pursued in Pomerania or Eastern Prussia.

At Cologne, Dr. Schmidt, the Minister for Economic Affairs, recently made his first speech on the economic situation, since taking over the *port folio* from Dr. Hugenberg. Dr. Schmidt laid stress on the salvation of industrial Rhineland through the expansion of foreign trade. Otherwise, the consumption of increasing production will entail far too heavy a burden on the home market, to bear. For another reason, exports must increase progressively, if foreign creditors can be satisfied. The agricultural province of Pomerania or Eastern Prussia should be saddled with a protectionist policy, even though it may increase the internal prices of staple foodstuffs. He further disillusioned the fond hopes of any phenomenal recovery through the institution of emergency of public works. The utmost, that can be expected out of them, is just a normal recovery. He did not advocate the policy of arbitary intervention in industrial concerns, as it would drive employers into bankruptcy, or would, otherwise, artifically raise costs all round. He considered the forced absorption of unemployed as futile, from the employers' stand-point. But, he believed in relieving the congestion of unemployed through transfers to less congested parts of the country.

Regarding the capital market, he stated that the country's resources were very meagre. But, he banked his hopes on "blocked" foreign capital, which would be available for fresh investment. Otherwise, its release is possible only through "additional" exports, in payment for which the "blocked" capital can be employed. It cannot even be spent by foreigners in Germany for overhead expenses. In the last resort, creditors holding scrips against this "blocked" capital can get them discounted by the Reichbank at 50 per cent., or so. Dr. Schmidt held that the restrictions on foreign exchange were necessary on the ground that the ebb of export surplus was at its lowest.

The aforesaid exposition of the German economic policy brings, for the first time, the Nazi *volte face*, into hold relief. How far it would succeed in effecting an improvement in the economic well-being of the country remains yet to be seen. But, there can be no doubt as to the hold that the capitalist ring has taken of the Government.

Reduction of Unemployment.

The latter half of July witnessed a reduction of unemployed on a scale which would beat the record, during the noteworthy trade revival of 1926, hollow. The astonishing reduction of 358,000 within the short period of a fortnight is explained by the State Department for Unemployment Insurance, as due to the employment of forced labour to the number of 150,000 persons. Another explanation is that members of national associations, who have kept away from the employment exchanges, owing to increasing strictness of the regulations, have now reappeared at the labour exchange, as "privileged" applicants to fill in vacant or newly created posts.

But, it is quite on the cards that an increase in unemployed will, much sooner than later, show itself again, as the so-called "traitors to the State," consisting of social-democratic and communist workers, are getting sacked for their political opinions.

Another aspect of this vexed question of the reduction of unemployed is the section in which employment has taken place. In East Prussia, moral pressure is brought to bear on employers to take in more hands, than the work on land can bear. The transfer of unemployed from congested areas is possibly for East Prussia, where agricultural work can be found. Under the system of forced labour and the transfer of labourers, not trained for agricultural jobs, for service as casual workers, the solution of the unemployment problem is anything but satisfactory. The remedy is costly, and harmful to the efficient conduct of agricultural operations. A third outlet from the morass of unemployment is to induce all public bodies and undertakings to place their orders and contracts with East Prussian firms.

By all tokens, the procedure of the Government, regarding the reduction of unemployed, is actuated by an inordinate desire to produce psychological effect. In normal times, it would, perhaps, revive business activity, more or less permanent in

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

character. But, in the present abnormal condition of the world trade depression and national self-sufficiency propaganda it is extravagant to woo a real economic revival through, the merely adventitious method of psychology stunts. In consideration of the uneconomic employment of untrained labour, the reverse of what the Government aims at has the greater probability of realisation.

A graver fault in the Government scheme is the restriction of orders and contracts to East Prussian firms. The fostering of a parochial mentality may bring other evils in its trail. The major part of the economic troubles of industrialised countries is caused by trade restrictions. As between countries and countries, such restrictions have spelled economic disasters. What should one expect of a parochial discrimination within the limits of a single State? At present, there is no legislative enactment sanctioning this discrimination. But, it will not take long for the Government recommendatory mode to transform into a vociferous demand, by the vested interests in East Prussia, for prescription.

These rash tactics, concerning the reduction of unemployed, tell but one tale. The Nazi Government is faced with popular reaction, which it is anxious to negotiate in any desperate manner that it can. For sometime, the remedial measures may function, but not for long. But, if, by any chance, a real economic revival sets in, the steps, that are now the subject of criticism, may easily prove to be the sheet-anchor of the staying-power of the present administration.

Interest Payment.

Under the arrangements in connection with the transfer morotarium, the interest, due to foreigners other than the Dawes, Young and Standstill creditors, was not to be paid in full. Fifty per cent. of it was to be transferred in foreign currency, and the balance to be paid into a conversion office, attached to the Reichbank. Scrips for the untransferred amount were given to the creditors. These conversion scrips cannot be used directly in Germany; but, can be used in payment for importing "additional" German goods.

Even the fifty per cent. of the interest, that should be transferred, has not yet been paid to the creditors. The Reichbank cannot agree to the transfer of the part interest, as all the parties concerned have not yet accepted the scheme without any reservation. The full acceptance of the scheme would mean the consideration of German debts as liquidated, when they are once paid into the Conversion Bureau. But, the English, Dutch and almost all other creditors except America, have come to an agreement. Unless American creditors fall in line with other creditors, the latter will have to wait, or come to a separate understanding with the Reichbank.

(*Continued from page 616*).

PROFESSOR CASSEL PLEADS FOR STERLING BLOC

III

In an article in the "Svenska Dagbladet" Prof. Gustar Cassel, the eminent Swedish economist, exhorts Great Britain to sustain her economic leadership by forming a sterling bloc with her Dominions and such other countries as are prepared to join.

Apart from the British Empire, Great Britain would get the Scandinavian countries, South America, and probably Japan to join such a group, which would arrange for a moderate raising and subsequent stabilisation of the price level. Such a measure might attract also the gold countries, and ultimately form a basis for a stabilisation of international exchange rates.

A LOST OPPORTUNITY

If Great Britain were willing to do this, it would have another splendid opportunity of becoming a leader of the monetary policy in a considerable part of the world.

Had Great Britain earlier resolutely placed itself at the head of a general raising of prices, America might have been willing to join in that action, says Professor Cassel, but America was now left to act alone, and the result would be an American isolation, greatly harmful to world economy. It is true that such a sterling group would not attain what was expected from a badly-prepared economic World Conference, but it would, nevertheless, achieve a feat of immeasurable importance to the economic recovery of the world.

TURN YOUR BACK ON GOLD

For this purpose, it is, however, an absolute condition that Great Britain concentrate its monetary policy solely on this aim, and that it abandon for the time being every thought of stabilisation of the value of the pound in gold or gold currencies, while there can be no question of a return to the gold standard for a long time to come.

Such initiative on the part of Great Britain, and a clear view of the actual situation, would restore the confidence of the sterling countries, and enable them to establish and maintain their natural position of power in world economy.

W. E. C. Results Better than they seem

"Put on paper, the results of the World Monetary and Economic Conference seem meagre enough, and there is ample evidence of the extent to which failure to agree on exchange stabilisation precluded the solution of other problems," observes the 'Westminister Bank Review' for August.

The Monetary Sub-Commission on Immediate Measures of Reconstruction was naturally the worst sufferer through the jettisoning of hopes of currency stabilisation. The decision necessarily restricted its discussion of credit policy, exchange control, &c., to the statement of broad points of view, for no country was prepared to tie itself to a definite policy in circumstances whose future was so uncertain.

The discussion of international indebtedness revealed that the creditor nations were still very anxious to conserve their rights. The justice of the view put forward by the Italian delegation, among others, that maintenance of the investor's confidence is essential for resumed international lending cannot be denied.

Nevertheless, over-emphasis can be placed on the extent to which trade recovery and higher prices will automatically reduce debtors' burdens. It is morally certain that some countries will be quite unable to share in that recovery—and thus will retard the improvement of the world as a whole—until the burden on their exchanges and their budgets of inflated indebtedness is modified.

The spirit in which the delegates parted and which has doubtless by now been imparted to some of their countrymen furnishes the best hope of more fruitful outcome to a resumed Conference. The turn of events in America after the Conference was mooted certainly made its assembly untimely—though this should have been foreseen when its date was fixed by Mr. Roosevelt and Mr. MacDonald at the end of April. In so far as the future is concerned, the Conference has given birth to many expert discussions which can be more valuably continued when they escape the embarrassing, concentrated attentions of the world's Press.

The experts' work, as well as the resolutions of the Conference itself, relating to the eventual working of a restored gold standard, will provide a basis for a renewed conference in the autumn.

Topical Extracts:

IS TRADE ON THE MEND ?

VIEWS FROM ABROAD

I

Messrs Robert Benson and Co., merchant bankers, state that, despite the complete failure of the World Economic Conference, trade continues to show signs of slow recovery in many different countries. This is due to such "normal" processes as encroachment of consumption on stocks, adjustment of debts to current price levels by refunding or bankruptcy and last, but by no means least to mere psychological readjustment to changed conditions.

The revival does not seem to be confined to countries which have pursued any particular brand of currency policy, but extends to sterling and gold standard countries as well as to the United States. It is, however, difficult to believe that it can go very far in the absence of currency stabilisation and a genuine reduction of the barriers erected by every country in the vain attempt to stave off or divert depression from its own shores.

BARRIERS TO TRADE.

That recovery can make some headway against the most forbidding array of barriers is a plain fact, but one must fear that its progress and extent will prove disappointing unless some real advance towards freer international trade can be made by the method of bilateral and multilateral trade agreement.

The extent to which this method can be developed (now that the attempt to secure any comprehensive scaling down of barriers has failed) will be one great determinant of the amplitude of the present revival of trade. Another will, of course, be the fate of the great experiment which President Roosevelt has launched on the other side of the Atlantic.

RECOVERY ADMINISTRATION IN U. S. A.

The United States is now just entering the second phase of Roosevelt's recovery programme. The first phase was that of treatment by mass suggestion. The abandonment of the gold standard, the planning of public works, the taking of powers to print notes—all these were devices for persuading the public that a great rise in prices and a great recovery in production lay ahead.

They were a promise of inflation to come rather than in themselves inflation. For a time the spell worked. Prices of basic materials rose heavily under buying by speculators and for the replenishing of exhausted stocks, and production in steel and certain other branches also rose heavily. But consumption did not respond in proportion: in fact, it hardly responded at all since the substantial improvement in production was possible without any notable increase in pay rolls.

INFLATION, NOT ITS PROMISE!

Meanwhile the purely psychological stimulus had exhausted itself. Talk of inflation was no longer sufficient to depress the exchange, raise commodity prices, or further stimulate production. Hence the necessity for the second phase of the recovery programme—specific action to stimulate consumption.

The attempt to increase consumer demand is now being vigorously pursued by the imposition upon industry of "codes of fair competition," the purpose of which is to increase pay rolls by shortening hours of labour, while maintaining or increasing wage rates, and at the same time to check increases in the sale price of industrial products.

By these means the President hopes within the space of a month or two to have a large proportion of America's unemployed population back at work and consuming once more on the normal scale. It now remains to be seen what success will attend this bold attempt to restore prosperity by encasing a whole community in an economic strait waistcoat.

WAY TO SOCIALISM.

Informed opiinion in this country is almost universally sceptial. It fears that the difficulties of controlling the play of ordinary economic motives in a highly independent community will prove insuperable, that industrial efficiency will suffer and rising costs lead to doses of real inflation and a further raising of America's high tariff walls. The next few months will provide the test.

The result, whatever it may be, will have a profound influence on economic policy all over the world. A striking success would undoubtedly pave the way for similar experiments elsewhere and for a great advance towards Socialism. An acknowledged failure, while it would undoubtedly set back recovery throughout the world, would probably swing the pendulum of world opinion back towards personal liberty and away from economic interventionism.

II

In the August issue of their quarterly review of business conditions Merrs. J. Schroder & C. declare that "In spite of the apparent failure of the assembled statesmen to find what diplomatists would call a formula for the benefit of world trade world trade is improving, and there is reason to hope that is will continue to do so".

The Conference has not been entirely fruitless, and signature of the Four Power Pact is said to be a definite step towards a better atmosphere in European politics.

But the evidences of trade improvement, says the review, have a special interest, because it is peculiarly difficult to see why the improvement is happening. "If it is largely based on the speculative lead given by America, there is some danger of a change of mood and reaction. If, on the other hand, it has happened just because people all over the world are tired of being frightened and depressed, and have definitely grasped the favourable features in the business position, which are very real, then the improvement may be relied on to grow by its own momentum.

FAVOURABLE FEATURES.

"These favourable features are cheap money, plentiful food and commodities, a ready demand from consumers for finished articles that are offered to them on reasonable terms, and a tendency towards cooperation among certain groups of States, which has been made all the stronger by the breakdown of the Conference. Above all, the natural human instinct that impels most of us to try to better our lot by work and enterprise is the safest foundation for trade revival. For years this instinct has been obstructed by political and other fears. Is it too much to hope that it is now reasserting itself, and is destined to bring back prosperity?"

Mr. Roosevelt's measures are viewed by grave apprehension by all those who are wedded to what are called sound principles. As to the question of the permanence of the improvement, the critics are doubtful; and they rightly point out that if it proves to be merely speculative, and based on hopes which are not fulfilled the consequent reaction will be serious to all concerned. And among those concerned the London Stock Exchange and produce markets are prominent; because British Industrial shares have been pushed up rapidly by American purchases, based on expectations of a fall in the dollar rather than of a rise in British Profits, and commodities, such as rubber, have been affected by the increased demands of American manufacturers.

DECREASE IN WORLD UNEMPLOYMENT.

All the world, in fact, is watching the American experiment with anxious eyes. If it succeeds, it will have been the most daring and triumphant venture in the economic history of the world. Even if it fails, Mr. Roosevelt will be able to claim that he did make a bold attempt, at a time of exceptional depression, to give the economic machine the jolt that seemed necessary to jerk it out of the rut in which it was stuck.

The most cheerful news published since the beginning of the depression was the announcement in July in the weekly Bulletin, I.L.O. in July in the weekly bulletin of the International Labour Office, of a decrease in unemployment in a considerable number of countries.

IMPROVEMENT IN BRITAIN.

"With regard to the position of British industry though there has been so far no sign of improvement in the volume of exports, the general trade of the country, judged by the test of the unemployment figures, shows a very definite improvement. The Ministry of Labour returns showed that the total number of registered unemployed in Great Britain had fallen from 2,582,879 on May 22 to 2,442,175 on July 24. In comparison with a year ago 549,000 more insured workers are now in employment. The recent increase had been general, but was most marked in some of the export industries, so that the long-de-layed improvement in exports may at last be about to appear."

(Continued on page 615).

STATISTICAL INFORMATION

India's Foreign Sea-borne Trade in July, 1933.

The trade returns of British India for the month of July, 1933, as compared with the preceding month, showed a slight increase in the value of imports, while exports and re-exports recorded decreases. The value of imports of private merchandise totalled Rs. 8,70 lakhs, an increase of Rs. 1 lakh as compared with the preceding month. The exports of Indian produce and manufactures declined by Rs. 57 lakhs from Rs. 12,74 lakhs in June, 1933, to Rs. 12,17 lakhs in the month under report. Re-exports also recorded a decrease of Rs. 2 lakhs and amounted to Rs. 25 lakhs. The comparison of the trade figures for July, 1933, and the four months April to July, 1933, with those of the preceding month and the corresponding periods of the preceding year, is set forth below:—

	Month of July, 1933 R (lakhs)	Month of June, 1933 (R lakhs)	Increase (+) or decrease (...) in July 1933 as compared with June, 1933 R (lahs)	Per cent.
Imports ...	8,70	8,69	+1	+0.1
Exports ...	12,17	12,74	−57	−4.5
Re-exports ...	25	27	−2	−7.4

	Month of July, 1933 R (lakhs)	Month of Jyly, 1932 R (lakhs)	Increase (+) or decrease (—) in July, 1933 as compared with July, 1932 R (lakhs)	Per cent.
Imports ...	8,70	11,22	−2,52	−22.5
Exports ...	12,17	8,97	+3,20	+35.7
Re-exports ...	25	23	+2	+8.7

	Four months April to July 1933 R (lakhs)	1932 R. Lakhs	Increose (...) or decrease (—) in 1933 as compared with 1932 R (lakhs)	Per cent.
Imports ...	36,83	48,38	−11,55	−23.9
Exports ...	45,71	38,36	+7,35	+19.2
Re-exports ...	99	97	+2	+2.1

2. Treasure on private account, including currency notes, showed a net export of Rs. 2,62 lakhs in July, 1933, as against Rs. 5,55 lakhs in the preceding month and Rs. 5,74 lakhs in July, 1932. The import and export figures of gold and silver during the four months April to July, 1933, compare as follows with the corresponding period of the preceding year:

	Four months, April to July 1933 R (lakhs)	1932 R (lakhs)	Increase (+) or decrease (—) 1933 ac compared with 1932 R (lakhs)
Gold imported ...	38	38	...
Gold exported ...	18,00	18,58	−58
Silver imported ...	19	97	−78
Silver exported ...	27	22	+5

3. Measured by the statistics of merchandise and treasure, the total visible balance of trade in July, 1933, was Rs. 6,37 lakhs in favour of India as compared with Rs. 9,90 lakhs in June, 1933, and Rs. 3,74 lakhs in July, 1932. During the four months ending July 1933, the visible balance of trade in merchandise and treasure was Rs. 27,59 lakhs in favour of India compared with Rs. 8,52 lakhs in the corresponding period of the preceding year. The balance of remittances of funds in July, 1933 was minus Rs. 4,34 lakhs and in four months April to July, 1933, minus Rs. 19,18 lakhs.

Changes in imports.

4. As compared with July, 1932, the imports of food, drink and tobacco in July, 1933, decreased by Rs. 31 lakhs to Rs. 88 lakhs, those of raw materials by Rs. 29 lakhs to Rs. 1,21 lakhs, and those of manufactured articles by Rs. 2,01 lakhs to Rs. 6,32 lakhs. Under food, drink and tobacco, imports of sugar 16 D. S. and above (including beet) declined from 43,000 tons valued at Rs. 46 lakhs to 25,000 tons valued at Rs. 27 lakhs. The imports of betelnuts declined from 86,500 cwts. to 85,200 cwts. and those of raw tobacco from 419,400 lbs. to 264,700 lbs. Imports of provisions and oilman's stores declined from Rs. 21 lakhs to Rs. 18 lakhs owing mainly to reductions under vegetable products and condensed milk and farinaceous and patent foods. Under raw materials, the imports of kerosene oil receded from 7.2 million gallons valued at Rs. 33 lakhs to 2.6 million gallons valued at Rs. 13 lakhs. Imports of fuel oil rose from 5.7 million gallons to 6.4 million gallons. Imports of lubricating oils amounting to 1 million gallons showed an increase of 140,000 gallons in quantity accompanied by a declined of Rs. 1 lakh in value. Imports of coconut oil improved by 53,000 gallons without any corresponding rise in value. Raw cotton (chiefly imported from Kenya Colony and Egypt) recorded an increase of 100 tons in quantity and of Rs. 1 lakh in value. Imports of raw silk fell off by 264,000 lbs. in quantity and by Rs. 12 lakhs in value. Under manufactured articles the imports of cotton yarn and manufactures decreased by Rs. 1,31 lakhs. The imports of twist and yarn fell from 4.3 million lbs. to 3.0 million lbs. in quantity and from Rs. 35 lakhs to Rs. 23 lakhs in value. Under cotton piece-goods imports of grey goods fell from 32 million yards valued at Rs. 48 lakhs to 22 million yards valued at Rs. 27 lakhs and those of white and coloured goods from 43 and 44 million yards valued at Rs. 78 lakhs and Rs. 81 lakhs to 20 and 22 million yards valued at Rs. 31 lakhs and Rs. 38 lakhs respectively. Under iron and steel there was a decrease of Rs. 6 lakhs due mainly to a decline under sheets and plates. The number of motor cars imported amounted to 784 and that of motor lorries, buses and vans to 232. The value of motor cars imported in July, 1933, amounted to Rs. 14 lakhs and that of motor lorries, buses and vans to Rs. 3 lakhs. The imports of dyes obtained from coal tar rose by 42,000 lbs. in quantity and by Rs. 3 lakhs in value. Other noticeable variations were decreases under paper and pasteboard (=7 lakhs), rubber manufactures (−Rs. 8 lakhs) and piece-goods of cotton and artificial silk (−Rs. 18 lakhs), and increases under machinery and millwork (+Rs. 3 lakhs) and copra or coconut kernel (+4 lakhs).

Variations in Exports.

5. Compared with July, 1933, exports of food, drink and tobacco in July, 1933, fell by Rs. 27 lakhs to Rs. 2,79 lakhs. Shipments of rice not in the husk, advanced in quantity from 119,000 tons to 131,000 tons but the value thereof fell from Rs. 98 lakhs to Rs. 82 lakhs. The exports of tea dropped from 35 million lbs. valued at Rs. 1,68 lakhs to 27 million lbs. valued at Rs. 1,51 lakhs. Exports of coffee rose from 400 cwts. (Rs. 22,000) to 7,000 cwts. (Rs. 4 lakhs). Shipments of tobacco unmanufactured recorded an advance from 2.0 million lbs. to 4.4 million lbs. in quantity and from Rs. 8 lakhs to Rs. 14 lakhs in value. Raw materials and produce exported rose by Rs. 2,96 lakhs to Rs. 6,02 lakhs. Under the group raw cotton recorded in improvement of 20,200 tons in quantity and of Rs. 1,31 lakhs in value. Of the total shipments of 38,200 tons, Japan took 17,600 tons, Italy 4,000 tons, the United Kingdom 3,500 tons, China 3,400 tons, Germany 2,600 tons, France 2,300 tons and Belgium 2,200 tons, the remainder being despatch mainly to Indo-China and the United States of America. Consignments of raw jute also increased from 30,400 tons to 57,200 tons in quantity and from Rs. 50 lakhs to Rs. 91 lakhs in value. Exports of lac rose by 11,000 cwts. in quantity and by Rs. 3 lakhs in value to 43,000 cwts. valued at Rs. 12 lakhs. Shipments of oilseeds also improved from 44,000 tons valued at Rs. 67 lakhs to 105,000 tons valued at Rs. 1,34 lakhs. Exports of groundnuts showing an increase from 19,000 tons (Rs. 33 lakhs) to 54,000 tons (Rs. 73 lakhs) and of linseed from 6,000 tons (Rs. 7 lakhs) to 32,000 tons (Rs. 37 lakhs.) Rape seed showed a decline of 5,000 tons in quantity and of Rs. 7 lakhs in value. Exports of raw hides and skins rose by 2,600 tons in quantity and by Rs. 35 lakhs in value. Exports of manganese ore improved by 13,000 tons to 26,000 tons in quantity. Shipments of raw wool rose from 625,000 lbs. valued at Rs. 3 lakhs to 5.2 million lbs. valued at Rs. 18 lakhs. Manufactured goods rose by Rs. 53 lakhs to Rs. 3,28 lakhs. The yardage of gunny cloth exported increased from 75 millions to 94 millions and from Rs. 75 lakhs to Rs. 1,05 lakhs in value. The number of jute bags shipped declined from 24 millions valued at Rs. 69 lakhs in July, 1932, to 22 millions valued at Rs. 63 lakhs. Exports of tanned hides and skins rose by 600 tons in quantity and by Rs. 9 lakhs in value. There was an improvement of Rs. 8 lakhs under pig lead and of Rs. 5 lakhs under pig iron while cotton manufactures recorded a decline of Rs. 7 lakhs (chiefly) due to piece-goods).

Trade with foreign countries.

6. The share of the United Kingdom in the imports amounted to 38 per cent. as in July, 1932, and that in the exports fell from 35 to 28 per cent. The shares of Germany, Japan and the United States in the month under report were 7,17 and 5 per cent. respectively under imports, and 6, 11 and 11 per cent. under exports.

Movement of Shipping.

7. The tonnage of vessels entered into British India and cleared outward with cargoes from and to foreign countries and British Possessions during the month of July, 1933, amounted respectively to 576,000 and 618,000 as against 609,000 and 630,000 in June, 1933, and 535,000 and 512,000 a year ago. During the four months ending July, 1933, the tonnage of vessels entered and cleared with cargoes amounted respectively to 2,332,000 and 2,445,000 as compared with 2,230,000 and 2,347,000 in the corresponding period of the preceding year.

BENGAL.

The report of the maritime trade of Bengal for the official year 1932-33 begins by pointing out that the world-wide economic depression coupled with the instability of certain foreign exchanges continued to affect the normal course of trade and the total value of private merchandise was the lowest for thirty years. In some cases, *e.g.*, sugar, motor cars and liquor, the higher rates of duty have set in motion the law of diminishing returns. Exports were hampered by the low prices offered for raw materials and agricultural produce and by the tariff barriers which have been raised in most countries.

Foreign imports into Calcutta of cotton goods (+Rs. 1,89.23 lakhs), machinery (+Rs. 69.91 lakhs), metals) (+Rs. 29.39 lakhs), woollen goods (+Rs. 16.60 lakhs), hardware (+Rs. 13.58 lakhs) and paper (+Rs. 11.14 lakhs) showed considerable improvement. The more important articles which were adversely affected were oil (−Rs. 93.39 lakhs), sugar −Rs. 66.69 lakhs), spices (−Rs. 29.05 lakhs) and grains (−Rs. 26.68 lakhs) ; the net result being a small rise of about 87 lakhs or 2½ per cent.

Foreign exports from Calcutta dropped by nearly Rs. 5,90 lakhs or 10 per cent., the chief sufferers being tea (−Rs. 1,22.70 lakhs), jute (−Rs. 1,03.89 lakhs), jute manufactures (−Rs. 20.77 lakhs), opium (−Rs. 75.68 lakhs), lac (−Rs. 58,57 lakhs), hides and skins (−Rs. 46.66 lakhs), seeds (−Rs. 49.15 lakhs), metals (−Rs. 41.38 lakhs), grains (−Rs. 27.97 lakhs), bones (−Rs. 14.44 lakhs) and coal (−Rs. 10.79 lakhs). The majority of the jute mills worked short of their normal capacity throughout the year.

Prices.—In almost all cases prices of the more important articles have again declined. This is particularly marked in the case of imports of cotton and woollen goods and kerosene oil and in the case of exports of tea, jute and jute manufactures.

Distribution.—It is too early to comment on the effect of the preferential duties levied from 1st January, 1933, under the Ottawa Trade Agreement. The British Empire's share, both of imports and exports, showed a slight improvement and accounted for 48 per cent. of the total trade compared with 46 per cent. in the previous year. Trade with the Continent (18 per cent.) and with Asia (15 per cent.) remained much the same, whilst that with America declined by 2 per cent. to 17 per cent. A special feature of the year was the flooding of the Indian markets with cheap Japanese goods for which the successive depreciations of the value of the yen were largely responsible. From the normal gold parity of Rs. 137=100 yen the rate of exchange dropped first to Rs. 106=100 yen and on this basis the Tariff Board recommended an increase in the duty on non-British cotton piecegoods from 31½ per cent. to 50 per cent. which took effect from 30th August, 1932, but a further drop to Rs. 82=100 yen nullified to a large extent the protective effect of the higher duty* and Japan continued to supply exceptionally large quantities, not only of piecegoods, but also of numerous other articles such as shoes, tyres, belting, heavy chemicals, electric lamps, etc. This led to the giving of six months' notice of abrogation of the Indo-Japanese Convention of 1906 (which gave Japan the "most favoured nation" privilege) in preparation for the promulgation of the Safeguarding of Industries Act which is in force from 16th April, 1933, to 31st March, 1935.

Coasting Trade.—There was very little change in the total trade of Calcutta with other Indian ports either in the case of imports or exports but the shares of the different provinces showed considerable variations from the year.

A Few Details.

British Empire.—There was an improvement of Rs. 77.23 lakhs in imports but although the volume of exports increased, the value declined by Rs. 1,26.52 lakhs, the net result being an adverse balance of Rs. 49 lakhs.

United Kingdom.—The total value of imports improved from Rs. 12,85 lakhs to Rs. 14,23 lakhs but the total export trade declined from Rs. 15,66 lakhs to Rs. 13,99 lakhs. Cotton piecegoods partially recovered from last year's set-back and imports rose to Rs. 2,60 lakhs against Rs. 1,61 lakhs in the previous year. The demand for new plants for the manufacture and refinement of sugar accounted for the increase under machinery and millwork from Rs. 2,28 lakhs to Rs. 2,76 lakhs. Jewellery valued at Rs. 29 lakhs, most of which was re-exported to Nepal, was a special feature of the year. Receipts of metals improved by Rs. 10 lakhs and of manures by Rs. 5 lakhs. Arms, paper, tobacco and postal articles not specified recorded noticeable decreases. On the export side although the volume of tea exported actually increased by 20 million lb. the slump in prices caused the value to drop by more than a crore of rupees. Jute and jute manufactures accounted for a reduction of Rs. 77 lakhs and the value of lac fell by Rs. 12 lakhs. There were increased shipments of hides and skins, leather and oilcakes.

*Since this report was written the duty on non-British cotton piecegoods has again been raised from 50 per cent. to 75 per cent. with effect from 7th June, 1933.

British Possessions and Dependencies.—Imports declined from Rs. 3,45 lakhs to Rs. 2,85 lakhs. Arrivals of wheat from Australia fell from Rs. 49 lakhs to Rs. 23 lakhs and of horses from Rs. 21 lakhs to Rs. 19,000. Betelnuts from the Straits Settlements heavily declined from Rs. 78 lakhs to Rs. 52 lakhs but tin rose slightly from Rs. 24 lakhs to Rs. 27 lakhs. Coconut oil was the principal article coming from Ceylon and rose from Rs. 37 lakhs to Rs. 48 lakhs. Salt from Aden fell by over Rs. 10 lakhs and cloves and raw cotton from Zanzibar and Kenya respectively, also recorded decreases. As regards exports, Australia took more gunny-bags and cloth thereby enhancing the value from Rs. 2,71 lakhs to Rs. 3,64 lakhs and the quantity actually exceeded that of 1930-31 though, owing to the lower level in prices, the value was considerably less. Indian tea appears to be losing its popularity in Australia and exports further declined from Rs. 18 lakhs to Rs. 14 lakhs. Canada took more tea and jute manufactures. Ceylon severely cut down her indents for Bengal coal.

Foreign Countries.—The total import trade has practically remained the same, Europe and Asia profiting a little at the expense of America.

Europe.—Germany sent more machinery, hardware and metals. Imports from Belgium increased due to large consignments of sugar mill machinery (Rs. 28 lakhs) and precious stones (Rs. 19 lakhs), the latter being intended mostly for Nepal. Woollen manufactures and articles imported by post from Italy appreciably increased whereas France sent less wine and the Netherlands less provisions and cotton manufactures. Exports of grains, hides, lac and jute to Germany declined. Belgium took less hemp, jute and lac. France and the Netherlands increased their demands for hides and jute whereas Italy curtailed hers. Russia received less tea and jute.

Asia.—Almost all the principal articles imported from Japan, especially cotton goods, recorded increases. Supplies of sugar from Java and of cotton twist and yarn from China decreased considerably. On the export side Japan's demand for lac, pig iron, linseed, manures and oilcakes declined although this was partly compensated for by increased shipments of jute and jute manufactures. In consequence of smaller shipments of sugar Java's requirements of gunny-bags dropped from Rs. 96 lakhs to Rs. 41 lakhs. China took less jute and jute manufactures and paraffin wax. The export trade to Turkish ports in Asia appears to be regaining its former importance.

Africa.—Import trade did not vary much although a little more salt came from Italian East Africa. Exports of the principal articles to Egypt heavily declined but paraffin wax to Portuguese East Africa recorded an improvement.

America.—The import trade with the United States showed a considerable decline owing to very poor receipts of mineral oils and motor cars. The demand for American tobacco, however, was re-established. Amongst exports to the United States tea alone showed an improvement. Exports to South American countries increased substantially due to heavier purchases of gunny-cloth by the Argentine Republic amounting to Rs. 2,47 lakhs against Rs. 1,19 lakhs in the previous year. More gunns-bags were also exported to Chile and Peru but shipments of raw jute to Brazil and gunny-cloth to Uruguay declined.

BOMBAY.

The following statement shows the value of imports and exports of the principal articles of Foreign Trade of the Bombay Presidency for 4 months from 1st April to 31st July, 1933, compared with the corresponding period of the preceding year:—

	Four Months from 1st April to 31st July

Extracts from Directors' Report:

Report—For the year ended 31st March, 1933.

The following are the comparative figure of trafic carried over the Railway during the past four years:—

	Passengers.				Goods.			
Year	No.	Rs.	A.	P.	Mds.	Rs.	A.	P.
1929-30 ...	1,31,782	46,859	1	10	6,05,398	59,743	0	9
1930-31 ...	90,898	34,480	7	9	4,51,125	46,226	15	0
1931-32 ...	1,12,388	42,825	7	3	2,73,817	21,128	7	0
1932-53 ...	1,16,975	44,069	10	9	3,47,722	41,963	5	0

Coaching Traffic.—The above statement shows a further increase in the number of passengers carried on your line and the receipts derived therefrom during the year under report over those of previous year.

Goods Traffic.—There is also a considerable increase in the goods traffic during the year under report as compared with the previous year.

The Earnings of the line for the year ended 31st March, 1933, amount to Rs. 99,881-0-3 including the rebate of Rs. 44,473-7-7. Adding Rs. 3,452-9-11 brought over from last year's accounts, the total ocmes to Rs. 1,03,333-10-2. After deducting Income Tax, expenditure incurred during the year under report and payment of Rs. 20,528-2-11 to the shareholders on account of an Ad-interim Dividend at 3 per cent. per annum for the half-year ended 30th September, 1932, the balance available for disposal is Rs. 54,594-0-9 which the Directors propose to dispose of as under:—Dividend at the rate of 5 per cent. per annum or Rs. 2-8-0 per share, for the half-year ended 31st March, 1933, payable less Income Tax, thus making in all 4 per cent. per annum during the whole year (less Income Tax), Rs. 34,214-5-10, Reserve Fund Rs. 15,000, balance to be carried forward Rs. 5,379-10-11.

The amount of Rs. 15,000 to be transferred to the Company's Reserve Fund, is intended to provide for certain anticipated expenditure in connection with special repairs and renewals required on your line.—K. R. Godbole, Chairman.

DHOND BARAMATI RAILWAY CO., LD.

Total	...	13,14,585	Total	...	13,14,585

Extracts from Directors' Report:

Report—For the year ended 31st March, 1933.

The following Statement shows the traffic statistics of the Railway during last four years:—

	Passengers.				Goods.			
Year	No.	Rs.	A,	P.	Mds.	Rs.	A.	P.
1929-30 ...	1,18,657	71,768	11	4	9,46,716	1,02,966	4	5
1930-31 ...	1,04,663	64,022	14	6	8,03,331	96,670	10	0
1931-32 ...	80,531	51,031	11	6	6,95,151	72,201	10	0
1932-33 ...	72,499	45,973	4	11	6,12,598	67,954	10	0

Coaching Traffic.—The number of passengers carried over the line during the year under Report shows a decrease of 8,092 and the earnings derived therefrom show a fall off of about Rs. 5,000 when compared with the figures of the previous years. The reasons for this decrease are motor competition and the general trade depression during the past year.

Goods Traffic.—There is a decrease of about Rs. 4,000 in the goods traffic earnings during the year under report which is due mainly to general depression in trade and low prices of commodities.

The Net Earnings of the line during the year ended 31st March, 1933, and other earnings together with Rs. 2,920-2-1 brought over from last year's accounts. amount to Rs. 72,833-15-3. After deducting Income Tax and Super Tax, expenditure incurred during the year under report, and payment of Rs. 23,356-11-4 to the shareholders on account of Ad-interim Dividend at 4½ per cent. Per annum for the half-year ended 30th September, 1932, the balance available for disposal is Rs. 27,790-12-8, which the Directors propose to dispose of as under:—Dividend at the rate of 4½ per cent. per annum or at Rs. 2-4-0 per share, for half-year ended 31st March, 1933, payable less Income Tax, thus making in all 4½ per cent. per annum during the whole year (less Income Tax), Rs. 23,356-11-2, balance to be carried forward Rs. 4,434-1-6. K. R. Godbole, Chairman.

Extracts from Directors' Report:

Report.—For the half-year ended 30th June, 1933, shows a profit of Rs. 827-5-3. To this has to be added the balance brought forward from the last account, namely Rs. 1,193-11-10, giving a credit balance to be carried forward to the next account of Rs. 2,021-1-1.

The past half-year has, unfortunately, witnessed no improvement in trading conditions. Yarn prices continued to sag under the influence of the steady decline in Indian Cotton, and with buyers restricting their purchases to an absolute minimum values have throughout the period under review been consistently unremunerative.

Under the circumstances the Company's Mill has remained closed—J. A. Ogg, E. L. Watts, M. A. Hughes, Directors.

Extracts from Directors' Report:

Report.—The Directors report that the result of the Company's working for the six-months ending 30th June, 1933, has reduced the loss brought forward of Rs. 31,453-2-8 by Rs. 1,171-0-1, thus leaving a loss to be carried forward of Rs. 30, 282-2-7.

No depreciation has been provided on Buildings and Machinery for the half-year.

The Dividend of Rs. 3 per share, amounting to Rs. 18,000, on the Cumulative Preference Shares for the half-year ending 30th June, 1933, was paid on 1st July, 1933, out of the Dividend Equalization Reserve Fund.—R. Lee, K. R. Krishnaswamy Iyengar, S. Abdul Wajid, B. W. Batchelor, Directors.

BOWREAH COTTON MILLS CO., LD.

Synopsis of Balance Sheet:

Liabilities		Rs.	Assets		Rs.
Capital	...	18,00,000	Block (net)	...	25,33,882
Reserves	...	26,03,336	Cotton, Yarn &		
Debts	...	1,11,607	Cloth	...	10,07,895
			Stores	...	1,45,573
			Outstanding	...	1,11,192
			Cash	...	6,49,809

Total	...	45,14,943	Total	...	45,14,943

Extracts from Directors' Report:

Report.—For the half-year ended 30th June, 1933, shows a loss of Rs. 8,214-6-1. To this has to be added the debit balance brought forward from the last account, namely Rs. 58,377-14-10, giving a deblt balance to be carried forward to the next account of Rs. 66,592-4-11.

Provision has been made for Depreciation by a transfer of Rs. 50,000 from 'Renewals and Extensions' Account.

The past half-year has, unfortunately, witnessed no improvement in trading conditions. Yarn prices continued to sag under the influence of the steady decline in Indian Cotton, and with buyers restricting their purchases to an absolute minimum, they were forced in the month of April to reduce working hours in order to avoid further accumulation of unsold stocks. A subsequent rise in cotton values was reflected to some extent in the yarn market, but the imprvement has been very slow and selling prices have throughout the period under review been consistently unremunerative.

The Weaving Shed is working satisfactorily and we are making every effort to popularize our productions in the markets. It has now been decided to instal more looms, which have already been ordered, and this extension should be completed about the end of the year.—J. A. Ogg, E. L. Watts, M. A. Hughes, Directors. Calcutta, 21st August, 1933.

DUNBAR MILLS, LD.

Synopsis of Balance Sheet:

Total	...	44,62,963	Total	...	44,62,963

Extracts from Directors' Report:

Report.—For the half-year ended 30th June, 1933, which, after writing off Rs. 40,000 for Depreciation, shows a loss of Rs. 2,413-15-2. Deducting this from the credit balance brought forward from the last account, namely Rs. 6,983-9-3, there remains a credit balance to be carried forward to the next account of Rs. 4,569-10-1.

The past half-year has, unfortunately, witnessed no improvement in trading conditions. Yarn prices continued to sag under the influence of the steady decline in Indian Cotton, and with buyers restricting their purchases to an absolute minimum they were forced in the month of April to reduce working hours in order to avoid further accumulation of unsold stocks. A subsequent rise in cotton values was reflected to some extent in the yarn market, but the improvement has been very slow and selling prices have throughout the period under review been consistently unremunerative.

In view of the continued difficulty which we are experiencing in disposing of our production of bundled yarn it has been decided to extend the activities of the Company ta the weaving of cloth and the necessary machinery has already been ordered.—J. A. Ogg, E. L. Watts, M. A. Hughes, Directors. Calcutta, 21st August, 1933.

Extracts from Directors' Report:

Report.—For the year ended 28th February, 1933. The result of the Company's operations during the year shows a profit of Rs. 1,05,909-10-8. Deducting therefrom the debit balance of Rs. 42,186-10-9 in the Profit and Loss Account brought forward from the previous year, there remains a balance of Rs. 63,722-15-11. From this sum the Directors have allocated to:—Depreciation on Buildings Rs. 10,000, Depreciation on Machinery Rs. 40,000, total Rs. 50,000, leaving a balance of Rs. 13,722-15-11, which with Rs. 50,000 transferred from Equalisation of Dividend Fund makes a total of Rs. 63,722-15-11; and the Directors propose to dispose of same as under:—Dividend of Rs. 2-8 per Share on 25,000 Shares of Rs. 50 each Rs. 62,500, to carry to next year's account Rs. 1,222-15-11, total Rs. 63,722-15-11.

The Trade conditions during the early part of the year were fairly satisfactory, but subsequently profitable trading became difficult owing to outside competition.

The Stocks and the Cash Balance at Bangalore as on 28th February, 1933, were checked by Mr. H. V. Venkatarama Iyengar, a certified Auditor, and found correct. Similarly, the Stocks and the Cash Balance at the Mill in Bombay were verified by Messrs. K. S. Aiyar & Co., Auditors and found correct, for which an extra remuneration of Rs. 200 has to be paid to them.

On his retirement from India, Mr. P. S. Mellor resigned his seat on the Board and the Directors take this opportunity of placing on record their appreciation of the services rendered by him during his tenure of Office for over 13 years. In his place, the Directors have appointed Mr. W. G. McKee, who retires under Article 103 of the Articles of Association, but being eligible offers himself for re-election.

Two of the Directors, Mr. Albert Raymond and Mr. H. P. Mody, retire by rotation, but being eligible offer themselves for re-election.

The Mill property and stocks are insured for the sum of Rs. 97,87,400 and the profits and standing charges for Rs. 10,00,000 for 24 month's benefits that is Rs. 5,00,000 annually.—Sir Lalubhai Samaldas, Albert Raymond, H. P. Mody, A. M. Kajiji, B. N. Gamudia, W. G. MacKee, D. N. Sirur, Directors. Bombay, 4th August, 1933.

BENGAL CHEMICAL & PHARMACEUTICAL WORKS, LD.

Extracts from Directors' Report:

Report.—For the 32nd year ended 12th April, 1933.

Meeting Depreciation, Bad Debts and all other charges, the Revenue Account shows a nett profit of Rs. 5,21,473-1, bringing the balance at credit of Profit and Loss Account to Rs. 12,74,153-14.

We propose to distribute this year's nett profit as under:—Transfer 5 per cent. of the nett profit to Reserve Fund Rs. 26,073-10, transfer to Dividend Exualization Fund Rs. 10,000, transfer to Fire Fund Rs. 20,000, set apart to meet Super Tax Rs. 45,000, pay as Workers' Commission Rs. 32,558-2, contribute to Provident Fund Rs. 11,911-13, pay Divided at 7½ per cent. free of Income Tax, on the Preference Shares Rs. 67,500, pay Dividend at 15 per cent. free of Income Tax, on the Ordinary Shares Rs. 1,50,000, pay Dividend at 15 per cent. free of Income Tax, on the Medical Ordinary Shares Rs. 274-9, total Rs. 3,63,318-2 balance of Profit in the year under report Rs. 1,58,154-15, total Rs. 5,21,473-1.

The above distribution will leave a balance of Rs. 9,10,835-12, to the credit of Profit & Loss Account.

We further recommend to the Shareholders that out of the balance to be carried forward, Rs. 10,000 be sanctioned and place at the disposal of the Directors for being spent for the benefit of the employees of the Company.—P. C. Ray, Haridhan Dutt, Hiralal Sinha, Satyanarda Bose, W. M. Roy, Rajsbekhar Bose, Directors. Surendra Bhusan Sen, Manager and Secretary. Calcutta, 15th July, 1933.

			Cash & Deposits	...	6,65,203
Total	...	15,71,738	Total	...	15,71,738

Extracts from Directors' Report:

Report.—We submit herewith the Audited Accounts for the half-year ended 30th June, 1933, showing a profit on Revenue Account of Rs. 9,055-2-2. After writing back Rs. 10,000, on account of the Reserve for Bad Debts, and taking into account a profit of Rs. 3,420, on conversion of Government Securities, there is a balance at credit of Profit and Loss Account of Rs. 56,374-0-4, with which it is proposed to deal as follows:—To Dividend at 5 per cent. per annum Rs. 30,000, to balance carried forward Rs. 26,374-0-4, total Rs. 56,374-0-4.

The further extension of the crushing import duty of Rs. 2 a cwt. on Wheat has, as predicted, led to the position of the local Flour Mills going from bad to worse. This is confirmed in the various Flour Mills Companies, half-yearly reports. Indian Wheats remain unjustifiably inflated beyond the world's parity of prices. The long-standing Flour, etc., export business, on which Mills so largely depend, is now a thing of the past. In addition the high prices of Indian Wheat have led to high Flour and Atta prices, with the natural result that the chief consumers cannot afford to buy, meaning that they have either cut their consumption by more than half, or abandoned Wheat products as a staple food, although their nutritious qualities rank so much higher than those from other food grains and pulses.

The further curtailment in Mills' workings has rendered heavy losses unavoidable, until, to-day, about the most serious situation in their existence has to be faced, as will be reflected in Mills' reports for the current half-year unless an immediate change for the better occurs. Several representations to Government have been made, emphasising the extremely critical nature of the situation, but nothing has been done in the way or relief.

Flour consumers now-a-days insist on a higher grade of Flour than formerly. This it is impossible to obtain from the Indian Wheat available. In an effort to uphold this high standard, we, early this year, and in spite of the import tax, imported several thousand tons of Australian Wheat. Our Flour quality was at once restored, but the financial loss was so heavy, owing to the import duty, that the venture could not be repeated. The extraordinary anomaly is that, while so heavy a duty is levied on imported Wheat, imports of foreign Wheat products, such as Pollard and Bran, are admitted free, thereby further adding to the already heavy handicap on Flour Mills. In the absence of a quick change for the better, the practical closing down of local Flour Mills may have to be considered. This is all the more regrettable on the top of the already heavy reduction in employees, some after lifelong service, who have been compelled to swell the ranks of the unemployed. The Flour Milling Association is putting up another representation, which, it is hoped, will not share the same fate as its predecessors. The puzzle all along has been, and continues to be, to ascertain exactly who are benefiting by the practical strangling of one of India's most important industries.

Directors.—Mr. Eric Studd, being out of Calcutta, has not signed the accounts.—Balmer, Lawrie & Co., Ld., Managing Agents. Calcutta, 23rd August, 1933.

			Investments	...	12,600
			Cash & Deposit	...	6,656
Total	...	4,95,943	Total	...	4,95,943

Extracts from Directors' Report:

Report.—For the half-year ending 30th June, 1933.

The profit earned during the half-year amounts to Rs. 12,215-6-3, which together with the balance standing at credit of Profit and Loss Account amounts to Rs. 77,526-1, which the Directors recommend be carried forward to the next half-year's Account.

Prospects for the coming half-year are uncertain.

The Buildings and Machinery have been kept in good repair.—R. Ferguson, R. M. King, Jahn Smith, Directors. J. C. Duffus & Co., Ld., Secretaries. Calcutta, 14th August, 1933.

CALCUTTA ICE ASSOCIATION, LD

Synopsis of Balance Sheet:

Liabilities		Rs.	Assets		Rs.
Capital	...	6,00,000	Block (nett)	...	3,87,250
Reserves	...	75,000	Stores	...	51,597
Debts	...	74,168	Goods-in-transit	...	1,250
Profit & Loss	...	23,975	Outstandings	...	34,748
			Cash, etc.	...	32,884
			Investments	...	2,65,414
Total	...	7,73,143	Total	...	7,73,143

Extracts from Directors' Report:

Report.—The Directors submit herewith the audited accounts for the half-year ended the 30th June, 1933, which show a profit on Revenue Account of Rs. 6,704-2-2. After the adjustment of Liability Account and Sundries, and the transfer of Rs. 5,000 from Dividend Equalisation Fund, there is a credit balance of Rs. 28,974-12-6, which they recommend disposing of, as follows:—To Block Depreciation Rs. 5,000, to dividend at 2½ per cent. per annum Rs. 7,500, to balance carried forward Rs. 16,474-12-6, total Rs. 28,974-12-6.

Unfavourable conditions continued throughout the half-year, due to the abnormally low temperatures ruling during the hot weather, to the keener competition, and to so nominal an improvement in the general trade depression. Prospects for the current half-year are also unsatisfactory, owing to still keener competition and to the shrinkage in the seasonal demand for ice for fish packing, on which results so largely depend.

The Association's Factory continues to be kept in a high state of efficiency. Being out of Calcutta, Mr. Eric Studd has not signed the accounts.—A. E. Mitchell, W. B. Monair, Directors, Balmer, Lawrie & Co., Ld., Managing Agents, Calcutta, 25th August, 1933.

HOSHIARPUR-DOAB BRANCH RAILWAYS COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	65,00,000	Block (Nett) ...	58,04,212
Reserves ..	60 760	General charges, etc. ...	6,76,805
Sundry shareholders for warrants unrepresented ...	11,159	Outstanding ...	1,93,710
Debts ...	483	Investments ...	74,870
Profit	1,99,321	Cash and other balances ...	22,126
Total Rs. ...	67,71,723	Total Rs. ...	67,71,723

Extracts from Director's Report:

The Managing Agents of the Hoshiarpur-Doab Branch Railways Company (Messrs. Gillanders Arbuthnot and Company) submit the audited accounts of the company for the year ended March 31, 1933. The capital expenditure for the year amounted to Rs. 363, making the total expenditure from the commencement of operations to March 31, 1933, Rs. 64,81,017. The total paid-up capital of the company on March 31, 1933, was Rs. 65,00,000. The nett earnings for the year amounted to Rs. 2,45,209, as compared with Rs. 2,29,017 for the previous year. The increase is attributable to both passenger and goods earnings though the latter earnings suffered on the Jullundur-Mukerian branch from motor lorry competition between Amritsar and Hoshiarpur. The nett increase in passenger earnings was Rs. 15,106, due partly to the success of the methods adopted by the North Western Railway in combating motor competition and partly to the previous year having been unusually bad in this respect. Goods earnings were better in the aggregate by Rs. 17,336, attributable to a slight general all round improvement. During the year an interim dividend at the rate of Rs. 2-4 per share, less income-tax, was paid. The amount available for final distribution is Rs. 1,99,321. The managing agents now propose to pay a final dividend at the rate of Rs. 2-4 per share, less income-tax, making Rs. 4-8 per share, less income-tax, for the year. The distribution will absorb Rs. 1,46,250, which leaves, after payment of the Managing Agents' commission, a balance of Rs. 44,975 to be carried forward.

TATA IRON AND STEEL.

The financial portion of the Directors' report of the Tata Iron and Steel Company for the year ended March 31, 1933, was published in these columns in our issue of August 19 last. The general portion of the Director's report runs as under:—The operations of the company of the year 1932-33 have produced better financial results than those of recent years. While they still leave much to be desired, the directors trust that the shareholders will regard the results as not unsatisfactory in view of the unprecedented industrial difficulties which have prevailed in India and throughout the world during the year. The world's consumption of steel in 1932 was only about 40 per cent. of that in 1929. It is not surprising, therefore, that the consumption of steel in India also fell below the level of any recent year, although fortunately the fall was not so marked as in many other countries. The consumption of rails, normally one of the largest outlets for steel in India, was the lowest for more than a generation; and with it fell the demand for the several other forms of steel which are largely dependent on the requirements, direct or indirect, of the Indian railways. In these circumstances the company was not able to maintain its output at the record high figure of 1931-32; the output of 1932-33 showed a reduction of about 5 per cent. The company, however, by concentration on economy and efficiency throughout all its activities, succeeded in reducing its costs of operation still further. While this reduction was assisted by falls in the prices or costs of raw materials, the greater part was due to increasing efficiency throughout and to the concentration of production on the more economical parts of the plant which resulted from the closing down of the old steam-driven mills and the hand-fired boilers. An additional important factor in the improvement of the results for the year was the success achieved in increasing the output of sheets up to the full estimated capacity of the sheet mills and the conversion of a larger proportion of the output into the more profitable galvanised sheets. In February, 1932, the company authorised the Commerce Member to inform the legislature that it would during 1932-33, produce about 4,000 tons of galvanised sheets per month. The actual output for the year was practically 47,000 tons, a result for which all concerned deserve congratulation. In the early part of the year prices of Continental steel, which is now the main source of competition with the company's products, fell still further below levels of 1931-32. Although there was some improvement during the latter half of the year, it was barely sufficient to bring the average rupee prices for 1932-33 back to the average of the previous year, even though the effects of the fall in the rupee exchange and of the surcharge on import duties operated throughout the whole year 1932-33, whereas they had operated during only half of the previous year. To the difficulties created by this fall in prices were added a further reduction in the demand for the more profitable tested steel and the necessity of selling a larger proportion of the company's output than even previously in the more distant Indian markets, which involved increased expenditure by the company on internal freights. The measure to which these handicaps have been more than overcome by the efforts of the company is indicated by the increase in the works profits over those of the previous year. In the autumn of 1932, negotiations based on the principles which had been laid down at the Ottawa Conference were entered into between the company and the British manufacturers of galvanised sheets, as a result of which an agreement was made subject to the approval of the Indian Legislature, which approval was subsequently granted. In accordance with the conclusion arrived at by the Ottawa Delegation, the import duty on galvanised sheets imported from the non-British sources was fixed at Rs. 83 per ton, while that on sheets imported from Great Britain was reduced to Rs. 53 per ton if the sheets were made of non-Indian steel, and Rs. 30 if made of Indian steel. Under the agreement entered into between the company and the British manufacturers, the latter are to use Indian steel as far as possible for the manufacture of galvanised sheets for India, subject to a monthly maximum, and the tonnage of sheets exported to India from Great Britain is to be regulated according to the company's estimate of the Indian demand. Within certain limits laid down by the Ottawa Delegation and approved by the legislature, the prices of sheets made from Indian bars are to be regulated by the company and those of purely British sheets by mutual agreement between the company and the British sheet-makers, subject to a specified minimum. The agreement terminates on March 31, 1934, in order that the Indian Tariff Board, during its forthcoming enquiry, should have free scope to deal with protection on galvanised sheet manufacture in such way as it considers best. A further outcome of the Ottawa Conference was the decision by the United Kingdom to continue the right of free entry for Indian pig-iron and steel. On this basis the Indian makers of pig-iron were able to negotiable an arrangement with the British makers under which a fixed quantity of Indian foundry iron is to be allowed to be sold in the United Kingdom and a fixed percentage (subject to a minimum stipulated quantity) of the free market for basicpig-iron in the United Kingdom is reserved for Indian iron for twelve months. The working of this arrangement will be carefully examined before the expiry of the period. The reduction in the cost of pig-iron noted in the two previous years was continued in spite of the reduced output. This was mainly due to cheaper raw materials, but the drive for economical operation was well maintained by the staff concerned. Throughout the greater part of the year, only two blast furnaces were in operation, the output being restricted owing to the economic situation. "B" furnace had to be shut down for re-lining. Throughout the year, the development of the plant and equipment at the works was under active consideration. The installation of a plant for cleaning blast furnace gas received the very careful attention of the works management, the agents and the board, and an order has been placed for a plant for cleaning this gas, the operation of which is expected to add considerably to economy and efficiency. An extension of the sheet mill was sanctioned by the board in July, 1932 and the erection was completed in an exceptionally short time, the first sheets on the new roughing units being rolled on February 15, 1933. The extension necessitated certain alterations to the sheet bar and billet mill and a new 7,500 h.p. motor was installed to drive the 18-inch section of that mill. This motor is one of the largest of its type in the world and records were achieved both in the time of manufacture and of installation. Apart from the above extension, other new equipment was installed in the sheet mill, such as a 156-inch squaring shear, a galvanising plant, a sheet levelling machine and two additional cranes. A 1,500 kw. motor converter set is being installed. In the rail and structural mill, new finishing equipment has been installed and put into operation and an extension to the crane runway at the rail loading dock is now in hand. A central elevator is being installed at the new calcining plant and arrangements are being made to burn pulverised coal in the rotarykilns at this plant so as to release more coal tar for sale. Kilns for the manufacture of bricks from magnesite obtained from the company's mines in Mysore have been erected at Jamshedpur and put into operation. These bricks are replacing imported Austrian magnesite bricks with a marked reduction in costs.

WORLD OF INDIAN FINANCE

Calcutta, September, 8.

The monetary ease has continued during the week; and credits were unlendable with lenders in excess of borrowers. This exceptional ease, together with the readiness of Government to increase the discount rate on Treasury Bills, is fully reflected in the result of this week's auction. In contrast with the low amount of Rs. 144 lakhs tendered last week, this week's tender showed an increase to as much as Rs. 303 lakhs. The improvemet in the market's response to the Government's invitation is to be attributed to the scaling down of the rate of acceptances. The average rate of Rs. 99-12-6 which compares with Rs. 99-12-3 last week is only a further confirmation of our reading of the situation in these columns last week, that Government are prepared to meet the market in its natural and just demand for more remunerative rates for investment in Treasuries. Another point, in which our prognosis has proved true, is the resumption of the sales of intermediate Treasury Bills which was announced in the communique of the Controller of the Currency published on Tuesday evening. It may be supposed that the rate of Rs. 99-12-9 announced as the tap-rate is below the rate which we may be supposed to have induced our readers to expect. Unquestionably, the rate is still somewhat too favourable to the Government. But the explanation lies in the fact that the Government have to fix the tap-rate at not less than 3 pies above the average rate of accepted tenders at the last auction. It should not, therefore, be taken as a clue to the rates that may yet be available to the market from the Government. As it is, it must be confessed that it is not calculated to evoke any generous response from the market. For our part, we should be surprised if the Controller of the Currency is able to secure more than half a crore by way of sales of intermediate bills during these days. If, as we expect, the results of this week's sales should not be quite encouraging, the Government will soon have to raise the rate to a higher point, at which, as we said earlier, there will be a fair balance between the needs of the Treasury and the surplus funds in the market.

An inkling of the increased needs of the Government is already seen in the latest statement of the Imperial Bank of India which shows Ways and Means Advances to the Government of India at Rs. 50 lakhs. We belive we have said enough in the recent issues of **Indian Finance** to lead to the conclusion that the advances made to the Government by the Imperial Bank of India is only an earnest of the larger advances yet to come, as the Government have to make their disbursements both on account of the usual payments at the beginning of the month and the special expenditure on account of the discharge of 1933 bonds. Considering the position as indicated here, the question arises whether the Government should not increase their weekly offer to Rs. 2 crores. This suggestion is more plausible in as much as sales of intermediate Treasury Bills at the rate announced in the last communique are not likely to be on any substantial scale. We do not know whether the authorities are considering the step and, if so, how they feel inclined to it. But we should venture the opinion that any action in this regard should be postponed, till the Government are in a position to ascertain more fully the rates which would induce the market to part with the amounts which the Government are out for. For, surely, it would not be desirable that the Government should increase the amount of weekly Treasury Bills to Rs. 2 crores and risk an unseemly rebuff from the market. Before the Government increase the weekly sales in this way, they should induce in the market a sufficient degree of eagerness to invest in Treasury Bills; and any haste in this regard may result in a setback that will defeat the Government's purpose and unduly handicap their progress in the future.

The comparative calm, that has followed the violent fluctuations in the sterling-franc rate last week, with a consequent fall in the sterling prices of gold, is duly reflected in the market's sales of sterling to the Government during the week. Only £40,000 were tendered as against £710,000 last week. This is to be attributed, not only to the ease prevalent in the money market, on account of which bankers are not anxious to secure more funds through sales of sterling, but also the recognition that there is no stimulus now for larger exports of gold.

The securities market has failed to keep up the rise which was registered towards the close of last week as a result of the easy money conditions and the influx of more funds on account of the repayment of

1933 bonds. In fact, 3½ per cent. paper showed a weakness on Monday. It was at first attributed to profit-taking; but it is now learned that one of the big bull operators in Bombay was trying to unload. The market naturally turned bearish in sentiment. And on the top of this, there was the belief that the Board of the Bombay Stock Exchange had decided to stop dealings in forward business. This induced a somewhat panicky feeling in the market; and it was not till the market learned that the Board had not prohibited such dealings but were only going to consider the question after the 15th inst., that the tone improved. During the last two days a distinctly steadier feeling was noticeable. Not a little of the improvement is attributable to the firming up of India sterling securities in the London market; but in any attempt to gauge the tone during the week, it must be remembered that the Bombay market, from which other centres take their cue, was closed on the sixth and seventh instant.

But there can be no doubt that the securities market will recover form the setback that has occurred in the earlier part of the week; and though a hectic rise in Government's securities has been repeatedly frustrated, and the prospect thereof is not in the immediate future, the undertone is unquestionably steady and the outlook for the future healthy. In spite of the repeated disappointments, we still venture to suggest that the end of the month would see the 3½ per cent. paper at the level of Rs. 86-4 with a corresponding rise in other securities. And this may be seen from the fact that short and medium terms have gone up in value during recent times on account of the unwillingness of the holders to part with their scrips.

There was less anxiety to sell sterling to Government, as bankers had neither need for cash nor reason to expect higher gold exports.

The closing rates are: 1s. 6 1/32d., T. T. till November; 1s. 6d., December-January T. T.; 1s. 5 31/32d., February-March-April T. T.; and 1s. 5 15/16d., May to December T. T.

Bills may be quoted: 1s. 6 7/64d., all positions right up to December-January.

Money was easy again this week, the rate for interbank call money being ½ per cent. Union rates for call, three days and seven days notice being ½ per cent. Onemonth and twomonth deposits quoted 1 per cent. and threemonth deposit 1¼ per cent.

OTHER INDIAN MONEY MARKETS.

(By Wire.)

(From Our Correspondent).

Madras, September 8, 1933.

There has been little demand for exchange from traders. But persistent buying by Banks in Calcutta has forced rates down by 1/32 for all forward deliveries. A fair volume of buying orders for all positions from December at 1s. 6 1/32d. to March 1s. 6d. were received here and a number were executed. Sellers in this market are however now satisfied and at the close, selling rates are quoted 1s. 6 1/32d. Ready to November, 1s. 6d. December-January, and January, 1s. 5 31/32d. for February March. Export Bills have been in poor supply and Money has been comfortable throughout the week.

FINANCE ABROAD

		Sterling-Dollar rate	Sterling-Franc rate	Gold Price London
September 1	...	4.53	80.75	130s. 8½d.
September 2	...	4.53⅜	80.34	131s. 3d.
September 4	...	4.55¼	80.28	131s. 0d.
September 5	...	4.56	81.03	130s. 4d.
September 6	...	4.56¼	80.53	130s. 7d.

During the week, the sterling-franc rate has continued to fall, the lowest touched being 80.28 on September 4th; and though the following day witnessed an improvement to 81.03, Wednesday saw the rate at a substantially lower level than at the beginning of the month. The dollar, on the other hand, has steadily fallen in relation to the pound from 4.53 to 4.56¼. To the extent that the depreciation of the dollar has been resumed, the British monetary authorities will find it difficult to execute their policy as we have so far been able to understand it. Last week, the somewhat unwelcome development of the depreciation of sterling in relation to the franc was compensated by the appreciation of the dollar in relation to sterling. In this week, the continued depreciation of the dollar makes it more necessary for the British authorities to reconsider their monetary and exchange policy at least to the extent of being able to be clear about their operations in the immediate future.

It is not suggested, however, that the position has any serious difficulties or conundrums for Great Britain. If, in the past fortnight and more, the changes in the foreign exchanges were regarded as not quite welcome to the British "control," it was mainly because the "Control" had evinced an anxiety during the earlier months to maintain the stability of the sterling-franc rate and at the same time to prevent an undue depreciation of the dollar, which has its obvious inimical effects on Britain's export trade. There is reason to think that during the last one month, the British Government have reconciled themselves to the depreciation of sterling as against the franc and the gold currencies. It is clear from the Air Mail papers that, when the decline in the sterling franc rate first set in, the "control" did not make any serious effort to counteract the tendency. Banks, no doubt, sold at the outset large amounts of francs on behalf of the authorities; but this effort was abandoned soon; and we believe that in all the subsequent stages, the control has been speedily and willingly relaxed.

There is every reason why Great Britain should leave the sterling franc rate to find its own level. As mentioned last week, it could not have been the intention of the "control" at any time to combat the seasonal depression in sterling. Besides, after having signified their assent to a common monetary policy for the Empire, calculated to stabilise the inter-imperial exchanges and to bring about a rise in price levels, the authorities have an obligation to make some preparation for the eventual adoption of such policy. It is well known that most of the Empire countries are of the inflationist persuasion. In South Africa, there has recently been a demand for a further depreciation of the South African pound, though it is well known that, left to itself, the chances are that the South African pound might appreciate well above its present level. Canada is watching the American experiment with a view to its eventual adoption, if Mr. Roosevelt should make a success of his present programme. And if there is anything characteristic of the American policy, it is that of giving the first stimulus to prices through a sensational measure of inflation. Australia has achieved enough of internal reconstruction and restoration of confidence to be able to participate in a general inflationary policy, especially when such a policy has the sanction and support of all the members of the British Commonwealth. As for India, the demand for a reconsideration of the ratio question, which has been left in abeyance since the abandonment of the gold standard in September, 1931, is now being made in certain quarters. The prime idea is, not so much that India should have an advantage in her export markets over her competitors, as that the position of the rupee should be defined before the Reserve Bank of Indida is instituted and entrusted with the maintenance of the value of the rupee. It may justly be said of the demand for a revision of the ratio that it need not be, though it often is, a mere expression of the desire that India, too, might taste the sweets of currency depreciation, but only a recognition that the external value of the rupee had never been determined on a purely scientific and impartial basis. It is not our purpose here to examine at length the question of the exchange value of the rupee; but it is certain that when the re-examination is undertaken, it would most probably lead to the conclusion that a reduction in the rupee rate is essential in bare justice to the trade and industry of this country.

Thus, with an inflationist Empire, with the dollar again tending to droop, and the gold link proving too costly, it may be said that present conditions are driving Great Britain more and more to the side of the sterling *bloc*.

When the link between sterling and the franc and other gold currencies is broken, a new academic interest will probably develop. It has been recognised since September, 1931 that the depreciation of sterling has tended to lower world prices still further. The main reason for this development is to be found in the fact that the currency of the foremost consumer of raw materials had depreciated in its external value. It is still possible to suggest that, because sterling had for long been regarded as an international currency, world prices must be influenced in the main by the course of sterling prices. That the distinctness between sterling and gold was destroyed by the stability of the sterling franc rate over a long period is unfortunate from the point of view of one who tries to determine whether sterling or gold is the more potent factor in world prices. If and when sterling is definitely delinked from the franc and gold, then there will be occasion for us to see whether world prices follow the trend of sterling prices or *vice versa*.

One of the interesting developments in the week is the failure of the London prices of gold to follow too closely the changes in the sterling franc rate. While as against a franc rate of 80.34 the price of gold stood at 131s. 3d., on September 4th the price of gold fell to 131s. as against a fall in the sterling franc rate to 80.28. This can only be interpreted as a narrowing of the premium which holders were willing to pay for gold over and above the price justified by the prevalent sterling franc rate. At the level of 131s. 3d. this premium stood at 7½d. per ounce. It is yet too early to say what has interfered with the forces that tended to keep this premium at a high level. As we have examined the causes of the premium on gold at length on more than one occasion in the past, it should suffice to point out here that it arises from the anxiety of Continentals to keep their funds in a form in which it can neither deteriorate nor is liable to be appropriated by the Government. It is not correct to suggest, as is done by the foreign correspondent of a local daily, that the Bank of England has powers to acquire all gold compulsorily. Such power is vested in the Bank only in relation to the holdings of British nationals and foreign nationals have so far been exempt from this power of the Bank. Is it possible that rumours have arisen in the meanwhile of an intention on the part of the British Government to extend these powers of the Bank of England to foreign holders also?

COMMUNIQUES AND RETURNS.

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, September 5. The total amount offered was Rs. 3,03,00,000. Tenders at Rs. 99-12-6 and above were accepted in full and those at Rs. 99-12-3 were allotted approximately 30 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1,50,00,000, the average rate of accepted tenders being As. 14-2 per annum.

Tenders for Rs. 1½ crores of three months Treasury Bills will be received on Wednesday, September 13. Successful tenderers should make payment on Friday, September 15. Other conditions are as usual.

Three months intermediates will be sold from September 6 to 12 at Rs. 99-12-9 per cent. subject to the condition that the sale of intermediates may be discontinued without previous notice at any time during this period.

STERLING TENDERS.

On Tuesday, September 5 tenders to the amount of £40,000 at 1s. 6 1/16d. were received and allotted in full.

On Wednesday, September 13, £1,000,000 will be offered for tender on the same conditions as previously announced.

GOLD STANDARD RESERVE.

The balance of the Gold Standard Reserve on July 31 amounted £40,000,000 and was held in the following form:—

	£
Cash at short notice at the Bank of England	4,822

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE.

(From Our Correspondent).

Thursday, Sept. 7.

The interesting features during this week has been Government securities Jute, and coal. In Government securities higher-priced stocks met with a fair amount of enquiry. 3½ per cent. paper remained in the neighbourhood of Rs. 85-2 while the 4 per cent. 1960-70 loan was in demand at Rs. 98-8; 5 per cent. 1945-55 met with enquiry at Rs. 113-5, 5½ per cent. 1938-40 loan quoted Rs. 109-2 s.l., 4 per cent. Punjab Bonds (1948) Rs. 99-10 and the 6 per cent. Treasury Bonds 1935 were placed at Rs. 107-7.

Coal.—These shares showed a tendency to slacken and business was more or less on a restricted scale but on account of the strong revival of demand prices once again showed an upward tendency. Burrakurs closed with buyers around Rs. 18-4, Equitables were placed at Rs. 19-8, Raneegunge were in demand at Rs. 35-12, Amalgamateds had a few buyers at Rs. 14-4, Rewas were on offer at Rs. 11, Bengal quoted Rs. 237, Bengal Nagpur (Ordy.) Rs. 41, Katras-Jherria Rs. 32-12 and Sendra Rs. 8-10.

There has been some enquiry for these shares probably due to the protection offered by the Tariff Board. Kesorams quoted Rs. 3-6, Bengal Nagpurs (Ordy.) Rs. 19-8 and Dunbars (Ordy.) Rs. 101.

Jute.—There was great selling pressure in this section on account of the large jute forecast on Monday but this eased off as the week advanced and prices, on the whole, became steady. Howrahs changed hands between Rs. 48-4 and Rs. 48-6, Kamarhattys were dealt in at Rs. 445, Nationals met with some enquiry roundabout Rs. 21-2, Presidencys were on offer at Rs. 5-4, Barnagores quoted Rs. 131-8, Caledonians Rs. 485 s.l., Gourepores Rs. 348, Albions Rs. 236 s.l., Alliance Rs. 273 s.l., Kanknarrahs Rs. 427-8, Kinnison Rs. 630-8 s.l. and Standard Rs. 331 s.l.

Tea.—Interest in these shares has subsided for the time being and dull conditions have prevailed. Teen Ali met with some eenquiry at Rs. 20-8, Tengapani came to business at Rs. 16-4, Betjans were dealt in at Rs. 25-2, Teesta Valley improved to Rs. 38-8, Bishnauths were dealt at Rs. 23-12 while Tukvars were marked back to Rs. 24-2.

Banks and Railways.—Imperial Bank shares (fully paids) have improved from Rs. 1,198 to Rs. 1,208-8 and the Contributories to Rs. 298-8. Central Banks, too, rose to Rs. 24. In Railway shares, Darjeeling-Himalayan (Ordy.) quoted Rs. 75, Arrah-Sasaram Light Rly. Rs. 60-8, Futwah-Islampur Light Rly. Rs. 73-4 and Katakhal-Lala Bazar Rly. Rs. 80 ex-div.

Miscellaneous.

This section showed little or no change. Bengal Iron were marked up to Rs. 2-14, Indian Iron and Steel accounted for some business at Rs. 4-7, Indian Standard wagon (ordy) moved further to Rs. 44, among Electric Power shares Bengal Telephones continued to find buyers at Rs. 15-8, Benares Electric quoted Rs. 12, in Mining shares Burma Corporations quoted Rs. 8-12 and Kangra Valley slate Rs. 129 s.l. Ivan Jones quoted Rs. 4-14, Reliance Firebricks and Potter Rs. 7-4, Bengal Paper (ordy) Rs. 72-8, Titaghur paper (ordy) Rs. 14-15, Bengal Assam Steamship Rs. 172, Bengal Aerating Gas Rs. 63 s.l. Digwarrah rubber Rs. 5-12. In Sugar shares Balrampurs quoted Rs. 11-8, Carew & Co., Rs. 14-10 and Samastipurs Rs. 13-10 ex-div.

BOMBAY STOCK EXCHANGE

(By Wire).

(From Our Correspondent).

Bombay, Sept. 8.

Government securities for which business was allowed only on a cash basis, remained quiet but others declined as sellers predominated owing to fears that forward business will be stopped. 3½ per cent. Government paper after touching Rs. 85-12 from its previous close of Rs. 85-11 closed on Tuesday at Rs. 85.

The market, however, was closed on Wednesday and Thursday, for both shares and securities due to Parsi Holidays.

Mill shares weakened due to the worsening situation of the Textile industry. Bombay Dyeing dropped from Rs. 773-12 to Rs. 766-4, Fazalbhai from Rs. 283-2 to Rs. 265, Century from Rs. 225 to Rs. 218-2 and Pearls from Rs. 225 to Rs. 157-8. Alcocks improved to Rs. 208-12. In Electric shares Andhra Valley (Ordy.) were firm at Rs. 1,472-8, and Tata Powers Rs. 1,017-8 after touching Rs. 1,025 on rumours about revived dividend. Trams and Hydros remained firm at Rs. 145-10 and Rs. 161-14 respectively. Belapur Sugar eased from Rs. 201-4 to Rs. 199-6 and Murma (Old) from Rs. 378-12 to Rs. 372-8. Tata Steel were steady, Ordinaries quoted at Rs. 54-12, Deferred at Rs. 191-14 but Second Preference were in great demand and quoted at Rs. 105-8 after touching at Rs. 106-8.

BAREILLY ELECTRICITY SUPPLY CO., LTD.

NOTICE

is hereby given that the Eleventh Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 18th September, 1933, at 3-5 p.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th June, 1933, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 8th to 18th September, 1933, both days inclusive.

JUTE AND JUTE GOODS

JUTE.

During the week under review the market has ruled quiet with a decline of Rs. 21 in values.

Pending the final forecast which was out on September 5 the market was very narrow for the earlier part of the week. The highest and lowest for October Futures were Rs. 30-12 and Rs. 27-8, and good business was done by the shippers for ready pucca bales before the forecast was out at Rs. 27-8. Mills however have remained out of the market throughout the week. Fair business is, expected in the course of next week at prices slightly below the previous week.

FINAL JUTE CROP FORECAST.

The following is the final forecast of the Jute crop in Bengal, Bihar and Orissa, and Assam, for the year 1933, published on September 5 at Writers' Buildings, by the Director of Agriculture, Bengal.

Names of Districts.	Estimated area under jute in acres.		Estimated total yield in bales of 400 lbs.	
	Last year*	This year.	Last year*	This year.
Bengal (Presidency Division).				
24-Parganas ...	46,400	61,000	151,000	200,000

Total Assam ...	127,400	130,200*	340,100	367,900
Grand Total for the three Provinces :—	2,143,100	2,491,000*	7,097,100	7,933,200

*Revised. (a) Includes Nepal.

The area under jute according to the preliminary forecast issued in July was estimated at 2,479,800 acres which according to the revised figures now stands at 2,491,000 or an increase of 11,200 acres.

In our issue of July 8, I have fully dealt with the probable production and consumption of raw jute during the current season. I had forecasted a crop of 82 lakhs of bales since reports of steadier growth of jute from some districts were received. There was a strong rumour in the market that the final forecast will for some reason or other be a surprise and the figure will be in the vicinity of 70 to 72 lakhs of bales. But there was no justification for such a low figure and writing on the eve of the forecast *i.e.*, in the issue of September 2, I had said that the forecast according to my calculation should be for 80 lakhs bales.. According to the Government report the yield is placed at 7,933,200 bales of 400 lbs. each. The Government figures are not wide from private estimates though some base it at 85 lakhs of bales. However as reported previously, the supply available, including old crop, will be in the neighbourhood of 85 to 90 lakhs of bales against which the seasons consumption is estimated as below.

Local Mills ...	...	44 lakhs of Bales
Mills Abroad ...	...	35 ,, ,, ,,
Extra Factory ...	...	5 ,, ,, ,,
Total	...	84 lakhs of Bales

It means that the existing stocks with mills and others remain practically unchanged.

The forecast is far from bullish but at the same time it can not be said to be very bearish. The drop in the future quotations to about Rs. 2 per bale in the course of the last two days have made the temporary position strong and the immediate trend seems to be for a narrow market. The present price levels are so low that they do not warrant any crash in values. But, the supply of raw jute is just enough to meet the years requirement in full, leaving the stocks more or less unaffected. This clearly indicates that buyers will only appear and will be interested when the values are low. They will withdraw at every rise. On the contrary, there will be a comparatively heavier selling pressure in the course of this and next month and during this period if a slow decline in raw jute is noticeable it should be no surprise. It therefore seems desirable that long holders should wait for a while more. Short purchases at declines will, however, prove beneficial for small profits.

The Indian Jute Mills Association gives a Memo of total reported production of manufactured goods by the mills in the membership of the Association *and also* by the Adamjee, Agarpara, Gagalbhai and Shree Hanuman Mills, for the month of August, 1933.

JUTE MANUFACTURES.

During the current week there has been a further sharp decline in the values of hessians. Nine porter ready which stood at Rs. 10-8 has come down to Rs. 9-10 while the November futures has come down from Rs. 10 to Rs. 9-4. The decline in values has been partly due to heavy bull liquidation, bear jute crop forecast and poor buying support from the consuming centres. The export of hessian during August has amounted to 9.77 crores yards. The stocks in Calcutta on 1st September are higher by about half a crore yards as against the stock on August 1st.

Heavy goods market has ruled equally dull and easy, though the decline in values is not so heavy as has taken place in the case of hessians. Stocks have been again larger at the end of this month and demand has remained though fair but unsatisfactory. The existing state of the market does not warrant for any immediate and appreciable rise in the values of jute goods.

DUNDEE.

Prices of jute yarns and cloth in Dundee are still being well maintained, though buyers have shown less inclination to operate, and the market has ruled generally quiet owing to the uncertainty of the fibre. Calcutta goods displayed distinct weakness in the early days of the week, showing a slight recovery later.

Jute Yarns.—Buyers are still reluctant to concede 2s. 1d. for common 8lb. cops and 2s. 2d. for 8lb. spools, but though they have been offering to purchase at ½d. less, spinners have rigidly refused the business. The result is that there is little business passing in the hessian descriptions. Twist, however, continues to be sold at from 3 9/16d. to 3 5/8d. for 8 ply 8lb., and sacking yarns are by no means neglected at steady prices. Values of Rove have been shaded occasionally, while the finer yarns have been very quiet, though some inquiry exists, especially for the finest qualities for local use. Carpet descriptions continue quiet.

Jute Cloth.—Manufacturers are still very favourably situated with orders, and they are always booking a certain amount of fresh business, buyers being rather more interested during the past day or two on account of the advance in raw jute values. According to the volume of inquiry there are still many wants to fulfil. Prices are quotably steady at from 3½d. for 10½ oz. 40 in. and 2 8-8d. for 8 oz., and these rates are generally obtained. The wide widths have recently been sold on broader lines. Linoleum hessians are quiet, but steady, and heavy goods are in limited demand.

German Trade.—Nothing special can be reported in the market here. Business is very slow, and during the past week no larger sales have taken place. The official quotations of the Syndicate are not lower, but there is rather a downward tendency in the price fluctuation. Yarns are also more or less neglected.

Linen Trade.—There is very little business passing in flax and tow only a few odds and ends. No further sales have been reported by the Monopolies. Sellers would be prepared to shade their prices a little for the small quantities of old crop fibre remaining. The reports of the new crop from all districts are very satisfactory, and it is expected that pulling will commence next week. It is anticipated that the crops will be larger and of good quality. Flax and tow yarns are quiet, but spinners are fairly well engaged. Cloth business continues moderate.

Total reported sales for the week ending Saturday the 2nd September, 1933.

COTTON AND COTTON GOODS

COTTON.

(By Wire.)

(From our correspondent).

Bombay, Sept. 8.

All American markets were closed on Saturday and Monday. It is feared that the real objective—due to raising of purchasing capacity. Large masses won't be achieved by Nira programme and the weight of hedge selling is proving burdensome. New York October came down from its previous close on Wednesday to 9.48 on Tuesday to 8.92 but closed on the sixth at 9.15 on reports of heavy rain and Government buying. Liverpool market remained supine. The local rate for Broach April-May came down from Rs. 203-8 to Rs. 192-8 but the market remained closed yesterday.

During the week the market has ruled narrow and featureless. Fluctuations have been meagre and the buying and selling operations on a very moderate scale. Pending the Bureau report this week, which is again expected to be bearish, longs have liquidated their holdings. The purchases by Japanese houses have, however, offset the weakness caused by the liquidation. American markets also remained dull pending the further development of inflationary measures and the success of the codes inaugurated in the various industrial concerns.

Hedge sales are not wanting, both, at home as well as abroad, but, the values being already low they are absorbed by short bulls and genuine investors. The market is, at the moment, very uncertain, and will be ruled by the Bureau report and the general view taken thereof by the speculators. The tone has been no doubt bearish but the absence of heavy longs will not carry the market much down.

The export activity has been of a small nature. China has sent retail inquiry but this appears to have been filled very quickly. Europe continues her hand-to-mouth demand but there is almost a total absence of inquiry for new crop commitments are almost nil and in consequence the shadow of the approaching crop movement looms much larger than usual. The mill situation shows no signs of inprovement and slow but steady stoppage of spindles and looms continues. Crop news continues satisfactory and with light rains about the middle of next month a crop of fully normal size will be produced.

COTTON CONSUMPTION.

An increase of 2,010,000 bales in the consumption of cotton by the world's mills for the year ended July 31 is revealed by the statistics compiled by the Federation of Master Cotton-spinners and Manufacturers Associations.

The total consumption of 24,332,000 bales comprised:—

	Bales.
American	14,167,000
East Indian	4,200,000
Egyptian	936,000
Sundries	5,029,000

Consumption by mills for the half-year to July 31 was as follows:—

	Bales.
Britain	1,168,000
India	1,264,000
Japan	1,512,000
China	1,233,000
U. S. A.	3,309,000

According to the weekly cotton statistics, issued by the New York Exchange, the consumption of American cotton during the current season shows a marked expansion as compared with the takings for the corresponding period last year. Forwardings to American mills, to date, *viz.*, 382,000 bales, represent an increase of 144,000 bales, exports to Great Britain have been improved by 47,000 bales to 106,000 bales, while Japan has increased her quota by 62,000 bales to 130,000 bales. Garside makes the world's consumption of American for the year 14,132,000 bales and the carry over 11,975,000 bales. On this basis the season's supply will not be much less than last year, *viz.*, 24½ million bales as against 25½ millions.

THE UNDERWOOD
PORTABLE

Ranks foremost in writing machines because of Lightness in touch—Quickness and ease of action—A type impression which is sharp and distinct—An Alignment of type which long and hard use will not alter.

It is quiet, because of a new carriage return, a new shift key mechanism and a generally subdued key action. It is fast, because incorporated in it are exclusive features that, for years, have made Underwood typewriters the speed typing machines of the world.

Fuller particulars promptly furnished on request or better still, ask for a demonstration.

PIECEGOODS.

Since reporting last week there has been no improvement in the piecegoods market. There has been very little fresh business in forward positions, while the ready sales have also been very disappointing. The recent floods in various parts of the country have further diminished the seasonal demand and clearances have consequently been far below the conservative estimates.

Some business is reported done by local mills in standard shirtings Italians, fancy coatings and poplins. The clearances are, however, poor and reports from Bombay and Ahemedabad go to show that further curtailment of output is seriously being considered. There has been no fresh forward business from Japan, the only reported business is some sales from stocks.

Business in Lancashire goods is, however, improving. Enquiries have been more numerous and some decent business has been placed in white mulls, shirtings and dyed fancies.

Some improvement is noticeable in the yarn section. There has been not much of a new business, either in Japanese or English yarns but replacement orders, are not wanting. Enquiries from consuming centres are better and actual business done is much better than reported done during the past several weeks. In consequence values also have shown a slight improvement and they are at the time of writing ruling firm.

Manchester:

The past week has been devoid of any feature of outstanding importance. Although during the earlier part of the month the cotton crop made excellent progress there have lately been reports of deterioration in the growth. The recent heavy rains in the eastern section of the belt have increased the possibility of weevil damage, and recent cables have referred to the pest becoming more active generally. However, the most important factor at the moment is the success or otherwise of President Roosevelt's various codes for the different industries, which are apparently meeting with better results than were anticipated in some quarters. The currency question is undoubtedly one of the main reasons why operators generally are proceeding with extreme caution.

There has been a welcome increase in the volume of inquiry dealt with during the week, and though offers have on the whole been very low, there has been an increase in actual business. India has submitted a fairly varied inquiry ranging from light bleaching cloths, prints, and certain dyed styles for Calcutta, to white fancies from some of the up-country outlets. Small lots of white yarn dhooties have been booked for Calcutta and Madras, whilst Bombay and Karachi have purchased moderate lines of fancies. Singapore has put forward some inquiry for fancies and Rangoon for fine goods, some of which have already been placed.

There has been little of any change with regard to China, though Shanghai has continued to show interest in coloured poplins. Egypt has booked a few mulls and tanjibs, while there has been a fair inquiry from the Near East and North Africa, for bleaching cloths. Comparatively little has been done for the West Coast, but certain heavy goods and a few white shirtings have been booked for South Africa. Dyeing cloths and specialities have been in moderate request for South America.

SUGAR ELECTRICITY SUPPLY CO., LTD.

NOTICE.

is hereby given that the Fourth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 18th September, 1933, at 3-0 p.m. for the purposes of receiving and considering the Director's Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th June, 1933, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 8th to 18th September, 1933, both days inclusive.

Managing Agents.

CALCUTTA,
The 7th September, 1933.

BULLION

GOLD.

(By Wire)

(From our correspondent).

Bombay, Sept. 8.

There were tempestuous fluctuations in this market due to heavy movement in the sterling-franc rate. The franc rate touched its lowest at 79.65 when the local rate nearly touched at Rs. 83 per tola. The latest quotation to-day for Bhadrapada is Rs. 32-9-3. The undertone, however, was firm.

During the earlier part of the week under review, the gold market in London registered a heavy advance from our previous week's closing figure of £6-8-9½ to £6-11-3 on the 2nd, but later sustained a decline and the latest quotation available is £6-10-7. In sympathy with this trend of the London market, the local market also during the earlier part of the week witnessed a sharp rise, prices advancing to Rs. 32-11 the highest figure ever reached since England went off the gold standard, but later declined with the steadying up of the London-Paris cross rate. America has modified her embargo on gold and the London New York cross-rate has gone up to 4.55.

Arrivals of distress gold and export thereof continue. Stock position remains same as last week.

LONDON (Air-Mail Week.)

Gold reserves against notes of the Bank of England was £190,162,445 on the 16th August, showing no change from the previous Wednesday's figure.

During the week, the Bank purchased bar gold to the value of £6,732.

In the open market, the supply of gold was fair on all the days. Continental purchasers were deterred by the high premium over the franc parity. The destinations for the most part of the purchases remain undisclosed.

The following were the United Kingdom Imports and Exports of Gold registered from midday on the 14th instant to midday on the 21st instant.

SILVER.

(From our correspondent)

By Wire.

Bombay, Sept. 8.

The silver market was featureless only meagre fluctuations taking place. The trend, on the whole, was also easier. The rate for Bhadrapad Settlement dropped from Rs. 55-12 to Rs. 55-7 after Rs. 55-15 and Rs. 55-2-6.

During the week, the silver market in London registered slight fluctuations near about 18 1/8 and 1/16d., the latter being the latest quotation available. New York price has gone up to 37. The local market remained inactive with a slight advance in the earlier part and a quiet closing up. The stock is 2200 bars with the daily offtake of 3 bars.

LONDON (Air-Mail Week.)

During the week, prices fluctuated within narrow limits. Re-sales from China and offerings from the Continent were offset by bear covering and support from China.

America bought as well as sold, but unlike the previous week, during this afternoon dealings were on a smaller scale. Buying and re-sales by Indian bazaars and speculators continued.

The undertone of the market at the moment appears to be good. The prospect of appreciable movements seems, however, to be distant.

The following were the United Kingdom Imports and Exports of silver registered from midday on the 14th instant to midday on the 21st instant.

TEA

Sale No. 13 was held on 4th and 5th September when 17,000 packages of leaf tea with export rights, 6,000 packages of tea for internal consumption and 6,000 packages of dust were sold at annas 0-8-9, 0-4-4, and 0-4-2 per lb. respectively.

More tea was available for this week's export sale, the catalogues totalling 20,000 packages, which offered a useful selection.

The sale passed with a fairly brisk tone but prices were very irregular and weaker.

Common brokens sometimes sold at last rates but were usually 3 pies lower and mediums declined 3 to 6 pies. Fannings were a weak feature and ½ to 1 anna lower. Good liquoring and tippy kinds met a little more support and often fetched last rates.

Leaf teas were in less demand commons and mediums declining 3 to 9 pies while Assam Orange Pekoes were often an anna or more lower.

Sale of teas for consumption in India 12,800 packages were offered, half of which were Dusts. The sale passed with an improved tone and prices were fully firm to dearer, leaf teas meeting very strong support.

Dusts showed some irregularity and were barely steady.

The following are full particulars of Sale No. 13:—

Teas with Export Rights.

		1933.	1932.	1931.

London.

Offerings at the tea sales this week comprise 45,700 packages of Indian, 24,500 of Ceylon and 7,400 of Java teas. There was good, strong, active demand for all grades and qualities. Common tea was rather firmer.

INDIAN TEA SALES.

At the London auctions on August 30, 26,300 packages of India tea were submitted for sale.

There was a fair demand. The market was firm and prices remained unchanged.

The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day auction per lb.
Common Pekoe	9½d.	9¾d.
Common Broken Pekoe ...	9½d.	9½d.
Common Orange Pekoe ...	10d.	9½d.
Common B. O. Pekoe ...	9¾d.	9d.
Common B. P. Souchong ...	9½d.	9½d.
The following were the value prices:—		
Clean Common Pekoe ...	9¾d.	9¾d.
Clean Common B. Pekoe ...	9¾d.	9¾d.
Clean Common O. Pekoe ...	10d.	10d.
Clean Common B. O. Pekoe	10d.	10d.
Clean C. B. P. Souchong ...	9½d.	9½d.

At the London auctions on September 4, 23,300 packages of India tea were submitted for sale.

There was a good demand at generally firm rates. Common sorts were sometimes a farthing per lb higher. Low medium kinds were rather irregular but good medium teas sold well and were generally in sellers' favour.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 9¾d., to-day's auction 9½d. lb.; Common Broken Pekoe last auction 9¼d., to-day's auction 9¾d. lb.; Common Orange Pekoe last auction 9½d., to-day's auction 10d. lb.; Common Broken Orange Pekoe last auction 9d., to-day's auction 9¼d. lb.; Common Broken Pekoe Souchong last auction 9¼d., to-day's auction 9½d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 9¾d., to-day's auction 9¾d. lb.; Clean Common Broken Pekoe last auction 9¾d., to-day's auction 9¾d. lb.; Clean Common Orange Pekoe last auction 10d., to-day's auction 10d. lb.; Clean Common Broken Orange Pekoe last auction 10d., to-day's auction 10d. lb.; Clean Common Broken Pekoe Souchong last auction 9¼d., to-day's auction 9¾d. lb.

JAVA TEA SALES.

At the London auctions on August 31, 6,500 packages of Java and other teas (including Sumatra) were submitted for sale.

There was a good demand and a firmer market. Tippy sorts were generally firmer. Other teas, except dust, were sometimes a farthing per lb. higher

The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day's auction per lb.
Common Pekoe	7¾d.	7¼d.
Common Broken Pekoe ...	6d.	6¼d.
Common Orange Pekoe ...	9¼d.	8½d.
Common B. O. Pekoe ...	8d.	7½d.
Common B. P. Souchong ...	8d.	8d.
The following are the value prices:—		
Clean Common Pekoe ...	8d.	8¼d.
Clean Common B. Pekoe ...	8d.	7¾d.
Clean Common O. Pekoe ...	9⅜d.	9⅜d.
Clean Common B. O. Pekoe ...	8⅜d.	8⅜d.
Clean C. B. P. Souchong ...	8d.	8d.

CEYLON TEA SALES.

Steady Tendency: Prices generally unchanged.

At the London auctions on September 5, 24,100 packages of Ceylon tea were submitted for sale.

The tendency was steady but later became quieter. Prices generally remained unchanged.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 10¾d., to-day's auction 10½d. lb.; Common Broken Pekoe last auction 10¾d., to-day's auction 10d. lb.; Common Orange Pekoe last auction 12d., to-day's auction 11¾d. lb.; Common Broken Orange Pekoe last auction 10¼d., to-day's auction 11d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 11d., to-day's auction 11d. lb.; Clean Common Broken Pekoe last auction 11¼d., to-day's auction 11¼d. lb.; Clean Common Orange Pekoe last auction 12¾d., to-day's auction 12¾d. lb.; Clean Common Broken Orange Pekoe last auction 12¼d., to-day's auction 12¼d. lb.

GRAINS AND SEEDS

WHEAT.

(By Wire)

(From our Correspondent.)

Since reporting last week, there have been no fresh developments in the market. The weakness in the commodity markets in general and foodstuffs in particular have helped in keeping the wheat low. Business has been of a meagne nature. Weather conditions have all along been favourable and there is less inclination on the part of longs and stockists to carry on. The liquidation therefore has been on a large scale and seem to be a large scale and seem to be a largely over. As soon as it is over an upward reaction will take place and the market then seems to remain narrow.

Quatations:—

Australian South Parcels ...	26sh. 9d.

Chicago (per Bushel)

September	$0.83⅞
December.	$0.88¼

LINSEED.

There has been a sharp rise of about 8 annas per maund in the value. Of linseed in the course of one week. The rise has taken place due to unfavourable weather reports in La Plata and the consequent bear covering in the local market specially for September position. The rise has been over and the market now seem to remain for the time being at this level.

The following are the quotations:—

MADRAS STOCK EXCHANGE

(By Wire)

(From Our Correspondent).

Madras, September 8.

The securities market was active and prices on balance show an improvement especially for short and medium dated loans and 4 per cent. 1960-70 loan. A large amount of business was done in 4½ per cent. 1934, 5 per cent. 1935 treasury bonds, 4 per cent. 1934-37, 5 per cent. 1939-44 and 5 per cent. 1940-43 loan. There was a mild panic in Government paper on Monday of this week on news of the resolution given notice of by a member of the Committee of the Bombay Stock Exchange for stopping forward dealings in securities, and the Rupee Paper touched Rs. 84-12. But at the lower levels good support was forthcoming from the investors. The market gradually improved, closing steady at Rs. 85-3. Mysore Government securities were firmer, 5½ per cent. being taken up at Rs. 109-8 with buyers over, while 5 per cent. and 6¼ per cent. were taken at the improved rates of Rs. 113-10 and Rs. 115-2. There was no transaction in the new Cochin loan. Business in Port Trust, Municipal and Joint-stock company debentures was nil, there being no sellers. The prospectus of the 6 per cent. Singareni Collieries Debenture issue was made available during the week. Among preference shares, interest chiefly centred in Tata Iron and Steel Second Preference and business in this was done at one time up to Rs. 107-8 but closed easier at Rs. 106. Buckingham preferences were absorbed at Rs. 135 and Hooghly preferences at Rs. 17. Among bank shares, Imperial Bank fully-paids were steady at Rs. 1,200, and Contributories were lower at Rs. 288-4. Indian Bank shares improved to Rs. 88, but business was negligible owing to absence of sellers. Electric shares were in fair request. Rangoon Electrics were taken up at Rs. 23-8 with buyers over. Benares Electrics were wanted at Rs. 11-8 and Affimeres at Rs. 8-8 and at these prices sellers were not forthcoming. Cotton Mill shares were steadier. Business in Buckinghams was done at Rs. 182-8, in Coimbatores at Rs. 60-12, in Cambodias at Rs. 10 and in Gokaaks at Rs. 122. Towards the close, there were sellers at the quoted prices except Buckinghams. Local sugar shares improved on the declaration of an interim dividend of 20 per cent. per annum free of tax by the Deccan Sugar and Abkhari Co., Ltd. The old shares improved to Rs. 300 and the new shares to Rs. 74 with Cum-Dividend buyers. Amongst outside market shares, Samastipurs changed hands several times around Rs. 15-4 (Cub-Dividend). New Savans had one or two buyers at the close at Rs. 13-12. India cements were weaker at Rs. 302, while Punjab Portland were in request at Rs. 16. Peria Karamalais Teas moved up to Rs. 30. Others remained unchanged. Rubber shares were lifeless except for isolated deals in Cochin, Malabars at As. 9, while the Preferences were dealt in at Rs. 20. In the miscellaneous section, Veninzula Oils Mexican Eagles, Burma Corporations and United Brewaries were active. This sections closes lower. There would have been larger turnover but for Bombay Markets being shut for nearly three days on account of Parsi New Year Holidays.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

FUNCTION OF A RESERVE BANK.

Before this issue of *Indian Finance* is in the hands of its readers, the Government will have introduced in the Central Legislature the Reserve Bank Bill on the lines outlined by the Committee in London. Though the question of the Reserve Bank is familiar to the country, thanks to Sir Basil Blackett's futile attempts to establish a central banking institution in India, it would, we believe, be desirable to set out the main issues connected with this question and in a manner that will help a proper sense of proportion and relative importance. For Sir Basil's attempts were a failure, mainly because there was but a hazy idea of the importance and functions of the Reserve Bank and a proneness on the part of our Legislators to treat the central banking institution as one amongst the many bones over which various political parties might snap at one another for as long as may be. Even to-day many of those who seem to take an active interest in the question would find themselves unable to define the place of a central banking institution in a national economic scheme. Those who have felt annoyed at the frequent emergence of the vexed question of the ratio would be tempted to regard the central bank as the haven of rest from a bewildering and unending controversy about the external value of the rupee. Critics of Government's financial operations justly regard a Reserve Bank manned by experts as a more natural and competent financial agent of government than officials liable to constant shift from centre to centre or from department to department. The Indian banks, long exposed to neglect and unfair competition, welcome the bankers' bank as friend, philosopher and guide. Agriculture and industry look blankly on, unable to comprehend how another addition to the financial structure, however imposing, would alter the essentially censorious and unhelpful attitude of finance to all creative activity in the sphere of economy. And, needless to say, foreign financial interests are only anxious that the Reserve Bank like the Federal and provincial Legislatures should be rendered powerless to interfere with their dominance.

* * *

But it should be easy to appreciate that the characteristic feature of a central banking institution is that it should be central, in the sense that it is not sectional. Its main purpose is to see that the financial mechanism functions with the utmost smoothness and efficiency. Considered by itself, finance may be regarded as a machinery; but in relation to industry and all productive and distributive activity, it is no more than a lubricant enabling the machinery of the national economy to work without breakdown or friction. It is the task of a central banking institution to ensure that this lubricant is supplied in the proper quantity and quality and that it is distributed in proper proportion over all parts of the machine. This is the supreme function of a central banking institution and all other duties only follow from this. If certain duties normally performed by a central bank are given prominence, it is only because the historical development of prominent central banking institutions is confused with their logical functions. To a new country like India the historical attributes should not matter much, for, in a sense, we start with a clean slate and obsessions due to a knowledge of history should not be allowed to obscure our view of the characteristics and functions of a true central bank.

* * *

We have laboured this point because it is only when the public realises that the Reserve Bank is to serve the broad public interest that the apparently conflicting claims of sectional interests will be seen in their proper relation. It is for the public as represented in the Central Legislature to hold the balance between such conflicting interests; and this, it would be unable to do, if it does not see how the duties ordinarily performed by a central bank follow from our conception of its proper objective. To take the financial agentship for the Government first, it may be pointed out that in Britain its precedence over other functions of the Bank of England is purely historical in origin, the Bank of England having been formed to find the beginnings of the present National Debt. To-day it is esential that the financial operations of the Government should be done by the Reserve Bank, not because that is its prime function, but because the operations are on such a large scale and have such effects on the money and capital markets that it is best that the Reserve Bank should be entrusted with the carrying out of those operations. If the scale of Government operation should dwindle to the size of a hundred years ago, there is no reason why a properly constituted central bank should be saddled with this task.

* * *

In the same way, the external value of the currency is a concern of the central bank only in so far as the stability or the regulation, as the case may be, of that external value is essential for the efficiency of the financial and economic mechanism. To-day, we have the spectacle of two of the foremost central banking institutions of the world functioning with apparent indifference to the state of the exchanges. When the economic interests of the country and the circumstances of international finance require that the external value of the currency should be left untended, the central bank, far from assuming any responsibility in that regard, should divest itself of such as it may have inherited from the past. We do not suggest that a country can afford for any length of time to be indifferent to the value of its currency in terms of foreign currencies or the international standard; and when it is possible and desirable to regulate the exchanges, the task must naturally devolve on the shoulders of the central bank. But here we are out only to clarify the relations between the various functions normally discharged by a central bank.

* * *

The obligations of the Reserve Bank to private banking institutions also follow from the fact that the Reserve Bank is in charge of the financial mechanism. Nobody can make the mistake of supposing that it is one of the duties of the Reserve Bank to find means of expanding the profits of private banking institutions. And yet when the question of the agency or the expansion of banking is considered, those who are interested in the Imperial Bank seem to feel that it has a right to the special patronage of the Reserve Bank; and indigenous banks of all kinds feel that service of their interests is the *raison d' etre* of the existence of a central banking institution. The term Banker's Bank, which is usually employed in reference to a central bank, though, no doubt, useful as depicting the character of its normal working, tends to create a misappresension that the ordinary banks are, and ought to be, the chief beneficiaries of the activity of the Reserve Bank. Occasions might conceivably arise when the Reserve Bank will have to carry out a policy which is opposed to the narrow interests of the banks. In India, however, the immediate inter-

est of the country lies in the spread of the banking habit through an expansion of the banking service to all parts of the country. It is obvious that in securing this need the Reserve Bank will have to take an active initiative ; and the most handy instruments are the indigenous joint stock banks. It is out of the question that the inducements necessary for banks to engage in this activity should be available to foreign institutions. Nor could the policy be so framed that a few of the more prominent institutions would find it possible to bestride the whole of the Indian banking world like a Colossus.

* * *

The practical aspects of the Reserve Bank Bill are dealt with in the "Clive Street Gossip" appearing in this issue. And here we are only concerned to show that the purpose of a Reserve Bank far transcends any one task that it will be called upon to perform or any question on which the attention of the public is often sought to be focussed in an exclusive manner. Our regular correspondent at Simla as well as our special representative there have stressed the lamentably amateurish character of the Joint Committee which will be dealing with the Reserve Bank Bill with that detailed care and scrutiny for which the committee stage is insisted on as part of the process of democratic legislation. They are, therefore, likely to be be bewildered by the conflict among the various interests. If it is realised that the Reserve Bank ought to be a Supreme Financial Council, the counterpart in Finance of a Supreme Economic Council, there could be little doubt about what its constitution and functions should be. The Committee would then insist that in such a potent instrument of the public good a body of private shareholders would be a dangerous incongruity; that the reservation of its benefits for any one banking institution is less an injustice to other banks than an injustice to the country as a whole; that to saddle it with the maintenance of a ratio of an at best doubtful scientific nature would be to disable it for serving the national economy; and that, above all, it is political and economic suicide to leave the direction of its policy in the hands of a foreign government.

THE TROPICAL INSURANCE COMPANY.

The first quinquennial valuation report of the assets and liabilities of the Tropical Insurance Company as on December 31, 1932, has just been released to the public ; and we are glad to note the satisfactory position revealed in the report. A surplus of Rs. 40,678 has been disclosed out of a life fund of Rs. 1,55,490 thereby leaving a necessary Reserve of Rs. 1,05,022 for the existing policyholders. The Consulting Acturay, Mr. G. S. Marathey, has recommended that a sum of Rs. 7,188 out of this surplus, be set apart as provision for writing off the preliminary expenses, which is shown as an asset (amounting to Rs. 37,872 on December 31, 1932) in the balance sheet and which, one would wish, had been wiped off in full. Nine-tenths of the balance of the surplus amounting to Rs. 29,952 are available to the policyholders under the Articles of Association of the Company. It is noteworthy that the shareholders have resolved in their Annual General Meeting to give a further sum of Rs. 2,971 out of their share of Rs. 3,328 in the surplus, to the policyholders. Thus a total sum of Rs. 32,923 has been distributed as bonus to "with profit" policyholders. The Actuary has recommended a bonus of Re. 1 per thousand per annum to all class of "with profit" policyholders. This is, indeed, an achievement considering the number of factors which have adversely affected all forms of business during the past few years. The Consulting Actuary in his report says "Your company has thus achieved a result which is creditable at such an early stage of a life insurance company, particularly when it is realised that the period under investigation has been a very trying one to Life Insurance companies in India. Your company has easily withstood the difficulties of the trying period and the valuation should be taken as encouraging and satisfactory for which you deserve congratulations".

The steady progress which the company is making can be shown by the following tabular statement:

Year	New Business	Net premium Income	Net Income from all sources	Life Fund
	Rs.	Rs.	Rs.	Rs.
1930 ...	...	1,28,811	1,30,836	30,052
1931 ...	9,14,000	1,40,716	1,45,225	77,546
1932 ...	10,08,834	1,45,561	1,67,882	1,55,490

The new business has increased from Rs. 9,14,000 to Rs. 10,09,000 in the year under review. The life fund at Rs. 1,55,000 has more than doubled as compared with the figure of 1931. All the items show a steady, though pehaps not too rapid, improvement over the figures of the preceding years. The Revenue Account shows that premiums received during the year amount to Rs. 1,46,000 interest received and outstanding amount to Rs. 7,584. A sum of Rs. 11,776 is shown as an income against appreciation in the value of G. P. notes ; and it is against the accepted canons of sound finance, that credit should be taken for unrealised appreciation in the value of investments. Besides not to take credit for this amount would be more in consonance with the 4 per cent. rate of interest assumed in the valuation. The disbursements side shows that claims and surrenders amount to Rs. 18,871 expenses of management amount to Rs. 67 thousand nearly. The ratio of expense to the total premium income is 46 per cent. nearly, which is rather high. But as the company is yet in its infancy and as there is a gradual reduction, it may be hoped that ere long the company will succeed in keeping its expenses within the accepted limit.

JAPANESE COTTON DELEGATION

Warm welcome awaits the Japanese Cotton Delegation, which will arrive, before the next issue comes out. The official section, under the leadership of His Excellency Setsuzo Sawade, proceeds to Simla direct, while the industrial group marches off to Bombay. The Bombay Millowners' Association has invited millowners from every part of India to Bombay, to welcome the Delegation and have preliminary consultations. The Indian Textile industry awaits the proposals of the visiting Delegation, to form the basis for negotiations.

From the farmer to the factor, Indians warmly reciproacate the Japanese determination to secure goodwill, and hope for the restoration of the traditional friendship, to the advantage of Indo-Japanese trade relations.

BENARES ELECTRIC LIGHT AND POWER CO., LTD.

With reference to the further issue of 40,000 Ordinary Shares already intimated to registered Shareholders in a Circular Letter dated 8th September, 1933, *holders of shares on blank transfer* are hereby notified that only Members on the Company's Register on the 30th day of September, 1933, will be eligible for participation in the New Issue, consequently they should send in their shares for registration in their names on or before that date.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

DATED, CALCUTTA,
8th September, 1933.

BRITAIN'S UNEMPLOYMENT POLICY.

In the policy of the British Government towards unemployment, a significant change is indicated by the announcement of the Minister of Health in the last session of the Parliament that the Government will take responsibility, administrative as well as financial, for the assistance of all the bodied unemployed who need assistance. And by all tokens, it is more or less certain that legislation for implementing this declaration will be introduced in the next session of Parliament. The change indicated is of such a radical nature, at least in principle though not in actual working, that much consternation has been produced in circles which regard individual responsibility for self maintenance as the mainspring of human effort and the engine of social progress. To appreciate the extent of the change involved, it is necessary to point out that in Britain half the unemployed are being maintained out of funds found by the central exchequer, but without the enforcement of the principle of less eligibility which centuries of experience of poor law have shown to be necessary. So far, the accepted principle of unemployment relief is that the man, who has either lost, or has not been able to find, employment, must be afforded enough to provide the conventional necessaries, but not sufficient to put him on a par with the employed in point of material welfare and thus deprive him of the urge to seek or retain employment. In the administration of unemployment relief, it has also been considered essential that the main financial responsibility must rest with the local authorities, so that the amount spent on such relief will bear a definite relation to the capacity of the locality. The practical advantage that was expected to flow from this was that, when unemployment exceeds the capacity of the locality to provide relief therefor, a wholesome tendency on the part of the unemployed to move to places of expanding employment would set in, and freeplay would be afforded for the economic forces that tend to readjustment.

* * *

It is contended by the opponents of the present proposals of the Government that the new legislation would deprive the system of all those wholesome features and that the consequences thereof on the whole economic organisation are, too disastrous to contemplate. Under the new scheme, the principle of individual responsibility for self maintenance would have been sadly undermined with obvious consequneces on the morale of the whole country and the efficiency of the workers and the unemployed and the productive organisation as a whole. When the local authorities are relieved of the financial responsibility for relief, the nation might well be saddled with an intolerale tax burden.

* * *

There are in this instance of the controversy that is threatened in England issues of world wide significances. The circumstances which change the whole complexion of the problem of unemployment is that it is agreed on all hands that for some long time to come, the figure of the unemployed is bound to be more or less near its present level. Mr. Neville Chamberlain once drew a too gloomy picture; but the difference between him and others is only a question of degree. If unemployment has admittedly come to stay, should not the problems connected therewith be tackled in some different manner The old system of unemployment relief was based on two assumptions. In the first place unemployment on any considerable scale was but a passing phenomenon; and that in normal times the relief of the unemployed would be well with in the capacity of the nation as a whole. If the schemes are designed to satisfy the conventional necessaries of the unemployed during the limited period of unemployment, as essential social task will have been performed without the risk of intolerable financial burden to the community or undermining the morale of the working class. Now in the present state of Britain's national economy both the assumptions are accepted to be false. Unemployment is not a passing phenomenon. The changes that have come over world trade in the post-War years have rendered it futile to hope for an adequate expansion of employment in British industry. And it follows from this that the maintenance of the large mass of unemployed on he scale hitherto accepted as a decent minimum is beyond the capacity of the nation. In such a position it is unthinkable that local authorities would be able to bear the burden; in fact, the charge to the local authorities was even in the past dictated by administrative, more than theoritical, requirements. Thus on the indisputable facts of the case it might be established that a change in the principle and the character of unemployment relief is necessary.

Though there are, no doubt, features peculiar to the situation in Britain, it is idle to overlook the similarity of the unemployment problems in all the counries of the world, which may be said to have been industrialised. In so far as unemployment is the result of improved technique and not the mere curtailment of production consequent on the depression, all the principal countries are faced with an identical problem. Many a thesis has of late been published on the forces that increase or decrease unemployment and the ways by which the resulting problems may be tackled. But the simple economics relevant to this problem is rarely stressed with clarity. An ideal economic organisation implies an adequate distribution of the work necessary for the maintenance of the community among its efficient members and the distribution of the products on a basis roughly corresponding to the contribution of each number. Mechanisation, if it means anything, means only the release of man from the necessity of manual exertion, and a progressive reduction of the amount of human labour needed to maintain society on the accepted standard of life. The more the mechanisation, the less man has to toil. Society as a whole can benefit by mechanical inventions or improvement of technique, only if the reduction of toil and work is uniform for all the members of the community. If hours are stuck to as well nigh unchangable, then unemployment is on the increase, with its obvious effects on consumption, and, through a fall in consumption, on production and employment. When the pace of mechanisation and shrinkage in employment is high the old notion of unemployment being a transenct phenomenon is not true to facts. And if it is not true to facts, it is unfair to insist hat, if the individual strives hard, he can find employment and improve the stanadrd of his maintenance. Though it may be true that one individual or two might by their own effort succeed in finding employment, the unemployed as a class, would be powerless, even with the best will in the world, to change their status.The old attitude to unemployment and the system of relief, which is based on that attitude, alike call for change. It has to be recognised that national and world economy have alike entered a phase in which short period changes are so swift and radical that the forces on which economists have confidently relied for long period adjustment are often rendered inoperative and powerless. The impact is so strong that yet newer forces are set in motion. If it is not true that unemployment is a passing phenomenon, it is equally fallacious to conclude from this that unemployment relief must be on a more liberal scale or that the state should not count as carefully as before. In Britain the view is widely held among Labour circles that since unemployment cannot be helped by the average unemployed it is unfair to impose on him a lower standard of maintenance than is enjoyed by the average worker.

* * *

And the present Conservative Government, too, had decided on the measures referred to more out of consideration for expediency than out of any conviction about their ethical or economic soundness. One should have thought that it was the duty at least of Socialists to deal with the unemployment problem—a problem of which the question of relief to the unemployed is only a small part—in a truly scientific manner. But there is reason to think that the Labour Party is habituated to viewing the question of unemployment relief as one of making the best bargain with the capitalist. As for a Conservative Government like the one now in power in England sponsoring radically new measures of unemployment relief, this is only characteristic of the deterioration of principle which always sets in in the advanced stages of an imperialist democracy. It may be that the ruling party has begun to recognise that, in the absence of an adequate system of unemployment relief, they would not be able to maintain their hold on the electorate and that failure to placate the populace in this manner would make it all the easier for the socialists to come back to power and alter the entire scheme of things. Thus, from the point of view of the Conservative government also, more relief for the unemployed is only a matter of bargaining with their political masters. The bane of unemployment is that, while it is in origin and nature a purely economic question, it is always viewed from the political angle and tackled by politicians with an eye to political advantage. The best way of relieving the unemployed is obviously to find work for them. If in England the position is complicated by the fact, that, owing to the changes in world trade and economy, British industry can never again expand to the point of absorbing all the unemployed, it is up to the leaders of economic thought in Britain to endeavour to find a new point of equilibrium for the national economy and then to contrive an even distribution of employment through a reduction of hours and, if necessary, a reduction in wages. It might be said that this involves a reduction in the standard of living to the workers, but as England is situate to-day it is difficult to see how such an eventuality can ever be avoided except at great peril to national solvency. In this regard, the valiant efforts of President Roosevelt to circumvent the problem of unemployment relief by bringing about an expansion of employment and an increase in productive activity through the formulation of the well-known codes of fair competition are worth world-wide emulation.

INDIANS IN SIN-KIANG.

In his speech to the two Houses of the Indian Legislature, the Viceroy assured the Indian public that the presence of His Majesty's representative at Kashgar had considerably minimised the danger to British Indian subjects, and he was making every endeavour to bring about the arrest and imprisonment of the perpetrators of "these" crimes. The reference was to the murder of a number of Indians, attended with loss of property in Sin-kiang, the western most province of China.

* * *

What originally started as an independence movement, soon degenerated into a civil rumpus, among rival, ambitious factions. The rebel leaders were all from Turkoman clans, belonging to important centres of population in Sin-kiang. The ablest among them was Timur, the Turqi Commander. He arrested the leader, and disarmed the forces, of Khotan, and came to terms with Usman Ali, the Kirghiz leader, who was later induced to retire with his forces.

* * *

But, the civil strife is still restricted to the Yarkand-Kashgar valleys. It has not yet spread to Urumchi, the seat of the Chinese Governor of the province, towards the north of the Tianshan mountains, which runs West to East, dividing the province into northern and southern sections.

INCOME-TAX EXPERT.

thoroughly conversant with procedure for claims against Income Tax authorities and who can advise on Returns, etc. can be consulted by gentlemen home on leave from India.

Particulars from

GEO. GRIFFIN,
7, Hills Place,
Oxford Circus W.1,
or C/o British Refrigerators,
30a, Chowringhee, Calcutta.

While rival leaders are settling their accounts in the southern portion, the Chinese provincial authorities have handed over the control of the southern part of Sin-kiang to one, Khoja Niaz Haji, as price for his support against a strong Tungan force from Kansu. This manner of the Chinese Government strengthening itself was not to Timur's liking, and he resumed friendly relations with Ma Chan Tsang, the Tungan leader in Kashgar. Owing to some difference with the Tungan leader of Kashgar, Timur had to invite the Kirghiz to help him in the disarming of the Tungans. The Kirghiz declined to undertake the job, all alone, and retired to the hills in umbrage. Timur pursued the Kirghiz, with a view to disarm them, before they reached the hills.

Finding Kashgar thus unprotected, Ma Chan Tsang captured Kashgar old City. When Timur hurried back, he was captured and killed by Tungan troops. The Tungans then essayed to conciliate the Kirghiz by inviting them to return to Kashgar, but failed in their efforts. Arms and ammunition, found in Kashgar old city, were, however removed to the Kashgar new city.

* * *

A few weeks later, the Kirghiz fell suddenly up on old city, and captured it. The Tungan troops and Chinese residents fled to the new city. Others were killed, and property was looted. The Combatant casualty was over 150 killed ; but the civilian loss is not known.

An attack was launched on the New City the very next morning, August 17, but was repulsed.

The Chinese authorities are weak, as military reinforcements from the central government of China cannot reach soon, for lack of transport facilities. So, the authorities have adopted the "divide and rule" policy, by weaning away to their side, the Tungans, the descendants of ancient families, the aristocracy of the place, as it were, and setting up Khoja Niaz Haji against Turgi insurgents, under whatever leadership they may be, in order to take control of southern Sin-kiang.

* * *

But, this Khoja protege is not yet in evidence, anywhere. Obviously, he may be organising his forces, and possibly there may be another round of killing, looting and arson, quite apart from the varyin fortunes of the protagonists of the two cities of Kashgar.

* * *

Thus, Sin-kiang is a bone of contention among Ma Chang Tsang, the Tungan leader of Kashgar, Usman Ali, the Kirghiz Commander, and Khoja Niaz Haji, the prize-boy of the Chinese provincial government at Urumchi. A fourth factor is the trouble at Yarkand and in Russion Turkestan, where a "mystery" man is reported to be fomenting revolt for the purpose of forming a united Muslim State, out of Russian and Chinese Turkestans. For some months longer, the situation in Turkestan in general, and Sin-kiang in particular will remain highly disturbed.

* * *

This state of affairs is all the more deplorable, as the growing trade between India and Sin-kiang would suffer, and the persons and property of the Indian colony in the towns of Western Sin-kiang are exposted to extreme danger. The trade figures for 1927 give an indication of the commercial transactions between the two adjacent countries. India imported in that year goods to the value of Rs. 28,14,568 and exported, to Sin-kiang, merchandise to the value of Rs. 11,86,848. There is, however, no information available as to the actual number of Indians, doing business in the various towns of Sin-kiang.

* * *

In the present anarchical state of the country, the Viceroy's hope in the British Consul-General at Kashgar to effect the arrest and imprisonment of the perpetrators of crimes against Indians and their property, has to be construed as mere eyewash.

* * *

At the very outset of the disturbances, nineteen Indian traders were brutally murdered in Kurgalakh and their porperty was looted. Several Indians were forcibly converted at the point of the sword. The massacre of over a thousand Chinese, though highly deplorable, is not the concern of the Government of India. The pitiable right of Indians is further accentuated by transport difficulties, furstrating rapid fleeing. A party of 25 Hindus from Kashgar and Yarkand took four months to reach the Punjab. As against this version of the refugees, it is best to give the statement of Major W. K. Fraser-Fytler, Deputy Secretary to the Foreign Department, by way of a reply in the Legislative Assembly on August 23 :

* * *

So far as was known eleven Hindus were killed, nine injured and one Kashmiri Christian was imprisoned, but he was subsequently released. The property of all the murdered men was looted and also the property of seven Indians at Posgam, three at Goma and one at Aksu. Silk and carpets belonging to a Hindu trader of Yarkand were looted from the *serai* of the murdered Aksakal at Karghalik.

* * *

The Foreign Department also admitted that the British Government's protests for the safety of their subjects were of no avail, owing to the complete collapse of Chinese control. But, the Viceroy would have us believe that the presence of His Majesty's representative at Kashgar minimised the danger, not

to speak of the bold endeavour to run the "perpetrators" to the ground. Remembering the tremendous uproar causes by the abduction of Miss Ellis in 1923, it is sad that the Viceroy should make such a casual and summary disposal of so serious an affair as the loss of Indian life and property, on rather a large scale. A good opportunity to express the solicitude of the Viceroy for Indian welfare, was missed when he omitted to mention the total numbers of the Indian tradesmencolonies in Turkestan, the number of the fled, and the fleeing, the share of His Majesty's representative in arranging protection and transport facilities, and any other relevant details.

* * *

The fate of the Indians in Sin-kiang is in sorry contrast to the removal, by air to India, of refugees from Kabul, when Bachec-Saqa took possession of it, and the air-bombing of Kothai through the overpowering sense of reponsibility "for maintaining friendly relations with our neighbours." On receipt of information that certain ill-disposed persons had arrived in Bajaur, the Government of India, more than anything else, feared their arrival as a "source of grave embarassment to our neighbours across the Border". If *Pax Britannica* be more solicitous of the neighbours' peace of mind than responsive to the S. O. S. of Indian Nationals, caught in the Turcoman rising, comment is futile.

THE ASSYRIAN TRAGEDY.

In the earlier part of August, when King Feisal and his important ministers, including the Premier, were in Europe busy with schemes of development in Iraq, a section of the disarmed Assyrians were taken unawares in the unostentatious village of Simel, forty miles North-West of Mosul in North Iraq, and were done to death. This sorry episode bears traces of the vindictive spleen of Baqir Sidky, the Commander of the Iraq Army, detailed for the subjugation of the Assyrians, Conservative estimates put the numbers of the killed at 700 in Simel, and 600 in the vicinity of Doguq.

* * *

The Kurd tribesmen were let off against the Assyrians, in order to disarm them. Curiously, the wild Kurds behaved, on the whole, better than the regulars towards the unarmed Assyrians, among whom cases of outrage and murder were refreshingly absent.

Whatever the causes, just or unjust, of this deplorable incident in the Iraqi administration, a good case for the Government has been spoilt by false advocacy.

* * *

Iraq was admitted to the League of Nations on October 3, of last year, when the British mandate had ceased. The minorities in Iraq have been granted, by the League, guarantees. As such, Iraq is beholden to the League Council for justifying its wild action against a section of the minority community.

The Iraq Minister in London expected that an enquiry would be held into the Assyrian trouble. He also hoped that the League of Nations, would take the matter up. The Iraq Government promptly sent the League its explanation.

16, STRAND ROAD, CALCUTTA.

It says that the casualties (seven) at Bopisidea were confined to the warring rebels, and in no case did the Government troops oppress non-combatants.

The telegram alleges that the rebels themselves mutilated the dead and wounded and killed women and children, but the majority of the Assyrians supported the Government which took steps to prevent thefts and looting.

To first the alleged killing of women and children on the rebels is a clumsy piece of wrong advocacy. It would be far better with a third party, like the league, to find it so.

But, the hereditary Patriarch of the Assyrians and the leader of the so-called revolt, Mar Shimun, charged the Iraq Government or the army or its henchman with the "massacre" of women, children and old men ; the pardon of Kurdish chiefs and their dispatch against the Assyrians ; his own imprisonment in Bagdad ; and the advocacy of an Iraq paper of treating Assyrians as the Turks treated the Armenians.

Iraq's Minister in London gave a flat denial to all those charges. Even the charge of Mar Shimun's imprisonment is explained away as refusal of permission for the Patriarch to go to North Iraq, the scene of his "revolutionary" activities.

* * *

Since then, the Iraq Government has gone further in passing a special decree for the deportation of the Patriarch, his father and brother, whom the British Government has obliged with transport by an R.A.F. plane and safe asylum in Cyprus. On arrival, the Patriarch maintained that 325 women, children and old men had been "massacred" at Semel and over 500 at other places, and alleged that the Iraqi army had been responsible for the massacres at which the Government connived. The Patriarch was rather moderate in his estimate of the Assyrian casualties.

* * *

The Assyrians, like all subject peoples, are idealists or time-servers. Before the War, they had enough taste of the Turkish rule. Encouraged by Russia, they entered the lists against Turkey. Later on, during the War, they had to flee from the rage of the Turks into Iraq, when Russia was in the throes of Revolution.

Under the British, both during the War and during their mandate, the Assyrians throve well. But, when the League of Nations delimited the boundary between Iraq and Turkey, their original home fell within the Turkish limits. They had to fix up a new home in North Iraq. But, the Iraq Government came forward with a scheme of land settlement. The Assyrian idealists stood out for territorial autonomy in an enclave of their own, a sort of a State within a State. The Assyrians lived a warlike life in British ranks since their flight from the Turks during the War. The Assyrian Home Rulers enacted an exodus into Syria in protest against the non-compliance of the Iraq Government. But, the French Mandatory Government of Syria refused asylum to an armed horde, and promptly disarmed the Assyrians. The minority community which has come to look upon arms as its only security, would not agree to the new way of life. On promise of returning to Iraq, the Assyrians received back their arms. The Iraq army, which was already employed for the disarming of the Assyrians, got alarmed at the news of the return of the Assyrians. It was the panic of Baqir Sidky, the Iraq Commander in the field, that caused the tragic havoc among the Assyrians.

* * *

Had King Feisal and his Ministers been in Iraq, and the far-seeing Sir Francis Humphreys as well, the Assyrian "revolt" would certainly have fared quite differently.

* * *

Now that the British Ambassador is back in Iraq, an enquiry may be started into the disputed activities of Baqir Sidky, and some lasting settlement arrived at with the deported leader, Patriarch Mar Shimun, for the pacification of the Assyrians, who can rightly claim no mean share in the making of the State of Iraq. They served in the special force, raised by the British, in Iraq, during the war.

* * *

But, the Western press has no warrant for making a mountain out of a molehill. Iraq is a new State with barely a year's independent experience. Patience, charity and firmness should rather mark any criticism of Iraqi affairs, than rushing to conclusions that the blatant West alone was cut out to rule, and the East to be ruled. British and French Press already started the crescendo that the Iraq mandate was brought to a termination too early, and that the French mandate of Syria should be prolonged, and, at any rate, should not be done away with too soon, lest occurrences, similar to the Assyrian tragedy, should result.

* * *

The events in north Iraq, last month, are of the same family as the Jallianwala massacre in Amritsar in 1919. The Nazi drive of to-day in Germany and the fascist one of an earlier day in Italy have not disqualified the respective countries from enjoying sovereign status. It is rather funny that "drives," in Europe, bear the different nomenclature, in Asia, of massacres. The sooner Europe sheds its vanity of a special capacity to rule and develope a little charity in conceding that specious quality to new States in Asia, the surer will the East succeed in her own special tasks.

CAST IRON PIPES
for Water Schemes

Extract from "RANGOON GAZETTE" on the AKYAB WATER SUPPLY SCHEME, Dated 25-4-1933.

"The Completion of a work of this magnitude in so brief a time will be a creditable achievement, and if not indeed a record, certainly an exceptional accomplishment involving a considerable amount of organisation and hard work by all concerned. The BENGAL IRON CO. supplied the bulk of the pipes used in one consignment, chartering a special steamer to do so".

The Contract comprised:—1,760 Tons—Sizes 5″ to 20″ diam, including specials the bulk of which was shipped within ten days of the receipt of the order.

The laying was carried out by Messrs. Clark & Greig Limited of Rangoon.

Clive Street Gossip

As I sit down to write my to-day's gossip on my return from the Assembly after listening to Sir George Schuster's speech on the introduction of the Reserve Bank Bill, I see in my mind's eye the similar scene of six years ago. And what an appaling and tragical difference between then and now! As ever, Sir George was lucid in the exposition; and the delivery of his speech was graceful. In like situation Sir Basil Blackett was eloquent and vivid. Sir George gives the impression of conscientious discharge of duty, which Sir Basil felt a thrill of pride in sponsoring a bill which he described as "greatest measure of financial liberalism ever offered to the Indian people." Sir George is by comparison extremely unfortunate in his audience. The one man who knows the fundamentals of the Reserve Bank proposals is in the Presidential Chair and tongue-tied. The entire rabble do not seem to know even the difference between a reserve bank and any other type of bank. Sir George sounded ludicrous when he urged various parties to recommend for the Joint Select Committee, the names of such members as would give wise and useful counsel. The simple fact is that the Assembly does not contain one person who can on this subject offer wise counsel.

It is a staggering thought that the fate of this Bill is to be decided by a body whose complete ignorance of this matter is admitted on all hands. When Sir Basil Blackett introduced his Bill, there were in front of him a galaxy of talent consisting of leaders of thought, like Sir Purshottamdas, Mr. Birla, Mr. Jamnadas Mehta, Mr. (now Sir), Shanmukham Chetty, Pandit Malaviyya, Mr. Jinnah, Mr. Rangaswami Iyengar and Sir Victor Sassoon. There is all the difference between the Royal Society and a kindergarten school when we compare the strength of old times with the feeble exhibition of to-day. The Treasury Bench, however, pretend to take a solemn view of the situation, despite the obvious mockery of it. The official side is either lacking in a sense of humour or they are just pulling the legs of the Opposition by describing them as experts for whose judgment the world was impatiently awaiting. Neither the Leader nor the Deputy Leader of an important party was on the spot while in the rank and file there are individuals who are not sure of the difference between the object of a Reserve Bank and sale of Reverse Councils. Never was such vital legislation introduced before a legislative body so bewildered and emasculated. Discriminating critics are rare; but on the score of illness they are absent from the House. Sir Ibrahim Rahimtoolah is still a member of the Assembly; so is Dewan Bahadur Rangachari, but they are on the invalid register and no body cares who is in or who is out.

* * *

Here, I cannot forbear referring to the absence of Mr. Aravamudha Iyengar, the brilliant lieutenant of Sir Basil Blackett, whose presence might have given a sense of continuity and purposefulness to the measure. But he is ill. The contrast between Sir Basil Blackett's bill and Sir George Schuster's proposals cannot make the dissociation of Aravamudhu from the present scheme, a matter of personal sorrow for him. Sir Basil was determined on conciliating Indian opinion; and with the advice of Aravamudhu challenged the people of India to own the Reserve Bank offering them special facilities of national subscription. Sir Shanmukham put the question straight on the occasion. He said, "Sir, if I am not mistaken, one of the fundamental provisions of the charters of Central Banks all over the world is that every share-holder must be a person belonging to the nationality of that country; and even in those banks, where persons, who do not belong to the nationality of the country, are allowed to be shareholders, they are not allowed to exercise the right of voting at meetings. I ask whether Sir Basil Blackett would for a moment be prepared to concede this fundamental point, which is incorporated in the charter of every central bank in the world. Would he be prepared to say that no one except an Indian can be a shareholder in the Reserve Bank of India? Or, as an alternative, that even, if outsiders, who are not Indians, are permitted to be shareholders, they will not be permitted to exercise the right of voting at general meetings? Sir, if my Honourable friend is prepared to concede that, I would straight-away agree to the constitution of a central bank with private shareholders".

Sir Basil Blackett replied: "May I say that I shall be perfectly willing to add to the draft amendment I have that no one who is not an Indian or a British subject ordinarily resident in India should have a vote".

That was a bold commitment made by a pro-Indian Finance Member. Had his Bill been passed, then, the financial history of India in the last three years would have been different. I have heard many regret the frustration of Sir Basil's ambition; and as one, who supported him, and even incurred the odium of being described as his publicity officer, it is to me a matter of melancholy interest to note Sir Basil's incontinent critics recognise the virtue of his plan.

In three respects, Sir Basil's plan was more liberal than Sir George's scheme even as the Simon Report was more liberal than the White Paper scheme. But in all these matters, we have been again and again missing the bus. Firstly, Sir Basil's final programme of concessions was most liberal but he held them back as part of his manoeuvres to yield in response to the co-operation of the Assembly. It was not a rigid proposition; and it was the flexibility of the scheme that fascinated him in his task as pilot of the Bill. Secondly, Sir Basil Blackett's regional scheme of subscription was more scientific; and when coupled with that is the safeguard about restricting shares to Indians and domiciled Britishers, we should recognise in it a bold scheme of nationalised

SIR BHUPENDRA NATH MITRA

FLOWER OF INDIAN OFFICIALDOM

Sir Bhupendra Nath Mitra is essentially an official, a type of public servant whose qualities are better understood and appreciated by the British people.

Officials in India have to clear a hurdle of prejudice before they can gain a measure of popular recognition. Criticism of the foreign government and its ways has often been concentrated on the officials as a hierarchy. Possibly, the Congress of the early days, felt that it was officials that stood between the "two great peoples," as the older Congressmen often used to say. Whatever that may be, the earlier Congress speeches were so many Phillipics against the bureaucracy. Whether our leaders of those times were criticising the *personnel* or bureaucracy as an instrument of Government, I do not know. Surely, it cannot be regarded as a political perversion, inadvertently omitted by Aristotle in his classification. The bureaucracy is only an instrument of Government ; and if anything is wrong, it is in the directing hand.

In no scheme of social organisation, that we can foresee, excepting, perhaps, the most primitive and the most elementary, can we dispense with the official ; and the more technical the task of Government, the greater the need for him.

It is of the nature of democracy that its heads should be amateurs, who win the confidence of the electorate by talking just what they understand. But the official is the exact antithesis of the politician above him. While the latter is a layman the former is an expert. The politician determines policy ; the official works out its details. As policy is often in the clouds, it takes a practical man to bring it down to earth. It is easy to conceive some catching idea to satisfy a popular demand or capture the popular imagination. But it is the official alone who can see it in all its bearings and make the necessary adjustments.

We, in India, after having cried ourselves hoarse against the bureaucracy, have of late gone to the extent of condemning the brown bureaucracy as worse than the white bureaucracy. The spread of the cult of non-co-operation has deepened the prejudice against Indian officials.

If it is realised that to rear a race of administrators is as necessary as to learn the technique of party government, men like Sir Bhupendra Nath Mitra will come into their own in popular estimation.

Sir Bhupendra rose from the ranks, as the hackneyed phrase goes ; and this may be said to cut both ways, his admirers pointing to it as proof of merit, and his detractors hinting thereby at favouritsm, and the means by which it is secured, as the main lever of his uplift. It is not commonly known that Sir Bhupendra had a very creditable academic career and was fully qualified to start on the vaunted covenanted services. I say this only to show that there was no need for favouritsm to push him up the official ladder. Of his efficiency, there can hardly be any question. Controller of War Accounts, holder of Secretarial jobs of various kinds, Commerce Member, Finance Member, High Commissioner for India, Sir Bhupendra had a variety of jobs and was never found wanting. It may be that the Department in which he spent the best part of his life was not of an exacting kind. But it was sufficient for Sir Bhupen to display the qualities which have made him such an outstanding success. He is himself a good worker with a high standard of efficiency. But the more striking was his capacity to draw out the best in every co-worker and push him up in life for all that he was worth. There are officers in every grade of the services, with which Sir Bhupendra was connected, who owe their present position to him.

And in this he showed no favouritism. For the beneficiaries of his discerning bounty are of all castes and creeds. Among the many provincials who offer for services, there has during the last few years come to be established an accepted gradation of efficiency. It would not be good taste for a Madrasee to detail or dilate on it. Sir Basil Blackett, it was, who charged the Finance Department with racial discrimination in favour of Madrasees and Scotchmen and arraigned himself as the arch-culprit. He did not know, perhaps, that in this he was but following the footsteps of Sir Bhupendra. Of Sir B. N. Mitra it is sometimes said that he reserved his qualitative favours for the Madrasees and his quantitative favours for men of his own province. The latter is, perhaps, a little exaggeration. But there can be no doubt that he was among the first to detect the pre-eminent fitness of these two races for office work.

It is enough credit for the tallest of us to have achieved more of Indianisation than all the Assemblies put together.

Little or nothing has ever been heard of any sharp opposition to Sir B. N. Mitra's efforts to pull up deserving Indians. And this only shows his capacity to take the line of least resistance without any sacrifice of principle or objective. Not a little of the secret of successful administration lies in this gift for conciliation. When a Government is able to command the services of such an administrator, it naturally utilises him for every kind of work that offers. Often he becomes a stop-gap ; and the public tends to mistake this constant shift for a veiled form of jobbery. The truth is that a good administrator has, necessarily, a degree of versatility, which implies, not expertness, but adaptation to every new requirement. When Sir Bhupendra Nath was appointed as President of the Banking Enquiry Committee, I was not one of those who were gladdened by that decision of the Government. But the event showed that he was fully equal to the task, and that, at any rate, the work could not have been better done by another Indian. I do believe, to this day, that Sir Bhupendra, when he accepted the Chairmanship, was new to the subject of banking. But he has a definite technique of dealing with any matter before him, in which lack of previous knowledge is no bar to efficient work.

Sir Bhupendra's work at the Banking Committee is even more important for the manner in which he prevented the warring sections of his colleagues from coming to a clash. The Banking Committee was less a committee of enquiry than a Board consisting of the representatives of various interests. On more than one occasion friction threatened to develop into a flame. But Sir Bhupendra had his hand on the pulse of one and all ; and on many matters he was able to embody in the report agreed decisions.

Some of his colleagues and some of the witnesses that appeared before them might have taken the impression that Sir B. N. Mitra had a weakness for Europeans and European interests. It is illogical to

THE GATEWAY OF INDIA

(From Our Correspondent).

Bombay, September, 6.

The question of the transfer of Aden has again assumed great importance. Since 1839, when it was transferred to the Administration of Bombay on the civil side and to the Government of India on the financial, Indian capital has flowed into the place, and developed trade connections with Western Asia, Africa and even Central Asia. So in 1921, a resolution was passed against the transfer of Aden.

But, the question of Federation for India has again pushed this topic to the forefront. The Arabs of the place are against Aden being included in the Federation. This is an ostensible excuse for the British Government to take over charge of Aden, and place it in the Colonial Department. The importance of Aden to the British Empire is purely strategic. As India has not the naval and the Air strength to benefit fully by the retention of Aden within the Indian Administration, His Majesty's Government are desirous of relieving the Indian Exchequer of an annual expenditure of Rs. 20 lakhs, while the Port will, as ever, serve the purposes of India, an integral part of the British Empire.

But, Indian merchants, who have developed vested interests in the place, are nervous about its transfer to the Colonial Department. Their experience in East Africa, South Africa and other places, where the Indian Government has no control, has been responsible for the fear that they stand to lose much by the transfer. But, in view of the changed cirmumstances to-day an amended resolution was moved by Sir Phiroze Sethna in the Council of State, to the effect that the military and political control of Aden may be transferred to His Majesty's Government in the Colonial Department, but that the Civil Administration should be retained by India.

As against the annual expenditure of 20 lakhs, the Port is yielding a revenue of 10 lakhs under salt super-tax and income-tax. There is good reason for hoping that the receipts would increase year by year, in view of the development of near places such as Egypt and East Africa. Though the result of the resolution in the Council of State was a success, it does not mean much, as the proceedings are only to be sent to His Majesty's Government for information. That was why the Government of India bloc did not participate in the discussion. It is too early to guess the action of the British Government.

The opinion here, though not openly against the motion of Sir Phiroze Sethna's resolution, is not quite favourable to the amended form of the demand. A dual Government would be the result, if the resolution were to be given effect to. The political and the military administration in the hands of the British Colonial Department, while the civil administration is in the hands of the Indian Government, is sure to breed clash of interests and cause much misunderstanding in the future. Far rather that Aden should be transferred *in toto* to the British Government, than that it should in part to be administered, by India.

The recommendations of the Thomas Reorganisation Committee have been published, and the results have not been quite disappointing. A minimum reduction, in the expenditure of the Government of Bombay, of nearly 24 lakhs has been effected for this year. It will rise up to 76 lakhs for the succeeding years. The scheme of retrenchment is not complete as the question of a cut in the salaries of the President and the Vice-President of the Legislative Council and the Ministers has not yet been settled. But, the question will come before the Legislative Council at the next budget session. It will then be possible to arrive at a precise appraisal of the benefits of the retrenchment.

The visit of the French Trade Commissioner to Bombay has been fruitful in creating fresh interest in the businessmen of the place with regard to the trade relations between this country and France. Lt.-Col. Marcel Bonnaud, the French Trade Commissioner for India, has his head-quarters at your place, with jurisdiction over the whole of India, Burma and Ceylon. He pointed out that, while every great country had its own trade commissioner in France to safeguard its commercial interests, India had no such representative of her own. The appointment of an Indian trade Commissioner in France should be one of the first measures that the Government of India should take, if the commercial relations between the two countries should improve.

To give an indication as to the value of developing commercial relations between the two countries, the following figures are quite convincing. The export trade from India to France before the War was Rs. 14.78 crores on an average, while the value of her exports for the last four years was respectively Rs. 17 crores ; Rs. 11 crores ; Rs. 7.63 ccrores ; and Rs. 7.35 crores. On the import side, India bought annually from France goods to the value of 2.21 crores, on an average, before the War, while the figures for the last four years were respectively Rs. 4.58 crores ; 2.89 ; 2.18 ; and 2.04 crores. The decline in recent years is due merely to the general trade depression all over the world. In any case, commercial bodies like the Indidan Merchants' Chamber, the Federated Indian Chambers of Commerce, and the Associated Chambers should bring pressure to bear upon the Government of India towards the early appointment of an Indian Trade Commissioner in Paris.

Just at present, a subject of absorbing interest to the small men of the city has raised its head.

Wage-earners and employees drawing small salaries get into debts, either because their income is not adequate enough to meet all their financial liabilities, or because of the various social calls on their very limited purse. It is not everyone that can restrict himself to the limits of a clean balancesheet. In a city, the temptation to spend is too strong. In most cases, the earning members of the community do not start their careers with a clean slate.

The Government has offered protection to such of these, with a view to prevent them from getting the sack from the employers. But, the proffered protection is far too meagre to serve the end in view. It is refreshing, therefore, to find the Honorary Secretary of the B.B. & C.I. Railway Employees' Union making, in his reply to the communication from the Department of Industries, a strong plea for increasing the present limit of protection to the employees against their creditors. The Secretary says: "In view of all these facts, my Union is of opinion that even the maximum of Rs. 100 will not protect a large number of deserving cases ; and to prevent a misuse of the process of law and an amount of unnecessary suffering, protection should be extended to those whose wages and salaries amount to Rs. 200 and below per month. My Union, therefore, submits that the arrests and imprisonements for the debts of persons in receipt of wages and salaries amounting to Rs. 200 and less, should be stopped by enacting the necessary legislation for that purpose."

Even the limit of Rs. 200 is not too high a sum. There are many cases, in which protection up to even Rs. 500 will not be too much. The lesser the wage or salary, the greater is the debt of a person. There is greater reason why the limit of protection should be raised to a decent sum. The only other alternative is to fix the amount of debt coming under special protection on a graduated scale, based on the wage or salary, earned regularly by the debtors. The smaller the wage or salary, the greater should the margin of protection be. This is the only sensible way of ensuring the interests of the creditor, who can operate with attachment of property. It is to be hoped, therefore, that the Government of India and the Government of Bombay will do the needful in the matter, in a generous manner, for the protection of the little men of towns and cities.

Simla, September 5.

The Bhawalpur Loan—Finance Member forced to recognise authority of the Legislature—Punjab Government escapes unscathed—Losses to be spread, not avoided—Bombay Turncoats turn to officials—Indian Finance Year Book in the Assembly—The Reserve Bank Bill—Constructive Criticism disconcerts Sir George Schuster—Scramble for Select Committee.

Members of the two Houses of the Central Legislature have made an earnest effort this week to disentangle some of the financial and commercial problems, which have been weighing on their minds. Government Members were not anxious to help them ; and it was only through searching cross examination that any results were achieved.

Take, for instance, the question of the Bahawalpur loan. Sir George Schuster was a bit reluctant to give full information ; and when, Sir Cowasji Jehangir asked that no financial settlement be entered into without previous consultation with the Assembly, the Finance Member would not give such an undertaking because the matter referred to their relations with Indian States. But Sir Cowasji cornered the Finance Member. All loan services have to be voted by the Assembly ; and whatever the decision government took has to be voted atleast during budget time. This made the Finance Member agree that the Assembly has a vital say in the matter and he asked for time to consider the constitutional aspect of the question.

The position is that up to the end of March 1933 the Bhawalpur Durbar owed Rs. 11,63 lakhs to Government. The rate of interest was 6% up to the end of 1930-31 and this was reduced to 5½% in the year 1931. Thereafter the rate charged will be based on the borrowing rate of the Government of India.

Sir George Schuster refused even to state what was the total income of the State, so that the House could not judge the capacity of the State its. However, out of these discussions he let the Punjab Government come out cheaply. The Government of India was merely the lending authority and the financial and the engineering aspect of it was left to the Punjab Government to calculate ; and the Punjab Government's proposals were accepted by the Government of India. How far is the Punjab Government responsible ?

Sir George Schuster has in effect absolved the Punjab Government by stating that their responsibility was only in respect of the design of the project and that there was no material defect in the design. The question then remains : Who is to suffer for the losses ?

The Bahawalpur state maintains that the Ruler was a minor, when the project was approved, and that the Council of Regency was reluctant to give its assent, unless the responsibility for failure was taken by the Punjab Government or the Government of India. The Government of India does not accept this interpretation.

However the Finance Member made a remark which throws light on what may be the plans of the Government of India in this respect. He hopes to arrange matters without having to write off large amounts. One of its implications is that whatever is written off—and it may amount to 4 crores—will be spread over say twenty years. But the fact remains that British Indian taxpayer will be made to foot the losses and both the Punjab Government and the Bahawalpur Durbar come out of the deal unscathed !

I am told there is only one precedent for such an action, the War Loan of the Persian Government amounting to about 5 crores, which had to be written off by the Government of India. But never in the case of an Indian State has a similar situation arisen before. The general opinion among the members of the Assembly is that hereafter no loan should be given to Indian States from British India.

The question of Aden's future has already been debated in the Council of State. The Government of India had made the mistake of expressing its approval to the scheme on the ground of financial relief, while His Majesty's Government had agreed to take this burden on its shoulders with a view to retain a hold on an important strategic point. The "local" opinion in Aden had been manufactured ; but Indian opinion had also to be consulted.

The pledge was given over six years ago and had been forgotten ! Now the two Houses of the Central Legislature refuse to part with Aden and, in a sense, disown the recommendation made by the Government of India ! That puts Simla on the horns of a dilemma. I am told London authorities are keen on having Aden and that this opinion from India may not influence their judgment materially. All that it may lead to is to make London consider the question of compensating India for past losses.

The debate on the Cotton Textile Industry Bill proved most interesting. The Bombay trio, Sir Cowasji Jehangir, Mr. H. P. Mody and Mr. Chinoy came up in time for the debate and started 'lobbying'. Not among non-officials but among officials. Formerly Swarajists were in power and the Millowners hobnobbed with them. Now Government is in power and the non-official parties have been given the cold shoulder. No wonder most of the speakers from the popular side spoke against the measure.

Indian Finance Year Book proved particularly useful to the Members in their debates on this subject. They insisted on the publication of the Tariff Board so that all the 'ugly' disclosures regarding the managing agency system be placed before the Indian public. Sir Joseph Bhore was openly accused of being a friend of the millowners and of protecting them against well-deserved censure !

The affairs of the Tariff Board also came in for critical notice at the hands of the Assembly. Opposition parties were anxious to see the end of the Board, especially when it has no more enquiries to conduct. A very interesting statement was placed on the table of the Assembly by Sir Joseph Bhore giving names, provinces of origin and periods of services of Presidents and Members of the Tariff Board. The statement runs :—

Name	Province	Period of Service Yrs.	Mths.	Days.
Presidents.				
Sir George Rainy (Official)	Bihar and Orissa	2	9	10

SOUTH INDIA

(From Our Correspondent.)

Madras, Sept. 6.

India outside India is mainly an affair of South India. Excepting Gujerati merchants and a sprinkling of Bengali officials in Rangoon, Indians abroad are mainly emigrants from the South. And the pessimist may see in this the source of a civil war, comparable to the American Civil War, between the North and South in the future Indian Federation, should the federal foreign policy be not quite suited to safeguard the interests of Indian emigrants in foreign lands. At the moment it happens that South India has to contemplate more on this problem than for some time in the past. The South African Indians, who have returned to their native land under the scheme of repatriation connected with the names of the Rt. Hon'ble V. S. Srinivasa Sastri and executed in part by Sir K. V. Reddi, are now finding that the scheme which they hailed as a great relief is not, after all, quite to their satisfaction. This is only to be expected. For whoever has heard of emigrants finding their surroundings to be quite congenial after their return from a long exodus? Even the Anglo-Indian officials, who have often put by enough to secure for themselves princely comfort, find the equable climate of Great Britain some times a little too warm for their tastes and habits. And so the poor Indians, who have come back, find it difficult to fit into the social and economic framework of their motherland and are often left to drift as best as they can.

Only recently, a meeting was held in the Spur Tank to stimulate public interest and popular sympathy in the predicament in which the repatriated Indians are now placed. Dr. Varadarajulu Naidu was in the chair ; and, as may be expected, found it a fitting occasion to call in question the political wisdom of Mr. Sastri in negotiating a scheme of repatriation. It is surely an unfair test to prescribe for the scheme, whether the Indians on their return are able to find suitable employment. For no one can possibly be under any illusion as to the economic conditions in a country in which the masses are living on the verge of starvation. Neither Mr. Sastri nor any of the Indian settlers in South Africa could have overlooked the obvious difficulty of securing employment in India, which is all the greater in the case of new-comers. The improvement in the economic status and well-being of South African Indians was not at all present in the minds of those who negotiated the scheme of repatriation, which was inspired only by the desire to free the Indians from the galling restrictions that were sought to be imposed upon them by the South African Government. It is not, therefore, open to anyone, least of all a political leader of the standing of Dr. Naidu, to criticise the agreement merely on the ground that the repatriates are not able to find suitable employment in India.

But one may well sympathise with the main resolutions passed in the meeting held in the Spur Tank. The first resolution contained a request to the Government of India and the Government of Madras to help the South African repatriates in securing employment. The second appealed to the local bodies to give preference to the repatriates in the matter of employment and the last of them requested the Corporation of Madras to give them facilities for building suitable houses in the City. One cannot be quite sure either of the justice of the preferences asked for or the feasibility of the suggestions made by the meeting.

Indian labour in Ceylon is another of the important problems of South India, though it is not at the moment as embarassing as that of the labour repatriated from South Africa. The interest in this problem has now been stimulated by the publication of the report of the Agent of the Government of India in Ceylon, which contains valuable informa- observes that there are few countries in the world tion and thoughtful reflections. The Agent rightly which are so happily situated as Ceylon in respect of labour supply. The tea and rubber industries derive from South India a plentiful supply of a "fine type of labour, cheap, efficient, hard-working and law-abiding." Owing to the exceptional severity of the depression in 1932 in the tea and rubber industries the repatriation was higher than in the previous year, with the result that there was a net efflux of Indian population from the island of as much as 7,288. Unlike the repatriates from the South Africa, those who have returned from Ceylon have been able to settle down in their villages in suitable vocations. For it must be remembered that most of the emigrant population of Ceylon are of the artisan type who retain, even during their absence, their local caste affiliations and are, therefore, able to fit into the economic structure of their locality with as much ease as if they had never left their native villages.

It is those Indians in Ceylon who are not labourers in the estates that have more problems of their own to face. In the first place, local sentiment is increasingly against them and attempts have been made to deny them the benefits of such schemes for relief of unemployment as Government may have instituted. But it may be hoped that if, on the one hand, the Government of India make it clear that unfair discrimination against Indian nationals in Ceylon would not be regarded with indifference by them, and on the other, the Indian settlers in the island show a disposition to share the joys and sorrows of the indigenous population, these problems will soon be adequately and satisfactorily settled.

One point of interest that has been expounded clearly in the report of the Agent is the working of the labour ordinances. It will be remembered that they provide for a minimum wage rate ; and this provision is embodied in a specific Minimum Wage Ordinance. Attempts are, however, being made to circumvent this law on the ground that, as the minimum wage is provided for an eighthour day, it is open to employers to offer a lower rate for less hours of work on a *pro rata* basis. It has been contended that this practice is defensible, because the labourer is prepared to accept and acquiesce in such an action on the part of the employers. The Supreme Court of Ceylon, it is gratifying to learn, decided against the employers during the well known Perth Estate Case. The Agent's remarks in this context are interesting : "The intention of the Legislature is to secure to the Indian labourer a minimum living wage ; and this object cannot be achieved if it is open to the employer to give a labourer less than eight hours' work a day and on that ground to deny him the full minimum wage. The Perth Estate case was pressed not, as captious critics have assumed, to harass the planting community in a time of depression but to remove a legal camaflouge which would have clouded the principles on which the minimum wage is based."

THE READING ROOM

World Reorganisation or Downfall and Remedy: By Peter L. Robertson: Davis-Lisson Limited, Hamilton, Ontario: pages 236.

Yet another attempt at a scheme of world Reorganisation; but now on an economic basis, with a view to restore the economic equilibrium between nation and nation. Like other writers on this subject of postlwar problems, Mr. Robertson explains all the ills of the present day as the direct outcome of the tangle of Reparations and War Debts and the resultant chaos. And in attempting to suggest a constructive plan towards extricating the world from its sorry plight, Mr. Robertson has, in his book, "Remedy," given a composite picture of the causes of the present disequilibrium, analysing the extent of war costs, losses, debts, reparations, gold shortages, etc. Elaborate statistical information has been furnished which, however welcome had better been fitted into the frame work of his thesis. The pitiful story of the inflation of the currencies of almost all the nations, the scarcity of the yellow metal which has, due to trade movements and other effects, been concentrated in two countries and the consequent inability of the nations to cover their currencies by gold—all these have been fully treated and, in fact, form *the* theme in the first half of the book. The author urges the necessity for a 100 per cent. gold backing for all currencies if the nations should have an effective gold standard with not only a hope to receive gold for the currency but also a confidence that it will be paid. He is of the opinion that it is the only way possible, if we are to end this "reign of terror" in the exchanges. Any constructive programme (says the author) must take account of this factor and any remedy suggested should strike at the root of the causes that have produced these results.

With this in view Mr. Robertson, has outlined a scheme, which is both rational and ingenious. An immediate redistribution of the 73 per cent. existing available gold that has now been concentrated in the U.S.A. and France, among the other nations as required by "Money Needs and Economic Needs" in accordance with his Redistribution Formulae; a revaluation of gold at present in stock at five to one, with a view to give it an artificial and enhanced value and thus to combat the scarcity now prevalent; an immediate liquidation of war debts, which has been the chief reason for the present disorganisation; a complete and cent per cent. covering in gold for all currencies (paper, nikel, copper and silver included) so that the people may have full confidence in the currency; and the creation of an international standard of value—an Esperanto of Money—at the enhanced value—these in brief are the main features of the suggested new plan. Gold is to be made a Government monopoly to enable them to adjust their gold reserves in accordance with the variations of the currency needs. "Le Remedes," having the same weight and fineness as the present $20 gold piece, but with its value enhanced to $100 will be the international money to which the national currencies of individual nations will bear some ratio. The gold reserves of the world and the gold backed international currency are to be under the control of some international body, say, the League of Nations. The above scheme, thinks the author, will once again bring in its train an era of prosperity.

The scheme outlined above is a curious mixture of the idea of an international currency "WARA" propounded by the German Economist and the idea of a gold inflation. To some extent, the plan suggested follows the principles governing the Reconstruction Financial Corporation of the U.S.A. with an international application given to it. The idea of increasing the value of gold by a few adjustment entries in the Bank Ledgers throughout the affected nations, though commendable in itself, as giving in effect a fivefold increase in the utility of gold, to meet the demand created for it, defeats the primary object of a currency which is to give a definite standard or yardstick, free of all suspicions of its worth, and which time, wars and periods of depression cannot debase: for, this revaluation must be looked upon as a precedent, and who can predict, if a generation hence, the necessity may not rise to revalue it at a still higher level or to debase it? Moreover, such a currency, sought to be gained by this process, will not command the confidence of the world as being susceptible to the corrupt influence of a few major nations.

(*Continued from page 661*).

expect a government servant of such long standing to be a fire-eater competing with those who are out to make a "hit" in the country. Nor is it an obviously sound view that Indian banking must be built on the ruins of foreign banking. All said and done, there is, it must be admitted, a singular incapacity among retired officials to enter into the spirit of our political and economic demands. If the Opposition in the Assembly could have a fair sprinkling of retired officials the whole tone of the debate would be changed beyond recognition. That is yet far off. Meantime, let us not overlook the fact that Indian officials, who have risen from the ranks have been, and are, true nationalists at heart. They have themselves served the country, and they are the main inspiration for the long line of public servants on whom the nation will in the last resort have to rely for its prosperity.

Mr. Harold Laski has, in his sketches in the *Daily Herald*, chosen Sir Arthur Salter, Sir John Anderson and Sir Maurice Hankey as the flower of the British permanent service. Considering the difference in opportunity, Sir Bhupendra Nath Mitra is their no unworthy counterpart in this country.

CHILDREN'S ASSURANCES.

II

Children's Deferred Assurance also known as Savings Fund Policy is of comparatively recent growth. It is one of the best methods of life assurance, affording maximum amount of benefits for the minimum cost. Here, the policy is taken on on the life of the child itself, but the risk is deferred or postponed till it attains a specified age, usually 21, and sometimes 25. The premiums, paid during deferment period, are accumulated at compound interest, and are used at the deferred age to reduce the premium that would otherwise be necessary then. The following are the important among the numerous advantages securable by this class of policy. The premiums are very low, and will secure a policy for nearly double the sum that could have been procured at the deferred age of the child. This policy will be the property of the child at the deferred age, whether it is in a fit state of health for a normal assurance protection or not. This point is of great importance, particularly in view of the fact that a considerable number of children who live to attain the age of 21 or 25, are then either quite uninsurable or can secure policies only at an enhanced rate of premium. Thus, a person aged 21 can secure a valuable assurance protection at a considerably cheap rate without any medical examination or any other restriction whatsoever, if his parents had taken a policy under this plan. At the time of taking this policy, the child need not be medically examined except when the proposal form reveals some serious defects in the family or personal history of the child, or where the deferment period is short.

If the child dies during the deferment period, all the premiums paid except that of the first year's are returnable with compound interest at $2\frac{1}{2}$ to $3\frac{1}{2}$ per cent. The premiums are returnable even when the parents die during the deferent period. But by the payment of a small additional premium (during the deferment period only), it may be arranged that the premiums cease until the child attains the deferred age, in the event of the prior death of the parent or guardian who is paying the premiums under the policy. In this case, the company will require evidence of good health of the parent or guardian and the usual medical report is obtained. Liberal surrender values are allowed before and after the risk is undertaken. This policy is at the first instance taken by the parent or guardian who at the deferred age transfers the full interest to the child by a simple assignment. Usually, the original policy is a whole life one and various options are given for selection at the deferred age; but sometimes children's Deferred Endowment assurances are also granted. The sums assured under different options are quoted for a fixed premium of £10 per annum for children of ages varying from one month to 12 years (in some cases up to 15 years). Premiums are also quoted for a fixed sum assured of £1,000 (either whole life or endowment at the first instance) for different ages of the children. The former method is more widely adopted by life offices. Besides, the usual queries regarding the name, address, etc., of both the parent and the child, the proposal form contains searching questions regarding the personal and family histories of the child concerned, and regarding the prospects of the child going abroad to unhealthy places or being engaged in Army, Navy or Air Force.

It is the numerous options that are offered to the parent or guardian at the time of the deferred age and during the deferment period, that have made this an ideal Children's policy. At that age, the parent is thus allowed to determine which option is best suited to the particular circumstances of the child and make his selection accordingly. After the deferment period the following choices are given to the parent:

(A) To continue payment of the same amount of premium and select any of the undermentioned policies for different specified sums (depending upon the plans chosen) both under the with or without profit schemes.

(1) Whole Life Assurance.
(2) Whole Life Assurance limited payments.
(3) Endowment Assurance maturing at different ages.

(B) To discontinue further payment of premiums and take a fully paid-up Whole life policy or a fully paid up Endowment policy maturing at different ages (both with or without profits) for specified sums, depending upon the plan and kind of the policy.

(C) To surrender the policy for a specified cash amount. During the deferment period, if the parent so desires, he can also discontinue further payment of premiums at age 13 or 16 of the child, and obtain, in lieu of the Surrender value, 3 or 5 Educational instalments for the use of the child. The amount of such instalments will depend upon the total amount and number of premiums already paid. The full merits of this class of policy can easily be understood by quoting one or two concrete examples from the English prospectuses.

Example 1:

The National Mutual of Australasia provides for a child aged 1 next birthday for an annual premium of £10, the following benefits:

(A) on continuing the same amount of premium after it attains the age 21

(1) A whole life policy for £1,130 with profits.
(2) A whole life limited payments policy for £1,100 with profits premiums ceasing at age 60.
(3) A whole life limited payments policy for £1,060 with profits, premiums ceasing at age 50.
(4) An endowment assurance policy for £1,015 with profits payable at age 60 or earlier death.
(5) An endowment assurance policy for £865 with profits payable at age 50 or at earlier death.
(6) An endowment assurance policy for £625 with profits payable at age 40 or at earlier death.

(B) on discontinuing the premiums after age 21

(1) A fully paid-up Whole Liffe policy for £845.
(2) A cash of £300 on surrendering the policy at age 21. If desired the policy may be partly surrendered for cash and partly paid up.

(C) Besides the above options exercisable at the age of 21, educational benefits are also allowed at age 16. When the child attains the age 16, the parent may terminate the original policy and receive three annual sums of £69 each, the first payment being made on the child attaining the age 16.

Example 2:

The Standard Life offers a Children's Deferred Whole Life Assurance for £1,000 for a child aged 1 next birthday for an annual premium of £8-5, and the following options are given for selection at age 21

(A) on continuing the same amount of premium

(1) A whole life policy for £1,000 with profits.
(2) A whole life policy for £1,263 without profits.

(3) An endowment policy for £1,040 without profits or £814 with profits payable at age 60 or earlier death.

(4) An endowment policy for £684 without profits or £660 with profits payable at age 50 or earlier death.

(B) on discontinuing further payment of premiums

(1) A whole life fully paid up policy without profits for £794.

(2) A fully paid up endowment policy without profits for £660 payable at age 60.

(3) A fully paid up endowment policy without profits for £538 payable at age 50.

(4) A cash of £237 (the amount of premiums actually paid being £173-5) on surrendering the policy.

(C) Besides the above options, educational benefits are also offered at age 13 if the parent or guardian so desires. If the policy is discontinued and surrendered at age 13 the company pays an educational annuity of £43-3-6 for 3 years.

After the above brief survey of the origin, growth and development of Children's assurances in Great Britain and other Western countries, let us see how far Indian life offices offer similar benefits to the Indian public. On a perusal of the various schemes of children's policies offered to the public by different life offices, it is regrettable to note that children's assurance is still in its infant stage of the growth. Most of the life offices offer pure endowment policies as children's assurances, and children's endowment assurances with premiums ceasing on the death of the parents.

Some offices like the Oriental, Hindusthan Co-operative, National, United India, Bharat Insurance and New India, issue Educational Annuity policies where the sum assured is payable in a number of Annual or half-yearly instalments. Here also the premiums cease on the death of the parent ; but the policy money is payable only at the end of the original term. Thus this is almost the same kind of policy as the child's endowment, premiums ceasing on the father's death, the only difference being that the sum assured is payable in a number of annual or smaller instalments to suit the educational expenses of the child. As already pointed out in these columns last week, this class of policy has an important defect, namely, that it does not adequately help the immediate financial needs of a family on the death of the bread-winner. The family is either forced to wait till the unexpired term of the endowment ends to receive the full benefits of the policy, or to receive a much smaller sum by way of surrender value. It is a pity that Indian life offices have not cared to remedy this situation. It is, of course, true that short-term ordinary endowment policies may be taken to provide benefits for children, thereby avoiding the above difficulty. But it should be noted that the public will not be inclined to take such policies of their own accord at a heavy cost. If the life offices were to combine suitable short-term endowment policies, (as the English offices have done) quote the necessary premiums, and forcibly point out the numerous benefits to the children and to the family, I am sure that this kind of policy will become much more popular than the one now prevalent in almost all the life offices.

In this connection, it may be pointed out that the Educational Endowment policies of the Hindusthan Co-operative Insurance Society, definitely remove the difficulty above mentioned and offer an immediate cash payment of about 77 per cent. of the sum assured as soon as the parent or guardian dies (whenever it may occur). Thus, if, the parent dies after the payment of the first year's premium only, the society undertakes to pay 77 per cent. of the sum assured immediately if his legal representatives so desire, or undertakes to pay the full sum assured in five equal annual instalments if the representatives wait till the end of the original term. Under similar circumstances almost all other life offices decline to pay any immediate cash (as no surrender value will be due then) and the representatives are forced to wait till the end of the term. The decided superiority of the Hindusthan Educational Endowment policy can well be illustrated by taking a concrete example. A parent aged 30 next birthday can secure five annual educational annuities of Rs. 300 each on payment of an annual premium of Rs. 76/10 for 15 years. If the parent dies after payment of only one premium of Rs. 76/10, his legal representatives may get an immediate payment of Rs. 1,150 or may wait for 14 more years and get Rs. 1,390 in lump sum or 5 annual instalments of Rs. 300 each.

A further and more useful extension of this policy is also offered to the public by the Hindusthan Co-operative. This extended Educational Endowment policy combines the above simple educational endowment policy with a slight variation of the family protection policy (which the Society offers under the name of "Deshabandhu Policy"). Under this scheme all the benefits of the simple educational endowment policy are available in full, and besides, if the policyholder dies at any time prior to the full term of the endowment, the society will pay an annuity of Rs. 300 for every 1,500 assured, for all the remaining years of the endowment term. Thus if the parent dies after the payment of the first year's premium, the legal representatives may take an immediate cash payment of Rs. 1,150 (for every Rs. 1,500 assured) and besides will also get Rs. 300 per annum for 14 more years, thereby getting a return of Rs. 5,350 for the premium of Rs. 108/9 paid by the policyholder.,

The Children's Deferred Assurance as described above is the best kind of children's policy. It is really regrettable that no Indian life office has thought of introducing such a policy to the Indian public. There is no denying the fact that it will prove profitable both to the insurance companies and to the insuring public. The companies cannot lose anything during the deferment period as they have simply to return the premiums paid under any contingency happening during this period. After the deferment period, they would have earned a sufficiently big reserve and would not feel the strain, if the life assured dies. Thus under both the circumstances the companies are safe. To the insuring public this policy will be a great boon to provide for their children sufficiently to induce thrift from the beginning. As the premiums are comparatively very low, they can easily afford to take policies for decent sums on the lives of their children and present them when they attain the deferred age. Thus persons who would otherwise be uninsurable or insurable only with a heavy extra premium, may find themselves possessed of a valuable policy at a very cheap rate, had their parents been wise enough in taking policies of this class, earlier.

VALIDITY OF 'GOLD CLAUSE' IN CONTRACTUAL OBLIGATIONS.

(By A Legal Correspondent)

While the controversy in the United States of America whether in cases where public and private obligations which contain a 'gold clause' to the effect that they shall be discharged in gold coin of a particular standard of weight and fineness can be paid out in 'legal tender' of any other kind, has been settled by a joint Resolution of both Houses of Congress with the support of President Roosevelt, declaring that the 'gold clause' in public as well as private contracts is contrary to public policy and providing that all such obligations may be discharged dollar for dollar in legal tender, a recent decision of the Chancery Court in England, *In re Societe Intercommunale Belge D'Electricite. Feist* v. *The Company* (reported in 1933 Ch. p. 684) has definitely ruled that such a clause is illegal and unenforceable.

In this case the question arose whether the holder of a bearer bond for £100/- which provided that "on presentation of this Bond the sum of £100 in sterling in gold coin of the United Kingdom of or equal to the standard of weight and fineness existing on the 1st day of September, 1928" could insist on being paid in gold coin as provided in the bond itself or its equivalent value in sterling. All the judges agreed in construing the bond as one for the payment of a debt simply and not as contract for delivery of gold coin in specie. But the more difficult question was as to the quantum of the obligation of the obligor under the bond. The contention of the bondholder was that the gold clause in the bond was intended to determine the quantum of the debt payable and not merely the mode in which the indebtedness was to be discharged and accordingly that the amount should be ascertained by adding to the nominal amounts of the principal money and interest a further sum in sterling equivalent to any decrease at the time of payment in the gold value of such nominal amounts as compared with the gold value of the same nominal amounts on September 1, 1928. If the bond were not to be construed in this manner, it was contended, there was no purpose in the bond providing for a payment of £100 in sterling in gold coin of the United Kingdom of or equal to the standard of weight and fineness existing on the 1st of September, 1928. Both Lawrence L. J. and Romer L. J. discussed this aspect of the matter at length and came to the conclusion that such a clause could not be given effect to legally, even though the intention of the parties might be as Counsel on behalf of the bondholder contended. The reason according to the Learned Judges was that in as much as the Coinage Act, 1870, together with the Bank of England Act, 1833, and the Currency and Bank Notes Act 1928, by their combined operation provided that contracts to pay money could be discharged by legal tender of any kind, a bond providing that it shall be discharged by payment in gold coins only (being one form of legal tender), cannot abrogate the enactments by the Legislature that the obligation may be discharged by payment in bank notes (being another form of legal tender). In the words of Romer L. J. "any contract that attempts to exclude a payment of money by tendering any coins that are made legal tender by the Act of 1870 is illegal. In the present case the company purports, in effect, to debar itself from paying in silver or bronze coins any part of the principal or interest secured by the bond or from paying any such part in gold coins of a different denomination from any that existed on September 1, 1928. This, in my judgment, is not permissible, and the bond must, therefore, be treated as though the words "gold coin of the United Kingdom of or equal to the standard weight and fineness existing on the 1st day of September, 1928," were excluded. That being so, the company can from time to time discharge their liability under the bond, whether for principal or interest, by payment of any sterling currency, whether paper, gold, silver, or bronze, that constitutes for the time being legal tender for the amount due." 1933 Ch. p. 711).

In the course of the argument, two cases decided in the Supreme Court of U.S.A. were referred to. (*Bronson* v. *Rodes*. 7 Wallace 229, and *Butler* v. *Horwitez*. 7 Wallace 258). In the former case it was decided that a bond given for payment in gold and silver coins lawful money of the United States, cannot be discharged by a tender of United States notes issued under the Loan and Currency Acts 1862 and 1863, and by them declared to be lawful money and a legal tender for the payment of debts. In the other case it was ruled that a contract to pay a certain sum in gold and silver coins is in substance and legal effect a contract to deliver a certain weight of gold and silver of a certain fineness to be ascertained by count. The Court refused to follow these decisions.

So far as the United States of America is concerned it cannot be said that the question as to the legality of the 'gold clause' in contracts is free from doubt even now. Though Congress has passed the resolution already referred to, declaring such a clause to be contrary to public policy and providing that debts expressed to be payable in gold or in any other specific coin or currency could be discharged in legal tender of any kind, the legality of the Resolution and the power of Congress to pass it so as at any rate to take away rights under bonds already existing, has yet to be decided by the Supreme Court. There is a strong body of opinion in U.S.A. condemning the Resolution in so far as it is retro-active and affects past obligations. Secretary of the Treasury Woodin in issuing a statement explaining the Resolution also referred to a recent decision of the Supreme Court of New York holding that an obligation calling for payment in gold coin could be satisfied by payment of other lawful forms of money.

From the point of view of public policy however there can be little doubt that such stipulations in contracts as the 'gold clause' must affect the smooth working of the financial system of a country in very unpleasant ways, especially in critical times. To quote from the Judgment of Romer L. J. in the Chancery decision already referred to, "Consider, for instance, the position of the silver coinage. As it is only legal tender for sums not exceeding 40s. 0d., it is not necessary to mint and put into circulation more than is likely to be required in view of that fact. If, therefore, contracts to pay large sums exclusively in silver coins were permissible, the result might be seriously to diminish the silver coinage available for the public at large, causing temporary inconvenience to them and imposing upon the Mint the necessity of coining more. In the year 1919 the price of silver rose rapidly, and it appears that on February 11, 1920, the silver value of a half-crown was about 3s. 4½d. In consequence of this the Coinage Act of that year was passed, reducing the standard fineness of the silver coinage; but it illustrates the possibility that under certain conditions endeavours might be made by creditors to be paid large sums in silver and the loss that might thereby be caused to the country." This reasoning applies with greater force in the case of gold.

GREAT BRITAIN

LANCASHIRE DELEGATION TO INDIA.

The departure of the Lancashire delegation for India on August 25, is a matter of equal interest to both India and Great Britain. It has long been felt that, in spite of the signs of improvement in the cotton export trade here and there and now and again, the real position of the world cotton industry requires that some sort of understanding should be arrived at between the principal competitive countries. Though in regard to the Far Eastern markets there are other complications, particularly the multiplicity of political authorities involved, so far as the Indian market is concerned, the problem is comparatively simple, in as much as Japan, Lancashire and the Indian mills could work on an agreed basis. The political connection between India and Britain may be said to reduce the contracting parties to two instead of three. But it is felt that the time is past when the interests of the Indian cotton mills could be decided by Great Britain without much regard for Indian opinion. The Government are only too keenly aware that, while in respect of other export and import trades they could apply their present policy of bilateral agreement and quota systems, in regard to the Indian cotton export trade, the factors involved are far from being within their control. There is, on the one hand, the vast gulf between producing costs in Japan and the producing costs in Lancashire. There is also the just desire of India that the domestic market should be available to the domestic markets in preference to every other. Though the Ottawa policy of "the nation first, Empire second and the foreigner third" may on principle be accepted by India, India cannot overlook the repercussions of a too literal pursuit of this policy on her trade and commercial relations with Japan. The problem is full of complications whether viewed from the Indian standpoint or from the British. For in her dealings with Japan the British have also to consider the ways and means by which their competition with Japanese mills in the Far Eastern markets could be regulated. And that is a sphere in which there is no auxillary factor like the political authority of Great Britain, which obtains in India. From these points of view British opinion welcomes the move taken by the Japanese in sending a delegation to India and appreciates the readiness of the Government of India to give full consideration to the representations of the British delegation after their conference with the Japanese and the Indian interests. The improvements in British trade and commerce have brought about a mood of mellowed optimism in Britain; and there is hope that there will be an end to the fierce competition in the cotton trade. On the eve of Delegation's departure to India, Mr. Walter Runciman, the President of the Board of Trade sent the following letter to Sir William Clare Lees, its Chairman :

> "I am very glad to learn that the proposals for a frank and friendly discussion of their mutual difficulties between the textile industries of India, Japan and this country have borne fruit and that a representative United Kingdom delegation is about to sail for India under your leadership.
>
> "The economic stresses of recent years have inevitably complicated the international relations of the textile industries of the world, and it is clear that a stage has now been reached at which it is imperative, before the skein becomes still more tangled, that the industrialists should sit down together and try to evolve a policy that will encourage the greatest possible measure of harmonious development.
>
> "The tripartite discussions in which your delegation will take part afford a most important opportunity for bringing order to the trade of markets vast both in present size and future potentialities. Our discussions will, I hope, represent an important development in the field of international co-operation, which will point to a method of solution of many of the difficulties, not only of the textile industries but also of other industries.
>
> "In meeting the Indian representatives you will, I am sure, make it clear that we freely and fully recognise the very remarkable development of the Indian cotton industry, and that our only desire is to co-operate in every possible way with that industry to the mutual advantage of both countries.
>
> "We all recognise that an improvement in our trade with India must depend on an increase in the prosperity of that country and an increase in the flow of goods in both directions, and we regard the mission of your delegation as a natural development of the policy evolved at the Ottawa Conference.
>
> "In meeting the Japanese representatives, you will have an opportunity of a direct exchange of views on cotton trade policy, and I have every hope that fruitful results will emerge from the personal contact which will thus be established between the two industries.
>
> "The Government is confident that no effort will be spared by you and by your colleagues to bring the discussions to a successful issue, and on behalf of the Government I wish you every possible success in your endeavours."

In a statement which Sir William Clare Lees made before his departure from London, he pointed out that "our object will be to bring back with us for consideration by the industry at home, and by the British Government, plans and proposals which will hold out promise for Lancashire of a more satisfactory volume of export trade in the Indian market and in other markets where we share an interest with the Indian mills."

Doubtless, the Delegation have already discussed among themselves the various alternatives now open, but they are naturally unable to say "until we discover what the situation is in India, on which of the possible proposals we shall chiefly rely." The delegation, judging from Sir William's statement are under the impression that a permanent solution for the problem of Japanese competition in the Indian market is a necessity as much for the Indian millowners as for Lancashire and this communion of interests gives a valuable common ground on which to begin. What economic or practical consideration there is to prevent India from treating Japanese and British goods alike for purposes of prohibitive import tariffs is not clear. India might as well aspire to answering the entire requirements of the country in the matter of piecegoods, even if talk of export trade should seem to be something of moonshine. But in the interests of readjustment of a gravely dislocated world economy, one might wish that as a result of the tripartite discussions in India, some sort of order will be restored in the chaos that now reigns in the Eastern markets.

New German Shipping Regulations

As a result of the Conference held in Berlin, referred to last week, new regulations have been issued by the Foreign Currency Control Department.

These provide, that henceforth passage money received in foreign currencies can be transferred, while the transfer in foreign currencies of reichsmark bookings is subjected to certain restrictions. Foreign agencies will be allowed to transfer to their home offices amounts not exceeding 50 per cent. of the transfers in the corresponding month of last year; they are at liberty to defray their expenses in Germany from such reichsmark takings. Requests for higher transfers must be left to the decision of the Ministry of Economics. Germans may book their passages with foreign shipping agents, but their payments must not exceed the amount of the fare plus their expenses on board the vessel. A refund of money not used during the journey must, however, only be made in Germany. This stipulation is intended to prevent a flight of capital from Germany. The German Government is now prepared to allow anyone to book any passage, provided payment is made in reichsmarks. The sum paid will not be deducted from the amount of money allowed to be taken out of the country by Germans proceeding abroad, nor is it to be noted in

Air Mail Week.

the passenger's passport. The provision for the limitation of passage money to fare plus expenses on board will eliminate the inclusion of sight-seeing trips ashore on pleasure cruises. The provision limiting to 50 per cent. the transfer of passage money receipts by foreign companies to their home offices will enable the agencies in Germany to equal last year's business after allocating the other 50 per cent. of the passage moneys received to the payment of commission and other expenses.

Wheat Conference—Preliminaries

The success of the wheat conference, which was known late on Saturday, was not much of a surprise. Not that the wheat problem lacks the complications characteristic of world economy in its present state, but it was evident from the beginning that two of the "big four" exporting countries, namely, U.S.A. and Canada were anxious to dispose of, in as short a time as possible, the abnormal surpluses that they had been carrying over for the last three years. Though this was the only hopeful feature visible at the beginning, it was sufficient to afford every assurance that the last minute adjustments, which experience of all international conferences shows to be necessary, would be forthcoming and that any serious deadlock, not to speak of failure, would be successfully avoided. As is well-known, the big four made bold to convene a wheat conference only because, as a result of the talks at South Kensington during the time of the World Economic Conference, they were able to arrive at as amongst themselves an agreement, restricting the maximum exportation for the next crop year and also a reduction of the acreage under wheat by about 15 per cent. Once this agreement among the big four was achieved, then it remained for them to discuss matters with the smaller exporters of Central Europe and then the exporting countries and thus establish an understanding among themselves. The negotiations with the exporting countries could be opened up but the interval between the World Economic Conference and the convention of the Wheat Conference at Canada House in London was utilised by an American representative to tour the whole of Europe, so that the necessary negotiations could be carried out, not with representatives who are not sufficiently empowered to enter into agreement, but with the Governments themselves.

Draft Text for Importing countries

The ground was thus well prepared and when the Conference met it was possible to complete the work within a week. So far as the debtor countries are concerned, the general agreement was that as debtor countries they would be entitled to a liberal treatment from the conference as a whole. When the discussions between the importing and exporting countries were taken up, they were based on the draft text which was submitted to these countries at the time of the World Economic Conference. This text provided that the importing countries shall limit the wheat acreage to the existing figure, adopt all possible measures to increase consumption, effect a lowering of customs tariff when the international price of wheat reaches and maintains for a specified period an average price to be fixed, the rate of duty necessary to assure remunerative prices not being high to encourage an expansion of acreage and lastly to make effective modifications of the general regime of quantitative restriction of wheat imports at the latest in 1934-35 if world prices have taken a definitely upward turn from the average prices in the first quarter of 1933.

Disagreements in the Text

The course of discussion on the basis of this draft agreement was none too smooth. In the first place, it was difficult to arrive at an agreement between exporters and importers as to the exact international price on the attainment of which the importing countries would be under an obligation to reduce their tariffs. Secondly, when the provisions were discussed in detail the importing countries were found to make a number of stipulations which, in their cumulative effect would practically have nullified the whole agreement. Thirdly, it was realised that any reduction in the North American crops would be more than made up by the increased yield of the European crops and that, therefore, it may be necessary for the exporting countries to revise the figures on the basis of which they had come to on an earlier agreement. With these difficulties to the fore and with Mr. Bennett, President of the Conference, threatening to leave any time, the fate of the conference seemed during the middle of the week to hang in the balance.

Agreement—and Provisos

As finally settled, the international wheat price was fixed at 12 gold francs per quintal, a compromise between the figures of 60 and 67 gold cents, which marks the range of difference between the exporters and importers. As for the stipulations of the importing countries, it has finally been agreed that Professor Laur was to make a statement on behalf of the importing countries. He announced in the open conference that the obligations of the importing countries under the agreement are to be interpreted in the light of the following declaration. "It is recognised that measures affecting the area of wheat grown and the degree of protection adopted are primarily dependent upon domestic conditions of each country and that any change in these measures must often require the sanction of the legislature. The intention of this agreement is, nevertheless, that the importing countries will not take advantage of a voluntary reduction of exports on the part of the exporting countries by developing their domestic policies in such a way as to frustrate the efforts which the exporting countries are making in the common interest to restore the price of wheat to a remunerative level." It will be seen that this proviso to the main draft vitiates all the main principles on which the value of the agreement, as a measure of restriction, depends, for excepting the obligation to stimulate consumption is the only exception; and its practical value is more than doubtful. Of the other principles, namely, the maintenance of the acreage at the existing level, the reduction of tariffs and the mitigation of quantitative import restrictions, all of them are rendered nugatory.

UNITED STATES OF AMERICA

MR. ROOSEVELT GOES AHEAD

The weekly history of American economic and business conditions has of late become the virtual balance sheet of the Recovery Administration setting out, on the one side, the gains and the assets and, on the other, the losses and the liabilities. To deal with the right side first, President Roosevelt has now gained the support of a powerful ally for his recovery Programme in Ex-Governor, 'Al' Smith, Democratic Candidate for the Presidency in 1928 and bitter opponent of Mr. Roosevelt at the 1932 Democratic Convention. It is reported that in a broadcast speech Mr. Smith appealed to all "good citizens of democracy to repose faith in the great physician, Mr. President Roosevelt." Mr. Smith is not yet a full believer in the methods adopted by his successful rival for the Democratic candidature. But Mr. Smith is definitely of the opinion that the results so far achieved by the Recovery Administration entitle the President to a fair trial and that nothing would constitute a fair triumph unless the large body of American citizens offer the utmost co-operation of

Air Mail Week.

which they are capable in the execution of the schemes now formulated or put into partial execution. On one thing, however, Mr. Smith feels that he must differ from the Government. There has been, during the latter stages, much talk of imposing by force codes of fair competition on industries which, for any reason, are not able to produce their own. This, taken together with the large powers conferred on the President both by the Inflation Amendment Act and the Farm Acts, raise fears of a dictatorship in economic affairs, not unlike what Signor Mussolini enjoys in his Fascist State. Mr. Smith, therefore, feels called upon to warn the Administration against such ideas of dictatorship as "the American people can be persuaded and led but not driven".

General Johnson repudiates Dictatorship

The strictures of Mr. 'Al' Smith on the suspected dictatorial methods of the Administration drew a pointed reply from General Johnson, the Industrial Administrator, in a press interview at Washington. General Johnson not only repudiated any intention to seek or employ such powers, but he went to the length of condemning the organisation of boycott campaigns against employers who failed to win the Blue Eagle, which is the emblem of the recovery campaign. But the General was also careful to make sure that his reassurance to Mr. "Al'Smith does not embolden recalcitrant employers to defy the Recovery Administration. He cleverly managed to leave the impression that employers could not fail with impunity to subscribe to the code. The Administration has now arrived at a crucial stage. The difficulties, which first raised their heads, have been dealt with in a way. And the few that remain might become insuperable, if the Administration allows the impression to gain ground that the Government are going to flinch from the exercise of their powers.

The Principal Tasks

To-day the important questions before the Administration may be classified as below :

1. The redress of complaints made about codes already instituted;
2. The formulation of new codes for industries which have not yet adopted any for themselves;
3. The execution of the schemes of restriction of agricultural crops; and
4. The question of inflation and the relation of prices to the working of the whole Recovery Programme.

Codes for Oil and Steel

Complaints about provisions of codes already formulated are most rife in the oil and the steel industries. There is, so to say, in this respect, a triangular contest between the industry and labour interests and the Roosevelt Administration. So far as the oil industry is concerned, the contest has been ended by the President signing codes governing conditions in the oil and lumber industries, as well as an order codifying the regulation for the steel industry for an experimental period of three months. The oil industry is still dissatisfied with the price-fixing provisions, but they have promised to support General Johnson on patriotic, if not on legal, grounds. The President has, at the same time, agreed, in consideration of persistent reservations and objections, to apppoint a committee representative of the oil industry, to suggest modifications in the code, the oil men agreeing in the meanwhile to abide by his recommendations. In the steel industry, an agreement has been finally reached between General Johnson and the interests concerned. The code, as finally approved, provides for a 40 hour week over 'three months' period. There will be a 8 hour day for all regular employees after November 1, or after production reaches 60 per cent. of capacity. The agreement cites increases in wages estimated at 15 per cent. and also expresses the opinion of the steel companies that the minimum wages of the fixed code will exceed 40 cents per hour. The code provides for the supervision of a committee of Federal officers to ensure that the provisions of the law are fully complied with. The vexed question of company *versus* trade unions has been sought to be solved by citing a section of the law guaranteeing the employees the right to organise in any manner they choose. According to General Johnson, the most significant feature of the steel code was the 8-hour day and the 35-hour week. The lumber code, which has also been signed, controls production and forbids prices below production costs.

Court Decision in Roosevelt's Favour

The settlement of the difficulties of the oil, steel and lumber industries, however tentative, is, undoubtedly, a feather in the cap of the Administration. The coal and automobile industries still remain, and, if General Johnson succeeds in evolving suitable schemes for these also, he would have broken the opposition, which at one time threatened the whole Industrial Recovery programme. The chief stumbling block in the coal industry is the disagreement among the interests concerned. To overcome the difficulties of the company union question, the national Recovery Administration intends to invoke licensing powers. But it is believed that such action might bring nearer the danger of an appeal to the Supreme Court which, if it should prove adverse to the Administration, might raise issues of a dangerously far-reaching significance. Speaking of the reference to the courts, it is, perhaps, necessary to mention here that the Chicago Federal Court has decided that Anti-Trust Law rulings of past years cannot be invoked against the price-fixing decrees of President Roosevelt or the other restrictive provisions of the Recovery codes. Though this decision may well be reversed by the Supreme Court, it is helpful to the Administration in so far as it gives an idea of the trouble that disgruntled companies and groups of employers would have to face in any attempts to foil the Government by means of open litigation.

Reduction of Agricultural Production

The third question on our list is that of executing the reduction of acreage, which is such an essential part of the whole programme of recovery. It is now announced that plans for effecting a cut in the acreage for 1934 have now been completed by the Department of Agriculture acting under the Agricultural Adjustment Act. The Government have already sent out voluntary workers into the entire wheat belt; and these are only awaiting formal instructions before starting the campaign to induce farmers to sign an appropriate agreement. It is believed that the contract would provide for a reduction up to 20 per cent. of the present acreage. This percentage would, of course, have to be altered in the light of any world agreement for the restriction of acreage and export of wheat. A plan for the curtailment of maize may also be forced on the Administration by the fear that, otherwise, maize prices may collapse. It has also been announced that farmers, who do not fulfil their obligations to destroy a part of their cotton crop by the mid-night of August 24th, would have the job done for them by Government agents. This obviously is opposed to the spirit of General Johnson's speech referred to earlier. But the place of such restriction in the Recovery programme is so vital that it is not likely that Government will desist from their efforts merely on grounds of sentiment. In regard to sugar, an agreement has been reached with the domestic wheat pdoducers whereby their quota is to be raised from 1,521,000 tons to 1,750,000 tons annually, with a corresponding increase in the total consumption of the U.S.A. There is thus every reason for hope that the most difficult part of the programme, namely, the reduction of

Air Mail Week.

agricultural production, will be tackled by the Administration with unflinching courage and determination.

Inflation and Treasury Finance

In the background of all these developments, there still remains the question of inflation. Though the main case for inflation namely, that actual inflation must now replace the talks of it, on which business had gone forward during the past months, continues as strong as ever, there are other considerations, which suggest that it would not be quite advisable to go ahead with the inflationary programme without delay. In the first place, the Government are beginning to see the adverse reactions which inflation might have on their plans of financing the Treasury. It is a matter of common knowledge that, when the talk of inflation is rife, the investor is inclined to keep back from new capital issues of the Government, on the ground that there is no knowing what he would get back in return for his investment. It is true that the recent issue of 850 million dollars of short term obligations of the Government was successful; but that is so only in a technical sense. Because the amounts were taken up largely by the banks who expected to be allowed to keep the money on deposit for a good while. It is believed that a cut in the gold content of the dollar would force the Treasury to abandon all ideas of financing itself by the ordinary or conventional means.

Improvement in Federal Revenue

It is pertinent to point out here that the revenue gatherings of the first 17 days of August are such as to enable the Government to live within its income. The income during the period is $88.8 million as compared to $68.2 million in the same period of July. The total of the August income of 17th instant amounted to 123.82 dollars against the ordinary expenditure of only 123.73 millions. It need hardly be added that the additional expenditure on emergency needs is not and cannot be accounted as current expenditure under the budget.

Senator Thomas and Mr. Black of F. R. B.

Though this turn of the financial fortunes of the Treasury is notable, it would hardly suffice to change the bearing which inflation has on Government's finance. The inflationists are not, however, to be deterred by this reflection. They are, still, as enthusiastic as ever; and it is interesting that an officer of the Reserve System, who has published an article in an unduly apologetic way about the inflationary policy, was pulled up by an inflationist Senator, who suggested that it was equivalent to a charge of bad faith of the President and called for the resignation of the author of the article.

During the period in which the Administration is necessarily undecided about any radical estimate of inflation, attempts have been made to bring about a more generous release of credit by banking institutions. It has so far been experienced that the full amount of additional credit made available has been utilised by banks only for the return of their indebtedness and that, therefore, the attempt to force more credit into the industry has been infructuous. General Johnson recognises that it is impossible to obtain an expansion of credit by force, as faith and confidence are the necessary requisites of any credit policy. But at the same time, he adds significantly, the timidity of banks, who are failing to fulfil their proper function, is holding the recovery programme and he would, therefore, take action to remedy the situation. Senator Thomas has also joined the attack on the banks and in reply to him, Mr. E. R. Black, Governor of the Federal Reserve Board, denies that there has been currency and credit contraction by the Federal Reserve Banks. In a letter to the inflationist senator, Mr. Black says that the currency in public use has increased substantially since March. He explained that the recent decline of money in circulation did not reflect the reserve banks' withdrawal of funds from the public, but rather a return flow to the banks of hoarded currency. He pointed out that the amount of currency in circulation on July 26, was more than 500 million dollars over that of 1927, 1928 or 1929. From all these, it is clear that what is needed is that, on the one hand, the Federal Reserve banks should resume their policy of open market purchases and that on the other, the banks should utilise the increased supplies of funds to increase the credit facilities to trade and industry.

F. R. B. buys more Securities

That the controversy between Mr. Black and Senator Thomas has not been unfruitful is seen from the fact that the Federal Reserve Bank statement published on August 24, shows an increase of 35 million dollars in the banks' holdings of Government obligations. It is believed that as these purchases had been carried out only during the two previous days, there is foundation for the rumour that the banks intend to expand their purchases to 90 million dollars. But it must be remembered that the inflation amendment permits the banks to purchase up to 3,000 million dollars of Government bonds. As there is still the danger that even a purchase of 3,000 million dollars might be rendered ineffective by the action of the member banks, the Administration are planning to bring considerable pressure to bear on them to expand credit. The Reconstruction Finance Corporation may also have a large role to play in this development. A free gold market for gold if and when it is established, will also be another means of pushing more credit into the system.

Stock taking

Taking the balance sheet as a whole, we find that the internal troubles of some of the major industries and their opposition to the code have been overcome at least for the present. As for the automobile industry, though Mr. Ford still holds out from the negotiations in Washington, he may be depended upon to introduce the spirit of the codes in the actual working of his factories at Detroit. The only judicial decision so far given is in favour of the Administration. Much progress has been made in the provision of more credit, without deciding the somewhat thorny question of inflation. And lastly, business reports on the whole continue to be encouraging.

As for the general reconstruction, a committee of Reserve Bank officers and banking Superintendents has been formed to strengthen individual banks in each locality in preparation for the deposit guarantee scheme which goes into operation at the end of the year. Strong efforts are being made to bring about mergers and subscriptions of new stock to reduce the number of weaker banks and to reopen those which have remained closed till now. In this context, reference may, perhaps, be made to the disclosure that two banks namely the First National Bank and the Detroit Guardian National Bank of Commerce, had been found to be insolvent long before they were forced to close, of necessity, and that Mr. Hoover's connection in the matter requires to be cleared up. The announcement has however been made by Mr. Hoover that he does not propose to go to detroit to testify in connection with the investigation.

Trade Returns—Export Surplus

The trade returns for July show marked increase in both exports and imports; but the surplus has turned to be a favourable one. A heavy increase in the buying of staple commodities is held responsible

Air Mail Week

for the rise in American imports, which in July amounted to 143,000,000 dollars. Dollar depreciation as an aid to exporting is seen in the increase of exports for the month to 145,000,000 dollars.

This gives an export surplus of 2,000,000 dollars, which is equal to June's import surplus. The exports for July, 1932, amounted to 106,880,000 dollars, and the imports 79,421,000 dollars.

The figures for the seven months of this year show a favourable balance of 79,146,000 dollars, the figures being 814,341,000 dollars in exports, and 735,195,000 dollars in imports. For the same period of last year, exports totalled 946,842,000 dollars, and imports 826,207,000.

Gold exported in July amounted to 85,375,000 dollars, and gold imported, 1,496,000 dollars. The respective figures for July, 1932, were 23,474,000 dollars and 20,037,000 dollars. For the seven months of the year, gold exports amounted to 179,078,000 dollars, as compared with 791,312,000 dollars for the corresponding period of last year, and imports amounted to 185,010,000 dollars, compared with 167,887,000 dollars.

Silver exports in July were 2,572,000 dollars, and imports 5,386,000.

GERMANY

GERMAN CITIZENSHIP.

Nothing succeeds like success. Every morning, news of arrests, speeches of Captain Goering, incidents on the Austrian Frontier and representations of the Powers in the nature of protests are the common items a reader is treated to. Although the drive against Pacifists, Communists and Socialists is still carried on, it may be boldly stated that Herr Hitler has come to stay. It is commonly held that, if a general election were held to-day, 80 per cent. of the electorate would solidly vote for Hitler. Of the remaining 20 per cent. some would not exercise their votes, and the balance could not vote at all even if it would.

But, the chief trouble of Nazidom is well brought out by the adage that idleness is the workshop of the devil. The ardour of hundreds of thousands of martial youths is a source of embarrassment to the Nazi leaders. Route marches and other forms of military drill are not sufficiently alluring to it. They have found vent, for their exuberance, in committing excesses upon the classes of the population which are not in the good books of Nazidom. The government's chief activity, next to Jewish prosecutions, wholesale imprisonments of opponents and the brutality of individual physical punishments, is to find some engaging work for Nazi youths.

But, in order to keep up the spirit of the Nazi followers, drastic action against the opponents is still pursued. In accordance with a recent decree, German citizenship of several famous Germans, now abroad, was annulled, and their properties were confiscated. The plea was that they have injured the German interest by their behaviour, in conflict with their duty and loyalty to their nation and the Reich. Thus, the opponents of Nazi rule are between the scylla of internal repression and the charibedes of loss of German citizenship. Those affected by this recent decree, among others, are the ex-editors of Vossische Zeitung and the Berliner Tageblatt and Vorwaerts, Dr. Rudloph Breitscheid, the Socialist Reichstag leader and Leon Feuchtwanger, the famous author.

A curious incident happened regarding this famous author. His *Prinz Eugen* was the most popular work of fiction which outsold the record sale, in Austria, of every other great work. When Nazi students attempted to throw these books in a bon-fire, they were prevented from doing so as they were told that the book had an honoured place on the book-shelf of President Von Hindenburg. The author is, at present, busy with a biography of Garibaldi, the famous Italian soldier-patriot. But, he has assured himself of a safe-conduct for his present work by enlisting the sympathy of Signor Mussolini, who has agreed to write an introduction to his book in the only belief that Germans would not burn a book with an introduction from the Duce.

As a precaution against Radio attacks from Russian Broadcasting Stations, the authorities have confiscated all wireless sets from communists-owners. In the Ruhr district, it was known, for some time, that communists held meetings in their own rooms in order to hear propaganda from Russia. It was the knowledge of these secret meetings, that compelled the Government to take this drastic step. But, the Government are not averse to afford facilities for the communists to listen to German broadcast under official control. This step is an improvement upon the Austrian way of complaining and protesting. However much, the Nazi battalion of propagandists in Munich may send radio messages, the Austrian hearers can be prevented from being infected with this news-poison, if only the Austrian Government would copy the example of German authorities.

The Reichstag Fire the latest international flutter, which promises to confirm the moral estrangement, which Nazidom has provoked, is with regard to the case regarding the burning of the Reichstag. The International Legal Commission of enquiry to the burning of the Reichstag is about to hold a parallel trial in a neighbouring country, while the Leipsig trial progresses in Germany . The German Government has asked for the copies of papers, held by the International Commission. The conditions demanded by M. Branting, the Swedish Jurist, on behalf of the Commission were a free choice of German or foreign counsel by the accused in the Leipsig trial; the right of defending counsel to see all the documents relating to the trial; the right of the accused to confer with the counsel without the presence of a third party; publicity during the entire trial; the right of defending counsel to call witnesses; a safe-conduct for the counsel and witnesses; and more human treatment of the accused. But the German Government have refused to comply with the conditions, demanded. Thus, the International Legal Commission, consisting of Mr. Pritt, K. C. (Britain) Mr. Clarence Darrow (U. S. A.) Signor Fransisco Nitti (Italy), M. Demoro Giafferi (France) and M. Branting (Sweden), is now free to hold the parallel trial.

Very reliable foreign investigators have supplied the International Commission with highly valuable information bearing on the Leipsig Trial. Among the contributories, the most noteworthy is the International German Relief Committee presided over by Prof. Einstein. The information in the possession of the International Commission is very damaging, to the reputation of Nazi leaders.

It would appear that the Reichstag fire has been planned by members of the Nazis. It is even alleged that the secret under-ground passage from Captain Goering's residence was utilised for conveying the inflammable material to the Reichstag. On the night of the fire, it is alleged that the Reichstag Officials were given leave of absence, without their asking, by the Nazi Deputy House-Inspector. The Chairman of the Communist Party in the Reichstag, Herr Torgler, was not even present at the Reichstag. Besides, the leader of the Nationalist Parliamentary Party, Dr. Oberfohren, who left a memorandum on the subject, had to committ suicide. Several other persons, who can submit valuable evidence, are either in duress, or are no more.

Air Mail Week

Judging by recent events with regard to the climb-down on the shipping question and the stoppage of air-raids on foreign territories, the signing of the Four-Power Pact, and the promise to censor radio broadcasts, tend to prove the anxiety of Herr Hitler not to forfeit the moral sympathy of the outside world. It is, therefore, not too much to hope that the accused in the Leipsig Trial may get off with, at least, easier sentences than would otherwise be the case.

It is, therefore, rather premature for the British labour movement to advocate a boycott of German goods and German services. The counsel of the Trade Union Congress, in its annual report, stated that International Trade Union Organisation have sustained a severe setback in the seizure of power, by the Hitler Movement, in Germany. It is impossible to foresee the circumstance in which they will be able to recover their freedom and authority. By the boycott of German goods and services the British Labour Movement hopes to bring home to the German Government that the crimes it has committed, and is still committing, will not be condoned.

As already mentioned, Herr Hitler's task is not easy. If he should remain in power he has to placate the rebellious youths and the rasher section of his lieutenants. Hence, patience will not be out of place. Sooner or later, Herr Hitler will find it possible to bring under control his entire following. When once he is safely perched in power, he will be in a position to attend to international susceptibilities. Till then, it is safer to leave everything to Signor Mussolini who can exercise wholesome influence on his lieutenant and admirer, Herr Hitler. Already the British and French Diplomocy have entrusted the Duce with the task of smoothing things with Nazi Germany. A step in the right direction.

Trade Situation

During July, Germany registered an increase both in exports and imports, compared with the figures for June. But, the favourable trade balance of Rm. 25,100,000 was less by Rm. 2,800,000, than in June. The disparity in the increases of exports and imports leaves some room for anxiety regarding the economic well-being of the country. While the imports increased by Rm. 3,600,000, the exports rose only by Rm. 800,000. The improvement in both cases was due to movements of raw materials. The larger increase in imports is not conducive to the future welfare of Germany, especially in view of the foreign debt position.

The exports of finished goods have declined, as also the imports of food-stuffs. It is clear, therefore, that the manufactured goods of Germany are losing markets, while at the same time the lower imports of food-stuffs indicates a tendency towards the inflow of foreign manufactured goods. This state of affairs is anything but desirable for an industrial country like Germany.

During July, Germany imported gold and silver to the value of Rm. 19,000,000. This was possible, because of the transfer regulations, enforced in July, regarding foreign debts. The increase in the foreign exchange holdings of the Reichbank was due to the delay in the payment of transfered portion of the interest to foreign creditors, as well as to the larger export surpluses, gained in the earlier months of the year.

It was in October, 1931, that the export surpluses reached the peak of Rm. 396,000,000. Since then, there has been a steady fall, with slight unevenness, till February of this year, when the export surplus was only Rm. 27,000,000. But, during the months of March, April and May the favourable trade balance arose from Rm. 64 to 89 millions. But, the progress could not be maintained. In June, there was a sharp fall to Rm. 29 millions from 89 millions in the previous month. But, the month of July witnesses even a further fall, to 25 millions.

So low a trade balance is inadequate for maintaining Germany's foreign debt service, even after making allowance for the advantageous restrictions on the transfer of interest, better known as the transfer moratorium. Germany's exports, in spite of the decline, are consumed in Europe to the extent of about 75 per cent of the value of her total foreign sales. This fact should caution the Nazi Government to slow down the pace of antoganising foreign nations in Europe. The repressive policy of the Nazis against the socialists have already displeased the British Labour movement, while the brusque reply to the British and French representations in the early part of August, regarding the infringement of Treaty obligations against the Austrian Government, was highly impolitic. It is well, therefore, that Germany does not further aggravate the strained feelings of the great Powers in Europe. The export surplus, during the second quarter of this year, was in no small way responsible for the remarkable improvement in the spinning industry of Germany. Not knowing the sharp fall in the coming months as regards German exports, the Spinning Industry became more active, and in certain cases, extra machinery was put into commission. But, the low-priced offers from foreign countries have compelled sales to be made at unsatisfactory figures.

Agricultural Self-Sufficiency.

While the industrial position is subject to adverse influences beyond the control of the German Government, the national-socialist policy of self-sufficiency, at least in agricultural activity, is bound to ease the internal situation. For the past few years, the cultivation of wheat was being assiduously encouraged by the Government through export premia and the state purchase of surplus wheat, in order to maintain the domestic price. It is now feared that further extension of the wheat area would compel the farmer to sell his produce at unremunerative prices. The loss of the farmer will be all the more, as the Government has no intention of continuing the costly measures, which have, so far, helped to keep the domestic price from flagging.

The cultivation of Barley, oilseeds and fodder-crops should be given greater attention to. With a view to encourage the new crops, measures have already been taken to diminish the import of foreign fats. In proportion to the expansion of the area under oil-seeds, the wheat area would contract, as also the import of oilseeds. But, the peasant may prefer cattle-raising and dairy-farming to the cultivation of new agricultural crops.

Even then, to increase the amount of calories in wheat as cattle-feed, larger quantities of wheat will be required for consumption, than if it were the case of consumption in the primary form of bread. Thus, internal sales of wheat are assured for one thing ; the other means of larger consumption of wheat internally is to re-settle the large estates into small peasant holdings, thereby increasing the numbers, employed on the land. This step, if pursued vigorously, will assure the consumption of wheat by the agriculturists themselves.

The German State Railways' Company is keeping abreast of modern Road traffic development. It is now operating, singly or jointly with road undertakings, motor traffic, covering some 12,000 miles, devoted mostly to goods movement. The Railways have also taken up 145 different passanger routes. Some of these routes are in connection with the post office, while others are solely for the convenience of passangers.

SILVER AGREEMENT

MEMORANDUM

Of Heads of Agreement entered into by the Delegates of India, China and Spain, as holders of Large Stocks or users, of silver, and of Australia, Canada, the United States, Mexico and Peru, as Principal producer of silver, at the Monetary and economic conference, held in London, July 1933.

Whereas, at a meeting of the Sub-Commission II (Permanent Measures) of the Monetary and Financial Commission of the Monetary and Economic Conference held on Thursday, July 20th, 1933, the following resolution was unanimously adopted.

"Be it resolved to recommend to all the Governments parties to this Conference:

"(*a*) That an agreement be sought between the chief silver producing countries and those countries which are the largest holders or users of silver with a view to mitigating fluctuations in the price of silver; and that the other nations not parties to this agreement should refrain from measures which could appreciably affect the silver market;

"(*b*) That the Governments parties to this Conference shall refrain from new legislative measures which would involve further debasement of their coinage below a fineness of 800/1000;

"(*c*) That they shall substitute silver coins for low-value paper currency in so far as the budgetary and local conditions of each country will permit;

"(*d*) That all of the provisions of this resolution are subject to the following exceptions and limitations;

"The requirements of such provisions shall lapse on April 1st, 1934, if the agreement recommended in paragraph (*a*) does not come into force by that date, and in no case shall extend beyond January 1st, 1938;

"Governments may take any action relative to their silver coinage that they may deem necessary to prevent the flight or destruction of their silver coinage by reason of a rise in the bullion price of the silver content of their coin above the nominal or parity value of such silver coin", and,

Whereas, the Governments of India and Spain may desire to sell certain portions of their silver holdings, and it will be to their advantage that the countries which are large producers of silver should absorb silver as herein provided, to offset such sales, and,

Whereas, it is to the advantage of the large producing countries named in Article 2 that the sales of silver from monetary stocks be limited as herein provided, and,

Whereas, it is to the advantage of China that sales from monetary stocks of silver be offset by purchases as herein provided, with a view to its effective stabilisation;

Now, therefore, it is agreed between the parties hereto:

1. (*a*) That the Government of India shall not dispose by sale of more than one hundred and forty million fine ounces of silver during a period of four years, commencing with January 1st, 1934. The disposals during each calender year of the said four year period shall be based on an average of thirty-five million fine ounces per year, it being understood, however, that, if in any year, the Government of India shall not dispose of thirty-five million fine ounces, the diffffference between the amount actually disposed of and thirty-five million fine ounces may be added as additional disposals in subsequent years. Provided further that the maximum amount disposed of in any year shall be limited to fifty million fine ounces.

(*b*) Notwithstanding anything previously stated in this article, it is understood that if the Government of India should, after the date of this agreement, sell silver to any Government for the purpose of transfer to the United States Government in payment of war debts, such silver shall be excluded from the scope of this agreement;

(*c*) Provided, however, that, when the total of the disposals referred to in paragraph (*a*) above plus the sales referred to in paragraph (*b*) above by the Government of India under this agreement shall amount to one hundred and seventy-five million fine ounces, the obligation of the parties hereto shall cease.

2. That the Governments of Australia, Canada, the United States, Mexico and Peru, during the existence of this agreement, shall not sell any silver, and shall also in the aggregate purchase, or otherwise arrange for withdrawing from the market, thirty-five million fine ounces of silver from the mine production of such countries in each calendar year for a period of four years, commencing with the calendar year 1934. The said Governments undertake to settle by agreement the share in the said thirty-five million fine ounces which each of them shall purchase or cause to be withdrawn.

3. That the silver purchased or withdrawn in accordance with Article 2 above shall be used for currency purposes (either for coinage or for currency reserves), or be otherwise retained from sale during said period of four years.

4. That the Government of China shall not sell silver resulting from demonetised coins for a period of four calendar years commencing January 1st, 1934.

5. That the Government of Spain shall not dispose by sale of more than twenty million fine ounces of silver during a period of four years commencing January 1st, 1934. The disposals during each calendar year of the said four-year period shall be based on an average of five million fine ounces per year; it being understood, however, that, if in any year the Government of Spain shall not dispose of five million fine ounces, the difference between the amount actually disposed of and five million fine ounces may be added as additional disposals in subsequent years; provided further that the maximum amount disposed of in any year shall be limited to seven million fine ounces.

6. That the Governments concerned will exchange all such information as may be necessary with regard to the measures to fulfil the provisions of this memorandum of agreement.

7. That it is understood that subject to the provisions of Article 8, the undertakings of each party to the present memorandum of agreement are conditional upon the fulfilment of the undertakings of every other party thereto.

8. That this memorandum of agreement is subject to ratification by the Governments concerned. The instruments of ratification shall be deposited not later than April 1st, 1934, with the Government of the United States. It shall come into force as soon as the ratifications of all the Governments concerned are received, provided that all the ratifications are received before April 1st, 1934. A notice by any Government that the affirmative action necessary to carry out the purposes of this agreement has been taken will be accepted as an instrument of ratification. Nevertheless, if one or more of the Governments enumerated in Article 2 fail to ratify by April 1st, 1934, the agreement shall come into force at that date if the other Governments mentioned in Article 2 which have ratified notify the other Governments which ratify that they are prepared to purchase, or cause to be withdrawn, in the aggregate the amount of silver mentioned in Article 2. The Government of the United States is requested to take such steps as may be necessary for the purpose of the conclusion of this agreement.

In witness whereof the undersigned have signed the present memorandum of agreement.

Done at London this 22nd day of July, 1933, in a single copy which shall be deposited in the archives of the Government of the United States.

FULL TEXT OF WHEAT AGREEMENT

EXPORT ACREAGE CUTS: STATUS QUO FOR IMPORTERS

Following is the full text of the Wheat Agreement, reached at Canada House last Air Mail Week:—

The Governments of Germany, Austria, Belgium, Bulgaria, France, the United Kingdom of Great Britain and Northern Ireland, Greece, Hungary, Irish Free State, Italy, Poland, Roumania, Spain, Sweden, Czechoslovakia, Switzerland, The Union of Socialist Soviet Republics and Yugoslavia, having accepted the invitation extended to

Topical Extracts:

them by the Secretary-General of the Monetary and Economic Conference on behalf of the Governments of Argentina, Australia, Canada and the United States of America, to take part in a Conference to consider the measures which might be taken in concert to adjust the supply of wheat to effective world demand and eliminate the abnormal surpluses which have been depressing the wheat market and to bring about a rise and stabilisation of prices at a level remunerative to the farmers and fair to the consumers of breadstuffs, have agreed as follows:—

EXPORT MAXIMA.

Article 1.—The Governments of Argentina, Australia, Canada and the United States of America agree that the exports of wheat from their several countries during the crop year August 1, 1933, to July 31, 1934, shall be adjusted, taking into consideration the exports of other countries by the acceptance of export maxima fixed on the assumption that world import demand for wheat will amount during this period to 560,000,000 bushels.

Article 2.—They further agree to limit their exports of wheat during the crop year August 1, 1934, to July 31, 1935, to maximum figures 15 per cent. less in the case of each country than the average outturn on the average acreage sown during this period 1931-1933, inclusive, after deducting normal domestic requirements.

The difference between the effective world demand for wheat in the crop year 1934-35 and the quantity of new wheat from the 1934 crop available for export will be shared between Canada and the United States of America as a supplementary export allocation with a view to the proportionate reduction of their respective carry-overs.

Article 3.—The Governments of Bulgaria. Hungary, Roumania and Yugoslavia agree that their combined exports of wheat during the crop year August 1, 1933, to July 31, 1934, will not exceed 50,000,000 bushels. This undertaking is made on the understanding that the aggregate may be increased to a maximum of 54,000,000 bushels if the Danubian countries find that such a supplementary quota is required for the movement of the exportable surplus of the 1933 crop.

Article 4.—They further agree that their combined exports of wheat during the crop year 1934-35 will not exceed a total of 50,000,000 bushels, and recognise that the acceptance of this export allocation will not allow of any extension of the acreage sown to wheat.

RUSSIA'S POSITION.

Article 5.—The Government of the Union of Socialist Soviet Republics, while unable to give any undertaking in regard to production of wheat, agree to limit their exports for the crop year 1933-34 to a figure which will be arrived at upon the completion of negotiations with the Government of the overseas wheat exporting countries. They also agree that the question of their export of wheat during the crop year 1934-35 shall be the subject of further negotiations with the wheat exporting countries represented upon the Advisory Committee.

GENERAL PROVISIONS.

Article 6.—The Governments of the wheat importing countries in signing this instrument:—

(I) Agree henceforth not to encourage any extension of the area sown to wheat and not to take any governmental measures, the effect of which would be to increase the domestic production of wheat.

(II) Agree to adopt every possible measure to increase the consumption of wheat, and are prepared to bring about the progressive removal of measures which tend to lower the quality of breadstuffs and thereby decrease the human consumption of wheat.

(III) Agree that a substantial improvement in the price of wheat should have as its consequence a lowering of Customs tariffs, and are prepared to begin such adjustment of Customs tariffs when the international price of wheat reaches and maintains for a specified period an average price to be fixed. It is understood that the rate of duty necessary to assure remunerative prices may vary for different countries, but will not be sufficiently high to encourage their farmers to expand wheat acreage.

Appendix A contains the agreed definitions relating to the technical points mentioned in this paragraph.

QUOTA MODIFICATION

(IV) Agree that in order to restore more normal conditions in world trade in wheat the reduction of Customs tariffs would have to be accompanied by modification of the general regime of quantitative restriction of wheat imports, and accept in principle the desirability of such a modification.

The exporting countries for their part agree that it may not be possible to make substantial progress in these modifications in 1933-34, but the importing countries are prepared to make effective alterations in 1934-35 if world prices have taken a definitely upward turn from the average price of the first six months of the calendar year 1933.

The objective of these relaxations of the various forms of quantitative restrictions will be to restore more normal balance between total consumption and imports, and thereby to increase the volume of international trade in wheat. It is understood that this undertaking is consistent with maintaining the home market for domestic wheat grown on an area no greater than at present. It is obvious that fluctuations in the quantity and quality of the wheat harvest resulting from weather conditions may bring about wide variations in the ratio of imports to total consumption from season to season.

IMPORTERS' RESERVATIONS.

The obligations of the importing countries under this agreement are to be interpreted in the light of the following declaration:

It is recognised that measures affecting the area of wheat grown and the degree of protection adopted are primarily dependent upon domestic conditions within each country, and that any change in these measures must often require the sanction of the legislature.

The intention of this agreement is, nevertheless, that the importing countries will not take advantage of a voluntary reduction of exports on the part of the exporting countries, by developing their domestic policies in such a way as to frustrate the efforts which the exporting countries are making, in the common interest, to restore the price of wheat to a remunerative level.

Article 7.—The countries participating in the Conferference agree to set up a Wheat Advisory Committee to watch over the working and application of this agreement. The functions, organisation and financial basis of this committee are set out in Appendix B.

THE APPENDICES.

Appendix A.—(1) "International price of wheat," as mentioned in Article 6, paragraph (111) of the draft agreement, shall be understood to mean a duty free gold price c.i.f. on a world market.

This price shall be calculated according to the method followed by the Food Research Institute of Stanford University, California (explained in Vol. 4, No. 8 of "Wheat Studies"). It is the average price of all parcels of imported wheat of all grades sold during each week in all the ports of Great Britain.

(2) The Secretariat of the Wheat Advisory Committee set up by the Conference shall undertake the regular communication of indices of prices calculated as above to all Governments adhering to the Agreement.

(3) The minimum average gold price calculated as indicated above to be maintained for a period of sixteen weeks before it will be necessary for importing countries to adjust their tariffs shall be 12 gold francs per quintal (63.02 gold cents per bushel).

(4) The period referred to in Article 6, paragraph (*iii*), of the Agreement, during which the average quotation for wheat is to be maintained before it will be necessary for importing countries to adjust their tariffs shall be sixteen weeks.

(5) Each country will decide upon its tariff adjustment in accordance with the principles enunciated in Article 6 paragraph (*iii*) of the draft agreement, and every considerable and lasting change in wheat prices shall be followed by an adjustment of tariffs proportionate to such change.

Appendix B, referred to in Article 7, consists of the report of the sub-committee on the constitution of the

Topical Extracts:

Wheat Advisory Committee, which is to watch over the working of the agreement. Details of the report appeared in *The Financial News*.

An annex to Appendix B gives the suggested basis of contributions to the Advisory Committee.

MINUTES OF FINAL MEETING

The minutes of the final meeting state that the signatures to the agreement are to be regarded as affixed in the light of the statements made during the discussions by the representatives of the various countries; these statements are contained in the minutes of the Conference, and are to be interpreted in the sense of the Final Act.

The Act shall be deposited at the Secretariat of the League of Nations, in Geneva, and shall remain open for signature on behalf of other countries. It is understood that certain of the signatures have been affixed *ad referendum*.

The following countries did not sign the agreement:—Denmark, Estonia, Latvia, Turkey, Finland, Netherlands, Lithuania, Poland. Argentina will sign shortly.

U. S. SECURITIES ACT

PROVISIONS—A MASS OF LOOPHOLES

There are many defects in the U. S. Federal Securities Act, which has recently come into operation, and there are various loopholes by which clever manipulators may continue to mulct the public.

These facts are pointed out in an article in "Mining Truth."

Section 5 of the law, says the article, makes it unlawful to sell in inter-state commerce any unregistered security which is not exempt from the provisions of the law. But Section 4 sets up certain exemptions.

CHIEF EXEMPTIONS

The more important of these are:—

1. Transactions by private parties who are the bona fide owners of shares, and are not dealers, underwriters, or issuers.

2. Brokers' transactions, executed upon customers' orders on any stock exchange or in the open or counter market, providing such orders have not been solicited.

3. Issue of new securities in exchange for those of bona fide stockholders, where no commission is paid, or issue of new securities to old stockholders or creditors where a company is in process of reorganisation under the supervision of any court.

4. Certain transactions by dealers in previously offered but unsold stocks.

If the majority of "authorities" on the subject are correct, the various "exemptions" have made it possible to evade the intention of the Act entirely and still remain technically within the law.

AN INTERPRETATION

For instance, it now appears, according to the interpretation in "Barron's" (the New York financial weekly) by George A. Brownell, that:—

1. Stock Exchanges may list any issue, even if organised after the law took effect, without the necessity of having it registered, and brokers may accept orders for such issues providing they do not solicit them.

2. Promoters may buy up dormant and inactive corporations and work the old "reloading" racket without interference, as long as they do not pay commissions on the sale of the new stock.

3. Companies may be thrown into receivership and new shares offered to stock-holders and creditors without complying with the Act, and these creditor-stock-holders may then continue to deal in their privately-owned stock either through exchanges or on the open market; they are exempt from the necessity of registering under the law.

EVASION INVITED

These are plain invitations to evade the registration provision, which, it must be borne in mind, affects only stocks issued after July 27. All stocks and other securities now in existence are automatically exempt from the law's registration feature.

Section 12 provides that the purchaser of any security may demand damages from the seller if the representation on which the sale was made contained any untrue statement or omitted any material fact. The seller may not be the issuer, underwriter or broker; he may be a private individual who bought the stock in good faith and sold it on a stock exchange. Omission of a "material fact" might be construed to include, for instance, neglect to state that a mining stock which had previously paid dividends was assessable, as many such stocks are in theory although not in practice. The purchaser may demand the return of his money paid for the security, or he may demand damages if in the meantime the stock has passed to other hands.

This section seems to invite racketteering on the part of professional litigants and trouble-makers.

ADVISORY SERVICES

Section 17 was designed to eliminate "tipster" sheets" and also to prevent the bribery of newspaper financial writers.

Most authorities expected that "tipster sheets" would cease functioning, but several of them are going on their way as brazenly as before the law was signed.

The law was intended to protect the public, and for that reason it supposedly makes it easier for legitimate advisory services and investment counsellors to operate. As Mr. Brownell points out in *Barron's*, "it is believed that bona fide investment advice, unless connected with a sale from the investing party, does not create Section 12 liability."

In other words, investment advisers who make honest mistakes—and most of them made mistakes from 1928 to 1932 and possibly on to the present day—are not subject to damage suits. This applies, however, only to ethical advisers who do not profit by the sale of securities which they recommend—in other words, who do not trade against their customers.

(*Continued from page 659*).

proprietorship for his Reserve Bank of India. Thirdly, the present Bill makes the Governor-General a despot in the nomination of members to the Board, whereas Sir Basil's idea was more democratic and pro-Indian. The present Bill is Sir Basil Blackett's vindication.

Sir George Schuster's Bill is to be referred to a Select Committee consisting of fourteen Assembly members and fourteen members of the Council of State, members who will meet at Delhi and furnish a report for the disposal of the business in a special session of the Legislature in November. Mr. Pochkhanawala will probably be nominated to the Council of State in order to assist the deliberations of the Select Committee. I hope that the members of Committee will, without frittering away their energies on routine details of administration, concentrate on five essentials which is corroborated elsewhere.

Firstly, the question whether the Reserve Bank should not be a State bank deserves further consideration. In any event, if the Reserve Bank is to be a shareholders' concern at the inception, power should be retained in the hands of the Government to buy back shares after, say, fifteen years.

Secondly, the power of nominating directors should in no wise be vested in the Governor-General, but should rest with the Federal Minister of Finance, whose selection will be subject to the approval of the Governor-General.

Thirdly, the ratio question must be threshed out to give meaning to the Reserve Bank as a comprehensive national institution. To run away from the ratio question now will not solve the problem. Linked to sterling but on a lower ratio, the rupee should be a subject of care relegated to the Reserve Bank.

Fourthly, the Government should be made to undertake the purchase of gold to form the backbone of the Bank, even as the Bank of England is accumulating reserves for its security.

Fifthly, the preferential advantages given to the Imperial Bank should be regularised. The agreement with the Imperial Bank should be on a new basis in view of two important changes in the situation. There is no longer any unexpected portion of contract to be taken into account for awarding compensation. The non-paying branches of 1927 must have become paying by 1930, on the Bank's own admission; and no question of special concession arises. If these fundamentals are held in view, the Joint Committee will be able to do some good; but if they are lured into discussions of routine details and irrelevancies, the Committee will have failed to serve its purpose.

(*Continued from page 665*).

And, finally, about the Reserve Bank Bill. Sir George Schuster feels that his task in India is bound to be more difficult than it was in London. There he took with him a crowd who, having received this extraordinary gift of a holiday trip at his hand, were prepared to follow his lead. In India he has to face independent criticism. In this Mr. C. S. Rangaswami has led the way by a contribution to *Roy's Weekly* delineating the essential features of any sound piece of central banking legislation. And this has already caused Government to consider seriously how to pilot the bill in the face of such constructive criticism without agreeing to modify their scheme.

In the meantime a tug of war has been going on among members anxious to sit on the Select Committee. The Centre Party has presented, perhaps, the most interesting spectacle in this race. Mr. Anklesaria cabled a request to Sir George Schuster not to forget his services. Raja Krishnamacharya, the leader of the Party, wired for his nomination to the Committee while the Party in the absence of its Leader and Deputy Leader decided to nominate Rai Bahadur S. R. Pundit for the purpose!

No doubt, Government will make every effort to man the Committee with its nominees, so that in every critical division Government may have a majority behind it. But it is clear to Sir George Schuster that his task of piloting the Bill will not be an easy one.

The Reserve Bank Bill, which was due for introduction on Wednesday, could not be introduced till Friday, owing to the fact that the Indian States Protection Bill and the Cotton Industry Protection Bill took more time than anticipated. The latter Bill was passed but not without bitter speeches, which showed that non-official opposition to the mill industry's mismanagement is getting stronger and stronger. There will be a determined opposition to the States Protection Bill; but the real fight has been transferred for the time being to the Select Committee, half of which the Government has taken care to fill with its avowed supporters. However, it will not be till the end of January, 1934, that this Bill will come up for final decision.

The Reserve Bank Bill was eagerly scrutinised by members, and there was general disappointment that it did not fill in important details omitted by the London committee. Thus the Bill either contains clauses modelled on the London Committee's report or puts forward dummy clauses, leaving it to the Government to make its proposals to the Committee. I am told that one reason for this course is that the Government does not wish its proposals in these respects to be publicly known, until it has had the opportunity to canvass support in the Joint-Committee and commit that body to supporting their enactment.

The preamble to the Bill is interesting. It states that the Reserve Bank is being set up "with a view to securing monetary stability in British India," and proposes, in view of the disorganisation of the monetary systems of the world, "to make temporary provision on the basis of the existing monetary system." The Bill has to pay due regard to the existing constitution. Therefore, the nominees of the Government will be those selected by the Governor-General-in-Council and not by the Governor-General. But Sir George Schuster hinted that, when the new constitution is introduced, the necessary changes would be made, so that it is not open at present to the Joint-Committee members to fight against reserving these powers in the hands of the Governor-General. Part of Sir George's speech, which roused comments in the lobby of the Assembly was his appeal, that members best fitted to serve on the Committee should be nominated, irrespective of party or personal considerations; and yet the Government may be the worst offenders against this principle, because men like Mr. Yaminkhan and Mr. Anklesaria, who have no export or first-hand views on the subject, are to be roped into the Joint Committee. Thus, in view of the fact that the Reserve Bank Bill clauses are, in some cases, dummy clauses, non-official parties find it difficult to give a lead to the Joint Committee and are, therefore, all the more keen that membership of the Committee be chosen with the greatest care.

"HILL-BIRD."

COMPANY REPORTS

SMITH, STANISTREET & CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	12,50,000	Block (net) ...	4,04,931
Debts ...	4,30,660	Stock ...	5,35,858
		Outstandings ...	3,34,333
		Cash ...	12,867
		Profit & Loss ...	3,92,621
Total ...	16,80,660	Total ...	16,80,660

Extracts from Directors' Report:

Report.—For the year ended 31st December, 1932.

The loss for the year amounts to Rs. 67,403-7-4, which with the debit balance carried forward from the previous year amounting to Rs. 3,25,217-13-7, totals Rs. 3,92,621-4-11. The Directors recommend that this amount should be carried forward for the present.

The re-organisation indicated in the last Annual Report is n progress. The retail branches in Darjeeling and Dhurrumtollah were closed, leaving only the retail branch in Dalhousie Square, which will also be closed down at the earliest possible opportunity.

Stocks have been conservatively valued as certified by the Managing Director.

THORNYCROFT (INDIA), LD.

Synopsis of Balance Sheet:

Capital ...	7,86,165	Block (net) ...	4,48,886
Debts ...	1,12,906	Stock-in-trade ...	2,98,185
		Work-in-Progress	1,644
		Outstandings ...	93,443
		Cash ...	2,720
		Profit & Loss ...	54,193
Total ...	8,99,078	Total ...	8,99,071

Extracts from Directors' Report:

Report.—For the year ended 31st March, 1933.

The Profit and Loss Account, after writing off the usual Depreciation, shows a loss on the year's trading of Rs. 30,282-15-11. This figure added to the debit balance of Rs. 23,910-4-9 brought forward from last Account, leaves a debit to be carried forward of Rs. 54,193-4-8.

The above figures speak for themselves and are eloquent of the extent to which the prevailing depression has affected the Company's business.

In our last report we offered the opinion that the possibility of much improvement in the Commercial Vehicle business was unlkely, and this has unfortunately proved to be the case. Any improvement in trading results in the coming year will again largely depend upon a satisfactory turnover in this particular class of busness, and we regret to state that present indications are not very hopeful.

During the year two of your Directors, Messrs. S. D. Gladstone and J. R. Coulthard, resigned their seats on the Board on proceeding on leave, and Messrs. W. Hunter and W. M. Craddock were appointed in their stead.

These appointments you are now asked to confirm.

The Report and Accounts have not bene signed by two of your Directors, Sir John E. Thornycroft and Mr. J. R. Hutchinson, owing to their being out of India.—M. A. Hughes, N. T. Williams, W. Hunter, W. M. Craddock, Directors.

TROPICAL INSURANCE CO., LD.

Report.—For the year ending 31st December, 1932.

New Business.—During the year under report, 673 proposals were received by the Company for assurance amounting to Rs. 12,30,334-8. Out of these and the balance of last year's pending business, 572 proposals resulted into policies assuring a sum of Rs. 1x0,08,834-8, the annual premiums thereon being Rs. 52,550-8. The remaining were either declintd, postponed or awaiting completion.

Progress.—The following figures indicate the position and progress made by the Company during each of the past three years. The results for 1932 in ordinary circumstances should have been much better but for the continued trade depression and unsettled condition in the country. The Directors have, however, a very hopeful outlook for the future, and the business that has been secured for the first half of 1933 has been so satisfactory that it is anticipated the Company will secure a very sound volume of new business for the coming year and come into the forefront of many of the older established and larger Companies operating in the country.

Year.	Net Premium Income.	Net income from all sources.	Life Fund.
	Rs. As. P.	Rs. As. P.	Rs. As. P.
1930 ...	1,28,810 13 0	1,30,835 10 3	30,051 13 17
1931 .	1,40,716 5 0	1,45,225 4 6	77,545 14 0
1932 ...	1,45,560 12 0	1,67,882 7 2	1,55,489 10 9

From the above figures it will appear that during one year, Life fund has more than doubled.

Income and Outgo.—The net income from all sources during the year under report amounted to Rs. 1,67,882-7-2 showing an increase of Rs. 22,657-2-8 over the previous year.

BURRAKUR COAL CO., LD.

Synopsis of Balance Sheet:

		Cash & Deposits	2,56,784
Total ...	1,88,12,516	Total ...	1,88,12,516

Extracts from Directors' Report:

Report.—For the half-year ended 30th June, 1933.

Raisings for the period under review were 342,555 tons compared with 457,080 tons for the corresponding period of last year.

Despatches were 361,223 tons against 360,194 tons for the corresponding period of last year.

Coke Plant.—48,770 tons were manufactured as against 45,274 tons for the corresponding period of last year.

Market.—There was no improvement in the demand for coal during the half-year. Raisings continued on a restricted basis.

Development.—Necessary development has been maintained. The mines are in a position to take advanage of any improvement in the market.

Health.—Health of the Labour has been good.

Accounts.—The Profit and Loss Account, including Rs. 45,118,-11-5 carrier forward from last half-year and after deducting Rs. 1,09,744-11-11 for Depreciation, shows an available balance of Rs. 2,21,793-14-9, which we propose to dispose of as follows:—In paying a dividend at the rate of 7 per cent. per annum, free of Income Tax, on 22,998 Preference Shares of Rs. 100 each issued as at 30th June, 1933, Rs. 80,493-0-0, in paying a dividend of 4 annas per share, free of Income Tax, on 454,624 Ordinary Shares issued as at 30th June, 1933, Rs. 1,13,656-0-0, in carrying forward Rs. 27,644-14-9, total Rs. 2,21,793-14-9.—G. B. Morton, E. H. Marshall, E. L. Watts, W. M. Craddock, Directors.

BHULANBAREE COAL CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	7,15,000	Block (net) ...	11,59,316
Reserves ...	6,80,000	Coal	84,511

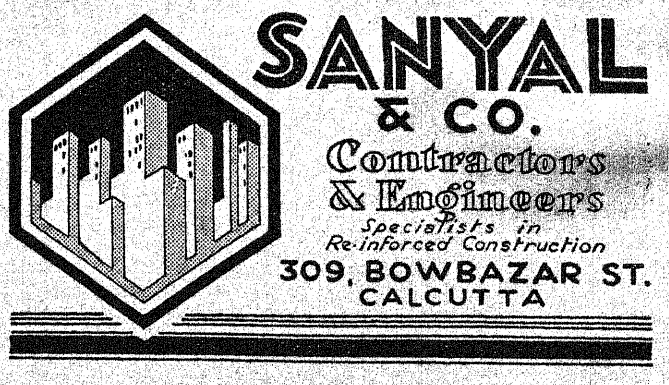
		Outlay ...	4,642
		Outstandings ...	73,800
		Cash & Invests	39,899
		Profit & Loss ...	1,38,678
Total ...	15,29,711	Total ...	15,29,711



Extracts from Directors' Report:

Report.—For the half-year ended 30th June, 1933, shows a loss on Revenue Account of Rs. 35,766-15-11. After adding the sum of Rs. 1,19,123-7-3 brought forward from last half-year, there is a debit balance on Profit and Loss Account of Rs. 1,38,678-3-0 to be carried forward.

Raisings and Despatches.—58,578 tons were raised and 49,586 tons were despatched.

Collieries.—The fire-stoppings were regularly inspected and found in order.

Development.—No 2 PIT.—Satisfactory progress in the development of 13 and 12 seams was continued during the half-year. Your Directors sanctioner the expenditure for a screening plant to be erected at this Pit.

Market.—There was no improvement in the demand for coal and prospects for the ensuing half-year remain uncertain.

Labour.—The health of the labour has been good.—G. B. Morton, J. S. Ker, E. L. Watts, Directors. F. W. Heilgers & Co., Managing Agents.

ONDAL COAL CO., LD.

		Cash & Invests. ...	46,993
		Profit & Loss ...	78,191
Total ...	3,12,076	Total ...	3,12,076

Extracts from Directors' Report:

Report for Season 1932.

Allowing for full depreciation, Revenue Account shows a loss of Rs. 33,312-9-0 and after making sundry adjustments there remains a balance at debit of Profit and Loss Account of Rs. 78,191-1-5.

A crop of 1,994 maunds of tea was obtained and sold at an average of annas 8/5.9 per lb. compared with a crop of 1,621 maunds sold for an average of annas 8/4 per lb. in 1931.

The outturn of first flush teas was less than normal owing to the prolonged drought suffered at the commencement of the season and rainfall for the year ended 26 inches behind the average. Slight hail damage was experienced in April but this was fully covered by insurance.

Estimates for the current season have been framed for a crop of 1,747 maunds to cost Rs. 81,234 on the garden and Rs. 25,219 in Calcutta.

Sir Onkar Mull Jatia now retires from the Board, but being eligible offers himself for re-election.—Onkar Mull Jatia, S. de B. Miller, Directors.

BANARHAT TEA CO., LD.

Synopsis of Balance Sheet:

Capital ...	9,00,000	Block ...	10,52,646
Reserves ...	3,40,000	Crop A/-. ...	89,462
Debts ...	76,599	Outlay ...	29,564
		Outstandings ...	9,584
		Investments ...	31,626
		Cash & Deposits ...	17,767
		Profit & Loss ...	85,950
Total ...	13,16,599	Total ...	13,16,599

Extracts from Directors' Report:

Report for Season 1932.

Revenue Account shows a loss of Rs. 88,744-8-1, which after making sundry adjustments, leaves a balance of Rs. 85,950-5-7 at debit of Profit and Loss Account.

A total crop of 14,087 maunds was obtained and sold for an average of annas 4/11 per lb. Comparative results of both divisions for the past two seasons are as follows:—Karballa—1931, 8,362 mds. at 6/1 lb., 1932, 8,384 mds. at 4/10 lb., Banarhat—1931, 3,386 mds. at 6/9 lb., 1932, 5,703 mds. at 5/- lb.

Drought at the commencement of the season and an early close due to mosquito blight and inclement weather affected the outturn at both divisions.

The planted area remains unaltered.

Estimates for the current season have been framed for a restricted crop of 14,190 maunds with an expenditure of Rs. 3,16,910 on the gardens and Rs. 1,30,847 in Calcutta.

Sir Onkar Mull Jatia retires by rotation but being eligible, offers himself for re-election.—G. S. Horton, Dnkar Mull Jatia, A. Aikman, Directors.

NEW DOOARS TEA CO., LD.

Total ...	8,60,917	Total ...	8,60,917

Extracts from Director's Report:

Report for Season 1932.

After allowing for depreciation, Revenue Account shows a profit for the year of Rs. 2,120-12-1, and after crediting interest on investments and making sundry adjustments, the sum at the credit of Profit and Loss Account amounts to Rs. 30,836-9-3, to which has been added Rs. 20,000 transferred from Equalization of Dividend Account. This amount has to be debited with the Preference Dividend already paid for the two half-years ended 30th June, 1932, leaving a sum of Rs. 34,836-9-3. From this we recommend payment of dividend on the Preference Shares in respect of the half-year ended 31st December, 1932, amounting to Rs. 8,000 and a dividend on the Ordinary shares of 10 per cent. leaving Rs. 6,836-9-3 to be carried forward.

The crop weighed out at 10.405 maunds which sold on a lower market at an average of annas 5-9 per lb. comparing with a crop obtained in the previous year of 7,579 maunds which sold at an average price of annas 7-7 per lb.

As a result of a prolonged drought in the early part of the season, prospects at one time were distinctly poor but later improved and were generally good until towards the end of the season when mosquito blight coupled with an early spell of cold weather closed the garden up earlier than usual.

The planted area remains unaltered at 1,065 acres.

The Estimate for Season 1933 is framed for a restricted crop of 9,366 maunds at a revenue cost of Rs. 1,71,680 at the Garden and Rs. 82,612 in Calcutta. The garden is in good condition and the estimated crop should be obtained within the expenditure indicated.

Mr. S. de B. Miller now retires by rotation but being eligible, offers himself for re-election.—A. Aikman, S. de B. Miller, Onkar Mull Jatia, Directors.

BENGAL PAPER MILL CO., LD.

Synopsis of Balance Sheet:

		Outlay	... 25,194
		Cash & Investments, etc.	... 8,07,815
Total	... 40,75,436	Total	... 40,75,436

Extracts from Director's Report:

Report for the half-year ended 30th June, 1933, after the addition of the balance brought forward from the previous half-year, less Debenture Interest, amounting to Rs. 18,000, shows a balance at credit of Profit and Loss Account of Rs. 3,41,197-1-7, with which we propose to deal as follows:—Items: To Depreciation on Buildings Rs. 29,000, to Depreciation on Manchinery Rs. 72,000, to Reserve for Bamboo Plant Rs. 80,000, to Reserve for Improvements and Extensions Rs. 15,000, to Reserve for River Training Rs. 7,500, to Dividend on Original Preference Shares at 7 per cent. per annum Rs. 7,000, to Dividend on "A" Preference Shares at 7 per cent. per annum Rs. 14,000, to Dividend on Ordinary Shares at 20 per cent. per annum Rs. 90,000, to Balance carried forward Rs. 3,41,197-1-7.

Manufacture.—Working results for the half-year were satisfactory. These were assisted by further reductions in the cost of raw materials. It would now seem, however, that bottom prices for these have been about reached so that it is likely we shall now have to look elsewhere for assistance in meeting the keener competition from imported papers. Japan has become so dangerous a competitor in certain markets that the matter has had to be specially taken up with Government by the Indian Paper Mills, the result of which is awaited. Unless relief is obtained, it is obvious business will have to be conducted at a loss at the Ports involved, with the object of retaining our connection. Prices had a downward tendeucy throughout the half-year, which continues. Paper stocks are again heavy, but have been valued under cost, as usual. Special efforts continue to be made to stimulate larger, sales without too seriously affecting prices.

Mill Renovations and Improvements.—These continue, and have had a good deal to do with improved outturns and qualities of paper.

Bamboo Pulp Mill.—The erection of this is proceeding and the main items of the extensive plant required are now either shipped or under shipment. As they arrive at the Mill, erection will proceed as quickly as possible. In the meantime, owing to alterations and additions, it is evident that the total cost of the completed plant will be rather more than was originally anticipated, for which reason it is necessary to continue reserving substantial sums.

River Bank Protection.—That in hand when the last report was issued has been completed, with very satisfactory results. To cover further reinforcements considered still necessary, a reserve has been made this half-year.

Directors.—Mr. Eric Studd and Mr. A. L. McLatchie, being out of Calcutta, have not signed the Accounts.—Balmer, Lawrie & Co., Ld., Managing Agents.

KARANPURA DEVELOPMENT CO., LD.

Total	... 8,09,120	Total	... 8,09,120

Extracts from Directors' Report:

Report for the year ending 31st March, 1933

The Balance of Profit and Loss Account including Rs. 4,94x5-0-6 carried forward from last year, amounts to Rs. 48,398-11-5 out of which the Directors have written off for Depreciation on Plant, Furniture and Fittings, etc., Rs. 7,500 leaving of Balance of Rs. 40,898-11-5 which they recommend to be disposed of as follows:—Dividend 7½ per cent. or Rs. 15 per share Rs. 30,000, Provident Fund Rs. 5,500, Bonus to Staff Rs. 2,000, carry forward Rs. 3,398-11-5, total Rs. 40,898-11-5.

Reserve Fund.—This now stands at Rs. 2,34,439.

Investments.—These now and stand at Rs. 2,96,369-7-6 (Book value and under market rates).

Stocks.—Rs. 2,70,373-10-11.

This has been valued at cost or under and depreciation has been made where necessary.

Branches.—The Directors have satisfied themselves that all the Branches are working at profit.

Insurance.—The whole property of the Company has been fully insured against Fire for Rs. 7,83,400 and Net Profits and Fixed Charges for Rs. 2,60,000.—N. R. C. Wadia, H. Gannon, R. S. Jackson, Directors.

EMPIRE OF INDIA LIFE ASSURANCE CO., LD.

Extracts from Directors' Report:

Report for the year ending 28th February, 1933.

Valuation.—Since the last Annual Report was issued the 7th Quinquennial Valuation has been made disclosing a Surplus of Rs. 36,07,371. After placing a substantial amount to Reserve the same rates of Bonus to participating Policyholders were declared as at the previous Valuation and the rates of the Interim Bonus were increased. These results in the face of the adverse conditions then prevailing indicate a high standard of financial stability. As the reserves were strengthened and the sources of future profits rigidly conserved the Bonus prospects for the future are excellent.

New Business.—Proposals Received—Number 8,669; Sum Proposed Rs. 1,49,52,149. Policies Issued—Number 6,157; Sum Assured Rs. 1,11,55,571; Premiums, Single Nil; Annual Rs. 5,62,201-9. Reassured Nil.

The total number of Policies in force is 55,922 assuring the sum of Rs. 10,91,96,244 including Bonus and of this amount Rs. 6,53,164 are reassured.

Claims by death amounting to Rs. 10,54,551 including Bonus have arisen.

Endowment Assurances matured (during the lifetime of the Assured) for Rs. 25,15,458 including Bonus.

The Expenses of Management were only 21 per cent. of the Premium Income.

The Funds of the Company are invested in Government and other Securities authorised by the Indian Trusts Act.

The Life Assurance Fund has increased by Rs. 19,88,263-3-11 and including the Life Assurance Reserve, Investment Reserve and Surrender Value Reserve Funds amounts to Rs. 3,96,69,041-1-1.

The Total Assets are Rs. 4,18,29,071-12-10.

Fidelity Guarantees.—Bonds were issued for Rs. 2,80,720 for which the annual Premiums were Rs. 1,552-1. Claims for Rs. 597-4-10 have arisen.

The Guarantee Assurance Fund including the Guarantee Assurance Reserve and Investment Reserve Funds amounts to Rs. 3,31,378-13.

In accordance with the Resolution passed at an Extraordinary General Meeting held on 11th August, 1932, the Paid-up Capital was increased to Rs. 1,80,250 by the transfer of Rs. 51,500 from the Bonus allotted to Shareholders from the Valuation Surplus and each share was thus made paid-up to the extent of Rs. 175.

The Directors recommend a dividend of Rs. 10 per Share which, with the Bonus of Rs. 60, makes a total distribution of Rs. 70 per Share for the year.

The Directors recommend that a Bonus equal to one month's salary be paid to the Officers and Staff.

The Directors desire the co-operation of the Shareholders and Policyholders in pointing out to their friends the benefits of Life Assurance and the very favourable terms on which Assurances may be obtained in this Company.—Rustam K. R. Cama, Chairman, F. E. Francis, F. B. Ghasvala, Nusserwanjee H. Vakeel, E. F. Allum, Ex-Officia, Directors. Empire of India Life Building.

WORLD OF INDIAN FINANCE

Calcutta, September 15.

The weekly chronicler of the money market has more grievance against the money market than the possessors of idle funds. For one's ingenuity in describing the same identical situation week after week must necessarily run out before long. There has been, to put it plainly, no change in the money market as compared with the previous week. Lenders still preponderate over borrowers. The markets are dull. The sight of numerous red dots and figures in the month's calendar inevitably brings on the holiday mood much earlier than its time ; and businessmen and office hands alike are less prone to put in strenuous work. Little demand therefore for money on account of trade can be expected ; and prices of both securities and commodity markets tend to show a weakness, which is discouraging to the average operator. Money thus is in plenty and wellnigh unlendable.

The Government, however, have not profited by such conditions of monetary plethora. Those, who had followed our comments in these columns in recent weeks, will not be surprised at the poor results shown in this week's *communique* of the Controller of the Currency regarding Treasury Bills. There has been a marked decline in the amount offered by the market in the week's auctions. Against Rs. 303 lakhs offered last week the total tender this week was only Rs. 169¾ lakhs. It is obvious that the pressure of easy money is not diverting funds into this channel of investment. During the last four weeks there has been a weekly appreciation in the rates available for Treasury Bills. From As. 12-11 in the week ended August 28 the rates have gradually risen up to As. 13-6, As. 14-2 and As. 15-7 respectively in the weeks following. The total amount offered by the market to the Government show a seasaw movement from Rs. 2½ crores to Rs. 1½ crores and thence to Rs. 3 crores and Rs. 1.69 crores. It is evident that the market has not so far taken these changes seriously. The sales of intermediate bills between September 6 and September 12 amounted to no more than Rs. 77.75 lakhs. It will be remembered that in our columns on this question last week we observed that the Government would not be able to rope-in appreciably more than Rs. ½ crore. If the tap-rate had borne any approximation to the rate at which investments in Treasury Bills would be attracted on any appreciable scale, we should have had much larger sales of intermediates. And as for the coming week, the amounts available at the average rate of As. 15-7 are a sufficient and reliable clue to what the Government may expect in the future. In making that estimate one has, doubtless, to remember that the remaining days of September are days of heavy maturities of Treasury Bills, as the following table shows :

September 23	...	Rs.	1,50,00,000
September 21 to 26	...	,,	2,11,75,000
September 28 to Oct. 3		,,	1,28,52,000
September 30	...	,,	1,50,00,000

As half a loaf is proverbially better than no loaf,, one might think that, instead of keeping their monies idle, bankers would prefer to invest them in so liquid a security as Treasury Bills, though the yield thereon is not even 1 per cent. But judging from the course of Treasury Bills sales during recent weeks, one has to conclude that banks are influenced by other considerations and that there is a general feeling of uncertainty as regards the immediate future. If the banks are not prepared to tender at Rs. 99-12 it seems improbable that any large volume of intermediates will be taken up at Rs. 99-12-6. Thus it is quite on the cards that the Government will have another week of disappointing sales of intermediates. Considering this phenomenon, it would seem that the period of flux necessarily preliminary to the establishment of the balance between the market's surplus and Government's needs will continue for some time.

If the Treasury Bills position has continued according to our anticipations the Government securities market offers, with a like continuity, an unwelcome disappointment. There has been during the week a steady day-to-day decline in security prices ; and we are sure that this decline, particularly in 3½ per cent. Paper since Friday last, has taken everybody by surprise. Last week the uncertain attitude of the Board of the Bombay Stock Exchange was a depressing factor ; but it was hoped that the setback in that week would prove to be only temporary. The persistence of the decline suggests that there is a more deep-rooted disease. And considering the intrinsic soundness of the position, the weakness in Rupee securities can only be accounted

for as the cumulative effect of a number of particular causes. Among these the uncertainty of the Bombay Board might perhaps, be given precedence. Then come the difficulties of the brokers of one of the Bombay operators, whose commitments could not be easily liquidated. In fact, the Bombay share market was closed on Wednesday on this account.

But by far the most unsettling factor in a lamentably "nervy" position is the fear of a possible change in the Rupee ratio. Though *prima facie*, apprehensions of a change in the exchange rate may seem to be groundless, it must still be recognised that the strength in sterling securities, particularly 3½ per cent. paper, attended as it is by a decline in the Rupee rate from 1s. 6 1/32d., to 1s. 5 3/32d., lends some colour to this view. It is not to be expected that when there is this all-pervading uncertainty of what the morrow would bring, the morale of the market has been altogether sapped. It is a common saying that nothing succeeds like success. Equally is it true that nothing demoralises so much as failure. Seeing that the prognostications of a healthy future of the securities market have been repeatedly shaken by events, one might pause to review the position and address to oneself the following questions. How far and how long will this decline in prices go? Is there anything to remedy the setback? If the decline in the Rupee paper is due to budlee in sterling it cannot go on for long. The inertia of selling pressure will take Rupee prices lower and lower. Competition for remittance will push Rupee rate and keenness for purchases of sterling securities will push prices up. The cumulative effect of all these ought in the end to deter this movement at some stage. It is reported that Paper touched Rs. 83-6 during the course of the day, that is, 3½ per cent. Rupee paper was about two points below the corresponding sterling scrip. It is, of course, impossible to say what a panicky market can do; but it hardly stands to reason that the fall can go unchecked. At some stage support should come from interested quarters. The bears had had their time for many a day; and it was thought that the release of Rs. 13 crores by loan payments would ultimately give short shrift to them But now it would appear that the ratio question has been God-send and we should, for our part, attribute the present weakness to this bearish psychology.

It would, therefore, be useful to consider the question of the prospects of a change in the ratio. The debate in the Assembly revealed that some sections who are by no means supporters of the present ratio, however, believed that the present is not the time in which the question of the ratio can be reopened without risk of grave disturbance to normal business life. But it might be said that we are still under the tutelage of the India Office and that it would be a good long time before either the Government of India or the Indian legislature will have the freedom necessary to alter the ratio, with reference to the needs and wishes of the British Government at home. Accepting this view as sound, we may try to read the mind of the British Government in respect of the ratio between rupee and sterling. The latest official document which may be regarded as throwing some light on this question is the preamble to the Reserve Bank which it has to refer to the question of the monetary and exchange policy, which the Reserve Bank should pursue. The reason for the enactment of the Reserve Bank Bill is laid down in the preamble as follows:

"Whereas it is expedient to constitute a Reserve Bank for India to regulate the issue of bank notes and the keeping of reserves with a view to securing monetary stability in British India, and generally to make provisions for matters incidental thereto;

"And whereas in the present disorganisation of the monetary systems of the world it is not possible to determine what will be suitable as a permanent basis for the Indian monetary system;

"But whereas it is expedient to make temporary provision on the basis of the existing monetary system, and to leave the question of the monetary standard best suited to India to be considered when the international monetary position has become sufficiently clear and stable to make it possible to frame permanent measures".

Is there anything in the above quotation to indicate that the revision of the ratio is a nearer possibility? Who can say when the international muddle will be solved? At the same time who cannot say that the present conditions are such that it will be some length of time before the position of international finance will allow India or her rulers, whoever they may be, the freedom to revise the link between the rupee and foreign currencies? We can say, therefore, that the question of the ratio will become a live question only when it is agreed that the currency problems of the rest of the world have been solved and that in the light of that solution

(*Continued on page 698*).

OTHER INDIAN MONEY MARKET

(*By Wire.*)

(From Our Correspondent)

Madras, September 14.

Weak advices from outside markets have resulted in a general marking down of exchange rates here, although banks locally are not buying at the cheap rates ruling elsewhere. Exporters complain that the continued fall in groundnut prices is hampering business and the scarcity of bills offering is a reflection of this state of affairs. Demand for remittance is small and has been met at current rates. At the close banks are sellers at 1s. 6d. to November, 1s. 5 31/32d. December-January and 1s. 5 15/16d. February but reluctant to quote beyond this delivery.

Money has been in fair supply with only occasional small borrowers.

FINANCE ABROAD

	Sterling-Dollar rate	Sterling-Franc rate	Gold Price London
September 7 ...	4.55⅛	80.59	131s. 0d.
September 8 ...	4.52⅜	80.93	131s. 0d.
September 9 ...	4.52⅜	82.09	129s. 2½d.
September 11 ...	4.55	82.71	128s. 9½d.
September 12 ...	4.57⅜	81.84	127s. 7d.
September 13 ...	4.58⅝	81.53	129s. 2d.

Though the principal international exchanges have not quietened down, no significant developments have occurred, since the first decline in the franc rate a fortnight ago led us to expect some. It is now learned that the decline was caused by a rapid flight of the dollar into the franc and that sterling suffered because the transactions were put through the London market, francs not being easily available in the exchange market in New York. Operators, therefore, were obliged to buy sterling securities against counter sales in London, and the proceeds were devoted to the purchase of requisite amounts of francs. Such being the cause of the decline in the sterling franc rate, there was even less justification than there would have been otherwise, for the British "control" interfering in the market to stop the depreciation of sterling in terms of the franc. Nevertheless, the deeper questions of international currency and exchange were in the minds of all at that time, owing to the exchange of social calls and courtesies between Mr. Montagu Norman and the monetary and political heads in the United States. The fact that the meetings between the political and the monetary heads were of a purely social kind seems to postpone further the possibility of any serious understandings between them.

The somewhat unexpected recovery of sterling has meant that the bear operators in sterling were badly caught and were forced to cover their earlier sales. This naturally accentuated the recovery of sterling. But the developments of this week show that the elements of uncertainty and instability continue to vex the foreign exchange markets. How long this state of affairs would continue is a question to which not even the highest authorities would be able to afford an answer. Britain's eyes are turned to the other side of the Atlantic. For her action the other side of the Atlantic. For their action would have to depend upon what Mr. Roosevelt decides to do. Not only are the public in America and outside in the dark about the monetary policy of the Administration, but Mr. Roosevelt himself is not now clear about his monetary policy.

In discussing this question, one can only set down what may be regarded as the facts relevant thereto. Considering the manner in which Prof. Raymond Moley was allowed to strut, not only the stage of domestic politics, but also the World Economic Conference in London, it would be reasonable to attach some significance to his sudden exit from the close ring of Mr. Roosevelt's advisers. The Professor is no longer a member of the much advertised Brain Trust. Nor does he even hold the inconsequential office of an Under-Secretary of State. And there is little fuss made either in official circles or in the public press about his virtual retirement. From this circumstance, one might be tempted to believe that Mr. Roosevelt is not as inclined towards economic isolationism as formerly. But as has been pointed out in our "Overseas" columns, there are other advisers of Mr. Roosevelt who are as strongly isolationist as the Professor. Perhaps, Mr. Roosevelt has made up in his own mind that the monetary policy would be decided solely by the fortunes of his recovery programme. Being a practical politician, with his mind fixed on the idea of setting the wheels of American industry in motion, Mr. Roosevelt regards finance as having no significance except as a handmaid to industry. Against this, no one can have anything to say. There is no reason why America should take a particular course of monetary policy for general considerations of international finance or world economy. If the further progress of the recovery programme, not to speak of its ultimate success, requires that some definite decision should be made in regard to the question of inflation, then Mr. Roosevelt must feel that all the considerations that can have an appeal to him require that inflation must be resorted to.

To our mind, there seems to be a clear method in what the rest of the world regards as Mr. Roosevelt's madness. He was able to bring about a sensational rise in prices by his dramatic action in regard to the abandonment of the gold standard and the imposition of the embargo. By letting the dollar exchanges sink to lower levels he sustained that rise. When the break in commodity and share prices occurred, he utilised it as an opportunity for asserting that his programme of industrial economic recovery is independent of the antics of speculators in the stock and grain exchanges. Abroad, he made an unequivocal claim that America's internal economic and monetary policy must be governed solely by her domestic requirements. And during the last one month, he has thrown himself, heart and soul, into the imposition of the codes of fair competition on all sections of American industry. If by the end of the year he is able to show that American economy can find a fair balance at the level of prices and wages that will be instituted by then, he can feel that he has at last won the freedom to determine the question of the foreign exchanges on its own merits. There is no reason why a depression, which is almost solely a crisis of consumption and a crisis of confidence which has been impaired only by the scepticism in regard to growth of consumption, should not be cured by an increase in wages, an expansion in employment and a concomitant rise in prices.

At the moment, it would seem that Mr. Roosevelt's chief obstacle is not so much the intrinsic defects in the plans he has adopted, as the scepticism of American and international finance. Mr. H. G. Wells once pointed out that finance by its very nature is opposed to all creative activity in economy. The American bankers seem to feel that their backs are put up by the President's appeal that more liberal credits should be advanced to firms that have agreed to come within the scope of the recovery programme. Though it is understandable that the average banker should resent his discretion being called in question, it might be well to point out that bankers as a community have been the last to realise the gravity of the economic tragedy that overtook the world in the autumn of 1929. It has been said that the American banking crisis was the aftermath of liberal extension of credits and artificial cheapness of money. But it is surprising how the most arresting feature of the Recovery Administration is so easily overlooked. While in the pre-crisis period advances were made to firms whose output was certain to be locked up in endless imprisonment in godowns and warehouses, now Mr. Roosevelt appeals to banks to make advances to industry in conditions in which increased consumption is as certain as human calculation can make it. If the American bankers refuse on this occasion to co-operate with Mr. Roosevelt by attuning their credit policy to the recovery programme, on the ground that liberal credits proved in the past to be a blunder, they will be committing the mistake of a burnt child which keeps asserting throughout its life time that all fire is but a menace to mankind. From the manner, in which Mr. Roosevelt handled the monetary and exchange question, we are, for our part, inclined to believe that he would not willingly resort to any large dose of inflation. Nor would he fight shy of it, if it becomes clearly expedient. If Mr. Roosevelt's appeals to the banks is heeded, it might well be that there would be no sensational decline in the dollar. If, on the other hand, Mr. Roosevelt is driven to inflation through such institutions as the Reconstruction Finance Corporation, America and the world will have none but the American bankers to thank for this regrettable development.

COMMUNIQUES AND RETURNS

TREASURY BILLS

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months' Treasury Bills were opened on Wednesday, September 13. The total amount offered was Rs. 1,69,75,000. Tenders at Rs. 99-12-3 and above were accepted in full and those at Rs. 99-12-0 were allotted approximately 81 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Rs. 0-15-4 per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Wednesday, September 20. Successful tenderers should make payment on Friday, September 22. Other conditions are as usual.

Three months' intermediates will be sold from September 14 to 19 at Rs. 99-12-6 per cent. subject to the conditions announced in the previous week.

Three months' intermediates sold from September 6 to 12 amounted to Rs. 77,75,000.

STERLING TENDERS

The Controller of the Currency notifies that there were no tenders for sterling on Wednesday, September 13.

On Wednesday, September 20, £1,000,000 will be offered for tender on the same conditions as previously announced.

THE GOLD STANDARD RESERVE

The balance of the Gold Standard Reserve on the 31st August, 1933, amounted to £40,000,000 and was held in the following form:—

	£
Cash at short notice at the Bank of England	2,996
British Treasury Bills	16,523,162
Other British and Dominion Government Securities	12,161,508
Gold.—In England	2,152,334
In India	9,160,000
Total ...	40,000,000

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE.

(From Our Correspondent).

Thursday, Sept. 14.

During this week coals were very steady with jute quieter and Government securities dull.

Government Securities.—These shares were quiet during this week also and the general tone was easy. 3½ per cent. paper closed on Wednesday with sellers at Rs. 84-8, 4 per cent. 1960-70 dropped back to Rs. 98-4, 3½ per cent. New Loan Rs. 98-4, 5 per cent. 1940-43 Rs. 107-4 and the 4 per cent. New Punjab Bonds Rs. 99-13.

Jute.—Quiet conditions prevailed in this section and Howrahs moved back from Rs. 49-4 to Rs. 49. Budge-budge were dealt in at Rs. 312, Anglo-Indias came to business at Rs. 344-8 and New Central at Rs. 360. Kamarhattys are quoted Rs. 451, Kanknarrahs Rs. 425-8, Kinnison Rs. 614-8, Lothian Rs. 265, Lansdowne Rs. 132, Orient Rs. 206, Bally Rs. 142, Albion Rs. 236, Empire Rs. 35, and Waverly Re. 1-10.

Tea.—Tea shares were steady though there was no particular feature of note. Betjans continued to be popular quoting Rs. 25-8, Bishnauths came to business at Rs. 23-12, East Indias quoted Rs. 14, Jutlibaris Rs. 16-4, while Teng-pani showed some improvement at Rs. 16-8.

Cotton.—This section was inclined to be easy due to the second report of the American Bureau. Kesorams quoted Rs. 3-8, Benares Cotton and Silk Re. 1-3 and Bengal Nagpores (Ordy.) Rs. 18-8.

Banks & Railways.—There has been no change in the Imperial Banks fully paids which remain the same at Rs. 1,208-8 but the Contributories have improved to Rs. 250, and Central Bank to Rs. 25-4. In Railway shares there has been only one transaction in Arrah-Sasaram at Rs. 65.

Miscellaneous.—In this section there has been nothing important to note. Electric power shares were a firm market particularly Patna, which were marked sharply to Rs. 14-8. Daccas also showed considerable improvement at Rs. 15-12, Bareilly quoted Rs. 10-14, and Benares Rs. 12-4. Among Engineering shares Bengal Iron kept steady at Rs. 2-12, while Indian Iron and Steel were in demand at Rs. 4-8, Indian Standard wagon quoted Rs. 45-12, Marshalls As. 13 and Thornycroft As. 9. Titaghur paper (Ordy.) came to business at Rs. 14-12, while Bengal paper (Ordy.) quoted Rs. 72-4. B. I. Corporation (Ordy.) quoted As. 14, Calcutta Tramways (Ordy.) Rs. 16-4, Assam Match Rs. 14-12, Madan Theatres As. 9, United flour Rs. 10. In Sugar shares Carew & Co., quoted Rs. 14-8.

MADRAS STOCK EXCHANGE.

(By Wire)

Madras, September 14.

3½ per cent. Paper lost considerably on selling pressure and lack of buying enquiry. However, a large turnover resulted with a healthier close. 4 per cent. 1960-70 was absorbed on investment account but shed a few annas, in sympathy with 3½ per cent. Paper, closing at 98-4. 4½ per cent. 1934 at 102-5, 4 per cent. 1943 at 102-8 and 102-5 and 5 per cent. 1939-44 at 107-6 were absorbed with further buyers. 3½ per cent. 1947-50 was a weak feature and dropped from 95 to 94-7. The market closed quiet with a holiday appearance. Mysore Loans were steady. 5½ per cent. were done at 109-12, 5 per cent. at 113-20 and 6¼ per cent. at 115-4. No business passed in Port Trust, Municipal and joint stock company debentures but buyers have reduced their bids.

Bank shares were firmer. Imperials were taken up at 1,208 and the Contributory shares at 291-4. Indian Banks continued to be in request at 88 and 88-4. Bank of Mysores were scarce at 215.

Textiles were steady. Buckingham and Carnatics were a bright feature with good buyers at 182-8 with nothing offering. Coimbatores and Cambodias were neglected. Maduras found buyers at 35. Gokaks were offered on Bombay account but no interest was evinced.

Electricals were firm. Benares were taken up at Rs. 12 cum. dividend and Rangoons at 23-8 cum. dividend. Cements hardened. Indians noted business at 312-8 and Shahabads at 300 whilst Bundis were wanted on Bombay account.

Sugars were quiet. Deccans were done at 290 ex dividend; Mysores at 8-4 and Belapurs at 202-8.

The rubber section was lifeless except for small deals in Cochin Malabars Ord. shares at 8 annas and the preferences at Rs. 19. No business passed in tea shares in the absence of sellers and the enquiry was also restricted to favourites. In the Miscellaneous section, Singareni collieries improved to 7-8. Kolar Gold Fields were lower on London advices. Nundyroogs were taken up around £3 and the Mysore Gold Mines at 18-7½. The market closed with a steady undertone.

BOMBAY STOCK EXCHANGE

(By Wire).

(From Our Correspondent).

Bombay, September, 15.

Government securities ruled quite steadily until last Thursday when they developed an easier tendency. 3½ per cent. paper touched the highest at Rs. 85-4 after its previous close of Rs. 85, declining to Rs. 84-5-6 and closing finally at Rs. 84-8.

The share market was closed during most days of the week due to settlement purposes and holidays. The textile industry finds it hard to compete with Japanese goods and the closures of more of the mills is likely, but rumours about a change in the rupee exchange has given temporary incentive to bulls. But prices of mill shares could not be sustained at advanced levels due to considerable liquidation.

Cement shares continue to be in the limelight while hydro-electric shares were quiet, developing an easier tendency. Imperial Banks old issues and Oriental Insurance scrips advanced to Rs. 1,222 and Rs. 3,710 respectively. The rates are as follows.

	Previous closing	Lowest touched	Closing to-day
Andhra Valley (ordy.) ...	1,475 0	1,469 6	1,470 0

JUTE AND JUTE GOODS

JUTE.

There has been a quieter feeling in the Jute market. Raw materials showed no change but qualities seemed to be cheaper than last week. New crop reports are quite satisfactory. There is a persistent rumour that the Indian Jute Mills alarmed at the increased stocks of sackings in Calcutta are contemplating restricting measures on the output of heavy goods. But so far nothing definite has been attained.

As reported in the first forecast sowing conditions were favourable in Bengal, monsoon weather being most beneficial for harvest operations in North and East Bengal and for growth in West Bengal. The crop under East Bengal is reportel to be good, the area under jute is 2,168,700 acres as against 1,845,700 acres in 1932.

The final forecast of the jute crop for 1933, for Bengal, Bihar and Orissa and Assam give the revised estimated area for these three provinces as 2,491,000 acres, which is an increase of 347,900 acres as compared with the revised final forecast for 1932. It is also estimated that this crop will yield 7,933,200 bales exceeding last year's total (revised) by 836,100 bales.

The consolidated returns are as follows:

Province.	Area in acres. 1932*	1933
Bengal (including Cooch Behar and and Tripura States)	1,845,700	2,168,700
Bihar and Orissa	170,000	192,100*
Assam	127,400	130,200*
Total ...	2,143,100	2,491,000*

Province.	Yield in bales. 1932*	1933
Bengal (including Cooch Behar and Tripura States)	6,213,500	7,092,100
Bihar and Orissa	543,500†	473,200†
Assam	340,100	367,900
Total ...	7,097,100	7,933,200

*Revised. †Including Nepal.

In the eight jute growing districts of Bihar and Orissa the area under jute was 192,100 acres compared with last year's estimate of 170,000 acres. In Purnea and Cuttack the outturn of the crop has been estimated at 40 percent and 76 per cent. of the normal. The import of jute from Nepal is estimated at 25,000 bales . In Assam, however the crop has been damaged to some extent by continous rain and also by insects while in the Surma Valley growth of the crop was checked by heavy rains in June.

Raw Jute exports.

The total exports of raw jute from Bengal during August 1933, according to the returns received by the Department of Commercial Intelligence, was 266,174 bales of 400 lbs. each of which 263,027 bales were exported from Calcutta and 3,147 bales from Chittagong. In August 1931 and 1932, exports totalled 186,743 and 152,074 bales. Shipments from Calcutta being 181,563 and 147,661 bales and the remainder from Chittagong.

JUTE MANUFACTURES.

The hessian marked was quieter during this week with less business passing and prices towards the close were slightly easier. September 10 oz. sold at Rs. 12-9 and Rs. 12-8 and October at Rs. 12-4 and Oct-Dec, 11 porters at Rs. 11-15. Heavy goods market was quiet and values unchanged. Liverpools were done at Rs. 26 and Sacks at Rs. 23-12 September.

DUNDEE.

Very little business was done in the hessian market.

Jute Yarns.—Some little business in hessian yarns has been reported by several spinners, 2s. 1d. being paid for common 8 lb. crops and 2s. 2d. for 8 lb. spools. These are still the lowest prices spinners will accept, and they have refused business at less. The finer yarns are quiet and quotably unchanged, but ½d. less would be possible with business, fourth grade Rio 8 lb. warp being obtainable at 2s. 2½d. and weft at 2s. 1½d. These rates are cheap in comparison with the ordinary hessian yarns, and manufacturers might do well to consider the fact that they can obtain a much better yarn at only ½d. per spindle more. Orders for twist are being received at from 3 9/16d. to 3⅝d. for 3 ply 8 lb., and some business is being done in sacking yarns at from 2 5/16d. to 2⅜d. for 24 lb. weft and 3 5/16d. for 8 lb. chains. Rove has come in for a good deal of attention, especially heavy sizes, the quoted rates of £19 for 48 lb. and £16 for 200 lb. being shaded in the case of good orders. Little mention is made of carpet yarns meantime.

Jute Cloth.—Only a very moderate business has been concluded in ordinary hession cloth, buyers evidently being inclined to await further developments, especially as manu-

SAUGOR ELECTRICITY SUPPLY CO., LTD.

NOTICE.

is hereby given that the Fourth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 18th September, 1933, at 3-0 p.m. for the purposes of receiving and considering the Director's Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th June, 1933, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 8th to 18th September, 1933, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

CALCUTTA,
The 7th September, 1933.

facturers have shown more disposition to shade their prices recently. Business has been done in 10½ oz. 40 in. hessians at 3 1/16d. and in 8 oz. at 2 5/16d., even in the wide widths. For delivery next year, manufacturers would accept 3d. for 10½ oz., and 2¼d. for 8 oz., but buyers are offering to purchase at less. Further good business has been done in linoleum hessians, and manufacturers of these are in a healthy position, contracts being placed for delivery well into next year both by home trade and America. Delivery in some cases is spread over the whole of 1934. Prices are inclined to be steadier. Heavy goods have been generally quiet, but sacking has been in better demand, and it is reported that an order for about 3,000 cuts has been placed in this market.

German Trade.—Business is still very quiet here, and buyers are hesitating to enter the market again. With exception of some orders received for sugar bags, there have been no larger sales in all sections of trade. The official quotations are not lower, but the general feeling is weaker.

Linen Trade.—Business is very quiet all round, and there is extremely little doing in any section of the industry. Pulling of the new crop is now in full swing in all districts, favoured by good weather, and steeping has begun in some parts. The crops in Russia and the Baltic States are expected to be much larger than last year. There is no material surplus from previous crops. Though sellers here would accept a little further reduction, spinners are not interested, as they are doing very little business in flax and tow yarns, prices of which are being well maintained. Spinners are still fairly busy on former contracts, and they are not so anxious for orders meantime. Trade in linen goods is inclined to be spasmodic, but generally quiet.

Total reported sales for the week ending Saturday the 2nd September, 1933.

COTTON AND COTTON GOODS

COTTON.

(*By Wire.*)

(From our correspondent).

Bombay Sept. 15.

In the Bombay cotton market there seems to be great activity on account of the approaching Pujah festival and the better tendency in the Piecegoods market. The passing of the Cotton Duties Bill in the Assembly has had no effect on the market and Bombay mills are doing a fair amount of business. In the Marwari bazar Broach April May opened steady at Rs. 197 on firm advices from New York but on account of the scattered Japanese selling there was a decline in prices. On short covering, however, the market again became firm and closed steady at Rs. 196-12, the highest rate being Rs. 197-4 and the lowest Rs. 196-4. Bengal December-January closed at Rs. 145-12 and Oomra December-January at Rs. 168-4.

Cotton shares have been dull and rates have had a hardening tendency due to the discussions which will take place shortly between the Cloth Producing interests of India, Britain and Japan. The American Bureau's second cotton report which was published on September 8, was the only interesting feature during the week. The spot trading value for American middling has shown a loss of 28 points on the Liverpool market while the closing price for Egyptians was marked down by 39 points. The spot value at New York opened weaker, but closed quieter with a drop of 60 points. The amount of new cotton ginned before September 1, was shown by the Census Bureau at 1,394,000 bales against 866,185 bales last year; 565,753 bales in 1931 and 1,879,919 bales in 1930.

PIECEGOODS.

The piecegoods market had a distinctly easier feeling during the week. This was due to the declining tendency in the price of cotton and finished article. Interest was mostly centred on the Bureau forecast, and though the report is more or less with general expectations, buyers have little or no faith in the existing values, and unwilling to operate on a free scale unless there is some signs of improvement in the offtake. In spite of these unfavourable circumstances, the market was well supplied with enquiries and actual business was not at all at a standstill. Indian mill—made goods experienced some activity but on a small scale while Lancashire production were also in evidence. Large quantities of Japanese goods are exchanging hands in the market at bazar rates but there seems no signs of fresh forward sales. It is anticipated that a better offtake might be expected owing to the coming Pujahs and dealers are looking forward in the hopes of making up for poor results.

The improvement in this market is reflected by the negotiation of small stocks of Lancashire light whites, white yarn, dhooties and dyed fancy styles. A clearance of stocks of coarse and medium counts stimulated the market resulting in a slight improvement in prices.

BULLION

GOLD.

(*By Wire*)

(From our correspondent).

Bombay, September 15.

The steadying up of the sterling-france rate in the earlier part of the week (from the 7th to the 11th) was reflected in the local rate which came down from Rs. 32-7-6 on the 7th to Rs. 31-15-6 on the 12th. The advance from this to Rs. 32-3-6 is also in sympathy with the London trend. Despite fluctuations, the undertone is firm.

The gold market in London advanced from £6-10-7 on the 6th to £6-11-0 which remained the rate for the 7th and 8th. After that it gradually declined till it reached £6-7-7 on the 12th. But the latest quotation available for the 13th shows an advance to £6-9-2, due to the sterling-franc rate having declined. The New York Cross rate which was 4.56¼ on the 6th gradually declined to 4.52⅜ on the 9th and advanced thereafter to 4.58⅝ on the 13th. The sterling-franc rate of 80.53 on the 6th also advanced steadily to 82.71 on the 11th, but declined after that date, the latest quotation for the 13th being 81.53. The rupee-sterling rate has come down to 1s. 6d. The local market in gold reflected the weakness of the sterling-franc rate in the earlier part of the week and the later steadying up. Prices rose from Rs. 32-3 on the 6th to Rs. 32-8 on the 7th and then quietened down to Rs. 31-10-6 on the 12th. As in the case of the London market, the latest quotation in the local market also registers an advance to Rs. 32-1. Movements are bound to be irregular so long as fluctuations in the sterling-franc rate are wide. Stocks in Calcutta amount to 20,000 tolas.

CALCUTTA

Branches at:
BOMBAY, MADRAS, ALLAHABAD,
PATNA, DACCA

The higher level of prices which ruled in the market during the week reflects the extent of the depreciation of sterling in terms of the gold currencies. The rate for gold per fine ounce rose to 129s. 4½d. on the 29th, this being the highest quotation since 5th December, 1932, on which date a price of 130s. ½d. was fixed.

Fair amounts of gold were offered daily in the open market, but there was keen competition among the buyers which resulted in prices fixed ranging from 6d. to 10½d. over parity. Most of the supplies were taken for the Continent.

The following were the United Kingdom imports and exports of gold registered from midday on the 21st instant to midday on the 28th instant:—

SILVER.

(From our correspondent)

By Wire.

Bombay, September 15.

The market showed gradual advance, but was otherwise without features. Mint silver ready stands at 56-9, first settlement at Rs. 56-10 and second settlement at 56-11.

London values for spot silver having remained at 18 1/16d. till the 9th advanced to 18 1/8d. on the 11th and 18 3/16d. on the 12th, but declined to 18 1/8d. on the 13th. Values for forward silver advanced from 18 1/8d. on the 6th to 18 1/4d. on the 8th, declined to 18 1/8d. on the 9th, but advanced again to 18 1/4d. on the 11th and came down to 18 3/16d. on the 12th. New York silver which stood at 36 3/4 cents on the 6th varied from 37 to 36 5/8. It was 37 on the 11th and has advanced to 37½ on the 12th. The local market was quiet and neglected, the fluctuating market in the yellow metal having attracted the speculators. Prices varied within narrow limits till the 9th that is, round Rs. 55-10 and have advanced to Rs. 56-4 on the 12th. The quotation for the 13th is Rs. 56-2. Stocks in Calcutta amount to 2,200 bars and the daily offtake continues to be 3 bars.

LONDON (Air-Mail Week.)

During the week, values fluctuated within narrow limits. The prices 18 1/8d. and 18 3/16d. for cash and forward transactions show respective rises of 3/16d. and 1/16d. Speculators were inclined to sell at the higher levels, but owing to the consistent support which was forthcoming from China, the undertone of the market was kept steady.

Sales from China also took place, while some purchases on behalf of the Indian bazars were effected. America also sold, and in the afternoons both bought and sold without, however, exerting pressure.

There is no change in the outlook and the sterling dollar exchange continues to be the important factor.

The market showed gradual advance, but was otherexports of silver registered from midday on the 21st instant to midday on the 28th instant:—

COAL.

A good amount of business has been done in these shares and prices have been higher than last week. There has also been readiness to take profits, and prices have dropped in most cases, but the undertone on the whole has been firm and there are signs of renewed support at a little below present quotations.

TEA

At the tea auction held this week the offerings totalled 16,500 packages of which 7,000 chests were dust tea. The sale passed with an active tone and prices were very firm to 3 pies dearer. Leaf grades and broken pekoes were the most favoured grades but dusts, too, seemed to be much dearer.

The Ceylon Government has issued a Proclamation fixing October 2 as the date from which prohibition of the export of made tea, except under license in terms of the Tea (Controller of exports) Ordinance, will come into effect. Due to this prohibition no tea can be exported from Ceylon on and after that date.

The following are full particulars of Sale No. 14:—

The following were the value prices:—		
Clean Common Pekoe ...	10d.	10d.
Clean Common B. Pekoe ...	10d.	10d.
Clean Common O. Pekoe ...	10¼d.	10⅜d.
Clean Common B. O. Pekoe	10¼d.	10¼d.
Clean C. B. P. Souchong ...	9¾d.	10d.

JAVA TEA SALES

At the London auctions on 8th September 7,400 packages of Java and other teas (including Sumatra) were submitted for sale.

There was a fair demand for all descriptions. Common and medium qualities were firm at last rates. Tippy sorts were in request and sold well. Export inquiry was strong.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 7½d., to-day's auction 8d. lb.; Common Broken Pekoe last auction 6½d., to-day's auction 7½d. lb.; Common Orange Pekoe last auction 8½d., to-day's auction 8¾d. lb.; Common Broken Orange Pekoe last auction 7¼d., to-day's auction 7¾d. lb.; Common Broken Pekoe Souchong last auction 8d., to-day's auction 8d. lb.

The following were the value prices:—

Clean Common Pekoe last auction 8⅛d., to-day's auction 8⅛d. lb.; Clean Common Broken Pekoe last auction 7⅞d., to-day's auction 8d. lb.; Clean Common Orange Pekoe last auction 9⅛., to-day's auction 9⅛d. lb.; Clean Common Broken Orange Pekoe last auction 8⅜d., to-day's auction 8⅜d. lb.; Clean Common Broken Pekoe Souchong last auction 8d., to-day's auction 8d. lb.

CEYLON TEA SALES

At the London auctions on September 12, 25,000 packages of Ceylon tea were submitted for sale.

There was a good demand for common qualities. Fine teas were firm. Thin liquoring medium sorts were irregular and often easier.

The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day's auction per lb.
Common Pekoe	10¼d.	10¾d.
Common Broken Pekoe ...	10d.	10¼d.
Common Orange Pekoe ...	11¾d.	12d.
Common B. O. Pekoe ...	11d.	11½d.
The following are the value prices:—		
Clean Common Pekoe ...	11d.	11½d.
Clean Common B. Pekoe ...	11¼d.	11½d.
Clean Common O. Pekoe ...	12¾d.	13d.
Clean Common B. O. Pekoe ...	12¼d.	12¾d.

purpose which foreign long-stape cotton serves? If Indian cotton be so unsuitable for our mills, how was it that Japan imported Indian cotton on a very large scale? He must be a bold man, who can boast that Japanese cloth is inferior, in quality, to Indian mill-cloth.

Now that the purpose of protecting Indian textile industry has been achieved, the public will turn its attention to cleansing the stables of mills, weighted with managing agency systems. If the Government tarry, or be tardy in the measures to be undertaken, the short cut of strikes will, in all probability, be tried, causing an utter paralysis of the textile industry. A cloth famine in a country, protected with high tariff walls, is a proposition which no Government can complacently look forward to. The best and the safest interest of the Government lies, therefore, in bringing forward legislation with a view to compel production to minister to the needs, and advantage, of the consuming public.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

THE DEBATE ON THE RESERVE BANK BILL

The Reserve Bank Bill has been smoothly ushered into the committee stage in the normal legislative process. It was a foregone conclusion. For not only is a Reserve Bank accepted on all hands as an urgent desideratum but, the controversial issues connected with its constitution have, from the first, been reserved for discussion in the Joint Committee. For their part, the Government have postponed the exact formulation of some of the important provisions in the shape of clauses in the Bill. And the members of the Assembly generally, and particularly those who have aspired to a place in the Committee, have felt that there is still some time left for them to acquire an acquaintance with the problem before the more crucial stages of this legislation are reached. There was thus an air of unreality about the whole debate, members exhibiting, as our Simla correspondent points out, an anxiety more to show off their knowledge or independence, neither of which was very considerable, than to make a contribution to the discussion. And so it happens that this first reading of the Bill was a meaningless formality.

* * *

This would not be regrettable, if the public could be assured that the discussions and decisions of the Committee would be more realistic. But what guarantee is there that the members of the two Houses, who have been attracted to the committee by a craving for "honours", rather than called by a sense of duty, will acquire sufficient knowledge and integrity to be able to influence the Reserve Bank legislation?

* * *

"Eavesdropper" who is now at Simla is somewhat hopeful, judging from his gossip appearing in this issue. And it is evident from the speeches in the Assembly, which were delivered after the members had the benefit of listening to Mr. C. S. Rangaswami in the lobby, that there have been some last minute conversions to the idea of a state bank as against a pure shareholders' bank. There is still but inadequate appreciation of the irrationality of making the Reserve Bank the property of a number of private shareholders. In his reply to the debate, Sir George Schuster adduced in defence of the scheme he is sponsoring, the fact that history is full of instances of countries getting into trouble through the interference of political authority in matters monetary. But Sir George Schuster has not explained how any public institution like the Reserve Bank could possibly free itself from the authority of an autonomous legislature. If it is true that most monetary troubles are due to the interference of political authority, the solution does not lie either in the transference of such authority to foreign hands or in the handing over of the Reserve Bank to a private body. In all such cases, the real safeguard of the public interests lies in building up a sound tradition and in producing the proper *personnel* with the requisite ability, talent and tact. If, on the one hand, there is danger in a state bank being submerged by the uncertainties of party politics, there is equally on the other side, the danger that a body of private shareholders may ultimately incline towards vesting the predominant voice in the hands of a commercial caucus. It is fortunate that, for the moment, this dilemma has been overcome by the swinging of the bulk of opinion in the Assembly towards modifying the present scheme of a shareholders' bank by inserting the provision that the State should, after a certain period, have the option of buying up the shareholdings. Much as we would like to see the Reserve Bank initiated as a full-fledged state bank, we believe that, if the Select Committee could succeed in inserting the provision referred to, the country will have reason to feel thankful that it has had a most desirable settlement. For the period, in which the shareholders scheme will endure, would form a period of experimentation, in which the public could have more reliable evidence on which to base its final choice. We shall have ample opportunity to watch the manner in which shareholders choose their directors, and the extent to which the directors would be sensible of their responsibility to the country at large. In watching such experiments, it must be remembered that the claims Traditionally made on behalf of the directorate of the Bank of England are no longer held to be beyond question. More than one writer of repute has in recent times inclined to the view that the Court of the Bank of England should no longer be the exclusive preserve of the banking interests in the City. Much of the argument in favour of the shareholders' bank rests on the tacit assumption that the choice of the shareholders in the case of the Bank of England has always been unquestionably the best. Now that the Assembly is at the point of deciding in favour of the shareholders' bank as a merely tentative scheme, it is necessary only to urge that in judging its working in future we shall bear in mind that the test of success does not lie as, in the case of England, in the regulation merely of the exchanges and the bank rate.

* * *

In the case of India, the prime test of the working of the Reserve Bank would be how far it has enabled, on the one hand, the developments of the banking habit and the provision of banking service to the remotest corners of the country and, on the other, the consolidation and the rationalisation, if we may say so, of the entire financial machinery. So long as the question of the international monetary standard remains obscured by the chaos of monetary practice and the nebulea of monetary theory, it is futile to hope that any one central bank will be able to discharge adequately its duties in respect of the external value of a national currency. All that we in India could demand, especially as we bear in mind the repeated injuries done to us in the past, is that the Reserve Bank shall not be asked to maintain a rupee ratio which in practice would only mean the denudation of the economic life blood of the country. The latest developments in monetary thought incline to the view that the exchange ratio is always of necessity a tentative one and that the ideal ratio is that which ensures the continuance of the normal equilibrium between payments to and from the country. Though there is a degree of common sense in the view urged in the course of the Assembly debates, that the present is not suited to a reopening of the question of the rupee ratio, there can be no question that before the Reserve Bank begins to function actively, the country must be assured that the preservation of the value of the rupee at its present level does not involve undue privations for the nation. We may, therefore, say that, while the question of the ratio is important only for the avoidance of any serious strain on the resources of the Reserve Bank, its ultimate success should be judged by its contribution to the country's banking system.

* * *

It is in this context that the agreement between the Imperial Bank and the Reserve Bank attains its full importance. We are constrained to observe that

in the course of the debates the Imperial Bank of India was the target of many an irrelevant attack. What is relevant to the discussions of the Reserve Bank Bill is whether the concessions and emoluments proposed for the Imperial Bank are such as to retard the growth of other banking institutions in the country and thereby delay the growth and useful functioning of our banking system. In this matter, the impact of the last big expansion of the Imperial Bank on the indigenous joint stock banks leaves no room for doubt that the spread of a colossal institution like the Imperial, desirable in itself, must be judged in relation to the scope of other banking institutions. As between the Imperial Bank and the Reserve Bank inter se, the fact that the Bank is not now deprived of any of its legal rights, puts an altogether different complexion on the affair. If the composition of the Joint Select Committee were to be broad-based on the different sections of opinion in that body, and if the speeches in the debate reflect the strength of feeling and the sincerity of purpose of the members, we might confidently look forward to a revision of these provisions in a way more in consonance with the true banking interests of the country. Considering that the points, on which we have been laying emphasis, are the provision for the change from a shareholders' bank to a State bank, provision of opportunities for Indian banking institutions to take their due share of the banking development in the country and the freedom of the Reserve Bank to pursue a monetary policy undeterred by the considerations of an untenable ratio, we believe that the Assembly debates still leave a ray of hope that the Reserve Bank Bill will approximate more to our ideal.

THE WHEAT AGREEMENT

In our comments on the wheat agreement, in our issue of September 2, last we had, of necessity, to deal with the general principles embodied in the agreement, though we also provided the statistical material on which any judgment of its practical value must be based. But it will be remembered that at the time the world wheat agreement was announced, the question of the apportionment of the export quota among the big four exporting countries had not been settled and that the agreement with the importing and other sections was signed on the assumption that there would be no difficulty in the exporting countries coming to an amicable settlement. The wheat agreement only provided that the total exports of the four leading countries, namely, the United States, Canada, Australia and Argentina would be based on an assumed world demand of 560 million bushels. While the supplementary agreement in this regard was being drafted in London, considerable misapprehension ruled as to the possibility of attaining an all round agreement. Mr. Wallace, the American Secretary of State for Agriculture, pointed out in a statement issued by the official department in Washington that while, "word has been received of verbal commitments covering these details, the Department is withholding comment and the announcement of its wheat plans until the agreement is signed by all four exporting countries." When questioned as to the points upon which uncertainty still ruled, the Department declined to give any explanation. In the later stage, the Argentine Delegate threw a bombshell in the shape of an announcement that he had not been empowered by his Government to sign the agreement. But it is gratifying that without much delay, the differences were composed. It is reported that Mr. Wallace announced on August 31, last that the distribution between the big four exporting countries of the combined world exporting total of 560 million bushels laid down in the London Wheat agreement was as follows:-

			Million bushels.
Canada	...	...	200
U. S. A.	...	...	47
Argentina	...	...	110
Australia	...	...	105

The total of 462 millions falls short of the export quota laid in the wheat agreement as the figure of 560 million bushels contains the provision for the possible exports of European countries other than the Danubians and Russia. The Danubian exporters were accorded 50 million bushels with a possible increase of 4 million bushels, if the crop justified it, in the final act of the Conference itself. It is not known how much is allotted for the other possible European exporters. It is estimated that the French export alone would amount to eight million bushels; and it is apprehended in some quarters that in the near future the trade will also be affected by continued offers of cheap German wheat. Thus, in this dispensation, Russia would be subjected to a squeeze and this is all the more regrettable as reports of excellent Russian crops continue to arrive.

* * *

The more concrete and immediate results of the wheat agreement may also be recorded here. The first and most tangible effect was the increase in the price of wheat on the English markets immediately on its announcement. Secondly, the settlement enabled the Ministry of Agriculture in the United States to announce the reduction of seeded acreage by 15 per cent. But pessimism as to the value of these measures still continues to reign. An Argentine newspaper is credited with the comment that though a rise in the price of wheat is now assured, it is by no means certain that every one will have bread to eat. The millers seem to agree in the view that the wheat agreement may very possibly result

AGRA, AJMER, AHMEDABAD, ALLAHABAD, AMBALA, BANGALORE, BAREILLY, BEZWADA, BHOPAL, COLOMBO, DACCA, DELHI, GAUHATI, JALGAON, KARACHI, KUALA LUMPUR, LAHORE, LUCKNOW, MADRAS, MANDALAY, MARCARA, MOMBASA, NAGPUR, PATNA, POONA, RAIPUR, RAJSHAHI, RANCHI, RANGOON, RAWALPINDI, SINGAPORE, SUKKUR, TRICHINOPOLY, TRIVANDRUM, VIZAGAPATAM

in their having to increase the price of bread. If the only tangible result of the long-drawn deliberations in London is dearness of the world's staple food, then the wheat agreement must, in relation to the world depression and the prospects of recovery, be considered to have only an adverse significance. In estimating this view no value can be attached to the expression of satisfaction which the delegates to international conferences always profess about their own handiwork.

* * *

It is the opinion of Mr. George Broomhall that though the aims of the world wheat agreement are praiseworthy "the methods proposed to realise these aims are the reserse of sound and, if persited in, may conceivably aggravate the depression, rather than relieve it." For the real cause of the unfortunate impasse of world wheat is that on the top of the bumper crops of 1928 with their consequential decline in the price of wheat Governments took action to protect their own agriculturists. That action started a vicious circle, for with every such action, the need for it was on the increase. Whatever one may say in defence of the doctrine of national self-sufficiency, it must be confessed that in the case of most of the European importing countries free-trade in wheat is a measure of true economy, from which there is no convincing reason why the national economy should suffer any serious or permanent injury. For the relative advantages in the production of wheat enjoyed by the big exporting countries and the new experimenters in agricultural protectionism are too substantial to be easily foregone. A real wheat agreement designed to secure an increase in prices without a fall in consumption must be directed to the removal of those irksom obstacles to free trade and the abandonment of the regulations which can be described only as the result of protectionism run amok. And it is a matter for regret that the London Conference was able to achieve next to nothing in this regard. The principle that the import regulations may be altered only after the world price has attained a cetain level is quite understandable. But the Conference cannot acquiesce in the principle that even after that date changes in tariffs should be left to the sole discretion of the respective legislatures. If contracting parties are to retain freedom of action in regard to crucial points, there is no contract worth the name.

* * *

Apart from such general principles, there is one vital point of criticism which can occur only to those who are closely acquainted with the conditions of the wheat trade. Like most other schemes of restriction, the wheat agreement also aims only at the limitation of exports and not the reduction of output. It is content to stipulate in the case of the European importing countries that they shall not extend the acreage; and it is needless to add that in the case of the exporting countries such a stipulation is hardly necessary. Mr. Broomhall in a special article in the *Financial News* points, out that in the case of the European importing countries, the difficulty is not the extension of acreage, but the progress of intensive cultivation. For all the cultivable land has been pressed into cultivation; and it has been rendered possible for farmers through the protective tariffs to carry on an intensive cultivation. The following statistical table shows the extent of the danger visualised by Mr. Broomhall.

		Yields per acre 5-year period 1928-1932.	5-year-period 1923-1927
Germany	...	31.5	27.3
Italy	...	20.5	17.9
France	...	22.1	21.8

The increase of 8½ million quarters from these quarters constitutes a threat against which the wheat agreement is utterly defenceless.

THE ALARM IN KENYA.

The Indian problem in Kenya is one of the many momentous subjects, which the Viceroy has just slurred over in his recent address to the members of the Central Legislature. He fiddled that "complete harmony among the different communities may be rapidly established" in Kenya, if only because Indians have decided, without prejudice to their preference for the principle of a common electoral roll, to enter the Legislative Council. But, Indians in Kenya expected the Viceroy to utter a cheery

word in their political and economic distress, and to gird up his loins for a fight with His Majesty's Government in the Colonial Department.

The Viceroy did neither. The Indian decision to enter the Kenya Legislative Council seems to have impressed him with feelings of riddance of an unwelcome claim on his time and energy. He is far too obsessed with Gandhiphobia to care for lesser themes of statecraft.

* * *

Indians in Kenya will, therefore, have to fight their own battles, unaided. As for advice or guidance, the lesser the dependance on the Government of India, the quicker will the political progress of Indians in Kenya be. Have they not missed the opportunity, on the advice of the Government of India, of reopening the Constitutional question, in 1928? What recompense have they had for this filial loyalty? The unofficial European Community has completed its plans for tying up Indians, hand and foot, politically and economically. Indians have discovered the European programme none too soon, and have voiced their protest in the most unequivocal terms.

* * *

At the end of July, the East African Indian National Congress, under the presidency of Seth Yusufali Esmailjee Jivanjee, M.B.E., took up its stand upon a revision of the Constitution, in order to implement the policy of His Majesty's Government, enunciated in the White Paper of 1930 in these words:—

"The goal of constitutional evolution in Kenya, as elsewhere, is admitedly responsible Government by a ministry representing an electorate in which every section of the population of Kenya finds adequate and effective voice and that the establishment of the common roll is the object to be aimed at and attained with an equal franchise of a civilisation or education character open to all races."

* * *

The Congress demanded the appointment of a Committee, by the Government, with an adequate representation of the Indian Community on it, to find out ways and means for the establishment of a common electoral roll; no change in the present financial control by the official majority, until after the establishment of the Common Roll and the full representation, in the Legislative Council, of the interests of all inhabitants of the Colony; and the increase of the Indian representation on the Kenya Legislative Council substantially at the earliest opportunity, during the interim, pending the introduction of the Common Roll.

The occasion for the Indian alarm in Kenya was the decision of the European Unofficial Conference, held at Nairobi on July 3, in direct contravention of the evidence of Lord Francis Scott before the joint Parliamentary Committee, only a couple of years ago, when he stated:—

* * *

"As regards the immediate political future, the Delegation do not ask for any constitutional changes either in the direction of a Federal Constitution with the neighbouring territories or early alteration in the composition of the Kenya Legislature. . . . What we want more than anything else is a few years of stability, in order that the various roots may have

a chance to grow, during which time there must be a continuity of policy and concentration on those administrative and economic problems that face us, rather than any constitutional or political changes."

The noble Lord further said that "all races inhabiting the colony have common interests in its economic progress and its political stability."

The Secretary of State for the Colonies in his despatch of July 13, last year, while not proposing to change the existing arrangements, agreed with the view of the Joint Committee that the "interests of the overwhelming majority of the indigenous population should not be subordinated to those of a minority belonging to another race, however important in itself".

* * *

But, secret negotiations, between the Secretary of State for Colonies and Lord Francis Scott when the latter was in Britain, preceded the Nairobi Conference, whose resolutions were based on the alleged understandings between the British Minister and the Kenyan legislator. Mr. Jivanji, the President of E. A. I. N. Congress claims to have learnt of the secret negotiations from the acting leader of the European elected members and the President of the European Unofficial Conference, Captain the Hon. H. E. Schwartze.

Who can elicit the truth, or otherwise, of these negotiations and understandings, if not the Viceroy of India?

* * *

Has he done so? If not, will he promptly do so? These posers should have been anticipated, and the answers broadcasted, in his address to the Legislature. Will he protest, now at least, against the creation, if true, of a Statutory Finance Committee behind the backs of Indians? Will he also press for the immediate increase of the Indian representation in Kenya Legislative Council, as well as the early introduction of the Common Roll? His reference to this subject was, however, far from reassuring.

* * *

While the Secretary to the Government of India in the Department of Education, Health and Lands, could say, in reply to Mr. Gaya Prasad Singh in the Assembly, that the restrictions upon Indians buying land in the highlands of Kenya applied only to agricultural land, the taint of racial discrimination, involved in the Secretary's reply, has been amply provided for, by the Secretary of State, in Paragraph 122 of the (India) White Paper, with a view to perpetuate it. Thus:

* * *

The Federal Legislature and the Provincial Legislatures will have no power to make laws subjecting in British India any British subject (including companies, partnerships of associations constituted by or under any Federal or Provincial law), in respect of taxation, the carrying of any profession, trade, business or occupation, or the employment of any servant or agents, or in respect of residence or travel within the boundaries of Federation, to any disability or discrimination based upon his religion, descent, caste, colour or place of birth; but no law will be deemed to be discriminatory for this purpose on the ground only that it prohibits either absolutely or with exceptions the sale or mortgage of agricultural land in any area to any person not belonging to some class recognised as being a class of persons engaged in, or connected with, agriculture in that area, or which recognises the existence of some right, privilege or disability attaching to the members of a community by virtue of some privilege, law or custom having the force of law. Federal or Provincial law, however, which might otherwise be void on the ground of its discriminatory character, will be valid if previously declared by the Governor-General or Governor, as the case may be, in his discretion, to be necessary in the interests of the peace and tranquility of India or any part thereof.

* * *

Here is the rub. While Paragraph 122 of the White Paper professes to grant reciprocity powers, in the matter of alienation of agricultural land, to the Federal or Provincial law, they are nullified by the powers, vested in the Governor-General or Governor, previously to declare any law, otherwise void, to be valid on the score of its necessity in the interests of the peace and tranquility of India or any part thereof. To tar, with the same brush of racial discrimination, the Indian legislation under the Reforms Scheme, is bad enough. But, to circumvent it through a mischievous proviso, resulting in robbing Indian Nationals of unquestioned and paramount powers to reciprocity, is unutterably despicable. The supplementary questions, to the Education Secretary on the floor of the Assembly, in order further to clarify this position, were neatly evaded with a promise of communicating the questions of Mr. N. M. Joshi to proper quarters, namely, the Joint Parliamentary Committee.

* * *

But, kenya adopted the reverse process. The Governor, there, was first invested with the power of veto, by the Crown Lands Ordinance of 1915, against alienation of land in the Highlands, for agricultural purposes, to persons of Asiatic origin. Here, the Governor-General or the Governor is empowered to alienate agricultural land to any British subject, in the interests of the peace and tranquility of India or any part thereof. How this phrase stinks in Indian nostrils!

The (Kenya) White Paper of 1923 finally confirmed the reservation of the Highlands for Europeans. Not more than eleven per cent. of the total alienated area could be developed, so far, by the Europeans, and even that at a very dear cost to the Colonial Exchequer in the shape of subsidies, paid to maintain the European farmer on land and to assist him in marketing his produce. As against this picture, the Indian agricultural enterprise is known to be uniformly successful, singularly intensive and absolutely self-reliant in Buganda and Bunyoroin Uganda, in Kilimanjaro highlands of Tanganyika and in the low-lying Nyanza province of Kenya.

* * *

The Indian Community's grievances in this matter were taken, by the E. A. I. N. Congress representative, to the Morris Carter Land Commission in 1932, for redress. But, the Commission

INCOME-TAX EXPERT.

thoroughly conversant with procedure for claims against Income Tax authorities and who can advise on Returns, etc. can be consulted by gentlemen home on leave from India.

would only record the Congress view, as it was not authorised to entertain any evidence on this issue.

* * *

But, has the Government of India any light to shed on the labyrinths of this racial enormity, perpetrated on Asiatic British subjects in a Crown Colony of the British Empire? Even a majority of the European community in Kenya is reported to have no objection now against the removal of the Governor's veto, on the transfer of lands to persons of Asiatic origin. Does the absence of any reference to this aspect of the question, in the Viceroy's address or in the answers of the Education Secretary, mean indifference only, or reluctance also? This by no means, is, the only just grievance of Indians in Kenya.

* * *

On top of this, the formidable array of allegations of racial discrimination against Indians in Kenya compel a careful scrutiny. Will the Government of India frame posers to the Government of Kenya and elicit answers to the following allegations?

"The Indian Trader has been eliminated from the Wheat Export Trade, and an attempt was made this year to eliminate him from the maize trade. The Indian farmer, in the narrow area he is allowed to own land, has not been granted any benefit from the agricultural subsidies and credit schemes devised for the benefit of farmers. No scheme for Indian Agricultural settlement has yet been devised. The Indian transport worker has been suppressed and the Asiatic community in general has been subjected to severe taxation in response to the agitation of a section of unofficial Europeans against the income-tax."

* * *

What guarantees have the Government of India secured for Indians in Kenya, against racial discrimination?

The only safeguard is the sweet will and pleasure of the Governor of Kenya to use the Crown's veto, or employ the official majority in the Council to throw out legislation tainted by racial discrimination. But, the administrative flaws, betrayed in the previous quotation, do not leave any hope of justice or fairplay for Indians. The crying need of the hour is, therefore, the statutory safeguarding of Indian interests against frequent onslaughts and encroachments.

The need is easier stated, than fulfilled. Will the Government of India essay itself to the task? Can it succeed, if it will? If not, what resources do Indians in Kenya command for achieving the well-nigh impossible? Though they are 37,000 in number and the Europeans only 15,000, there is no comparison between the two communities, in power, pelf and influence.

But, the Indians can start educating the native population and hold Joint Conferences with its representatives for concerted action on common interests in the economic progress, and political stability, of the Colony, and explore other fresh avenues for contact with the indigenous population.

The sooner, the better!

THE NATIONAL INDIAN LIFE INSURANCE COMPANY

The New Business of the National Indian Life Insurance Company during the year 1932 has suffered a slight setback. The world-wide depression in trade for the past three years reached its zenith in 1932, and it has left its impression even on most of the insurance companies, both Indian and Foreign. In spite of the fact that the number of policies issued by the National Indian during the year 1932 were twelve more than those of 1931, the total net New Business of the year under review at Rs. 17,46,500 was Rs. 2, 74,000 less than that of the year 1931. This happened on account of the fact that the average sum assured per policy during the year decreased by Rs. 196 to Rs. 1,471. It may be mentioned that the total amount of proposals received during the year at Rs. 30,79 lakhs showed an actual increase of Rs. 1,97 lakhs compared to the previous year; but as the quality of the business received was inferior more cases were declined and modified with the result that the effected business showed a decrease. The following tabular statement shows the position of the Company during the past four years:

In thousands of Rs.

Year.	Net New business.	Total busidess in force.	Total premium income.	Claims paid death and Maturity.	Total life fund	Total assets.
1929 ...	23,87	1,46,09	7,62	3,02	33,95	37,47
1930 ...	20,09	1,50,54	7,55	3,17	37,00	40,87
1931 ...	20,21	1,49,90	7,67	3,24	40,33	43,87
1932 ...	17,47	1,49,90	7,33	5,35	41,54	45,58

Branches: CALCUTTA. BOMBAY. CHITTAGONG

As shown by the above figures, both the New Business and the total business in force have suffered slight decreases during these depression years. The total premium income at Rs. 7,33 lakhs has dropped by about Rs. 34,000 as compared to that of the previous year. It is noteworthy that the life fund and the total assets of the company have been increasing steadily year after year. The claims paid by death and by maturity show a rather heavy increase during the year. This is on account of the fact that 102 war loan policies involving delivery of 5 per cent. war loan scrips to the face value of Rs. 2,03,264 matured during the year, thereby closing the scheme of the special war loan policies issued by the company during the year 1917. The expense ratio of the company during the year at 38.1 per cent. is rather high for a company of its standing and shows an increase of 2.5 per cent. compared with that of the last year. This increase is accounted for by the adjustment of the commission of the Managing Agents, Messrs. Martin & Co. Another factor which accounts for the increased expense ratio is that, while the actual expenses of the company have slightly decreased, the total premium income also has decreased, with the result that the ratio of the expenses to the premium income has increased. The average rate of interest earned on the total assets of the Company at 5.8 per cent. is quite satisfactory, particularly in view of the stable nature of investments of the assets. During the year, the life fund has been increased by Rs. 1.21 lakhs to Rs. 41.54 lakhs.

* * *

The Balance sheet of the company as at 31st December, 1932 is far more satisfactory than the statement of new business. It is no exaggeration to say that we rarely find such balance sheets among Indian concerns. The assets are well distributed and are assets in their true sense. The liabilities side shows a capital account of Rs. 1 lakh, a life fund of Rs. 41.54 lakhs, and outstanding claims of Rs. 2.21 lakhs. On the assets side, the giltedged securities at Rs. 22,22,000 account for 49 per cent. of the total assets of Rs. 45,58,000. Mortgages on properties in India amount to Rs. 11,95,000 (26 per cent. of the total assets) ; policy loans at Rs. 5,71,000 account for 13 per cent. of the assets ; equity shares share 5 per per cent. of the assets (Rs. 2,33,000) and the rest of the assets account for 7 per cent. Though the market value of the investments (giltedged securities and equity shares) amount to Rs. 25,74,000 on the date of the balance sheet, credit is taken only for Rs. 24,56,000 (being the value as at cost or as on 31-12-1929). Another outstanding feature of the balance sheet is that the outstanding premiums and interest on the asset side is very low .The outstanding premiums on the date of the balance sheet amount only to Rs. 95,000 and out of this, we are told, Rs. 71,000 have been realised before the date of the general body meeting. Thus in all respects the balance sheet is entirely satisfactory.

* * *

The next quinquennial valuation of the Company is due on 31st December, 1934. The previous valuation of the assets and liabilities of the Company as on 31st December, 1929, disclosed a surplus of Rs. 2,77,935 and the Directors have declared a reversionary bonus of Rs. 10 per thousand per annum on all "with profit" policies.

DESPICABLE EFFRONTERY!

It is, unfortunately, one of the incidents of any manner of public service to have to answer baseless charges and meaningless innuendoes. Our attention has been drawn to a paragraph in the *Commercial Gazette*—we cannot return the writer in our contemporary the compliment implied in his regular reading of our columns—in which our correspondent, "Eavesdropper", has been taken to task with despicable effrontery for his "gossip" in our issue of September 2. The omission of "Mr." in mentioning the name of Mr. Nalini Ranjan Sarker seems in this essentially pointless attack to be the head and front of our offending. The mistake was, in fact, due to the somnolence of a sub-editor at the late hour at which the telegram containing the "gossip" was received in this office. But what is the offence to this obscure scribe in a writer of well-known identity referring to a gentleman—friendship between them is equally well-known—by his name, and with unmistakable affability? It is the privilege of a publicist to refer to leaders in every walk of national life with an air of familiarity. Mr. Roosevelt's rival at the democratic convention is to all Americans, simply, "Al" Smith. Sir Joynson Hicks was always "Jix" in the British press. And yet our contemporary would on this pretext let its columns for unseemly spleen.

* * *

There are other baseless insinuations which are best left alone. But no one, who knows the identity of "Eavesdropper" could believe that he need be obliged to anyone for admission to those social functions, from which, apparently, the author of this noxious paragraph is still kept at a safe distance. "Eavesdropper" was a host of Princes and a Prince of hosts before his present detractor could have exchanged any manner of social convivialities. Our critic has reserved the sting for the tail and refers at the end to the "famous tip given on the occasion of the 3½ per cent. Rupee Loan of May last". Ignorance of finance is, doubtless, an insurance against such taunts. But if the writer would consult anyone who knows these matters, he would learn that for the *debacle* in the giltedge market it is not we, but others that must hang their heads in shame.

* * *

But we must own to having made more of this than it deserves. We must point out, however, that "this cheap tipster", on whom our contemporary has allowed this unprovoked and scurrilous attack, was, probably at the very moment it was being written, enlightening the members of the Assembly, at their request, on so important a measure as the Reserve Bank Bill.

* * *

There are ways and ways of attaining distinction in journalism. It has fallen to the lot of *Indian Finance* to gain a measure of recognition by right of solid service. And mere chagrin at precocious ability can only turn senility into a raving madness. And as for the advertisement value of cheap notoriety, we can only say that you cannot seek to keep your coin current merely on the strength of Gresham's Law.

"POOR MAN'S COW".

It is a matter of common experience that problems of rural economy in India are woefully neglected. The explanation is simple. As a corrollary of foreign domination, foreign language is invested with an undue importance. The Press as the vehicle, or rather the omnibus of thought is unquestionably a Western institution. It followed, therefore, that newspapers and periodicals were published in English, and had their widest circulation in towns and cities, to which the reading public steadily gravitated, mainly for economic reasons. As such, the interests of the townsfolk had to be nursed by the Press, if it should receive wide patronage.

* * *

Thus, for an unconscionably long time, the rural population which forms a preponderatingly large majority in the country, has been severely left alone, without so much as any design or deliberation. Not until the political awakening, caused by the Indian National Congress since the eighties, was complete, did problems of rural reconstruction really engage

the serious attention of the politician and the publicist. Representative institutions, however partial, and wider franchise, however meagre, taught the imperative necessity of educating the masses of the people—the denizens of rural India. Their illiteracy notwithstanding, patriotic vernacular Press sprang up in every part of India, with an air of audacious speculation. The venture, however risky at the outset, proved to be a sound proposition very soon, thanks to the agitation by the Congress which secured for the masses larger facilities of primary education. With the steady decrease of vernacular illiteracy and the sterner demand for comprehensive political reforms, the improvement of rural conditions formed one of the main planks in the political platform of the country. But, as the vernacular press largely depended on the English newspapers and periodicals for inspiration and guidance, and as the Congress itself became a mass movement with a very strong undercurrent of exclusive nationalism, even the people of the towns and cities quickly began to evince deep interest in the welfare of rural population. The journals in English opened their columns to news and views, regarding schemes of rural reconstruction. But, habit dies hard. The English periodicals in India have still an indifference to rural subjects, or rather greater allurement to topics such as, economic products of international importance, abstract economic theories, or matters of high national finance. Slowly, but steadily, the national Press in English, at any rate, turns its attention, more occasionally, if not very frequently, to matters of deep concern for rural folks. Gandhiji was singly responsible, more than all other agencies collectively, for pushing to the forefront, a pre-eminently rural scheme of economic reconstruction, namely, the hand-spinning by the Charka or the takli. The discovery of the charka, by Gandhiji, as an instrument of nation-wide economic uplift, was a stroke of sheer genius. The progress of the wheel, during a period of over ten years, warrants the encomium to Gandhiji.

* * *

If the charka bade fair to achieve the economic uplift of rural India, the goat—another pet of Gandhiji—promised to secure the eugenic development of the masses of India. Infant mortality, premature old age, poor physique, low vitality, proneness to disease and low power of physical endurance have all been, admittedly, due to a sad deficiency in the nourishing value of the national diet. It is universally held that milk should form the main item in one's diet. Nature itself supplies the proof of this truth. In animate creation, milk is the first, and the only diet, which offsprings, without a single exception, need, and can assimilate. With the passage of years, other food, such as solids, is needed as an addition. But, in actual practice, milk is either stopped as a regular diet after the weaning time deliberately, or through the stress of the need for economy, or by dint of sheer inability, born of poverty.

* * *

But, a rude awakening is preceptible in the national consciousness, which has found its reflection, however dim, in the recent activities of the Imperial Council of Agricultural Research. It is a stroke of luck that the Council should turn its attention to the improvement of livestock in India. There need be no surprise at this, as animal labour is the mainstay of agriculture, had it not been for the inclusion, in improvement schemes of the Council, of other than plough or draught animals. The Council is equally keen on the improvement of breeds of goats, sheep and poultry. The Council has fixed its aim upon two aspects of the question, namely, not to fritter away its funds upon anything other than research work, and the co-ordination of its schemes with those of the provincial governments. If the Council supplied expert knowledge and training, the provinces held out prospects of finding opportunities for the employment of this expert knowledge and training. The provinces generally supply lands, buildings and funds for certain essential expenses, while the Council undertook the experiment, guidance and supervision. Schemes for the improvement of livestock are already afoot in the Punjab, the United Provinces, Bombay and Madras. The Provincial (Agricultural) Advisory Committees form the link between departmental organisations in the provinces and the Imperial Council of Agricultural Research.

* * *

The Madras Presidency, for instance, has two schemes before it, one relating to the breeding of goats and the other to sheep-breeding. In this article, it is proposed to lay emphasis on the value of milk in the national diet, and to dilate upon its supply on a large scale and within the easy reach of the lowliest. The initial outlay and the chances of animal mortality veto the traditional and sacred cow as a possibility for the individual owner, especially among the Harijans and the smaller village ryots in a province, notorious for its material poverty.

Mr. J. J. De Valois, Principal, Agricultural Institute, Katpadi, about a hundred miles from the city of Madras, was judicious in drafting a scheme for the breeding of goats, which came for the consideration, a fornight back, of the Madras Provincial (Agricultural) Advisory Committee before they applied for a grant to the Imperial Council of Agricultural Research. Should the scheme be approved by the Imperial Council, the problem of milk supply for the poorer classes of the rural population in the Southern Presidency would, at no distant date, be solved. The only rift in the lute is the deep-rooted prejudice against the use, by caste Hindus however poor, of goat's milk. Neither the cheapless of the animal, nor the high value of its milk, nor even the supply of milk at any hour of the day or any number of times, is sufficient attraction to break down the prejduice. But, there are poorer classes, such as *Harijans* and others who have no objection of any sort in consuming goat's milk. If these poorer classes can be served, the scheme will have justified itself. But, a vigorous education programme with actual demonstrations is bound to convert the conservative elements of the Hindu society. Already, there are signs of the weakening of orthodoxy among large sections of educated classes. With the advance of time and the concommittant spread of education into the remotest corners of the presidency, goat's milk may ultimately drive out cow's milk from the diet of the villager, however caste-ridden otherwise.

The object of the scheme is to follow four main lines of research: (1) Selective breeding of the best Jumna-Pari goats by means of recorded milk yield and progeny tests to determine their adaptability to South India; (2) Similar selective breeding for Surtis; (3) mating of Malabar goats with Surti male: and (4) Cross-breeding of both Jumna-Pari and Surti males with Desi stock.

* * *

Baldly stated as the "poor man's cow" and as a cheap source of milk supply, the above scheme for the breeding of goats may seem quite commonplace. But, the national wealth, contained in domesticated animals of the country, even under the present haphazard conditions of development, invests the scientific improvement of India's live-stock with an importance, not lightly to be brushed aside. Colonel A. Olver, the Animal Husbandry Expert of the Imperial Council of Agricultural Research, estimates that, in British India alone, there are about 300 million domesticated animals—of course, not all of them, goats, and that the cash value of India's animal products, of which cattle labour and dairy products are the two most important, cannot be less than Rs. 1,500 crores annually.

* * *

Why then blink the imperative necessity of the scientific improvement of domesticated animals?

THE JAPANESE DELEGATION.

In a special message to *"Indian Finance,"* His Excellency Setsuzu Sawada, Envoy Extraordinary and Minister Plenipotentiary, the leader of the Japanese Trade Delegation, said:—

* * *

"Japanese Trade is much improved in recent years. And Japan & India have been in good terms in respect of trade and commerce. Since the treaty of 1905, Japan has been importing all her desired raw materials from India, and India in return got manufactured articles. And the two countries are making steady progress. In that way, the two are dependent and the trade between the two countries have been much benefitted in recent years. This relation has not only to be maintained, but it can also develop still further. The present trade and commerce requires confidence and reciprocity. It is most desirable that in view of the great importance of India's trade, an agreement be reached between the two countries; by this, we may establish strong ties between the two peoples in the field of commerce. Japan wishes to prosper together with India. Japan has no intention of menacing the necessary development of a nation. India and Japan have got one idea, *i.e.,* to march onwards, together with India, on the road of prosperity, happiness and harmony.

* * *

Such is the way, in my opinion, to ensure the general welfare of the two peoples. This is the first time Japan has sent direct to India such a large delegation. Our stay in India may be short; but I feel proud that during our stay here we shall get to know more about India while at the same time India may know more of Japan. In that way, I believe, the nations may understand each other, with increasing appreciation and better understanding not only between India and Japan, but also Japan and Great Britain.

* * *

In these days of world depression, good understanding between nations is a matter of great importance in overcoming the economic sufferings of the nations and the general public at large must understand this."

(Continued from page 698).

India can reconsider her currency problems. If this view should find increasing acceptance—and we see no valid objection thereto—then the setback, which has occurred in the securities market, should pass sooner or later. The failure of two petty brokers in Bombay to-day has accentuated the situation, and weak bulls have joined hands with bears in unloading securities. And one has to remember that, once confidence is shattered, it takes a long time to rebuild it. And for the present it might well be that so long as a change in the ratio is regarded as possible, the foreign banks will naturally try to unload their rupee holding gradually. This, no one can help.

The exchange market was weak, and there were practically no sellers for forward bills.

The closing rates are: 1s. 5 15/16d., up to January T.T., 1s. 5 29/32d., February-March T.T.; 1s. 5 7/8d., April-May T.T. and 1s. 5 27/32d., Monsoon months.

Bills may be quoted: 1s. 6 1/32d., up to December and 1s. 6 1/64d., January-February.

Money was easy during the week. Interbank call money quoted ½ per cent. Union rates for call, three days and seven days notice quoted ¾ per cent. Onemonth deposit quoted ¾ per cent., twomonth 1 per cent. and threemonth 1¼ per cent.

(Continued from page 725.)

a provision should be inserted (in case a shareholders' bank is finally decided on) to the effect that the Government should have option to buy back the shares at a specified price after, say, ten or fifteen years. Speaker after speaker on the Opposition benches stressed the need for the inclusion of an option of this nature. Mr. Sarma lent his support, emphasising that it was "a most fruitful suggestion made in a brilliant and illuminiating address given by the Editor of *Indian Finance* to the Assembly members." Sir Leslie Hudson, speaking on behalf of the European group, also gave his blessing to this proposal. Sir Leslie was in good form and made a short and sweet speech, from which one could gather that in the committee stage his group would be willing to give full consideration to all reasonable suggestions calculated to liberalise the scheme. But the star performance, from the point of view of comprehensiveness, if not of effective delivery, was that of Mr. Prabhakar Thampan. He showed a clear and complete grasp of fundamentals and a careful appreciation of all the details as well. I hope he will be on the Select Committee, as each one of his suggestions was obviously the result of correct understanding and deep thought and should receive the fullest attention. Mr. B. Das made a political speech attacking Bombay friends, delegates to London Conference, Government and Imperial Bank. He had a bare twenty minutes. But he felt pleased with himself that he had hit all and sundry in the hardest fashion. Sir George Schuster appeared off colour both in his opening and in his concluding speeches. One can understand it. The hearers one obtains in the present Assembly cannot enthuse or inspire any speaker, even if the speaker were of the calibre of Sir George.

CAST IRON PIPES
for Water Schemes

Extract from "RANGOON GAZETTE" on the AKYAB WATER SUPPLY SCHEME, Dated 25-4-1933.

"The Completion of a work of this magnitude in so brief a time will be a creditable achievement, and if not indeed a record, certainly an exceptional accomplishment involving a considerable amount of organisation and hard work by all concerned. The BENGAL IRON CO. supplied the bulk of the pipes used in one consignment, chartering a special steamer to do so".

The Contract comprised:—1,760 Tons—Sizes 5" to 20" diam, including specials the bulk of which was shipped within ten days of the receipt of the order.

The laying was carried out by Messrs. Clark & Greig Limited of Rangoon.

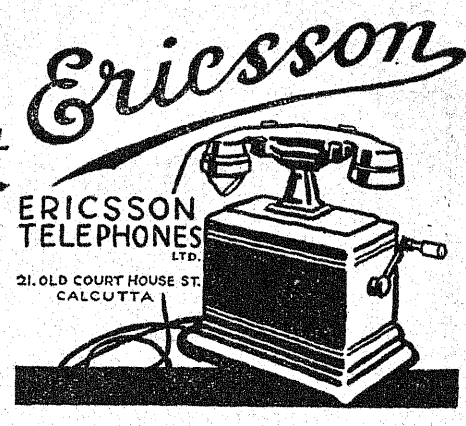
Clive Street Gossip



Eavesdrapper wires from Simla :

The Reserve Bank Bill and the Imperial Bank Amendment Bill, the first stage of discussion on which came to a weary end to-day, were responsible for lengthy, if not exactly edifying, orations. A prominent member on the Treasury Benches confessed to me that, compared to the scene amidst which the drama of Reserve Bank Bill in 1927 was enacted, that on the present occasion was "a pitiful tragedy". Not that ignorance of the earlier Assembly on economic questions was less striking. The effort of ten years ago proved abortive due entirely to lack of proper appreciation, on the part of the Assembly, of the real significance of the Reserve Bank in the national economy. The wanton and whimsical stupidity of 1927-28 was responsible for the *debacle* of a measure conceived on more liberal lines in every way. On the score of understanding of fundamentals of central banking, conditions on the last occasion were no better. But the actors of that day were far more impressive. They strutted the stage, confident of their importance and assured of wild acclamation from onlookers. Those on the stage to-day are puny and inconspicuous; and each is sure in his mind that everybody else is a person of no consequence or ability or status. Inferiority complex is a universal trait; and one feels thoroughly depressed and disgusted as one meets Phillistine after Phillistine.

* * *

That Sir George Schuster will be able to get a Joint Select Committee entirely pliable to his wishes and obedient to his behests and to pilot the Bill through the House in any form he likes may be taken for granted. The Government have an absolute and unshakable majority; and on the Opposition side, the stalwarts, who were marched off to London in summer, are even more aggressive in their support of the Parliament Paper scheme than Sir George himself. Sir Cowasji Jehangir and Mr. H. P. Mody as apologists for the Government point of view were sickening in their performance. Mr. Mody can always make a neat and natty speech, piquantly expressed, aptly phrased and fragrantly humourous. But the impression created by his performance on Tuesday was, as suggested by the inevitable Mr. B. Das, that he was laboriously defending an indefensible case. Sir Cowasji was all froth and fume; and his violent gesticulations and old style of vehement oratory looked out of place and ludicrous in reference to a scheme which, as it is, is void of any liberal feature. Pandit Vidya Sagar Pandya, who has had his knife into the Imperial Bank for a decade and a half, raked up old history, marshalled allegation after allegation and sought to prove that the experience of the Imperial Bank was not a hopeful augury for the successful conduct of the Reserve Bank. Mr. Pandya, who opened the discussion on behalf of the Opposition, has grown appreciably older since I last saw him. His voice is feebler and his eye-sight poorer. He was on his feet for over two hours and it was an exhaustive, and exhausting performance. But his friends gave him attentive and respectful hearing and all his diatribes against the Imperial Bank were warmly applauded by Mr. Das and friends. In fact, his cue was taken up by most speakers, and the principal theme of most speeches was a charge of some kind against the Imperial Bank. All the time Sir Kenneth Macdonald was sitting in the official gallery listening to the uninformed critics of his institution. It was Mr. R. S. Sarma who, as might be expected, came to his rescue. What do you all know about the Imperial Bank—asked Mr. Sarma, in effect. Are you a borrower—was the taunting reply. I have no manner of connection with the Imperial Bank, averred Mr. Sarma. After this exchange of pleasantries, Mr. Sarma shot into his strident style and made out a fairly convincing case for the present authorities of the Imperial Bank. He pointed out that of the Directors on the three local boards, more than half were Indians, that in Calcutta and Bombay circles two eminent Indian businessmen were chairmen, that the last annual meeting of the Bank was presided over by Rai Bahadur Badridas Goenka, held in high esteem alike in Indian and European circles, and that, as pointed out in Mr. Bunbury's speech, no recruitment of British assistants had taken place since 1929, and that Indianisation was not an eye-wash but a reality sincerely respected by the present Managing Governors. All the same Mr. Sarma admitted that the conditions that prevailed, when the agreement between the Imperial Bank and the Reserve Bank was devised, were no longer in force and that considerable alterations would be necessary in the altered circumstances.

* * *

From the trend of this week's speeches and from my talks with officials, I am in a position to say that the emoluments and concessions which will now be agreed to in favour of the Imperial Bank would be far less than on the former occasion. There is more or less complete unanimity on this question. Another issue on which there was accord amongst all parties was that, as suggested by *Indian Finance*,

THE GATEWAY OF INDIA

(From Our Correspondent).

Bombay, September 15.

The commercial and industrial community here is looking forward to the events of the next few, weeks with eagerness. Indians, in general, are pleased with themselves that two industrially powerful nations, like England and Japan, have sent strong delegations to talk over matters here, with a view to improve their textile trade with this country. It is rather gratifying that the importance of India as a market is so demonstrably recognised. The seeking, by Japan, of an enduring trade agreement with India enhances her status among the nations of the world. But, the fact that Lancashire should deem it fit to visit India on the same errand as Japan, in spite of the United Kingdom's political hold upon this country, is not only flattering to our sense of national self-respect, but also reassuring to our hopes of our emancipation from political thraldom and economic exploitation. Naturally, Indians here are in an exultant mood to play the admirable host to our visitors, keeping up the traditions of Indian hospitality. But, they are also fully aware of the fact that the two foreign Delegations will have their real dealings with the Government of India over which her nationals do not yet exercise an effective control. All the same, as the ultimate parties to be affected for good or bad, by the tripartite agreement, jointly or severally, Indians are anxious to get into touch with the two Delegations.

But, busybodies, interested in India's exploitation by foreigners, have already embarked upon subtle propaganda for creating suspicion, if not ill-feeling, between Indian Industrialists and the Japanese. It is being freely talked about that only the Lancashire Delegation will discuss matters with the Indian industrialists, but not the Japanese. While this stunt is expected to antagonise Indian mill-owners against the Japanese, it is also expected to alienate the sympathies of the Japanese by trotting out the story, at the same time, that the Bombay Mill-owners' Association has not invited the Japanese Delegation for preliminary discussions, as in the case of Lancashire Deputation.

The fact of the matter is that the Lancashire Deputation specifically requested for an opportunity to get into touch with the Indian industrial community. This is but proper, in view of the entertainments lavished upon Mr. H. P. Mody, the President of the Bombay Millowners' Association, during his recent business visit to England.

In the case of Japan, however, no representation of the Indian textile industry visited that country, although Sir Lalubhai Samaldas, the veteran co-operator and the friend of cotton-growers, has recently been there mainly for recouping his health. But, he had business talks with Japanese Commercial Community. The Japanese Delegation came out with the express object of negotiating for a trade agreement with the Government of India. The Japanese know full well that Indians have no effective voice in the Government of their own country. So, it did not, perhaps, occur to them that they should seek contacts, at this stage, with the Indian textile industrialists, and have any preliminary discussion with them, of their proposals. In all probability, the Japanese may deem it proper to get into touch with the Indian industrialists, after an agreement is settled with the Government of India.

But there is no knowing, if an eleventh-hour fixture may not be arranged for the Japanese and Indian industrialists to come together during the next few days. Indians here will not take it as a slight, if the Japanese do not meet our industrialists. Nor is there any fear that the Japanese will take umbrage at receiving no invitation from the Bombay Millowners' Association.

In some fastidious quarters, it is suggested that the Lancashire men have come to an understanding with Mr. H. P. Mody, regarding their joint attitude of Indians and the English, as Empire Citizens, towards the Japanese Delegation. But, much credence need not be placed on this matter, as it lacks authenticity.

Apart from the mild flutter of not inviting the Japanese industrialists for preliminary discussions here, rumours are being spread in the local Piece-goods market that Japan is fully confident of her powers to sell her textile goods here, however high the tariff walls may be, but that she has held her lower rates in leash, in view of the impending deliberations at Simla for more favourable terms of trade with this country. Whatever the truth regarding Japan's artificially stagnant trade in textiles, caused by prohibitive tariff walls, there is no doubt whatsoever here that this exposition is being assiduously spread with the tacit purpose of creating an impression that Japan can successfully surmount the difficulties of even higher tariff walls than the present ones against her.

The aim and purpose of the British textile manufacturer is to veto Japanese competition in the Indian market, by hook or crook, once and for all. Once this consummation is achieved, British industrialists hope to make short shrift of the Indian competition, if, and when, it grows menacing.

But, it is a pity that a small section of Parsi magnates favour a closer association, and identity of interests, with the Lancashire industrialists, rather than with the Japanese. But, there are more swans than crows in the Parsi community. All the same, it is reprehensible that even a small section of this virile community should grow slavish more towards Western standards than national.

Millowners here are all smiles with the passing of the Bill to extend, till March 1934, the protection, at present obtaining, to the Indian textile industry. There is unanimous agreement here that protection to the textile industry is imperatively necessary. But, large sections of right thinking people are worried that the benefit of the entire protection is monopolised by the manufacturer, whereas the consumer foots the bill of dearer prices. It is a fact that not only the consumers, but also farmers and rural weavers, are victimised by this maldistribution of wealth. Unless the interests of these parties, who form the great majority of the population, are safeguarded at the next earliest opportunity, discontent against a promiscuous policy of protection is bound to increase more and more with the lapse of time.

Apart from the broader principle of protection for India's Key industries, there is great ill-feeling against the millowners, regarding their ineptitude and extravagance. The Managing agencysystem in mills is an eyesore even to mill-hands, not to speak of the shareholders. Outside the mills, the general ranks of consumers are sick with the rant of mill-owners or the managing agencies, that the prosperity of the mill industry is a direct help to cotton-growers and an indirect prop to the cottage weaver. Their claim is based upon their ability to exercise cheaper foreign cloth from the Indian market. All this shibboleth has no meaning for the man-in-the-street. His strong memory teaches him how the cause of the country has been, and is being, betrayed in more ways than one. Have not the mills belched out spurious Khadi, in order to throttle the hand-spinning industry which puts in a few pice in the pockets of the impecunious rural population? Who can believe that the mills will restrict themselves to the manufacture of dearer cloth, leaving that of cheaper varieties to swell the coffers of the cottage weaver? Who does not know that Indian mills prefer foreign cotton to the indigenous, though India produces over 2,000,000 bales of long-staple cotton? How can anybody believe the story that Indian long-staple cotton is not suited for the very

(Continued on page 713).

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuons.

OLYMPUS

(From Our Correspondent)

Simla, September 12.

The Reserve Bank Bill.—The Assembly springs a srpurise—long and numerous speeches, instead of short and few.

Fiat Lux.—Mr. C. S. R. supplies light in the Lobby—The wrangle over the Joint Committee—Sir George Schuster widens the berths—A committee of Tenty-eight!—More Broadcast stations?—But where is the money?

It has been Reserve Bank Bill week. The subject is a technical one; and it was thought that speeches would not be many. Apparently the Members of the Opposition were determined to show their knowleddge and the average length of speeches so far delivered, is 45 minutes. Two reasons are adduced for this development. One is that those, who went to London were anxious to prove to Sir George Schuster that they stood by him, while those who did not go to London were equally determined to prove that they knew their subject well and were independent critics of the Reserve Bank scheme and must, therefore, be pacified by being put on the Joint Committee.

* * *

Sir George Schuster did not seem much worried about the speeches in the Assembly but he did seem a bit upset by the lobby conversations of the week. For instance, he discovered that the Indian Members of the Assembly sat for over an hour after a tiresome sitting and listened with attention to the speech of Mr. C. S. Rangaswami explaining the provisions of the Bill and the necessity for a number of important changes. And what is still more important, because it is so unusual, Sir George Schuster had to face the fact that the European Group of the Assembly invited Mr. C. S. Rangaswami to address them on the subject. The European Group is the most well equipped party in the House and they have approached the subject with an open mind.

* * *

The effect of lobby talks was visible in the speeches delivered on the Bill. Mr. H. P. Mody, who had otherwise put up a long apologia for the London scheme, conceded at once that the Bill should contain a clause giving the State the right to buy up the shares after a given period. However, to pacify the feelings of the Finance Member, he gave full support to the Finance Member's view that this is not the time to change the ratio.

* * *

Sir Cowasji Jehangir was also a member of the London Committee. He, too, wished to humour Sir George Schuster and at the same time to show that he could strike a line of his own. So he backed the shareholders scheme unreservedly and even suggested that the scheme should be modified with a view to give better chance to shareholders to hold larger shares than proposed under the scheme. But on the question of the ratio, he demanded immediate alteration. In this he had scored against Mr. Mody, who tried to explain that he also meant the same thing as Sir Cowasji; but the House knew he did not.

* * *

The other speeches were all critical of the Bill and certainly made the Finance Member feel a little sad that he was not having the same support that he expected. Mr. Vidya Sagar Pandya, who initiated the debate, was most effective in his exposure of the Imperial Bank of India and its method of work and election of Directorates so that he made the House visualise fully the picture of a Shareholders' Bank. He equally effectively exposed the "claims" of the Imperial Bank for compensation.

* * *

Mr. Gaya Prasad Singh, Mr. Reddi and Dr. Ziauddin Ahmed also backed the proposal for a State Bank and reflected Indian opinion. The standard of speeches generally was low, but most of the Members made it a point of speaking at length. The lobby opinion is that Sir George Schuster was in part responsible for this. He always goes out of his way to pay compliments to the Members of the House so that not only in return he gets generous tributes to his ability but he makes the Members believe that they represent the best that India could send to the legislature.

* * *

Perhaps, this serves the purpose of the Finance Member well. He wants votes and he wants men who can prove convenient to him on the Joint Committee. Over 10 days' wrangle had been going on in the lobbies regarding membership of the Committee. There were some who felt that the Assembly should not agree to a Joint Committee; but their opposition was won over by the Finance Member agreeing to take on the Committee 28 members, out of which 14 could be selected by the Assembly; and, as no Committee of the House has ordinarily more than 14 members, the non-official section of the House was happy that they would be able to send in two members atleast from each party.

* * *

But who should those members be? Sir George Schuster thought that the Members of the House, who had sat on the London Committee, had automatically won their right to be on the Joint Committee. The Opposition parties argued that, just as in the case of Indian Central Committee its membership became a bar against selection to the Round Table Conference, so the Joint Committee should not have any of the men who went to London. A strong argument. But Sir George Schuster was anxious to have his supporters and, therefore, the Committee's membership was enlarged with a view to enable the other elements to come into it.

* * *

The difficulty, however, arises that there are hardly fourteen men in the Council of State who could be said to be representative of non-official opinion. And to load the Committee with men, whose sole concern would be to vote with the Government, would hardly serve the purpose of proper legislation. The Finance Member, I am told, is sure that his scheme will get through in the form he wants. The Managing Governor of the Imperial Bank and Mr. Kelly, the Controller of the Currency, are already up here discussing the various points in connection with the Bill, so that Sir George Schuster may settle those details of the schemes which he has not already put into the Bill.

* * *

While the Assembly naturally monopolises all attention, important conversations are going on between Sir Frank Noyce and Mr. Frost of the British Broadcasting Corporation. It seems Mr. Frost has come here to make the Government spend about 7 lakhs in setting up more stations in India so that broadcasting may be popularised. Government broadcasting equipment, too, is very poor at present; and there is a great need for short wave length station. Some hill place like Simla or Poona is stated to be a likely selection for the purpose, if and when the scheme is put through. For the moment, Government finds it difficult to incur any expenditure of this kind.

SOUTH INDIA

(From Our Correspondent.)

Madras, September 12.

In my last letter, I pointed out, though in an obviously jocular way, that South India's interest in the foreign countries lying near to her might prove the source of a serious misunderstanding between the South and the North in the future Indian Federation. The light-hearted manner in which the Legislative Assembly has, during this week, assented to the provision of indentured labour for the Malay States affords a significant instance of the neglect which the insular problems of the South might receive at the hands of the all-India legislature. That the plantations in adjacent lands should set up the demand for labour from South India is natural and far from surprising. Was it not recently that the Agent to the Government of India in Ceylon observed in his annual report that the South Indian is "cheap, painstaking, intelligent and law-abiding"? This may be said of all grades of labour in the South. Conditions for an exchange between South India and the neighbouring states are ideal. They have need for labour and South India has a plenitude of supply. But the exchange in the past has been on a far from commercial basis. The grievances of indentured labour had long been a principal plank in the Congress platform in the olden days. And in these days it is unthinkable that any labour could be engaged on other than a free and voluntary basis. And the essence of freedom lies in the right of the labourer to change his status or terminate the contract of service at will. But for the present, the issues connected with this question have been narrowed down, by the fact that all those who come to the Malay States after paying their own fares for the journey are able to command a much higher level of wages than are offered to the indentured coolies from South India. Being subject to a long-term contract, it has not been open to the South Indian coolies to demand wages commensurate with the work he is asked to perform and invariably does perform. As the states have no laws prohibiting immigration of labourers—and such laws are out of the question for a country whose labour supply has always been below the effective demand—the obvious solution is that labourers from South India who seek to gain a living abroad should avoid the clutches of the agencies working within their country and proceed to the Malay States on their own initiative. There is no practical difficulty in following such a course, especially as the class of labour which emigrates is not altogether forlorn or destitude in its own motherland. Left to themselves, they would most naturally take to this course and they would reap the benefit of a higher level of wages and, what is more, freedom to return home as soon as they feel they have earned enough to keep them in comfort. In these circumstances, nothing more is expected of the Government than to decline to perform the services which they had so long rendered to the foreign planters by assisting the agencies for indentured labour. One does not know what to think of a government which obtrudes its notions of *laissez faire* where state assistance is needed and smothers people with its attentions when all that the people want is only to be left alone.

Provincial politics in Madras is entering a new and more interesting phase. Madras has long been singled out by Anglo-Indian apologists of piecemeal reform for fulsome praise as the most docile and promising pupil in the school for popular self-government. But the so-called party in power has never been anything more than a caucus of self-seeking, but unambitious, individuals. Its decadence is inevitable, if it be true that principles unconnected with personalities form the sap of any political party. No one would have thought that a party which was formed on the basis of a none-too-real distinction between Brahmins and non-Brahmins would ever attain to the status and prestige of a political party. But the non-Brahmin party, it must be confessed had at the beginning the motive power of a real need and a magnatic personality. Public position and influence, a decade ago was unquestionably weighted in favour of the Brahmins; and Dr. Nair had the flair for propaganda and the genius for organisation. His successor in the leadership of the party, Sir Thyagarayachetti, had all the requisite influence and prestige. The Raja of Panagal had much of the qualities of a statesman. He combined in a measure the qualities of both his predecessors; and his death has left a breach which the party has been unable to fill ever since. As in conquering hordes, so in political parties, the absence of a commanding leader means the rise of numerous contending factions. From this to utter disintegration is but a short step. The meeting of the non-Brahmin Federation last year, showed that the sense of discipline essential to success in party politics was utterly absent. Not only did the meeting find no means of confirming one faction or the other in possession of the party executive, but the whole organiastion has been allowed to fall into disrepair. The meeting that was held during this week at Tanjore bears witness to the disordered state in which the most successful upholders of dyarchy now find themselves.

If the past is disheartening, the future is hope less. The prospect of Provincial Autonomy must be wholly unwelcome to the present party in power, as it will naturally have to think of some popular programme with which to confront its political opponents and coax the populace to cast its verdict in its favour. Those sections, which till now have been able to claim that there was little practical difference between themselves and the Congressmen, will find this fence no longer comfortable; and the more reactionary leaders cannot contemplate with equanimity the chances of fighting the Congress candidate who has been invested by Mahatmaji in recent months with a peculiarly irrefutable claim on the suffrage of the Depressed Classes. In these circumstances, the Justice Party had, for some time, been dallying with the idea of throwing its ranks open to its traditional enemies. But nothing has yet been done and this shows that the party cannot throw off the poison of intense parochialism. What could such a conglomeration of individuals do with a constitution which, whatever its other defects, has the principle of universal suffrage. In all probability, the reformed constitution will have nothing of the party which is commonly supposed to have made a success of dyarchy. To have earned the praise of Anglo-Indian officialdom is enough cause why the popular electorate to-morrow should leave no trace of it in the future legislature.

THE READING ROOM

The Search for confidence in 1932—by A. H. Abbati P. S. King & Sons Ltd., 14, Great Smith Street, Westminister, 6s. nett: pp. 109.

The booklet under review is only a reprint of the second series of bulletins issued by the Unclaimed Wealth Utilisation Committee of Geneva under the Chairmanship of Mr. Abbati. The first series have already appeared in book form under the title of *Economic Lessons of 1929-31*; and the present consist of bulletins No. 12 to 23 which, though issued in early 32, are as relevant now, and instructive, too, for the fulfilment of the many fears and hopes expressed in them. These bulletins are issued by the Committee to indicate the major features of the economic situations as they arise, to forecast their effects, to expose economic fallacies and to formulate an independent national and international view point. Being written originally in 1932 the then world conditions interspersed with unparalleled trade depression with low price levels and flights from gold standards, it is but natural that the Author should have been drawn to the problem of Economic Remedies for drawing the world out of the quagmire of depression.

The constructive programme offered by the Author in his bulletins is well worth perusal by not only business magnates but also by statesmen and economists. The chief feature of his recovery plan may briefly be summed up as "reduced taxation and increased expenditure by the State." The creditor nations of the world are now suffering from excessive deflation and only anti-deflationary measures can have the effect of an all round general prosperity. On the other hand, the fetish of balancing the budget, indulged in by the present financiers and budget officials by the imposition of additional taxation will only cures for the overdeflated creditor nations. The budget becomes with them a main item, as they forget for the moment that a well defined budgetary policy must have in view the ultimate effect of the prosperity of the nation. Budget deficits and a temporary suspension of taxation in the circumstances are the only cures for the overdeflated creditor nations. The Author holds that moratorium for the tax payers with a view to increasing, the purchasing power of the people in general, coupled with increased expenditure by the State "on the production of goods not intended for sale or export" will give more employment to the now unemployed labour, capital and raw materials—thus creating an increased demand for these factors of production. Developing this idea of state expenditure, he lays emphasis on the large-scale programme of building construction and relief works as the most effective means of securing the objective. Incidentally, he observes that, if all the major nations cannot even join in this national programme of constructive expenditure, he expects that at least England, with her strong-hold of the sterling and the backing of the Sterling Area, can employ her resources to create the requisite movement for buying the surplus goods and services.

The Author has also been able to show some concrete examples of the success of his idea. The new era of economic reform in Germany as announced by Herr Von Papen, the Chancellor, with its emphasis on Government expenditure on New Public Works and Relief Works, employment premiums and Taxation credit certificates, seem to follow closely the suggestions put forward in the bulletin; but the measures are applied on too small a scale to enable valid conclusions regarding their practicability; for the success of this plan as a relief to the economic ills of the world depends on its uniform adoption by all the nations, and simultaneously, too; otherwise, it will only have the effect of depreciating the exchange value of the currency of the nation which follows this policy in isolation. The recovery programme of the U.S.A., with its main aim to raise the price level, also appears to be progressing well with its object, though building construction does not form a definite plank in the platform. The suggestions, though fraught with full possibilities, might have been considered by the World Economic and Monetary Conference, but seem to have been received with apathy. In spite of all the merits or otherwise of the programme, the Author has made one thing plain and that is that, *inter alia* a rise in the general price level, relief to the over-burdened tax-payer with a view to giving increased purchasing power and a well meant budgetary policy towards this end or the main lines on which any reform should proceed.

BENARES ELECTRIC LIGHT AND POWER CO., LTD.

NOTICE

is hereby given that the Eleventh Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 18th September, 1933, at 3-10 p.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th June, 1933, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 8th to 18th September, 1933, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

CALCUTTA,
The 7th September, 1933.

Braithwaites are also Agents for Sir William Arrol & Co.'s Power Cranes of Every Description.

Designs and Estimates Prepared for any Projects on Request.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN

MORE IMPORT DUTIES

It has been a week of extremely erratic foreign exchanges. And though towards the close, the fever which the earlier fluctuations suggested continue to of excited fluctuations abated, the main questions be insoluble riddles. The cross-rate moved up sharply to 4.61 from 4.55 of the previous week and relaxed in an equally sharp manner to 4.54, where it was more or less stationary, since Wednesday to the end of the week. The gold currencies showed a more regular appreciation on the pound, the French franc moving from 83¾ to 81¼. The main movements, thus, have been the sharp decline in the dollar against sterling and sterling against the Continental gold countries. The movements are closely connected, in as much as it is the flight of the dollar into the franc that has brought about both the significant movements referred to. Owing to the difficulty of acquiring francs in the New York exchange market, American purchasers of French currency have been obliged to put through purchases through the medium of the London market. This was considerably facilitated by the fact that it would always be possible for Americans to sell sterling securities in New York against sales in London and thereby bring about the transference of funds from New York to London. When this movement occurs on a large scale, the franc naturally appreciates as against the dollar; and the difference accruing in the sterling-franc rate might well be viewed as an appreciation of the franc rather than a depreciation in sterling. Even if the view be taken that it is equally a depreciation of sterling, it must be regarded as seasonal; and on this account alone the "control" would find little incentive or justification to employ its resources in an attempt to prevent the decline in the sterling-franc rate. The "control" was, therefore, well advised to desist from selling francs, which is obviously the means of counteracting the depression in sterling. And the restoration of comparative calm in the second half of the week relieved the authorities from the necessity of clarifying their policy and intention.

Most Expensive Meal in History

Though at the end of the week there is less excitement in the foreign exchanges than at the beginning, the events of this period are calculated to whet the edge of speculative curiosity. International finance has now passed into a phase in which "trifles light as air are proofs of holy writ." On the other side of the Atlantic, there have been more than one such tremendous trifle. A writer in the *Financial News* recalls that the selling pressure of sterling began in the first week of July, following upon reports that Mr. Keynes had lunched with Mr. MacDonald. On that occasion, the Continent jumped to the conclusion that Mr. Keynes must have prevailed upon the Government to adopt his advice regarding a depreciation of sterling. This led to the heavy withdrawal of foreign balances from London. And as the Exchange Equalisation Fund lost on that occasion something like £30 million in an effort to maintain the stability of sterling, the *Financial News* remarks that the Keynes-MacDonald lunch was about the most expensive meal in recent history. Such significant meals have been on the other side of the Atlantic. On the same day, Mr. Montagu Norman took lunch with Mr. Harrison, Mr. Woodin, the Secretary of the Treasury and Mr. Black, the Governor of the Reserve Board, at the Reserve Bank and had tea with Mr. Roosevelt, accompanied by Mr. Harrison. There was no disastrous landslide in the exchanges, the only change that occurred being a rise in the dollar from 4.64½ to 4.51½ and that, too, more because of British purchases of American securities than of the tea-time discussions. But the lunch at the Reserve Bank is regarded as having great significance to American financial policy. Mr. Harrison is credited with having warned the President against the dangers of competitive currency depreciation, and, as report goes, the President was not only indisposed to listen to such warnings but the Government have gone to the length of keeping Mr. Black in the Federal Reserve Board with the express purpose of carrying out such part of the policy as may be favoured by Government and opposed by orthodox central banking opinion. Now that Mr. Woodin, Mr. Black, Mr. Norman and Mr. Harrison are found to lunch together, it is believed that the Washington Administration is probably hearkening to the alarms sounded by the Federal Reserve Banks.

Exit Professor Moley

One circumstance which lends more colour to this theory is the exit of Prof. Raymond Moley from the stage of America's political economy. There has been little or no fuss about the resignation of the one man who, more than another, had a direct responsibility in the repudiation of the London stabilisation agreement and the break up of the World Economic Conference. Prof. Moley had long been the arch-priest of economic nationalism in America. And it is natural to suppose that with the fall of this meteor from the politico-economic firmament, economic internationalism is again on the ascendant. May it be that Mr. Cordel Hull has again come into his own! In answering this question, it must be remembered that Prof. Moley was not the only inflationist among the advisers of President Roosevelt though the Professor undoubtedly monopolised all the limelight. Besides, little or nothing is known of what transpired at the President's tea-party to Mr. Norman. It is not even known whether the exchange or the weather got the better at the tea-time talks. Rumour has it, however, that, while Mr. Roosevelt was speaking about more or less inconsequential matters, Mr. Norman was making vain efforts to bring the discussion to the question of a tentative exchange agreement between America and Great Britain.

Import Duties

The Import Duties Advisory Committee have again been busy adding to the restrictions on trade. According to an order issued under the Import Duties Act, the customs duties on the following commodities will be as below from September 5:

Bleached cotton linters, 1d. per pound. Dressed leather (certain kinds excepted), 15 per cent.; forged or cast rolls of iron and steel for rolling mills, if the value does not exceed £24 per ton, 33⅓ per cent.; if the value does not exceed £40 per ton, £8 a ton or 20 per cent., whichever greater; if the value exceeds £40 a ton, 25 per cent.; aluminium sulphate, ammonia alum, soda alum and potash alum, £2 a ton; aluminium hydrate, £3 to a ton.

Oats, oat products and pearled barley (excluding certain by-products), 20 per cent.; split peas, 20 per cent.; canned pilchards (other than sardines), 10s. per hundredweight; fruit pectin (other than citrus pectin in powder form), 25 per cent.; lactose, 3d. per pound; confectionery containing sugar or cocoa (except cakes and biscuits, jams, marmalades, fruit jellies and fruit pulp, beverages, ginger preserved in syrup), 10 per cent. of the value of the goods in addition to duty chargeable under any Act other than the Import Duties Act; plants, trees and shrubs (excluding rose trees and fruit trees) in flower, 9d. per pound; standard rose trees, £5 per 100.

The additions to the free list are Nickel-copper

Air Mail Week.

alloys containing more than 60 per cent. by weight of nickel, unwrought tin metal, wax matrices and copper matrices, impressed for the reproduction of gramophone records. The Committee has also given notice of applications for an increase in the import duty on automatic cash registers, commercial grades of disodium and tri-sodium phosphates, raw gypsum stone, plaster of paris, mineral white, and calcium sulphate cements ; and to the addition of free list of pitch, or for drawback of duty on pitch used in the manufacture of fuel briquettes. Any representations in regard to these applications should be made in writing not later than September 25.

The Joust at Clay Cross

The by-election at Clay Cross has more interest than attaches usually to by-elections, as an indication of the way the wind of popular opinion blows. In a second note on this subject, the *Economist* declares that "a victory for Mr. Henderson at Clay Cross should be a victory both for Disarmament and democracy." Though the prestige which the Labour leader has acquired from the Disarmament Conference might normally stand him in good stead, he is far from taking his success for granted. The Government, too, would seem to be putting forth their full strength in support of their candidate, Mr. Moores. And in a letter to the constituency, Mr. MacDonald declares that "the policy of the Government has been the persistent pursuit of peace and international co-operation, care being taken all the time that the influences for mischief may not be actually strengthened by our goodwill becoming weakness." If the electorate should judge between Mr. Henderson and the Government on the basis of their respective contribution to international disarmament there can be no doubt as to whither this choice should lie.

Labour's Leanings towards Dictatorship

But at the moment, it would seem that the claims of any Labour leader would be judged by his attitude to the question of dictatorship, which Sir Stafford Cripps has recently brought to the fore. It is only to be expected that many of the newspapers, well distributed over the various sections of public opinion should trounce Sir Stafford for his blatant advocacy of a political expedient, which it has long been the fashion of British politics to denounce. And many of the Labour leaders, too, are carefully weighing the effect of any professed leanings towards dictatorship on the mass of the electorate. Mr. Henderson, for instance, has declared himself an unflinching opponent of any attack on democracy at home. Mr. Clynes, too, remarked on Wednesday last that "the House of Commons must be the only dictator." It is quite understandable that people are unwilling to see the Mother of Parliaments pass into a dowager, leaving the direction of affairs in the hands of a Labour regency. But it is difficult to see how the future Socialist Government is to protect itself and its handiwork from the Capitalist sabotageurs. In his work on *Democracy in Crisis* Mr. Laski established beyond doubt that for the proper functioning of any Socialist government the possession of powers ordinarily considered unconstitutional would be absolutely essential. For it is unquestionable that all the traditional institutions of British Parliamentary government are opposed, tooth and nail, to Socialism and that they would stop short of nothing in their anxiety to overcome the Socialist menace. Latterly, the Socialist League has brought out a symposium written by eminent Socialists who, curiously enough, seem to harp in common on this necessity of a *coup de etat* and an absolute government, though only tentatively. The capitalist press would seem to welcome this confession of leanings towards dictatorship, and already the *Times* has given the utmost prominence it can to what it regards as the new fangle in the Labour theory and programme. Sir Stafford Cripps has come off rather awkwardly in an attempt to evade the charge; but, considering that other eminent socialist thinkers and politicians are with him, it would be better if he sticks to his convictions and the Labour Party takes its own chance at the next General Election. For the present, Mr. Henderson's preference for the traditional forms of democracy, despite their lack of substance, may enable him to defeat the Government candidate.

More Baiting from Canada

An interesting offshoot of the negotiations now going on between Mr. Runciman and the Soviet is Mr. Bennet's attempt to have the British timber market closed more effectively to Soviet Russia. In this, the Canadian Premier takes his stand on the clause in the Ottawa Agreement. It runs to the effect that if any of the preferences arranged were likely to be frustrated through State action on the part of a foreign country, such action should be met with absolute prohibition of imports from that country. It was clear from the beginning that this was a "blatantly *ad hoc* clause" intended to protect Canadian timber, should it be threatened by Russian competition. Throughout the negotiations at Ottawa, the Canadian Government possessed the whip hand ; and the British Delegation, in its anxiety to have some sort of agreement to show to the people on its return home, was meekly submitting to the unconscionable demands of the Dominion. But there can be no doubt that since then Canada has been notoriously unfaithful in implementing the Ottawa Agreement. While she has availed of every advantage to increase her imports into the British market, she has done everything to narrow the scope for British imports into Canada. Political prestige has induced the Government to remain silent and inactive about these infractions. But the latest grouse about the import of Russian timber should tax British patience beyond endurance. With the programme of slum clearance before them, the Government can hardly afford to give in to Canada on this point.

UNITED STATES OF AMERICA

MR. FORD AND THE CODE.

The meeting between Mr. Montagu Norman and Roosevelt, which must naturally loom large in the eyes of foreigners, has counted for little in Wall Street. It is believed in certain circles that it was not the result of a mere courtesy invitation extended by Mr. Roosevelt to the emient financier from London. It was, it is said, arranged by Mr. Harrison ; and Mr. Norman could, therefore, presume that the object of the meeting was an exchange of views on the outstanding monetary and exchange problems. Mr. Roosevelt, too, should have had a similar feeling. But it would seem that, when Mr. Norman turned up, he found that the party consisted not only of some members of the Roosevelt family but also some of the dignitories of the ruling houses of Europe. A motley gathering, which seemed to say in so many words that Mr. Norman was expected not to broach the unwelcome question of exchange stabilisation. How the British banker took this strange conduct on the part of the President, it is not known. But it is certain that nothing important transpired in the meeting. About as much significance can attach to the meeting between Mr. Woodin and Mr. Harrison or even the dismissal of Prof. Moley. The only event of any significance was the publication of the new provisions of the embargo. That, too, was nothing of a surprise ; for it was clear from the decision of the Government in

Air Mail Week.

regard to the export of gold precipitates and amalgams to Canada that the Administration was seriously considering the means by which the American mining industry should be awarded the legitimate fruits of its own toil. There is little room for any mistake about the actual significance of the new regulations, which only provide for the output of the local gold mines being disposed of to the Federal Reserve Banks at a price which represents the existing dollar price of gold. By this the American mining companies may, perhaps, stand to gain by about 12 million dollars a year.

Markets Featureless

The stock and grain exchanges of the week afforded no developments of interest, though, as may be expected, with the recovery in the dollar a slight setback occurred in Wall Street. Gold shares, too, were buoyant on the publication of the changes in the gold embargo. The provisions for a more equable supply and demand of whisky and other drinks enabled the wet shares to maintain themselves.

Thus, interest, as ever, centres on the Nira drive. Like all new experiments in national economy, the Nira, too, has its friends and foes—friends who extol its achievements and foes that decry it at every opportunity. It may be supposed that all the forces of conservatism are ranged against Mr. Roosevelt. But before trying to set down these points it would be well to refer to the intrinsic difficulties of administering the recovery programme.

More Decisions for Administration

In the first place is the threat of litigation against any action of the Administration which might be suspected to be unconstitutional. In this regard, the hands of the Government have been strengthened by yet another decision, this time from the Supreme Court of the District of Columbia, which decided that the Agricultural Adjustment Act was constitutionally valid and therefore, refused the injunctions sought by the Chicago Wayside Milk dealers to prevent the enforcement of the Chicago milk agreement recently arranged. In the course of the judgment, the Judge remarked that the day has passed when vested rights and private property were sacrosanct. And the premise, on which his decision was based, was that a national emergency exists which threatens the welfare of the people and the very existence of the Government.

More Internal Troubles, too!

The second trouble is the emergence of defections on the part of the employers or employees who have already come within the scope of a particular blanket code. More than 40,000 workers in the New England and Atlantic States silk trade have gone on strike as a protest against the code proposed for them; and Philadelphia has actually seen serious rioting. Higher wages and shorter hours than those provided for in the code are demanded by labour. And the President of the American Federation of Labour still complains that hours are far too long to permit the absorption of the 11 million unemployed. For the present, however, the Government are able to deal with employers who violate their codes. For instance, the Chicago Dairy which had failed to fulfill its obligations has had its licence cancelled by the Secretary for Agriculture. And employers naturally demand that similar drastic measures should be meted to labour when it shows itself unwilling to abide by the code. Cleavages are also visible within the ranks of the Administration itself. Mr. Dudley Gates, Deputy to General Johnson, has been forced to tender his resignation because of disagreement with his chief. The Federal Reserve system is putting up a stout fight against the Administration. Banks have never been enthusiastic supporters of the recovery programme; and at one stage the Administration were obliged to put their own nominee on the Board to see the execution of their programmes. Now that the Administration has called upon the Federal Reserve System to enter the sphere of private banking, it may be taken for granted that even the less orthodox sections in its ranks would feel inclined to resist the attempts of the Administration. The Reconstruction Finance Corporation has already administered a rebuff to the President and his advisers. The President called upon the Corporation to grant liberal credits to Blue Eagle firms, which are not able to secure them from the ordinary banks and which have to find the means of meeting the enlarged pay roles during the time which intervenes between the adoption of a code and the attainment of solid results. The R. F. C. has taken the standpoint that under the law it has no power to open the offices which would be necessary for advancing credits to all such firms. The anti-hoarding measures are also proving difficult to administer. At the time the laws were formulated the Government were feeling satisfied with their possession of the lists of persons who have availed of the right to acquire gold from the banks. It is now learned that the lists contain spurious names which cannot be traced. The Government are putting its best face over the whole affair; and, as it is believed that it would be unconstitutional to prosecute any person merely for having hoarded gold, the Administration is now fastening upon every individual the responsibility of making a statement about the amounts of gold held in his possession. Failure to comply with this order would involve prosecution; and the Government are at the moment relying for the success of this programme entirely on such effect as they will be able to produce on the country by prosecutions for failure to enter the required statement.

Mr. Ford's Recalcitrance

On the top of all is the refusal of Mr. Ford to come within the scope of the code of the automobile industry. Foreigners are apt to exaggerate the significance of Mr. Ford's reluctance to the whole scheme of the Recovery administration. They have long regarded Mr. Ford as the embodiment of all that is enlightened and enterprising in American business; and his opposition to the Roosevelt Administration, explicable, no doubt, in part by his long friendship with Mr. Hoover must be put down, nevertheless, to the scepticism of American business in the value of the recovery programme. But so far as the Administration is concerned, they seem to be hardly worried by this attitude of Mr. Ford. General Johnson is confident that he will be able to crack Mr. Ford by engineering a popular boycott of Ford cars. The President would not flinch from imposing the code on the Ford works which under the law he is fully entitled to do. But it looks as though he will be content with the unofficial boycott, waiting to see what effect it has on Mr. Ford. But signs are not wanting that Mr. Ford has already relented. Widespread public resentment over his failure to sign the automobile code has already induced him to confer with his leading executives on the question. Whatever the developments that may take place in the future, it is certain that the Recovery Administration is not going to flounder on the rocks of Detroit.

It will be apparent from what has been said so far that the more critical stages of the Nira are not yet over. But for the present, the Administration may feel satisfied that the problems of the oil industry have been tackled in a resolute manner. A new move towards the control of the oil industry has been made with the appointment of Mr. Harold Ickes, the Secretary of the Interior, as oil administrator. And President Roosevelt has appointed a committee of 15 to administer the industry and his action has been hailed as satisfactory by the leaders of the industry. Both the price-fixing and the anti-price-

Air Mail Week.

fixing factions of the industry are conferring to-day to fix a base price for gasoline, and also to work out plans for the appointment of regional emergency committees to assure the co-operation of individual States in making a success of the control plan.

Business Reports

Business news has of late been distinctly less encouraging than before.

Railway news has been prominent today. Car-loadings for the week ended August 19 rather surprisingly show an increase of 12,086 care above the previous week's figures. Compared with the same week of 1932 they show an increase og 116,405 cars. The first 29 railroad company reports for July have also been satisfactory. Gross earnings for the month show an increase of 21 per cent., compared with July, 1932, and operating income shows an even larger increase. According to the Department of Commerce, the production of automobiles during July totalled 195,020 private cars, compared with 211,450 cars in June, while that of trucks totalled 38,070, compared with 41,840 trucks in June. Although electric power output for the week, at 1,630,394,000 kilowatt hours, is 13.5 per cent. above the corresponding week of last year, the "Iron Age" estimates that steel activity is only at 47 per cent. of capacity, compared with 50 per cent. last week. Car loadings of the Pennsylvania and New York Central Railroads both show declines this week, and it is apparent that unless coal shipments are substantially increased the loadings of all Class 1 railroads wil be lowered. Far more disturbing has been the failure to-day of three commercial banks in Connecticut, with combined deposits of $6,650,000.

U. S. S. R.

ANGLO-RUSSIAN TRADE AGREEMENT

The negotiations for the new trade agreement between Britain and Russia are proceeding rather very slowly. The only satisfaction is that neither committee has reached any deadlock, but it is considered that the representatives need fresh instructions from their governments. It is, however, reported that good progress has been made towards an agreement on broad principles. It has been recognised that there is necessity for some machinery for securing that British imports from Russia do not contravene the Articles of the Ottawa Agreement, which was implicitly directed against Soviet dumping. It is also recognised that Russia must endeavour to raise her purchases from the United Kingdom nearer the level of her exports to Great Britain. Details are still to be worked out. But, the statement of Mr. Baldwin in the House of Commons that any trade agreement, arrived at, will be placed before the Parliament for consultation and the announcement, by the Soviet Government, that they have appointed M. Osersky as their trade representative, with authority to sign guarantees and enter into any commercial transactions pending the new agreement, show that there is bound to be a long lapse of time before the negotiations come to a conclusion.

There is one hitch, however. A circular is being sent round to the shareholders of the Russo-Asiatic Consolidated Ld., which suggests that they should appeal to the Foreign Office and to their local member of Parliament to urge that no agreement with the Soviet Government, temporary or permanent, should be concluded until the legitimate claims of this company and other British creditors of Russia have been settled. The validity of the company's claims has been recognised by Mr. Krassin already, though it fell through on the refusal, for political reasons, of its ratification in Moscow. The claim amounts in value to £56 millions, representing the confiscation of actual cash balances, gold, silver and other metals, in addition to property and plant of every description. It is in view of this that the British Government is not aiming at any permanent commercial treaty with Russia, pending the settlement of payments and claims.

Franco-Soviet Trade Treaty

As a result of the conclusion of the Franco-Soviet Pact of non-agression, negotiations for a commercial treaty between France and Russia has just been concluded. Though the terms have not yet been published, it is believed that one point raised in the discussions is the possibility of subtracting from the payments, made by the Soviet, for goods ordered from France, a sum of 10 per cent. to be allotted to a special fund, the object of which will be to compensate, to a certain extent, French holders of Russian bonds and French citizens who have lost property, as a result of the Révolution.

It is significant that M. Edouard Herriot, the French Ex-Premier, is on a visit to Russia after a fortnight's trip to central and eastern Europe. Though the exact purpose of his visit is not known, it is considered of the greatest importance as he happens to be a President of the Foreign Affairs Commission of the Chamber of Deputies. He has also been a protagonist of the small central and eastern European nations. It is possible, therefore, that his visit may bear some relation to the strengthening of the smaller nations in a union against the incursions of Nazi aggression.

Spanish Recognition of U.S.S.R.

On July 27, Spain formerly recognised the Soviet Union. As a result of this event, Spain hopes to increase its exports to Russia, but Russia stands to gain more. A suggestion to export coal was turned down, probably because of British influeuce. The annual imports of coal, by Spain, from Britain amounts to 1,500,000 tons; but Russia, then, proposed to export pitch. The chief aim of Russia is to augment its wood exports to Spain, not only for consumption locally, but also to serve for distribution for the Western and Southern European markets. On the other hand, Spain has gained a good market for her sulphurous products, cheap metal, lead, olive-oil, fruits and cork. At present, Spain exports to Russia, on the average, are about 400,000 at par, while it imports from Russia ...1,600,000 at par, in timber and oil products.

In view of the interruption in diplomatic relations between the two countries for over sixteen years, the recognition, by Spain to-day, of the Soviet Union is a happy event in itself.

Increased activity is evident in the coal mining and melting industries. The average daily output is now said to be more than 202,000 tons compared with 169,000 tons in the middle of 1932.

The average daily production of pig iron, during July was 21,500 tons, as against 16,700 tons in the same period last year. The average daily production of steel was 19,000 tons, compared with 14,700 tons in July of last year.

The Soviet foreign trade for the first half of this year showed an active trade balance for the first time in three years. This was achieved by drastic curtailment of imports. Exports for the half-year amounted to 224,572,000 gold roubles, and imports to 190,914,000, leaving a favourable trade balance of 33,658,000 gold roubles ; the Exports and imports for the same period last year were respectively 275,160,000 and 405,273,000 gold roubles, resulting in an adverse balance of 130,113,000 gold roubles.

Air Mail Week

Chinese Eastern Railway

The Chinese Eastern Railway, which was constructed by Russia and jointly managed by China and Russia, pointed out in a previous issue, is for sale. The Soviet delegation for negotiating the sale is still in Tokyo. The former offer of the railway for 250 million gold roubles was reduced to 200 million gold roubles. Still, Manchukuo is not prepared to buy at this price. It sticks to its original offer of 50 million gold roubles, stubbornly. But, the despatch of an expert from the Soviet State Bank to reinforce the Soviet delegation at Tokyo is proof of the fact that negotiations have not broken down. Hopes are still entertained that the deal will be gone through. In any case, one group in Russia desires to part with the railway at even a nominal price, provided that a binding agreement with Japan, with a view to avoid war in the Far East, is effected at the same time. The other group is not for parting with the railway at a ridiculously small price. They are prepared to let the Japanese seize the railroad, but they would wait for settling accounts with the Japanese at a future date when conditions in the Far East are more favourable to the Soviet Union and not so favourable, as now, to Japan.

Good Harvest

The harvest of crops has already begun, but the complaint of shortage of labour for harvest work is proof of the abundance of crops, this season. The authorities have ordered the Red Army soldiers to help in the harvest work. Besides, workpeople were released for this work by the closing down of less essential factories; and in towns of South Russia workers and employees have been permitted by the management to help in the harvesting of the crops. The semi-starvation of large masses of people, during last Winter and Spring, has, as it were, whetted, the appetite. The bumper harvest has resulted in an evil, in so far as illness has resulted from over-indulgence at the table. Bread and vegetables have been so plentiful after the comparative scarcity, that the masses of the people could not resist the temptation of over-eating.

Sabotage Persistent

Another State trial has been launched against executives and employees of State factories and distributing agencies who are being prosecuted for despatching harvesting combines, to various parts of the country, without essential parts. It has become more common that some sort of sabotage, either by commission or omission, is being regularly practised. The Metro-Vickers case has not yet been forgotten, and to-day we hear of this lapse when the bountiful harvest needs hands to garner it.

The Moscow Committee of the communist party recently called a special session for considering ways and means of improving the power-stations, many of which have broken down. The investigation gave cause for suspecting that the blame for the continued trouble at the stations in Moscow and elsewhere belonged to deliberate wreckers. The authorities have started investigations to book the culprits, with the help of voluntary detectives.

Baltic-White Sea Canal

The outstanding achievement of the Soviet Union this year is the opening of the Belomorstroi Canal, connecting the White Sea with the Baltic. The work began in November 1931, and the last of the series of sluices was completed in May. The steamer *checkist* traversed the canal with 300 passengers, in June. The canal begins at Soroka on the Murman Railway at the wtstern most point of the Gulf of Onega in the White Sea, runs into the lake Vyg, proceeds to Lake Onega and joins the Gulf of Onega at Povenetz. The Lake Onega is naturally connected with Lake Ladoga by the river Svir and from Lake Ladoga the canal runs through the river Neva into the Gulf of Finland.

The Soviet Union were very keen on finishing the project at any cost, by the summer of this year. American and German engineers were in charge, with 700 highly trained Russian engineers to assist them. It was originally estimated that the work would require 10,000 of the best skilled Russian workers, but the expedition of the work swallowed prison labour, on official admission, to the extent of 130,000 men. But it is reported that as many as 200,000 were actually employed.

Tht stupendousness of the work can be understood from the fact that, in order to raise tht water level of Lake Vyg some 21 feet, about 200 small islands had to disappear. Out of the length of 227 kilometres of the canal from Soroka to Povenetz, some 40 kilometres of this stretch had to be blasted through granite rock. The canal has 12 locks, 19 sluices and 15 dams. The most important of the sluices is called the Gates of Povenetz, where ships are lifted no fewer than 70 metres.

Tht magnitude of the undertaking is evident from the fact that it is one and a half times as long as the Suez, and three times as long as the Panama Canal. Somt idea of the driving power of Soviet Union can be obtained, when such a stupendous undertaking has been finished in incredibly short time of one year and seven months.

The voyage between the White Sea and the Baltic, which till now took seventeen days, could now be performed by ships up to 3,300 tons in less than six days.

The military importance of the canal lies in affording protection to the Northern coast of Russia the lack of which was vividly brought to notice when Britain and the Allied warships took control of the White Sea in 1918. The construction of this canal will make it possible for smaller war vessels ao sail from the Baltic to the White Sea.

The economic importance lies in the canal affording an easy transit for timber, which can be floated from Soroka on the White Sea to Povenetz, across the lake and by river Neva up to Leningrad. Here, the Soviet intends to erect a number of large saw mills, so that sawn timber can be directly exported to foreign countries. Fish from the White Sea and furs from the Northern forests, as well as natural minerals from the Kola Peninsula, can all be shipped through this canal. The Kola Peninsula has napthaline, and other minerals used in the production of fertilisers, and in aluminium, glass and china industries. Iron ore, equalling the best Swedish, is also found there.

Prosperity is writ large on the face of the canal. During the current year, it is expected that 1.14 million tons will be shipped by this canal. This figure will progress year after year, at the expense of international shipping concerns.

FINLAND

STEADY AND SATISFACTORY PROGRESS

During the past fifteen years Finland has been making steady progress in every department of national activity.

The short-term foreign indebtedness, increased, during the last half-year, from 1,570 million marks to about 1,930 million marks. But, the amount of foreign balances also increased, during the same period, from 880 million marks to about 1,240 million marks. Thus, the net indebtedness remained practically the same. But, during the corresponding time last year, it was reduced by about 160

Air Mail Week

million marks. The position will be appreciated by a comparison of the figures for previous years. At the end of 1930 the net indebtedness was about 2,160 million marks. In 1929, it was at a considerably higher figure, about 3,100 million marks, and at the end of 1927 at about 1680 million marks. The above calculation was based on gold marks. The fall of the dollar has, therefore, not produced any reduction in the actual burden of debt.

During June last, the timber goods and paper industry products showed substantial increases in the export line, as compared with June 1932; 342 million Finmarks representing the value of timber exports against 244,500 million Finmarks. Paper was at 181,700 Finmarks against 166,300 Finmarks. The foreign trade of Finland maintains a steady and satisfactory favourable trade balance.

In July, imports totalled 350,100,000 Finmarks and exports 692,400,000, leaving an export surplus of 342,300,000 Finmarks (£1,771,000). On the seven months, January to July, this year, there has been an export surplus of 631,100,000 Finmarks (£3,266,000).

The Finnish Seamen's and Firemen's strike, which was started as a protest against a 7½ per cent. wage-cut and the claim of the new Seamen's and Firemen's Union to represent the men in negotiations for a collective agreement with the owners, has come to an end, after a period of three months. At one stage, the British Trade Union circles offered to mediate, but it was rejected by the Union, as the British proposal for a settlement did not include a collective agreement with the owners.

Anglo-Finish Trade Treaty

Recently a British trade delegation visited Finland, and the courtesy was returned by a Finnish trade delegation under the leadership of Dr. Henrik Ramsay. The result of the exchange of visits was an Anglo-Finnish trade treaty. The terms of the agreement are not known yet.

Another result was the formation of the organisation of a British Shopping Week at Helsingfors and other important centres in Finland, commencing from September 4. During the Week, the treaty will be signed, and its terms published. So far as is now known, Finland has agreed to reserve three-quarters of her coal demands for British exporters. The total amount, required by Finland, is about 500,000 tons annually.

Finland has also registered progress in other directions such as the reduction of the unemployed. Since the turn of this year, unemployment has steadily declined. The figures for June amounted to 27,384, compared with as many as 82,626 in December last.

The trade balance has, all along, been strongly in favour of Finland. Britain took 46.8 per cent. of Finland's total exports last year, but supplied only 18.6 per cent. of her imports. In the last six months, however, the difference has considerably shrunk, and the imports rose to 19.4 per cent., as against Germany's share of 27.3 per cent.

Finland has decided to build a powerful broadcasting station, because the programmes from the existing Finnish stations are interferred with by the powerful Soviet stations. The building is about to be commenced and the new station is expected to be in full working, by next year.

The British Week.

The British Week in Finland is, as it were, celebrated by the despatch of four R. A. F. flying boats under the squadron leader, Mr. K. B. Lloyd, on a 3500-mile flight to Finland and back. The fleet is due at Helsingfors on September 2, and it will remain there for the whole of the British Week.

The Week is patronised by His Royal Highness the Prince of Wales and the President of Finland. The primary object of the Week is to promote the sale of British goods in Finland. The initiative came from the Finnish Government and the leading Finnish industrialists, bankers, merchants, retailers and commercial bodies. It is recognised by the Finnish authorities that Great Britain's present adverse trade balance should be adjusted.

The Finnish authorities have made Helsingfors a free port for British goods to be displayed during the Week, but they reserve the right to charge duties on any goods remaining for sale in Finland after the Week.

The Finland Steamship Company Ld., has undertaken to carry back to Great Britain, free of charge, any goods remaining unsold, provided they have been carried by that line on the outward journey.

Besides, lectures by prominent British authors, and authorities on banking, and economics will be delivered during the Week, while leading representatives of British achievement in public affairs, literature, commerce, education and arts will pay official visits.

Lieutenant-Colonel John Colville M. P., Secretary of the Department of Overseas Trade, has accepted the invitation to represent the British Government, and will officially open, at Helsingfors, on September 4, the British Week in Finland. In an interview on August 29, Colonel Colville said:

"Finland has not only accepted our view that international trade must be readjusted upon a more equitable basis of reciprocity, but is making sincere and determined efforts to apply this principle to trade between the two countries.

"Hitherto, trade between Finland, as between most other countries and ourselves, has developed with an adverse balance for ourselves. Finland's exports to Britain are valued, roughly, at £10,000,000 a year, and her imports from us at, roughly, £3,000,000. Altogether, she spends about £17,000,000 annually abroad."

In order to encourage Finnish interests in British motor cars, a lottery is organised during the Week, the first prize being a Hillman Minx Saloon Car to be given by Messrs. Rootes Ld., automobiles distributors and exporters of Devonshire House, Piccadilly.

The chief attraction for British export to Finland is the absence of artificial trade barriers and currency restrictions, which, in other countries, have lost the exporters of the United Kingdom many a market.

The following table clearly brings out the disparity in the trade balance of the respective countries:

Imports into the United Kingdom from Finland:—

1930	1931	1932
£12,634,451	£11,630,127	£11,736,684

Exports from the United Kingdom to Finland:—

1930	1931	1932
£2,414,486	£1,603,658	£2,263,024

Re-exports from the United Kingdom to Finland:—

1930	1931	1932
£429,560	£169,579	£238,262

The figures for the first six months of 1933 show a considerable improvement upon earlier years. Exports from the United Kingdom to Finland rose from £723,799 in 1931 and £878,172 in 1932 to £1,147,596 in 1933.

British industry has, of late, been travelling from one country to another, in search of markets. Last Autumn, Copenhagen was the scene of a British exhibition. In October last, Stockholm witnessed a British Week, in honour of the Prince of Wales, and now Finland is the point of attraction.

Growing Power of Finland.

Though it is a small country and agricultural, the people are famed for their national character, in point of hardness and ruthlessness. They are not

likely to fall in with any arrangement unless they see advantage in it,, but all that can be said, in their favour, is that they are as just as they are generous. One factor, however, that militates against any undue bascination for foreign countries is its sympathy for Germany. In spite of the recent German policy of agricultural protection, Finnish peasants cherish happy memories of their freedom from the hold of Soviet Russia, Which was effected by a German army corps under General Von der Goltz. So long as Russia remains a Power to be dreaded, Finland will have to fall back on the Reich for protection, in case of necessity. As such, the first preference will always be given to German goods. But, as the country is making rapid progress in every direction, its capacity for buying foreign goods will steadily be on the increase.

Since it was created into an independent State, it has developed an efficient and incorruptible Civil Service.

The Finnish people are capable of great sacrifice, as evidenced by their readiness to pay eighty times more, in direct taxation, than they did before the War, as well as more than twenty times in indirect taxation. This huge harvest of taxes is employed in the construction of new roads, new railways, new and luxurious schools and hospitals, power-stations and a magnificent building for the Riksdag, costing over £500,000, and fitted with automatic division signals, bathrooms for tired members and classrooms for budding stenographers.

Another item of nation-building expenditure is the creation of a fund, called the Government Colonisation Fund, which now totals about £2 million, out of which cheap loans are granted for the creation of a family farm of an average size of 50 acres each. About 3000 new family farms are added every year. For five years these loans bear no interest or amortisation.

The capital city, Helsingfors, is being rebuilt with new buildings.

Summer Resort

The whole nation does everything in its power to attract tourist traffic. Finland is eminently situated to make a pleasure-ground for summer holiday-makers. The country has innumerable lakes and the natural scenery is very entrancing. The State has spent large sums of money on what seems to be an uneconomic expenditure, making roads in the interior and establishing inns at various attractive centres. Women students from the universities have taken upon themselves the duty of hostesses for tourists, by way of spending their summer holidays as waitresses in the large country-inns under the indirect control of the Government. Sooner or later, large sums should be pouring into the country through tourist traffic. Finland is considered to be one of the ideal places for anglers as its lakes are full of salmon and trout. The summer knows no dark nights.

25 YEARS TEST

REVEALS THE BEST

Service: For over 25 years "The Indian Mercantile" has served the Indian Public with complete satisfaction.

"Dependable" is no exaggerated description of this indigenous concern which has at the time Assets exceeding three times its paid-up capital and has paid, with rare exceptions, handsome Dividends since its inception.

Life policies issued by this Company are scientific, up-to-date and designed to meet individual requirements at competitive rates of premium.

Agency Terms are unique and treatment sympethetic.

THE INDIAN MERCANTILE INSURANCE CO., LTD.,

(Continued from page 745.)

Report of the Committee on Financial Safeguards.

(13) Every major country has either been at its pre-war parity for exchange or has been forced to go lower. India is the one country which is above it. Comprehensive measures have been taken in the U. S. A. to raise prices by the inflation of the currency; further the Executive has been armed with the power to devalue the dollar to the extent of 40 per cent. of its gold content. For India there is a strong and strengthening opinion that a lowering of the existing ratio of 1s. 6d. will give much needed relief to the cultivator. It is axiomatic that it will put less strain on the currency system of India should world conditions be slow in improving.

In paragraph 4 of the report of the Committee on Financial Safeguards, are stated the conditions which should be prerequisites to the starting of the Reserve Bank. One of these is "India's normal export surplus should have been restored."

(14) His Excellency Sir Hubert Emerson, Governor of the Punjab, is reported to have said the following on 27-7-33, in his address to the Punjab Council (vide 'the Times' 28-7-33.) :—

> "The Governor presented an unavoidably gloomy picture of the economic situation of the province, for the "catastrophic fall in prices was so sudden that there was neither time nor opportunity for gradual adjustments". Among some sections of the people there had been a 50 per cent. reduction in expenditure and a return to a standard of living which it was hoped, would be fogotten. The Governor expressed his "sincerest admiration of the manner in which the people have withstood and battled with the storm that at one time threatened to overwhelm them".

A message from Karachi to "The Times of Inida" dated 5th July says as follows:—

> "The Commissioner in Sind has issued a communique saying that in view of the low prices of agricultural products compared with those when the last settlement was introduced, Government have sanctioned a special remission in the case of Non-Barage Areas for Rabi.
>
> The areas getting remission include the whole of Karachi district except Karachi Taluka and hilly part of Tatta Taluka, the whole of Upper Sind Frontier District, Johi and Kotri in Dada district, Naushahro, Kandiaro, Moro and Sakrand in Nawabshah District, all of which get a remission of 25 per cent. and Shikarpur and Garhi Yasin in Sukkur District and Guni Badin, Tando Bago and Dero Mohabat in Hyderabad (Sind) District which receive 12½% remission.
>
> The question of a special remission in the Non-Barrage Area of Larkana District is still under consideration."

A Press communique issued by the Government of Bombay, whilst denying that a very acute situation has developed in the Panchmahals admits of considerable hardship already existing in that district especially among the Bhils, who form the major portion of the backward population in the district.

The question of an impartial examination of this question ceases to be a mere formality as suggested by some and must be regarded as a major question affecting not only the prosperity of the masses, but the very foundation of the new constitution.

EAST & WEST INSURANCE CO., LTD.

COLLECTIVE OR INSTITUTIONAL ADVERTISING IN LIFE ASSURANCE

It is not often realised among insurance companies in India that advertising of life insurance provides a striking contrast to other forms of advertising. For, mere advertisement, however intensively it may be carried on, will not be able to sell life insurance. The final stage of selling a life insurance policy is, in almost all cases, a face-to-face conversation between the prospective policyholder and a representative of the company. Hence advertising in life assurance is always only a preliminary to personal canvassing. A second point of difference, and perhaps, the first arises from the second—is the intangibility of life assurance. It cannot be exhibited in a show-room or be photographed, for it is not a commodity but a service. The prospective purchaser cannot have a sample of it as in the case of other commodities. Nor can this be sold on approval or "money back" system. As such, methods which are suitable to sell commodities, are entirely out of question in selling life assurance. Again life assurance is not a thing which a person buys frequently. Perhaps a man buys insurance 4 or 5 times in the average during his life time. So advertisement of life assurance may not yield immediate results; but it must be carried on consistently and persistently to give good results. The period of waiting to see the effects of advertising in life assurance is very much longer than it is in the case of other commodities. The fourth and the most important point of difference is that life assurance companies are not competing with one another in the main, but are simply fighting a common campaign against apathy. Vigorous and intensive campaign of advertisement carried out by a big company does not take away a single case of any other company, though it produces wonderful results for that company. This is due to the fact that the field for selling insurance is very wide and much unexplored. It is thought in England and even in America that the population is still very much under-insured. How much more so in India!

Common advertising according to a plan is therefore more suited to the needs of life insurance. And that is a method recently introduced and tried extensively with ample success in Canada and U.S.A. It is based upon the firm conviction that the chief problem of selling life insurance at the present day is not competition with one another but is the co-operative fighting of apathy. In essence it is the co-operative publicity of life assurance companies conducted jointly by almost all the companies. This method makes the public known through various agencies, the importance of life assurance in general. Vigorous campaigns of the type "Eat more fruits", "Drink more milk" are carried out on a huge scale to stress the necessity of life assurance in the minds of the public. General pamphlets and leaflets advocating the use of life assurance are printed and distributed widely to the public. Regular and periodical advertisements in bold and captivating forms, are inserted in almost all the daily news papers and periodicals. All these advertisements are of a general nature without mention of any particular company anywhere in the advertisements.

For example in Canada 22 insurance companies have joined in a campaign of institutional advertisement and their advertisements appear regularly at intervals of 2 or 3 weeks in every daily newspaper of repute both in English and in French. These serve the interests of life assurance as a whole and are usually timed with the important events of the year. When schools re-open after long holidays, an interesting and captivating advertisement entitled "What about your child's education?" appears in almost all the leading dailies. During the marriage season, an avdertisement entitled "On the Threshold of Life" will appear. All these advertisements are boldly named at the foot "Life Insurance Service". The workmanship of these series of advertisements is of an exceptionally high standard; and the cost is borne by all the contributing companies in proportion to their size.

It may be pointed out in this connection that this system of advertising is possible only when all companies of any great magnitude in the country join together in contributing the cost. If the advertisement requirements of the companies vary widely and if there is no common cause between them, this method is absolutely impracticable. Another point of importance to be noted by insurance companies who have joined in the institutional advertising is that they should continue vigorously their individual campaign of advertising side by side to achieve the maximum success. Thus, while every

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

company obtains a measure of support from these common advertisements, those companies which spend the most on their own individual advertising get the largest share of the support which the general campaign provides. Usually individual advertisements of Canadian companies appear in the same issues where the institutional advertisements appear.

Another wonderful example of institutional or collective advertising is afforded to us by the remarkable exhibit at the recent World Fair at Chicago. That exhibit consisting of a working model of an average American community represented life assurance as an institution. The model which is 60 feet wide by 15 feet deep, contains miniature homes, factories, office buildings, public utilities, streets and automobiles and men and children, parks, playgrounds, construction of buildings and all other enterprises of an advanced and growing community. In the background is shown a massive and noble building, symbolising the stability of life assurance. The entire show is one of action picture taking a few minutes to complete the cycle. The actions are explained to the public by means of illuminated captions and synchronised electrical transcription.

In the first episode large groups of people representing policyholders enter the building symbolic of life assurance, and pay their premiums. As they are paying, a huge reservoir at the top of the building is gradually filled up with dollars. This is explained by the caption "65 million policyholders have a stake in the institution of Life Assurance." The reservoir is labelled "20,000 million dollars of Assets." The next episode shows that "Life Assurance investments help to make your community a better place in which to live." This is depicted by a moving stream of yellow twinkling lights (giving the impression of gold dollars) which spread out to various parts of the community. They go to an electric power development, to a telephone building, to a gas plant, and other public utility places, then to a farm house, to an office building, etc., showing thereby that life assurance funds are invested in public utility bonds, mortgages of real property, government securities, etc. Then the caption "Your community resources help to provide the funds that pay your policies" is flashed on the screen.

In the last episode the return of dollars (the twinkling yellow lights) to the reservoir is shown and the following electrical transcription is made "You have seen how life assurance dollars are loaned to responsible borrowers and put to work in the community. Notice that the reservoir of life assurance assets is very nearly emptied. Now flowing back from the community, you see funds which represent the repayment of loans and interest earnings. Through such earnings life assurance assets daily grow larger. This enables policy-holders to get their life assurance at lower cost." Then crowds of men, women and children are seen coming out of the life assurance building from a different gate and the explanation says "The women, children and men you now see are life assurance beneficiaries. The funds they receive help to keep their homes together, educate children, provide security for old age, and serve many other needs. These people are helped to face the future, confident and unafraid." In order to keep alive the impression created in their minds each visitor was presented with a descriptive brochure.

There can be no denying the fact that institutional advertising has got its own virtues and will, perhaps, serve as the best public educator. The insurance companies of Canada and U. S. A. have realised its importance and have reaped its benefits also, by an extensive campaign. In my opinion, this method of advertisement will be admirably suitable to the present day conditions of Indian insurance. The very low position occupied by India among other countries of the world, as regards life assurance per head, is mostly, if not entirely, due to the lack of insurance education among the insuring public. And there can be no better method of educating the public than a regular series of interesting and attractive institutional advertisements in all Vernacular and English dailies. The Indian Insurance Institute seems to have begun such a campaign. But to achieve a good measure of success more vigorous campaigns are essential. I hope leading Indian insurance companies will realise the importance of collective advertising and will make an early move in installing such a system. The Indian life offices Association at Bombay may take up the matter and sound its members as to the advisability of introducing such a system in India.

In my article on Children's Assurances last week, it was stated that Children's policies as issued by Indian Life Offices do not adequately help the immediate financial needs of a family on the death of its bread-winner before the complete expiry of the endowment term. It was also stated that the Educational Endowment Policy of the Hindusthan Co-operative removes this difficulty to a great extent. It has now been brought to my notice that the Perfected Education Policy of the Zenith Life Assurance Company also removes this defect partly. Under this policy, if the parent or guardian dies at any time before the completion of the endowment term, the Company undertakes to pay immediately one-tenth of the sum assured to defray the current education expenses of the boy, and the balance of the sum assured is also payable in nine annual instalments of one-tenth of the sum assured. Thus if the parent dies even after the payment of one annual premium, the company will pay the sum assured in ten equal annual instalments, the first one commencing immediately after the death of the parent.

A CORRECTION.

We regret that in the Editorial review of the valuation report of the Tropical Assurance Company, the bonus declared by the company was wrongly stated as Rs. 1 per thousand per annum instead of Rs. 10 per thousand per annum.

INDIAN RESERVE BANK LEGISLATION

SIR PURSHOTTAMDAS'S NOTE ON

MINUTES OF DISSENT ON THE REPORT OF THE COMMITTEE

(1) The Report is by Committee which was appointed to report on "Indian Reserve Bank Legislation." (vide the heading to the Report) and "the prime purpose of the Report is to facilitate the drafting of the Reserve Bank Bill." The Committee did not therefore consider the wider and more important question whether the economic and currency position of India at the present time, or in the discernible future, justifies the launching of a Reserve Bank in the next year or two. The Committee assumed that the Imperial Government had decided to inaugurate a Reserve Bank and devoted its discussions to the consideration of the draft Bill of 1928; it suggested, by a majority or unanimously, such changes as were deemed necessary.

(2) Working in this restricted field the proceedings of the Committee were comparatively brief. The first meeting was held on Wednesday, July 5th. The subsequent meetings were twice a week, of five hours each, with one of three hours. The proceedings were finished on Saturday, July 8th, and the work was therefore confined to ten working days.

(3) From certain recommendations in the Report I am compelled to dissent. I feel it essential to explain these differences more fully than they are set out in the brief minutes appended to, or forming part of, the Report.

Management of the Reserve Bank.
Freedom from Political Influence.

(4) Paragraph 13 of the Report* deals with the method of appointing the Governor and Deputy-Governors of the Reserve Bank; it notes that the solution propounded is a comprmise, acceptable to all members of the Committee except four. As I was one of the dissentients I wish to set out my reasons, and what I say here also embraces the implications of the reasoning by some of my colleagues in Paragraph 32.

*"The method of appointing the Governor is a matter of the highest importance. It is essential that this officer should command general confidence, both in India and abroad. As regards the appointment of the Governor and Deputy-Governor (or Deputy-Governors), the majority of the Committee hold that the Governor-General in his discretion should be the appointing authority when the new constitution comes into force. Those who were of this opinion felt no doubt that before making these appointments the Governor-General would ascertian the views of the Board of the Bank. A minority of the Committee, however, hold that these appointments should be made by the Board of Directors, subject to the approval of the Governor-General. An attempt to harmonise these views was made by proposing that the existing provision of the Imperial Bank Constitution should be followed in drafting the Bill, and that the Governor and Deputy-Governors should be appointed by the Governor-General after consideration of the recommendations of the Board of the Bank. This solution, as a compromise, was acceptable to all members of the Committee except four."

The main grounds for agreement at the Third Round Table Conference that a Reserve Bank "free from any political influence" be started will be found explained by me, and confirmed by the Secretary of State for India, in questions 8598-86000 (28-7-33) of the Proceedings of the Joint Select Committee (No. 24).*

The Secretary of State, in his reply No. 8599, qualified the broad principle that the Reserve Bank should be free from any political influence by the words, "so far as we can make it."

* "8598. I only wanted to indicate one or two considerations which struck me as being very important to be borne in mind in connection with this Committee. I agree with the other requirements mentioned by the Secretary of State. The Reserve Bank Committe Report and the Railway Board Report are not available for us to-day, therefore I shall not ask any questions about them. There is one question I should like to ask, because it is a question which is constitutional and not purely financial. You have said that the Reserve Bank should be free of political influence. I wish to ask whether you remember that in the Financial Safeguards Committee, paragraph 4, page 37, the actual word used is "that efforts should be made to create, on sure foundations and free from any political influence"—the word "any" there does not mean merely political influence, and the significance of the word "any" is political influence both in India and in England. Would you agree with that? Yes.

"8599. I particularly stress this because I find there is a tendency rather to overlook the word "any" and only to think of political influence in India. Would you consider that something beyond that was intended and indicated in the draft Report? We intended in the Committee, and I contemplate now, that the Reserve Bank should be free, so far as we can make it, of any political influence.

"8600. On both sides of the seas? On both sides of the seas."

The recommendation of the Report is, in my opinion, contrary to the intention of the agreement reached at the Round Table Conference. The main objective sought in setting up a Reserve Bank is to ensure that the institution (Board and Management) should work from day to day as a commercial organisation pure and simple, on lines laid down, for the purposes of policy, by the Indian Legislature. If this end is to be secured it is essential that the Bank should be free to select its own executive officers, and appoint them with the approval of the Federal Government. If the Board of the Bank and the Federal Government agree on the personnel proposed no difficulty can arise. Should there occur any difference between the Government and the Bank, obviously then the Bank would suggest alternative names for the approval of the Government. But looking to the practical working of such institutions in the past, there is every reason to conclude that with the general consultation which will be necessary no conflict of opinion is likely to arise.

It has been suggested that should the Government and the Bank fail to agree, a deadlock will be established. That is, I consider, an extraordinary misapprehension, for which, so far as my personal knowledge goes, there is no precedent in the working of institutions of this character. It seems to me to argue a want of confidence in the non-political character of the Members of the Board; such a suspicion is bound to raise undesirable doubts in the minds of the Indian public. The Directors of the Reserve Bank will be men selected for their high position in the country and they will also have a vivid concern in the sound working and prestige of the Bank from their financial stake therein. It is therefore so improbable as to be inconceivable that they will suggest unsuitable persons for the high office of Governor and Deputy-Governors of the Bank, or if there should be a difference of opinion as to the merits of particular individuals, they would allow it to proceed to the stage of a deadlock and permit it to continue. Equally, the Federal Government will be responsible for the general stability of Indian Currency and Exchange policy; it will consist of Ministers appointed by the Governor General; and it will have an interest, not less than that of the Directors of the Bank, in its efficient working. To override both these responsible authorities, and to make the Governor-General in his discretion the appointing authority for the Governor and Deputy-Governors of the Bank, is in effect to vest the final word in the Governor-General. Can it be said in such circumstances that the Reserve Bank will be free from political influence "on both sides of the seas?" The Governor-General is consitutionally bound to act under the orders of the Secretary of State for India, himself a member of the British Cabinet, and as such subject to the Great political influence of the majority of the Imperial Parliament for the time being.

(5) For the reasons expressed above, if His Majesty's Government is not prepared to agree to the complete immunity of the Reserve Bank from political influence from or through the Secretary of State for India in London, it is only fair to meet the strong feeling in India in favour of making State Bank the Central Currency authority. There should be only two alternatives; either a shareholder's Bank completely free from political influence on both sides of the seas; or a State Bank directly subject to the control of the Federal Government. I did not press in Committee for the establishment of a State Bank, relying on the undertaking given by the Secretary of state at the Third Round Table Conference; but I am convinced that the qualification introduced by the Secretary of State in this reply to question No. 8599 undermines the foundation of the agreement arrived at, and if it is persisted in makes the consideration of the alternative of a State Bank an imperative necessity.

(6) There is a new feature in the situation which demands mention here. There has for some time been a movement on the part of a section of the British public for greater control of the Bank of England by the Government. They press for a change in the constitution and conventions of the Bank of England in the management of the currency which will secure that this shall not be

Topical Extracts:

substantially independent of the political feelings of the general body of the community. These ideas do not emanate from people without authority; they are fathered by some who may not inconceivably in the course of time be charged with the responsibility of forming a Government. That they should exist is a significant fact; should they gain force and be expressed in legislation, what will be the position of India? My country will have a real grievance if, on what may be the approximate eve of a change in the historic relations between the Government of the day and the Bank of England, leading to greater political control of the Bank, India finds herself closely tied to a system which England from experience has to reject. I mention this in passing to bring to the consideration of the Joint Select Committee the obvious undesirability of creating ir India the feeling that she is being irretrievably tied to a system which is under critical examination in England and when there is this strong movement towards a change.

(7) It has been suggested that as in the constitutional changes proposed the Governor-General is vested with special responsibility for "the financial stability and credit of the Federation", therefore he should have this special responsibility for the appointment of the Governor and Deputy-Governors of the Reserve Bank. I cannot agree. This special responsibility may affect many issues, but certainly not the day to day management of the Reserve Bank, which must be the duty of the high officers working under the general superintendence of the Board of Directors. The policy of the Reserve Bank can only be prescribed by legislation; this legislation wlil be subject to the approval of the Governor-General under the proposed constitution. But once that policy is determined, its practical application will be the responsibility of the Reserve Bank. I am convinced that the final voice sought by my colleagues to be given to the Governor-General at his discretions in the appointment of the principal officers of the Reserve Bank is not in accord with the agreement reached at the Round Table Conference, and is indeed unnecessary and most undesirable.

Silver-Sales not desirable

(8) The footnote to paragraph 21 (2)* was entered at my request. The Committee did not consider the question of the sale of silver now held in the Reserves, and it did not feel that it was included in the terms of reference. As a matter of general policy I am opposed to the sale of any part of the silver now held in the Currency Reserves. Although there has been a great change in the habits of the Indian people, leading to the use of Currency Notes instead of silver rupees for most ordinary transactions, the silver rupee, though a token coin, has a great hold on the masses. Indeed, the popularity of the Currency Note is largely based on confidence in its immediate encashment into silver on demand. Should there by any disturbance in public confidence—whether real or imaginary is immaterial—they would at once turn to the coined rupee in preference to the Currency Note, and it is imperative therefore to preserve this first line of defence unimpaired. This is especially the case when the financial world is still disturbed, and time must be allowed for the Reserve Bank to command confidence in action.

* "Some of us wish to make it clear that in accepting this scheme we do not wish to be regarded as endorsing any policy of selling silver."

Further, the sale of surplus rupees either to-day or in the near future, would only command in sterling approximately one-third of their face value, involving substantial losses on the transaction, as the silver was bought for coining at prices much higher than those now ruling. There is always the possibility, if an unexpected demand for rupees arises, of the Currency Authority having to buy silver for coining at prices higher than any present sale price; there is a strong movement indeed to raise silver prices. In view of all these circumstances, I submit to the Joint Select Committee the necessity of not leaving to the discretion of the Government of India, (either under the present constitution or any new one) the sale of silver in the Currency Reserves, merely to save interest on a metallic reserve which is for the moment inert. So long as silver commands the confidence of the mass of people any saving in interest is entirely subordinate to the major purpose of keeping this currency rampart in impregnable strength.

Gold-Minimum Reserves

(9) My note of dissent to paragraph 24* of the Report needs explanation. My colleagues recognise the deep and widespread feeling in India in favour of holding gold as affording ultimately the most reliable form of Currency Reserve. I submit that this is not mere sentiment, but is based on the example of far more advanced and richer countries. Some of the most progressive nations have conserved their gold reserves by placing a ban on exports, or increased them by purchasing gold at a premium, i.e., above par of gold (85 shillings) even to the extent of fifty per cent. The gold at present with the Government of India in the Reserves is worth approximately Rs. 44½ crores (face value) which is equivalent to approximately twenty-five per cent. of the Note issue. The Committee recommend a minium Reserve of forty per cent. (gold and sterling). I suggested in Committee that the present gold holding should be regarded as the minimum gold reserve for the next few years and certainly until world currency conditions became better stabilised. The majority of my colleagues felt that a Reserve of Rs. 35 crores might be accepted, leaving say Rs. 9½ crores of gold with the Reserve Bank free for any purposes for which it might be required. For the sake of unanimity, I accepted this compromise; but subject to an important condition; that was that a minimum gold holding in relation to the Note issue should be fixed. My colleagues could not agree, hence my note of dissent.

* "Sir Purshotamdas Thakurdas and Rai Bahadur Ram Saran Das dissent from the proposal to omit any provision for a minimum percentage of gold to the Note issue."

I am firmly convinced that the next few years may be difficult ones in Indian currency and exchange. Therefore the whole of the present gold holding (Rs. 44½ crores) should be earmarked as the minimum gold reserve. But if the alternative figures of Rs. 35 crores should be accepted as the minimum, a percentage of not less than fifteen per cent. gold to the Note issue, or Rs. 35 crores, should be laid down, whichever, is the higher. I prefer the first alternative, the preservation of the present gold holding intact, because I appreciate the difficulty of requiring the Reserve Bank to buy gold at a premium should the currency recovery of the world be slow and difficult.

(10) The second sentence of paragraph 26* is ambiguous. Under Clause 41 of the draft Bill there is no question of "utilising any reserves." It refers to the non-acquisition of further cover to the Note issue for a temporary period of a month at first, and of periods not exceeding a fortnight subsequently. The Gold minimum indicated in paragraph 24 should not be subject to decrease in the manner indicated in the second sentence of paragraph 26. It seems to me that in setting out the intention in regard to the minimum gold reserve there is some confusion in the minds of my colleagues; this arises because if the minimum reserve is to be used as suggested, obviously the figures indicated in paragraph 24 have no significance and do not constitute any true Reserve. In fact, it nullifies in a latter paragraph the agreement arrived at in paragraph 24.

* "We approve generally of the provisions of Clause 41 of the 1928 Bill, relating to the suspension of reserve requirements and the connected tax provision. We think it would be well to bring Clause 41 into a closer connection with Clause 31 in order to make it clear that the "minimum" reserve can, and should, be utilised whenever this is called for by the circumstances."

The Rupee-Sterling Ratio

(11) Paragraph 19 records the opinion of a considerable majority of the Indian Delegates that a suitable exchange ratio is one of the essential factors for the successful working of the Reserve Bank. The Committee, not being qualified to consider the various factors bound up with the question of a suitable ratio for India, have left the matter for consideration of the Government of India and decision by the Legislature. Certain of my colleagues say that "the exchange obligations incorporated in the Bill must necessarily be in accord with the rupee-sterling ratio existing when the Bill is introduced."

(12) My own view is that, in fulfilling some of the pre-requisites* of the Inauguration of a Reserve Bank, a review of the ratio is absolutely necessary. The existing ratio of the rupee to sterling is 1s. 6d. Before the war it was 1s. 4d. gold when sterling and gold were synonymous terms. When the £ went off gold the rupee was kept linked to the £ at 1s. 6d. No other dominion or agricultural country has been able to maintain the pre-war parity of its internal currency at its original standard. Australia and New Zealand have depreciated their domestic currencies between 10 and 25 per cent., while other agricultural countries have defaulted. The Indian ratio has been maintained at 1s. 6d. with considerable deflation of currency in India between 1925 and 1930 and with the fortuitous export of gold from India to the extent of more than £120 million since September, 1931, to date. The latter is admitted to be very largely "distress gold" reflecting the abnormal conditions in India arising from the fall of commodity prces.

* "Certain requirements must be satisfied before the Reserve Bank could start operations with a reasonable chance of successfully establishing itself; in particular, that (1) the Indian budgetary position should be assured, that (2) the existing short-term debt both in London and in India should be substantially reduced, that (3) adequate reserves should have been accumulated and that (4) India's normal export surplus should have been restored. The Committee recognize that some of these matters are beyond the control of Government but have been assured by the Secretary of State that, so far as is within his power and that of the Government of India, a policy which aims at the earliest possible realisation of the conditions required for the establishment of the Bank will be pursued."

(Continued on Page 741.)

STATISTICAL INFORMATION

BOMBAY TRADE

Last week we published a statistical summary showing the value of imports and exports of the principal articles of foreign trade of the Bombay Presidency for four months from 1st April to 31st July, 1933. To-day we publish below details of imports and exports for the month of July only. It appears that the aggregate value of the foreign trade—Imports and Exports—amounted to Rs. 8.33 crores, showing a decrease of Rs. 3.48 crores, or 29 per cent., as compared with the figures for July, 1932, but an increase of Rs. 7.13 lakhs, or nearly 9 per cent., as compared with those for July, 1931. The decrease of Rs. 3.48 crores is due mainly to reduced shipments of gold. Arrivals of both merchandise and treasure also declined. Exports of both Indian and foreign merchandise and silver showed increases.

Imports of merchandise were valued at As. 3.36 crores, showing a fall of Rs. 79.09 lakhs, or 19 per cent., and of Rs. 59.94 lakhs, or 15 per cent., from the figures for July, 1932, respectively. The fall of Rs. 79.09 lakhs is chiefly accounted for by smaller arrivals of cotton piecegoods—white and coloured (—8½ million yards and —Rs. 17.43 lakhs), silk, raw and manufactures (—Rs. 13.72 lakhs), metals and ores (—Rs. 8.57 lakhs), kerosene oil (—nearly 2½ million gallons and —Rs. 8.54 lakhs), artificial silk piecegoods (—over 3¼ million yards and —Rs. 7.11 lakhs), cotton twist and yarn (—nearly ¾ million lb. and —Rs. 7.03 lakhs), machinery and millwork (—Rs. 5.38 lakhs), cotton manufactures (—Rs. 4.91 lakhs) and rubber manufactures (—Rs. 4.61 lakhs). Imports of cotton, raw, on the other hand, rose by 661 tons in quantity and by Rs. 5.81 lakhs in value and those of cotton grey piecegoods by nearly 1½ million yards in quantity, though they fell by Rs. 64,162 in value. Imports of gold amounted to Rs. 5.22 lakhs as against Rs. 7.49 lakhs and Rs. 8.88 lakhs and those of silver to Rs. 27,829 as against Rs. 37.21 lakhs and Rs. 20.12 lakhs in July, 1932 and 1931, respectively.

Exports of Indian produce were valued at Rs. 2.46 crores, showing an improvement of Rs. 87.76 lakhs, or nearly 56 per cent. over the figures for July, 1932, but a fall of Rs. 29.07 lakhs, or nearly 77 per cent. from those for July, 1931. The improvement of Rs. 87.76 lakhs is almost entirely due to increased shipments of raw cotton (+12,850 tons and +Rs. 87.49 lakhs) and raw wool (+over 1¾ million lb. and +Rs. 7.32 lakhs). Exports of gold amounted to Rs. 2.28 crores as against Rs. 5.48 crores and Rs. 42.67 lakhs and those of silver to Rs. 2.74 lakhs against Rs. 92,365 and Rs. 58.78 lakhs in July, 1932 and 1931, respectively.

Re-exports of foreign merchandise were valued at Rs. 14.16 lakhs against Rs. 13.25 lakhs lakhs and Rs. 23.82 lakhs in July, 1932 and 1931, respectively.

The trade statistics of the first four months of the current financial year 1933-34, show a fall of Rs. 6.95 crores, or 31 per cent. and of Rs. 5.58 crores, or 27 per cent. in imports, but a rise of Rs. 4.13 crores or 17 per cent. and or Rs. 12.38 crores, or nearly 80 per cent. in exports, respectively, as compared with the figures for the corresponding period of the years 1932-33 and 1931-32. During this period imports of gold declined by Rs. 6,603 and Rs. 20.7 lakhs to Rs. 23.16 lakhs and those of silver by Rs. 71.91 lakhs and Rs. 89.08 lakhs to Rs. 3.52 lakhs. Imports of merchandise also receded by Rs. 6.22 crores, or nearly 30 per cent. and by Rs. 4.48 crores, or 23 per cent. to Rs. 14.78 crores, as compared with the figures for the same period of 1932-33 and 1931-32. The fall of Rs. 6.22 crores is attributable chiefly to smaller receipts of raw cotton (—41,632 tons and—Rs.3.65 crores), cotton piecegoods (—over 15¼ million yards and —Rs. 42.14 lakhs), kerosene oil (—nearly 4 million gallons and —Rs. 38.9 lakhs), alizarine and aniline dyes (—Rs. 34.64 lakhs), cotton twist and yarn (—nearly 3 million lbs. and—Rs. 33.47 lakhs), metals and ores (—Rs. 27.52 lakhs), silk, raw (—½ million lb. and—Rs. 24.56 lakhs), artificial silk piecegoods (—nearly 9¼ million yards and—Rs. 19.99 lakhs), paper and pasteboard (—Rs. 81.19 lakhs) and cotton manufactures (—Rs. 15.38 lakhs). Noticeable increase were, however, recorded in the arrivals of motor cars, including motor wagons, cycles and parts thereof (+Rs. 18.4 lakhs) and sugar (+11,853 tons and+Rs. 9.6 lakhs).

TRADE OF KARACHI

The statistics of the foreign trade of the port of Karachi for August, 1933, issued by the Collector of Customs, show that the total value of imports (merchandise) amounted to Rs. 1.16 crores, a decrease of Rs. 64 lakhs, and that of exports to Rs. 1.07 crores, an increase of Rs. 42 lakhs, as compared with the figures for August, 1932. The progressive totals for the five months ending August, 1933, show a decrease of Rs. 2.02 crores or 28 per cent. under imports but an increase of Rs. 1.13 crores or 28 per cent. under exports.

Comparative figures of the principal imports and exports for August, 1932, and 1933, are given below:—

Imports

In August, 1933.

	Quantity. Tons.	Value. Rs.
Cotton manufactures	...	14,26,042
Oils	...	9,75,130
Metals and ores	...	7,86,698
Woollen goods	...	13,48,058
Liquors	...	3,50,038
Cotton, twist and yarn	...	15,776
Vehicles	...	3,50,449
Machinery and mill work ...	...	18,40,021
Sugar	5,342	5,37,105

Increase or decrease as compared with August, 1932.

	Quantity. Tons.	Value. Rs.
Cotton manufactures	...	—51,89,706
Oils	...	—5,28,561
Metals and ores	...	—2,67,742
Woollen goods	...	—1,60,816
Liquors	...	—66,333
Cotton, twist and yarn	..	—17,539
Vehicles	..	—10,792
Machinery and mill work ...	...	+4,66,797
Sugar	+1,466	+1,32,107

The decrease under cotton manufactures occurrred in receipts of all the three main sub-divisions of piecegoods, viz., grey, white and coloured. Imports of grey goods amounted to 425,000 yards valed at Rs. 57,000 as against 3½ million yards valed at Rs. 6 lakhs, while those of white and coloured goods totalled 4½ million yards valed at Rs. 8 lakhs and 2¼ million yards valed at Rs. 5 lakhs as against 19½ million yards valed at Rs. 32 lakhs and 13 million yards valed at Rs. 27 lakhs, respectively, in August, 1932. The total imports of cotton piecegoods during the five months ending August, 1933, amounted to 74½ million yards valued at Rs. 1.21 crores, showing a decrease of 47 per cent. in quantity and 51 per cent. in value as compared with the corresponding period of last year. The share of the United Kingdom in the total imports of cotton piecegoods during the first five months of the current official year was 57¾ million yards valed at Rs. 98 lakhs, a decrease of 43 per cent. in quantity and 47 per cent. in value, while that of Japan was 16½ million yards valued at Rs. 22 lakhs, a decrease of 53 per cent. in quantity and 60 per cent. in value, as compared with imports in the corresponding period of 1932-33. The decrease under oils was most noticeable in receipts of fuel oil from British Borneo, Persia and the United States of America. The decrease under metals was due to smaller arrivals of iron or steel rails, chairs and fish plates and tubes, pipes and fittings, wrought from the United Kingdom, and sleepers and keys for railways from Belgium. Imports of woolen goods decreased as the result of reduced arrivals of piecegoods from Italy. The expansion in imports of machinery occured in receipts of sugar machinery from the United Kingdom and Czechoslovakia, offset partly by reduced arrivals of electrical machinery from the United Kingdom. The improvement of 1,466 tons in the quantity of sugar imported during the month under report occurred mainly in receipts of beet sugar from the United Kingdom. The total quantity of sugar imported during the five months ending August, 1933, was 26,647 tons as against 38,692 tons in the corresponding period last year

Exports

In August, 1933.

	Quantity. Tons.	Value. Rs.
Cotton, raw	11,622	57,81,535
Wool, raw (Indian and Foreign)	2,141	17,04,152
Rapeseed	10,941	12,48,125
Skins, raw	350	3,21,748
Hides, raw	119	79,853
Wheat	31	2,695
Wheat flour	385	42,304
Barley	20	1,303

Increase or decrease as compared with August, 1932.

	Quantity. Tons.	Value. Rs.
Cotton, raw	+6,363	+31,66,687
Wool, raw (Indian and Foreign)	+810	+4,67,202
Rapeseed	+4,541	+3,85,976
Skins, raw	+196	+1,68,554
Hides, raw	+82	+60,921
Wheat	+22	+1,900
Wheat flour	—680	—64,868
Barley	—43	—3,310

The increase under cotton occurred in shipments to Germany, Italy, the United Kingdom, Belgium and the Netherlands. Japan, on the other hand, took less, viz., 199 tons valued at Rs. 1 lakh as against 516 tons valued at Rs. 3 lakhs in August, 1932. The total quantity of Indian cotton exported during the five months ending August, 1933, was 68,933 tons (386,026 bales) as against 34,607 tons (193,797 bales) in the corresponding period of 1932-33. A feature during the current year was an export of Persian cotton, the total quantity exported so far being 155 tons valued at Rs. 1 lakh. Germany and Japan were the only purchasers. The increase in exports of raw wool occurred mainly in shipments to the United States of America. Shipments of rapeseed increased as the result of larger purchases by Germany, France and the Netherlands. Increased shipments of goat skins to the United States of America accounted for the improvement in exports of raw skins.

TRADE OF ADEN

The number of merchant vessels over 200 tons that used the Port of Aden in July, 1933, was 124 as compared with 113 in the corresponding month last year, and the total tonnage was 504,000 as compared with 475,000. Excluding coal, salt, fuel oil and military and naval stores and transhipment cargo, the total tonnage of imports in the month was 6,800 and of exports 4,000 as compared with 6,400 and 3,400 respectively for the corresponding month last year. The total value of imports excluding Government stores was Rs. 41,55,000 as compared with Rs. 43,99,000 for July, 1932, and of exports Rs. 27,35,000 as compared with Rs. 26,62,000. The total value of both imports and exports together was Rs. 68,90,000 as compared with Rs. 70,61,000 for the corresponding month last year Imports during the month were above those for July, 1932, in the case of grain, pulse and flour, gums and resins, skins raw and sugar, and below in the case of coffee, hardware, hides raw, seeds, piecegoods grey, white and printed or dyed twist and yarn, tobacco unmanufactured and manufactured and treasure private. Exports were above those for July, 1932, in the case of grain. pulse and flour, gums and resins, hides raw, skins raw, sugar, piecegoods white and printed or dyed, tobacco unmanufactured and manufactured; and below in the case of coffee, hardware, seeds, piecegoods grey, twist and yarn and treasure private.

RAILWAY EARNINGS

The total approximate gross earnings of all State-owned railways for the week ending 26th August, 1933, (21st week) amount to Rs. 131 lakhs, Rs. 6 lakhs LESS than the figures for the last week and Rs. 4 lakhs LESS than the figures for the corresponding week of the previous year and the same as those for the corresponding week of 1931-32.

The total approximate gross earnings from 1st April to 26th August, 1933, amount to Rs. 33.24 crores or Rs. 83 lakhs MORE than the xgures for the corresponding period of the previous year and Rs. 63 lakhs LESS than the corresponding period ofx 1931-32.

A comparision with the figures of the previous week for the principal State-owned railways shows DECREASES in the approximate gross earnings of all railways except the Burma, E. I. and Tirhoot and Lucknow Bareilly. A comparison with the figures of the corresponding week of 1932 shows DECREASES in the approximate gross earnings of all the principal State-owned railways except the B. N., E. I., N. W. and Tirhoot and Lucknow Bareilly.

During the week ending 26th August, 1933, there were loaded on the broad gauge 58,353 wagons, being 316 FEWER than in the corresponding week of the previous year, or a decrease of 0.54 per cent. On the metre gauge there were loaded 34,270 wagons, being 3,295 FEWER than in the corresponding week of the previous year, or a decrease of 8.77 per cent.

The following are the approximate ordinary working expenses including suspense but excluding appropriation to and from depreciation fund of the State-owned Railways from 1st April to 31st July, 1933, as compared with the actuals of the corresponding period of last year:——

Railways.	Up to 31-7-32 (In lakhs). Rs.	Up to 31-7-32 (In lakhs). Rs.
A. B.	33	35
B. N.	149	150
B. B. & C. I.	167	169
Burma	74	74
E. B.	111	108
E. I.	293	294
G. I. P.	213	214
M. & S. M.	107	107
N. W.	278	292
S. I.	81	82
Tirhoot and Lucknow Bareilly ...	21	21
Other Railays	7	8
Total ...	1,534	1,554

MYSORE GOLD MINES

The following are the returns of the Mysore Gold Mines for the month of August, 1933:—

Champion Reef.—9,470 tons current ore treated produced 5,016 fine ozs., and 17,854 tons old tailings produced 487 fine ozs., making a total of 5,503 fine ozs. of gold.

Mysore.—14,900 tons of current ore treated produced 7,688 ozs. of fine gold.

Nundydroog.—18,797 tons of current ore yielded 9,850 fine ozs., 2,589 tons of old dump sand retreated yielded 169 fine ozs., making a total yield of 10,019 ozs. of fine gold.

Oorgaum.—12,502 tons of current ore treated produced 3,465 ozs., and 20,498 tons of old dump sand retreated yielded 1,128 fine ozs., making a total of 4,593 ozs. of fine gold.

BURMA CORPORATION LIMITED—BAWDWIN MINE

During the month of August 41,422 tons of ore were mined. 32,800 tons of Ore were milled in the Treatment Plant producing 12,784 tons of Leady Concentrates.

15,177 tons of Lead-bearing material, including 610 tons of High Grade Ore were smelted in the Blast Furnaces, producing 7,060 tons Hard Lead for treatment in the Refinery.

Refinery Products were:—
5,880 tons Refined Lead
510,000 ounces Refined Silver.

Experimental Zinc Plant produced 4,923 tons Zinc Concentrates, assaying 8.950 ounces of Silver, 6.15 per cent. Lead, 53.7 per cent. Zinc.

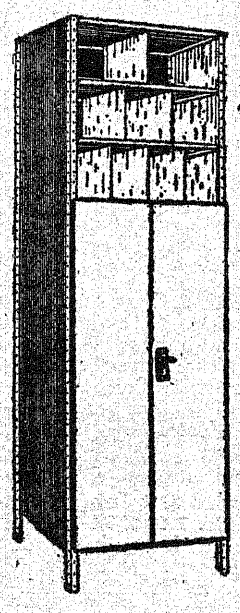
In addition to the above 900 tons Copper Matte were produced from the treatment of accumulated smelter by-products and 8,390 tons Copper Ore.

100 tons of Refined Antimonial Lead and 300 tons Speiss were also produced.

Included in the tonnage of Refined Lead is 56 tons recovered from the smelting of Copper Ore.

The General Manager reports the following development:—The Meingtha Orebody No. 3 Level has been crosscut East at 2,943 feet South exposing 76½ feet of ore assaying—Silver per ton 17.2 oz., Lead 20.3 per cent., Zinc 7.2 per cent., Copper 0.2 per cent.

BEST VALUE IN STEEL
SHELVING
GODREJ



No other factory in India has the special machines for shearing cold-rolling, flattening, etc., and the chemical and machine cleaning processes for anti-rust treatment like the Godrej Works, for making good Shelving.

This makes Godrej Shelving the very best on the market and its sales in India far exceed the sales of all other makes of shelving foreign and Indian combined.

Godrej gives you best value in Shelving.
STEEL SHELVING CUPBOARDS, RACKS,
PIGEON-HOLES OF ALL SIZES AND TYPES.

COMPANY REPORTS

THE EASTERN BANK, LD.

The Eastern Bank, Calcutta, have received the following telegram from their London Office:—

"Directors declare interim dividend at the rate of 3/- per share, less Income Tax at the rate of 5/- per £ less 1/- relief in respect of dominion Income Tax making net Income Tax 4/- per £. Dividend payable 30th September. Transfer Books will be closed from 28th September to 29th September both days inclusive."

CHARTERED BANK OF INDIA, AUSTRALIA & CHINA.

The local Agent of the Chartered Bank of India, Australia & China has received the following cable from his London Office:—

"Directors have declared an Interim Dividend for the past half year at the rate of 14 per cent. per annum subject to Income Tax".

ALLIANCE JUTE MILLS CO., LD.

BENGAL NAGPUR COTTON MILLS LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	12,00,000	Block (net)	9,34,062
Debentures	4,00,000	Cotton, Cloth, etc.	16,66,837
Reserves	7,00,000	Stores	1,29,054
Other Debts	7,71,507	Outstandings	41,488
Profit & Loss	16,577	Cash & Invests.	2,66,703
Total	30,88,084	Total	30,88,084

Extracts from Directors' Report:

Report.—For the half-year ended 30th June, 1933.

The working for the half-year, after deducting Debenture Interest, Depreciation and Commissions, shows a profit of Rs. 13,693-4, to which has to be added the amount brought forward from last half-year Rs. 2,883-11-3, making a total of Rs. 16,576-15-3, which we recommend should be dealt with as follows:—In payment of a dividend on the Preference Shares at the rate of 7 per cent. per annum, free of Income Tax Rs. 10,500 leaving to be carried forward Rs. 6.076-15-3.

Trading Conditions.—During the period under review most difficult conditions were experienced, a prominent feature being the scarcity of demand for both Yarn and Cloth from the usual consuming centres.

Some improvement in this respect took place towards the end of the half-year, but unfortunately sales could only be effected at reduced prices. This position has necessitated writing down the value of stocks of both Yarn and Colth, and trading results have been affected accordingly.

Since the close of the half-year the improvement in offtake has been maintained, but the general lack of confidence makes future prospects uncertain.

General.—With regard to the State's request that Excise Duty should be levied on the Mills' production retrospectively from December, 1925, we have to advise that the Ruling Chief of Nandgaon State has memorialised the Secretary of State, whose decision is awaited. —Shaw Wallace & Co., Managing Agents.

HOOGHLY FLOUR MILLS CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	6,00,000	Block (net)	2,31,001
Reserves	2,50,025	Wheat & Flour	2,06,369
Debts	1,67,886	Stores	27,504
Profit & Loss	10,557	Outstandings	2,37,324
		Cash & Invests.	2,76,270
Total	10,28,468	Total	10,28,468

Extracts from Directors' Report:

Report.—For the half-year ended 30th June, 1933.

Trading Conditions.—The half-year under review has again been a period of extreme difficulty. Government's policy in maintaining the heavy embargo on the import of Foreign Wheat has resulted in the price being maintained at a level which has served to attract increased attention to other foodstuffs which compete with the Mill's products.

The difficulty in trading profitably has been enhanced by the necessity for Karachi Mills to continue dumping their products here owing to their complete loss of export business.

Profit.—The profit for the half-year amounted to Rs. 904-6-7, to which has to be added the amount brought forward Rs. 3,684-6-11 and Rs. 10,000 transferred from Reserve Fund, making a total of Rs. 14,588-13-6. After deducting Rs. 4,031-9-6 for Depreciation and Commission, there remains a sum of Rs. 10,557-4 available for disposal.

Dividend.—The payment of a dividend for the half-year ended 30th June, 1933, at the rate of 2½ per cent. per annum, free of Income Tax, is recommended. This will absorb Rs. 7,500, and leave a balance of Rs. 3,057-4 to be carried forward.—Shaw Wallace & Co., Managing Agents.

DARJEELING HIMALAYAN RLY. CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	61,25,000	Block	45,04,533
Debentures	17,25,000	General Charges	2,77,641
Reserves	1,48,905	Stores	2,37,052
Other Debts	13,93,966	Outstandings	2,39,153
Profit & Loss	3,12,289	Cash & Invests.	44,46,781
Total	97,05,160	Total	97,05,160

Extracts from Directors' Report:

Report.—For the year ended 31st March, 1933.

Capital.—The Capital expenditure at 31st March, 1933, including Stores, stood at Rs. 50,19,226 as compared with Rs. 50,91,217 on the corresponding date last year, a reduction of Rs. 71,991. Whilst Rs. 1,363 was spent during the year on Capital Account there was a reduction of Rs. 73,354 in Stores balances.

Revenue.—The balance of Net Earnings on 31st March, 1933, was Rs. 3,12,289 arrrived at as follows:—Balance from previous year Rs. 2,02,216. Revenue for the year Rs. 4,09,610, Liabilities for the year Rs. 1,90,262 equal to Rs. 2,19,348, total Rs. 4,21,664. Deduct—Interim dividend paid during the year ended 31st March, 1933, at 2½ per cent. on Preference shares Rs. 1,09,375. Net revenue available on 31st March, 1933, Rs. 3,12,289.

The Directors recommend a final dividend of 2 per cent. on Ordinary Shares and 2½ per cent. on Preference Shares for the year, which will leave a balance of Rs. 1,67,914 to be carried forward. In making the above recommendations a dividend of Rs. 28,814 since received from the Extensions Company, but not actually declared during the year has been taken into consideration.

The gross earnings per mile per week averaged Rs. 474 against Rs. 543 for the previous year. The working expenses amounted to 75.28 per cent. of the gross earnings against 66.47 for the year ended 31st March, 1932.

Of the decrease of Rs. 26,266 in passenger earnings compared with the previous year, Rs. 5,611 is in Local passengers, Rs. 16,288 is in Foreign passengers, Rs. 1,773 is in Tourists and Rs. 2,593 in Troops. The decrease under passengers other than troops is due to a large number of passengers travelling by motors and also to less passengers travelling generally and to passengers travelling in lower classes than before owing to shortage of money. Less movement of troops accounts for the decrease under Troops.

There was a decrease of Rs. 572 under Luggage, which is due to passengers by motors carrying their luggage with them. There was a decrease of Rs. 2,394 under Military baggage, which is due to less movement of troops this year.

The decrease of Rs. 7,934 under Parcels is mainly due to Motor Lorries carrying parcels.

Merchandise General and Military Traffic.—The decrease under Merchandise is mainly due to less carriage of Potatoes, Iron, etc., P. W. D. Road metal, Cement, Kerosine Oil and other Merchandise due to general trade depression and to motor activities.

Expenses of Traffic Department.—The decrease of Rs. 27,606 is mainly under salaries and wages of general administration, station and train staff, travelling ticket examining staff and under loading and unloading charges of goods.—W. Hunter, T. S. Gladstone, Directors.

SAUGOR ELECTRICITY SUPPLY CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	47,940	Block (net)	1,98,111
Debts	2,34,262	Preliminary Exps.	12,434
		Stores & Tools	9,402
		Outstandings	5,255
		Cash	2,215
		Profit & Loss	54,785
Total	2,82,202	Total	2,82,202

Extracts from Directors' Report:

Report.—For the half-year ended 30th June, 1933.

Plant.—The Plant has run satisfactorily during the half-year and is maintained in good condition.

General.—Whilst there has been considerable improvement in the output, the progress is slow owing to general depression. The following shows the increase in the Company's operation:—

Half-year ended	Number of Consumers.	Units Consumption.
31st December, 1931	145	22,811
30th June, 1932	176	31,598
31st December, 1932	186	47,273
30th June, 1933	242	56,295

Accounts.—After providing for all charges including Rs. 6,207-0-10 on account of Depreciation, the half-year's working resulted in a Debit Balance of Rs. 10,093-9-5 to which has been added Rs. 44,691-14-3 brought forward from the previous half-year, making a total of Rs. 54,785-7-8 to be carried forward to next half-year's account.

Mr. Leslie Martin being on leave in England did not sign the accounts.—Martin & Co., Managing Agents.

CALCUTTA STEAM NAVIGATION CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assers.	Rs.
Capital	8,40,000	Black (net)	12,32,348
Reserves	4,95,851	Stocks	18,460
Debts	1,51,590	Stores & Spares	53,297
Profit & Loss	36,534	Outstandings	77,645
		Cash & Invests.	1,42,225
Total	15,23,975	Total	15,23,975

Extracts from Directors' Report:

Report for the half-year ended 30th June, 1933.

After providing Rs. 53,432-0-0 for Depreciation the balance at credit of Profit and Loss Account is Rs. 41,966-3-5 to which has to be added the sum of Rs. 11,657-8-3 brought forward from the previous account, making a gross total of Rs. 53,623-11-8.

From this has to be deducted Rs. 17,089-10-11 for Insurance, and Commission, leaving a balance of Rs. 36,534-0-9 with which it is proposed to deal as follows:—To pay a Dividend of Rs. 3 per cent. per share Rs. 25,200, to carry forward in Profit and Loss Account Rs. 11,334-0-9, total Rs. 36,534-0-9.

During the six months under review, general traffic returns have been poor. Towards the end of the period there were some signs of revival but it is by no means certain that the improvement will be maintained.

It has not been possible to keep the Fleet fully empxloyed but it has been maintained in good condition throughout.—Hoare, Miller & Co., Ld., Managing Agents.

SIJUA (JHERRIAH) ELECTRIC SUPPLY CO., LD.

Extracts from Directors' Report:

Report.—For the half-year ended 30th June, 1933.

Plant.—The Plant has run satisfactorily during the half-year and has been maintained in good condition.

The Maximum Load experienced during the half-year under review was 1,260 K. W.

Mains.—The extension of Mains to Sheopur was carried out during the half-year and supply was given in July.

Extentions to Mains have also been carried out in Chowk and Kotwale Ward Lanes, Nati Imli, Agagang and Digia.

General.—The following statement shows the Company's operations:—

Half-year ended	Total Connections	Units Sold	Revenue Rs.
31st December, 1931	... 1,645	1,992,334	2,19,795
30th June, 1932	... 1,854	2,073,371	2,27,353
31st December, 1932	... 2,045	2,212,822	2,46,002
30th June, 1933	... 2,224	2,352,300	2,40,444

Adjustment of charges in respect of the Municipal Pumping supply have been made in consideration of a large increase in the guaranteed consumption by the Board.

The Directors have considered it advisable in order to liquidate the loans made to the Company in connection with their extensions now amounting to over Rs. 4,00,000 to authorise under the provisions of Article 11 of the Company's Articles of Association the issue of a further 40,000 Ordinary shares of the nominal value of Rs. 10 each out of its unissued capital at a premium of Re. 1-4 per share. and to offer such further shares to shareholders whose names are borne on the Company's Register.

Particulars of such further issue. figure in a circular letter which is being sent to each of the Company's Registered Shareholders.

Accounts.—After providing for all charges including Rs. 49,179-9-2 on account of Depreciation and writing off Rs. 20,000 against Interest on Capital during construction, Preliminary Expenses and Brokerage on placing shares, a balance of Rs. 44,232-13-2 including Rs. 9,311-12-2 brought forward from the previous half-year remains available which the Directors recommend be disposed of as follows:—

Payment of a Dividend at the rate of 6 per cent. per annum free of Income-tax Rs. 38,997, carrying forward to the next half-year Rs. 5,235-13-2, total Rs. 44,232-13-2.

Owing to their inability to attend the Directors' Meeting Raja Sir Motichand and Mr. Leslie Martin did not sign the accounts.—Martin & Co., Managing Agents.

BAREILLY ELECTRICITY SUPPLY CO., LD.

Extracts from Directors' Report:

Rport.—For the half-year ended 30th June, 1933.

The balance transferred from the Revenue to the Profit and Loss Account is Rs. 72,711-1-9 and after adjustments for Depreciation, Income Tax, etc., there is a credit balance of Rs. 57,748-6-10, which we propose to dispose of as follows:—In paying a dividend of Rs. 4 per share, free of Income Tax, which will absorb Rs. 40,000 and in carrying forward the balance of Rs. 17,748-6-10 to the next half-year.

There was a better demand for our Iron Ore during the period under review but towards the latter half our contract for Manganess Ore with the Continent expired and the market being in such a depressed condition we have not renewed it.

We are pleased to report, however, that we have made contracts with Japan for Manganese Ore and also have maintained our trade in Chemical Managanese Ore with the Continent.

Prospects for future sales of Chemical Managanese Ore appear to be good. Bird & Co., Managing Agents.

PLANTERS' STORES AND AGENCY CO., LD.

The accounts for the half-year to 31st March show a profit of £4,221 (against £4,662 for the corresponding period of 1931-32). A dividend of 5 per cent. is again to be paid on the Ordinary shares, and £83,019 is to be carried forward (against £84,873 brought into the accounts).

WORLD OF INDIAN FINANCE

Calcutta, September 22.

Though slightly more usable on stray occasions, credits have been on the easy side, with lenders asking ½ per cent. and not always getting it. Though sales of Treasury Bills, inclusive of tenders and intermediates, were for a substantial amount (nearly Rs. 4 crores), Treasury Bills Maturities were also pretty heavy. On balance, no change worth mention has occurred in the money situation on account of Treasury Bills transations. The exchange market has been such as to make it nearly impossible for banks to tender sterling at what has now come to be understood as the minimum buying rate of the Treasury. The money market remained unaffected from the point of view of the transactions pertaining to the purchase of sterling by the Controller of the Currency. It will thus be seen that the influences at work in the monetary world were more or less of a simple character in this period. Moreover, we are on the eve of a somewhat long holiday; and the turnover of business has naturally tended to dwindle.

So far as the rupee-rate was concerned, there was a swing of the pendulum to the other side in the current week, Bear tactics were overdone in the previous week; and exchange, opening at 1s. 5 31/32d., on Monday, gained a point the same day and is quoting 1s. 6 1/32d., in the latter half of the week. It is reported that business was done, though on a small scale, for 1s. 6 1/16d., for ready T. T. The strengthening activity in exchange is due to various reasons. In the first place, it was an inevitable reaction after the slump of last week. In the second place, the special factors which occasioned remittances in the third week of this month were not operative to the same extent. In fact, the demand for remittance in the current week was conspicuous by its absence. In the third place, gold imports into Bombay have shown an appreciable expansion on account of the higher prices now current. It is expected that gold shipments in the Western Capital should show increases in this and the next few weeks. In the fourth place, when the rupee-rate dipped so low and so sharp, shippers and exporters took full advantage and fixed up all their requirements. It is believed that export bills discounted with banks at the low rates available last week were substantial. The recovery in the exchange market is in marked contrast to the downward movement which began in the giltedge market a fortnight ago and which has, for the time being, gathered more momentum. In our last week's issue, we referred to a special reason in connection with the setback in giltedge. The special reason had reference to the fears (or hopes?) of an alteration in the external value of the rupee and to resultant sales of rupee securities for reinvestment in sterling securities.

The real fact about the giltedge situation is that the operators cannot bring themselves to take a confident outlook for the future. They know and realise that, on the technical position, prices must be upward. They also know and recall that the soundest technical position could be easily disrupted by ill-timed or ill-advised tactics on the part of the Government. This fear was responsible for a drooping giltedge market right up to the end of 1931. This phase of diffidence gave way in the period beginning from January, 1932, to May, 1933, due to steadily increasing values in giltedge. A rude shock was administered after the last 3½ per cent. rupee loan. The market did recover from the blow; but the bruises received on the occasion were too severe to be forgotten easily. On the side of the Government, they have done nothing by way of administering some manner of soothing balm. The present position is, therefore, this: Professional operators are not inclined to take a long view and undertake large-scale commitments. Such genuine investment enquiries as arose from the sums released from maturing loans proved sufficiently important and weighty to overcome this bias in the market and to pull up prices to a level somewhat midway between the high watermark attained in April and the low watermark reached in May. If the market is to make further progress, it would not do for the Government to sit still and say that natural forces should find their own adjustment. If such is their attitude, for every single bull influence that makes itself felt in the market, there will be ten bear influences to reckon with.

Absence of support would not mean a maintenance of the price level but a positive retrogression. In such circumstances, the emergence of any weak or

tired bulls as sellers has grave repercusions. For our part, we believe that the holdings in the hands of weak parties have been considerably reduced; and that with energetic measures initiated from special quarters, a marked change in sentiment could be produced. Once confidence is revived, operators would be found ready enough to evolve bullish theories on the intrinsic position of the ways and means budget and on the prospects of considerably reduced new borrowings in the coming years. As it is, theories in recent times have proved veritable snares. It is up to the Government to give a substantial and effective impetus. We know that in urging this plea, we are addressing our appeal to deaf ears. Sir George Schuster, on landing in India, gave vent to cheerful feelings as regards the future of rupee securities. The press interview, which was published in the daily papers at the time, had a temporary effect of an uprising nature in giltedge values. But if Sir George believed that there was enough stamina in the market to maintain a rise merely on the basis of a vague assurance given by the Finance Member, he is clearly mistaken. He has done much to demoralise giltedge market. Let him do a little to infuse new vitality into this market.

NOTICE

There will be no issue next week, due to the Puja holidays. The Industries Supplement will be issued immediately after the holidays. The next regular number will be on October 7.

EDITOR,
"Indian Finance."

Exchange has been steady to firm in the current week. There has been a complete change-over from last week's market. Rates have risen for all positions. But in view of the large sums that are to be released before October 10, it is doubtful if there can be any further continuance of this strengthening tendency. On the other hand, plentiful credits might mean a depressing influence on the rupee-rate. On the weekly tender day, £80,000 at 1s. 6 1/16d., was received and allotted in full.

The closing rates are: 1s. 6 1/32d., September-December T.T.; 1s. 6d., January-February T.T.; and 1s. 5 31/32d., March-April T.T.

Bills may be quoted: 1s. 6 1/8d., right up to February, with 1s. 6 1/64d., lower possible.

Money has been easy, the quotable rate being ½ per cent. Interbank call money quoted ½ per cent. Union rates for call, three days and seven days notice were ⅜ per cent. Onemonth, twomonth and threemonth deposits were ⅜, 1 and 1¼ per cent. respectively.

OTHER INDIAN MONEY MARKETS

(By Wire)

(From Our Correspondent)

Madras, September 21.

There was a distinctly better feeling in evidence when the exchange markets opened on Monday and before the close, rates had moved up 3/32 and were back at old levels, *viz.*, sellers at 1s. 6 1/32d. for T.T. and small buyers at 1s. 6 1/32d. The improvement in rates is generally attributed to the Finance Secretary's statement on Saturday that there is no possibility of any alteration of the ratio in the near future. Confidence having now been restored we close with a firm undertone and sellers at 1s. 6 1/32d. T.T. this year with only doubtful buyers at 1s. 6 1/16d. T.T.

Call money is wanted at 1 per cent. to a small extent.

		Sterling-Dollar rate	Sterling-Franc rate	Gold Price London
Sept. 14	...	4.61⅜	81.21	129s. 6d.
,, 15	...	4.67⅛	80.96	130s. 5d.
,, 16	...	4.69¼	80.62	130s. 5d.
,, 18	...	4.79⅝	79.76	131s. 9d.
,, 19	...	4.79	79.68	131s. 9d.
,, 20	...	4.81	79.28	133s. 9d.
,, 21	...	4.78½	79.21	132s. 9d.

The principal foreign exchanges have suffered a relapse of the fever which had subsided during the fortnight previous to the week under review. The dollar has started on its downward trend; and except for the improvement of a fraction on September 19, it has been an unbroken and rapid decline from 4.61⅜ on September 14 to 4.81 on September 20. The next day has, however, shown an improvement to 4.78½ but the tendency of the week has been decidedly weaker for the dollar. Likewise, the sterling-franc rate has dropped from 81.21 to 79.21 at the end of the period under review. Gold price in London had gone up steadily from 129s. 6d. to 133s. 9d. from which level there was a setback to 132s. 9d. The set back occurred in the face of a further decline in the sterling-franc rate from 79.28 to 79.21. As we have pointed out on former occasions, the uneven movement of the sterling-franc rate and the sterling price of gold must be attributed to the unsteadiness of the premium that is available for gold in the London market.

The developments of the week may be summed up as an appreciation of sterling against the dollar and a depreciation in relation to the franc. In the absence of information to the contrary, one has to presume that both these developments are unwelcome to the British monetary authorities. When the first signs of these developments were visible, there was room for hope that the chaos indicated thereby would, in large measure, be avoided by some sort of an understanding with the American Government. The ignominous end of the meeting between Mr. Montagu Norman and President Roosevelt puts much farther the prospects of an exchange agreement among the principal nations. This was anticipated in these columns, because we saw more clearly that in America monetary policy has no identity separate from the general economic policy of the country. America has no ambitions to the role of an international financier, such as Britain is obliged to cherish owing to the states of British industry and the poor prospects of expanding her foreign trade. Mr. Roosevelt had from the beginning accepted the isolationism of American economic and financial policy as the prime requisite of any attempt at recovery. Inflation and stabilisation would alike have to be justified in the light of the requirements of the Recovery programme. But there was ample reason to think that personally Mr. Roosevelt would prefer to avoid the drastic remedy of actual inflation. In examining this question we observed last week that, left to himself, Mr. Roosevelt would try to avoid inflation but that, if ever he is forced to adopt it, it would be because of the unreasonable obstructionism of American bankers. Even with the threat of non-co-operation from the banks Mr. Roosevelt, it would now appear, has ways and means of providing credits for industry without inflation in the ordinary sense of the word. It is true that Mr. Harrison, the Chairman of the Finance Committee has observed in an interview that the dollar might be devalued in order to raise commodity prices. Mr. Harrison is reported to have predicted that President Roosevelt would take some action to raise prices "pretty quick-whether you call it inflation or not." The point is that Mr. Roosevelt has decided on measures which are inflationary in effect rather than in nature. Our Overseas columns refer to a scheme of recapitalisation of banks through a change in the rules by which banks can borrow from the Reconstruction Finance Corporation against their preferred stock. Formerly, the rules were stringent and now the relaxation proposed would have the effect of providing more funds for the banks, liquifying their position and enabling them to come into the scheme of Deposit Discount Corporation provided by Senator Glass.

If this scheme takes effect, then industry will have been provided with the means of carrying on in the face of the increased costs entailed by the codes imposed on it by the Recovery Administration. We venture to think that inflation in the ordinary sense of the word will thus have been avoided.

It would still remain to explain the fall in the dollar during the week. From all accounts, it would seem that the recovery of the dollar, since it touched the old sterling dollar parity, had to some extent interfered with the activity of the markets and the rise of prices. It is yet too early to attempt to explain the forces at work to depress the dollar again to the level of 4.80 or thereabout. There has been evidently a stronger force at work to counteract the seasonal depression of sterling in relation to the dollar. Whether the authorities in America have again resorted to the depreciation of exchange as a means of putting up commodity prices, it cannot be definitely said till more evidence either way is available. To help the study and conclusions of those who feel that every change in the cross rate must necessarily be a reflection of the policy of the American authorities, we append the following table of principal share and commodity prices in America, which, read together with the table at the top of this column, might afford some clue to the developments.

		General Motors	U. S. Steel Corpn.	Cotton Mdd. Spot	Wheat Chicago
		$	$	$	$
Sept. 14	...	35	56¼	9.55	0.88⅛
,, 15	...	35⅜	56	9.60	0.88⅛
,, 16	...	33¾	53¼	9.70	0.91¼
,, 18	...	35¼	54¾	10.15	0.92
,, 19	...	33¾	52¼	10.45	0.93⅞
,, 20	...	34	53	10.05	0.92¼

It will be seen from the above that while share prices have been fairly steady and have some times even shown actual declines, commodity prices have shown themselves more responsive to the depreciation of the dollar. It is not to be supposed that these developments are an adequate proof that prices can for ever be manipulated by appropriate changes in exchange. It must not be forgotten that the two commodities, whose prices are mentioned in the table above, are those which have received special treatment during recent times. Wheat has been the subject of an international agreement which not only minimises competition in foreign markets but has also led to an appreciable reduction of acreage at home. As regards cotton, the latest news from America indicates that President Roosevelt is arranging to have a sale of 3,000,000 bales to the Soviet Government on credits to be financed by the Reconstruction Finance Corporation. The price increases in these two commodities might just as well be the reflection of the improved sentiment consequent on these developments as the translation of the depreciation of the dollar into the prices of commodities.

COMMUNIQUES AND RETURNS

TREASURY BILLS

Tenders for Rs. 1½ crores (one crore fifty lakhs) of three months' Treasury Bills were opened on Wednesday, 20th September, 1933. Total amount offered was Rs. 2,64,50,000 (two crores sixty-four lakhs fifty thousand). Tenders at Rs. 99-12-6 were accepted in full and those at Rs. 99-12-3 were allotted approximately 92 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1½ crores (one crore fifty lakhs), the average rate of accepted tenders being As. 15 (annas fifteen) per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Monday, the 25th September, 1933. Successful tenderers should make payment on Saturday, the 30th September, 1933. Other conditions are as usual.

Three months' intermediates will be sold from the 21st to the 23rd September, 1933, at Rs. 99-12-6 per cent. subject to the conditions as announced in the previous week.

Three months' intermediates sold from the 14th to the 19th September, 1933, amounted to Rs. 2,43,50,000 (two crores forty-three lakhs fifty thousand).

STERLING TENDERS

On Wednesday, the 20th September, 1933, tenders to the amount of £80,000 (eighty thousand) at 1s. 6 1/16d. were received and allotted in full. Lower tenders were rejected.

£1 million (one million) will be offered for tender on Monday, the 25th September, 1933, on the same conditions as previously announced.

P. O. CASH CERTIFICATES.

During August, 1933, Rs. 1,16,71,000 (approximately) were realized by the sale of 5-year Post Office Cash Certificates, against Rs. 2,40,30,000 in August, 1932, and Rs. 1,64,62,000 in August, 1931.

THE GOLD STANDARD RESERVE

The balance of the Gold Standard Reserve on the 31st August, 1933, amounted to £40,000,000 and was held in the following form:—

	£
Cash at short notice at the Bank of England	2,996
British Treasury Bills	16,523,162
Other British and Dominion Government Securities	12,161,508
Gold.—In England	2,152,334
In India	9,160,000
Total ...	40,000,000

CASH BALANCE OF THE GOVERNMENT OF INDIA

WHY YOU SHOULD SHOP AT CURRIMBHOY'S

There are three chief reasons why you should shop at Currimbhoy's. Firstly, you can be certain that the very best quality cloth is being supplied to you because you can rely on the famous Currimbhoy group of mills where the cloth is made. Secondly, you are supporting Indian Industries when you purchase at Currimbhoy's Cloth Depot. Thirdly, Currimbhoy's fabrics are unequalled in India for their durability and lasting colours.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent).

Thursday, Sept. 21.

The market during the week showed Jutes shares fairly steady, Teas irregular and Government securities weak. Coal, however, was inclined to be steady also.

Government securities.—These shares were weak 3½ per cent. fell back to Rs. 84-1 while there was a fair enquiry for 4 per cent. 1960-70 Loan at Rs. 98-4 and 5 per cent. 1945-55 at Rs. 113-3. 5 per cent. 1935 bonds quoted Rs. 104-10 and the 6½ per cent. Treasury Bonds 1935 Rs. 107-6.

Jute.—Although these shares were steady there was not much business passing. Howrahs moved up from Rs. 48-15 to Rs. 49-3 while Kamarhattys showed no change at Rs. 457. Anglo-Indias were steady round Rs. 345, Orients were dealt in at Rs. 208-8 and New Centrals Rs. 350. Barnagore quoted Rs. 131, Auckland Rs. 175, Alliance Rs. 260, Kanknarrah Rs. 420, Cheviots Rs. 213-8, Nationals Rs. 21-2, Champdany Rs. 137, Northbrook Rs. 45-8, Presidency Rs. 5-9 and Birla (Ordy.) Rs. 8-2.

Cotton.—These shares were easy due to the conference of the Millowners' Association held at Bombay. Dunbars quoted Rs. 105 and Kesorams Rs. 3-7.

Banks & Railways.—In Imperial Bank shares the fully paids advanced from Rs. 1208-8 to Rs. 1234-8 and the Contributories to Rs. 300. In Railway shares Hardwar-Dehri were in fair demand at Rs. 109, Katakhal-Lal Bazar Rs. 81 and Shahdara Delhi-Saharanpur Light Rly. Rs. 117.

Tea.—Prices were irregular in this section and in certain cases quotations dropped. Eastern Cachar were marked back to Rs. 10-12, Loobah were easier at Rs. 6-12, Ranicherra at Rs. 18-4, Sarugaon had buyers round Rs. 11-12, East Indias were enquired for up to Rs. 14-8, Baradighi Rs. 45-4, Bishnauths Rs. 25-6, Darjeeling and Chincona Rs. 300, Dufflaghur Rs. 14, Dimakusi Rs. 25-8, Poobong Rs. 23-12, Seajuli Rs. 35-6, Tezpore Rs. 9-8, Bateli Rs. 4-14, East India Rs. 14-12½ and Jutlibari Rs. 16-6.

This section was unchanged. Indian Standard Wagon had more sellers but the price was steady at Rs. 50-8, Indian Iron and Steel were in demand at Rs. 4-13, Bengal Iron were easier at Rs. 2-10, Britannia Engineering As. 15, Burn & Co., (Ordy.) Rs. 141, Tata Iron and Steel (2nd pref.) 105 s. 1. In Electric power shares, Benares Electric quoted Rs. 12 c. div, U. P. Electric Rs. 123, Upper Ganges Electric Rs. 7-12, E. P. Electric Rs. 122, B. I. Corpn (Pref.) Rs. 119, Indian Wood Products had buyers around Rs. 32-8, while there was a sharp rise in Concord Insurance at Rs. 6-10 premium. Triton Insurance quoted Rs. 182, Titaghur paper (Defd.) Rs. 6, Calcutta Landing and Shipping Rs. 6-14, Indo-Burma Petroleum (Pref.) Rs. 110, Bengal Chemical (Ordy.) Rs. 282-8 s. 1. In sugar shares Basti quoted Rs. 223 s. 1. New Savan Rs. 14 and Samastipur Rs. 13-12..

Cotton mills shares were easier. Buckinghams were done at Rs. 180-8, Gokaks at Rs. 117-8. Madura Mills lost three points at 32.

No business passed in electric shares, with bid for Trichys up to Rs. 141-8 and Vellores up to Rs. 9.

Cements were a weak market owing to the cut of Rs. 2 per ton in the price of cements effected by the Cement Marketing Company on Monday of this week. Bundis are lower nearly Rs. 2 at 25 and at one time Indians and Shahabads touched Rs. 285. The closing levels are better.

Sugar shares were steady. Deccans have sellers at Rs. 290 (ex. div.) without attracting buyers. The small shares have sellers at Rs. 68 (ex. div.).

Rubber shares were dull.

In teas, Peermades were enquired at Rs. 20-8 on the announcement of an interim dividend of 5 per cent.

In the miscellaneous section, Singarenis improved to Rs. 7-12. There was no special feature. The market closed with a quiet undertone.

MADRAS STOCK EXCHANGE

(*By Wire*)

Madras, September, 21.

Securities were easy. Plentiful supplies of short-dated bonds were available in contrast to the scarcity in the previous weeks. Prices were sharply marked down. There was a good enquiry for 4½ per cent. 1934, 6½ per cent. 1935, 1939-44, 1940-43, and 1938-40 bonds at the close. The sellers were pressing the market with not many buyers in evidence even at the lower levels. The rupee paper was erratic and at one time touched Rs. 83-8, but closed better at Rs. 84. The interest previously taken in this both by speculators and the investors is rapidly waning. 1960-70 loan was down to Rs. 97-14 but subsequently improved to Rs. 98-5. Mysore loans continued to be absorbed at Rs. 109-12 for 15½ per cent., and Rs. 113-10 for 5 per cent. 6½ per cent. noted no dealings with buyers at Rs. 115-4. 7 per cent. 1951 Madras Corporation debentures changed hands at Rs. 125 with buyers over. Other Port Trust and Municipal issues were wanted at full rates.

Singareni Debentures to which attention was drawn in these columns two weeks ago, were oversubscribed. There are buyers at a small premium. There was otherwise nothing of note. Amongst preference shares, Tata Iron and Steel Second Preferences changed hands several times between Rs. 102-8 and Rs. 104-0. The tone at the close was easy at Rs. 102. Lack of sellers hampered business in local preference shares.

Imperial Bank fully-paids improved to Rs. 1,245 and Contributories to Rs. 304 with Bombay good buyers on this market. Indian Banks big shares improved to Rs. 88-8 and smaller shares to Rs. 18-12. There was persistent enquiry for Central Banks at Rs. 24-12 and Bank of Mysores at Rs. 215.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Bombay, September 22.

Gilt-edged securities altogether displayed quiet tone. 3½ per cent. Rupee paper from its previous close of Rs. 84-8 suffered temporary panicky decline due to heavy unloading from Calcutta and rumours about lowering rupee exchange. But it quietly revived and touching highest at Rs. 84-9 closed quiet at Rs. 84.

The arrival of Japanese and Lancashire delegations perturbed Indian millowners. A feature of the week was the sensational drop on Monday in the Fajalbhai group, in the Indoremalwas on Tuesday and all other mill shares were affected to some extent. Subsequently some improvement was noticed and it is to be hoped that rumours about financial difficulties will prove unfounded.

Industrial shares were but little affected excepting perhaps the cement group and Tata Steels. Fluctuations in the important scrips are as given below:—

	Previous closing	Lowest touched	Closing to-day
India Cement ...	311 4	291 4	293 12
Andhra Valley (Ordy. ...	1,470 0	1,456 4	1,456 4

JUTE AND JUTE GOODS

JUTE.

Jute was a dull and inactive market. Imports, too, were dull due to heavy deliveries on the futures market, which opened at Rs. 26 and closed at Rs. 25-12. Loose Jute market remained unchanged, small business being done in Supervised Jat at Rs. 4-4 and Rs. 3-12 for LR's and XLR's. Sellers seemed keen for business at reduced rates and buyers showed slight interest. The turnover was smaller with a further drop in prices. Pucca bales have declined in sympathy with the loose jute market with a general weakness all round. Foreign demand was negligible but there seemed to be a slightly easier feeling at the close. New Crop Firsts quoted Rs. 25 and Lightnings Rs. 23 but buyers showed little or no interest for early October shipment, while sellers asked 4 annas more.

JUTE MANUFACTURES.

The hessian market opened steady and prices appreciated with more covering business being in evidence for near delivery. There seemed to be more buying interest at the close but at lower levels and covering business for near shipment has checked the decline, prices, however, recovering a few points from the last. Ready-September 9 porters quoted Rs. 9-6 and 11 porters Rs. 11-14. Heavy Goods were a better market but with less pressure to sell. Sacks were done at about Rs. 22-6, September and B. Twills at Rs. 22-8 October.

DUNDEE.

The market remained quiet and raw material showed little or no change but the tendency was easy which has adversely affected business in other sections of the industry.

Warehouse.—Zadok Daisee-2/3 at £16.

Sept./Oct. or Oct./Nov.—Red Circle Sarkies-1 at £17 10s., the same mark of 1/2 at £17 2s. 6d., 2/3 at £16 2s. 6d., and threes at £15 15s., RF and Co. Firsts at £18, DM-SC at £12, Green DM-R at £14, Shiboo D-2/3 at £16 5s., Daisee-2/3 at £15 15s. for full group and also short group Shiva Daisee-2/3 at £15 15s., Abinash Tossa-2/3 at £17, Tossa-3 at £16 5s. for short group, Abinash Tossa-4 at £16 5s., Tossa-4 at £15 17s. 6d. for short group.

Jute Yarns.—An isolated sale of common 8 lb. cops was reported at 2s. 0d. and 8 lb. spools at 2s. 1d., delivery of which had to be taken immediately. There are indications that some spinners would accept 2s. 0½d. for cops and 2s. 1½d. for spools, but on the other hand these rates have been refused by the majority of spinners and sometimes 2s. 1d. and 2s. 2d. respectively have been paid for small lots. Buyers, on the whole are apparently content to await further developments. Twist remains firm at from 3 9/16d. to 3⅝d. for 3 ply 8 lb. and a good business done at these rates, while sacking yarns have also been in moderate demand at from 2 5/16d. to 2⅜d. for 24 lb. weft and 3 5/16d. for 8 lb. chains. Rove has been bought in small quantities at unchanged prices, but carpet yarns have been in good request and some large contracts placed at from 3 3/16d. for 14 lb. warp. Fine yarns have been purchased to some little extent at slightly lower rates.

Jute Cloth.—Buyers of jute cloth are interested to the extent of making fair inquiries, but actual business is still somewhat quiet. Manufacturers are quoting the unchanged rates of 3 1/16d. for 10½ oz. 40 in and 2 5/16d. for 8 oz., and these are being obtained for the small quantities usually purchased meantime, with at least 1/16d. less possible for delivery after the end of the year, a position in which some consumers are interested, though not willing to pay 3d. for 10½ oz. 40 in and 2¼d. for 8 oz. The 40 in hessians continue to be very well employed, and orders for 9½ oz. to 10 oz. for delivery this month have had to be refused on account of inability to supply same, America being the buyer interested. In the case of other widths there would probably be little difficulty in obtaining early delivery. Linoleum hessians are still very firm, and some further business has been done. Sacking is in some demand but otherwise heavy goods remain quiet.

Linen Trade.—The Soviet are reported to have sold 4,000 tons of their remaining stocks of old crop on the basis of £32 (gold) for Fourth Group. In consequence of the reduction in prices, there has been rather more doing in both flax and tow in this market. Values are again rather dearer than they were on account of the recent fall in Exchange, the fluctuations in which are making it very difficult for exporters to do business. The new crop reports continue quite satisfactory, pulling and retting proceeding. The Latvian Monopoly is expected to export about 10,000 to 12,000 tons during the coming season. Business in yarns is quiet, but spinners are in a favourable position, and there seems little hope of cheaper prices for some time at least, while there is a steady moderate business passing in linen goods.

German Trade.—During the past week, business here has shown more activity, and orders have been received from consumers as well as from wholesalers. The syndicate has raised the official quotations, so that the price for 10½ oz. hessians is now at 62 Pfg., 48 lb. yarn Pfg., and 8 lb at 42 Pfg. per kilo.

Total reported sales for the week ending Saturday, the 16th September, 1933.

COTTON AND COTTON GOODS

COTTON.

(By Wire.)

(From our correspondent).

Bombay, September 22.

The American cotton market continued to rise till yesterday due to the agitation for immediate inflation daily growing stronger. On Tuesday, New York, October, touched 10.27, advance of 109 futures having been recorded since Monday, the 11th. Reaction came yesterday all of a sudden, rebuff having been administered by the Government to the deputation of cotton growers' representation, rate closing forty-one points down. To-day it is further fifteen points lower. In the local market, Broach rate after advancing yesterday to Rs. 207 closed to-day at 202-8.

The cotton market developed a better tendency and values have steadily appreciated. This was partly due to the conference of the Millowners' Association held in Bombay to discuss trading between Lancashire and India. At the present stage India was importing larger quantities of textiles from other countries but the question was what was Lancashire's share in the trade and whether any adjustments could be made which might result in an advantage to her; and also to the possibilities of inflationary action in America. This, together with the prospects of continued control of cotton production next season has played a large part in the advancing tendency of prices. Values in New York have made quite a good recovery from the low point touched in the previous week. Spot trading value opened higher at 9.05 cents and advanced gradually to close firmer at 9.70 cents, showing an appreciation of 85 points on the week. Negotiations for the purchase of 3,000,000 bales of American cotton for French interests has opened in New York on the arrival of the international Banker, M. Neidecker from Paris.

PIECEGOODS

In the piecegoods market an improved tone was noticeable during the week and dealers have taken more interest in replacements than they have done for some time past. The enquiry, however, has been for a wide range of cloths and in these circumstances, the turnover has been of a retail character. Staple lines of greys and whites attracted a lot of attention and some orders were also placed for dyed fancy varieties such as *poplins*, striped shirtings and coatings. There has also been a few enquiries for Lancashire products such as white mulls, umbrella cloths etc. As regards ready position no expansion has been recorded in the offtake, demand being practically confined to restricted quantities of lower grade cloths.

Imports.

Although importations of piecegoods and yarns into Calcutta for August fall short of the returns made in the corresponding period last year, the figures nevertheless reveal a satisfactory expansion in trade, all centres having contributed towards the improvement. The total number of packages imported for the month named from all producing countries, including those from Indian ports amounted to 44,994, viz. 17,139 packages from Indian ports and 27,855 packages from outside ports. This compares with 63,478 packages for August last year; 34,588 packages for July; 84,160 packages for June and 34,721 packages for May.

The following comparative figures giving the respective importations from the three chief sources of supply since January will prove of interest. It will be seen, however, that despite the enhanced tariffs, which came into force on June 7, trade in Japanese goods continues to make satisfactory progress:—

	From Gt. Britain Pkgs.	From Japan Pkgs.	From Indian Ports Pkgs.
January ...	6,340	11,687	22,399
February ...	5,269	9,740	19,999
March ...	8,683	12,533	14,380
April ...	6,922	10,418	10,577
May ...	4,772	14,129	10,097

is hereby given that the Eleventh Half-yearly Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Saturday, the 30th day of September, 1933, at 12-10 p.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th June, 1933, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 23rd to the 30th September, 1933, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

DATED CALCUTTA,
The 21st September, 1933.

BULLION

GOLD.

(*By Wire*)

(From our correspondent).

Bombay, September 22.

The quest for gold has been keener and heavy sales of dollars for purchasing gold currencies, particularly the franc resulted in big decline in the sterling-franc rate. Operation through Exchange Equalisation Fund tried to stem further sagging. Yesterday London ready gold attained the dizzy record height of 133s. 9d. and the local rate touched at Rs. 33-2 with the franc rate tumbling down to 78.75. To-day rates (at 5-30) quoted at Rs. 32-14-9 and Rs. 32-15 for October and November settlements.

The advance in the rate per fine ounce for gold in the London market reported in our last week's issue continued throughout the week under review, the latest quotation available for the 20th being £6-13-9. The New York crossrate which stood at 4.61⅛ on the 14th has gone up to 4.81 on the 20th. The sterling-rance rate has declined from 81.21 on the 14th to 79.28 on the 20th. The rupee-sterling exchange has in consequence gone up to 1s. 61/32d. once more. The local gold market in consonance with the trend of the London market has registered continuous advance from Rs. 32-2 on the 14th to Rs.32-12 on the 20th. Stocks in Calcutta amount to 20,000 totals. Arrivals of distress gold from up-country parts continue.

LONDON (Air-Mail Week.)

Gold reserve against notes of the Bank of England was £190,283,342 on the 30th August, comparing with £190,167,177, the figure for the previous Wednesday.

During the week under review, the price of gold went up further due to the continuance of the depreciation of sterling in terms of the gold currencies. The quotation of 131s. 3d. per fine oz. reached on the 2nd inst. is the highest so far on record.

In the open market, large supplies were forthcoming. But the demand was also keen the Continent readily absorbed all the offerings.

The following were the United Kingdom imports and exports of gold registered from mid-day on the 28th ultimo to mid-day on the 4th instant:

	IMPORTS. £
France	18,879

SILVER.

(From our correspondent)

By Wire.

Bombay, September 22.

Silver rates have fluctuated within narrow range, but on balance the trend is downward. Rates to-day quoted Rs. 56-5, Rs. 56-7, and Rs. 56-11 for ready, October, and November settlements respectively.

The possibility of inflation in America has been responsible for better advices from America and Shanghai. The London Market in silver stands nearer to 18½d. having advanced from 18 1/16d. the closing figure for last week. Fluctuations are small. New York silver has gone up from 37½ cents on the 13th to 40⅛ cents on the 18th, but the latest quotation for the 19th shows a quietening down to 39⅝ cents. The local market has gone up from Rs. 56-3 on the 14th to Rs. 57/- on the 20th. Stocks in Calcutta amount to about 2,000 bars and the daily offtake is three bars.

LONDON (Air-Mail Week.)

A steady tone ruled in the market during the week under review. Movements in prices were small. Slightly higher levels were maintained. Buying from China kept the tone teady by offsetting sales from the Continent and the speculators.

Re-sales from Indian bazaars and moderate sales from America were features of the market. The undertone is fairly good without indications of any important change in the near future.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 28th ultimo to mid-day on the 4th instant:—

TEA

At the Calcutta Tea auctions on Monday and Tuesday the offerings consisted of 4,606 chests for export and 4,469 chests for internal consumption. Out of this 3,820 chests for export and 4,443 chests for internal consumption were disposed of. Bidding, however, was for broken grades which were dearer and prices showed considerable irregularity and a large proportion was taken out under bids below valuation. Leaf teas were a weak market. Owing to the coming Puja holidays the tea market will reopen again on October 2.

The Government of Travancore State announce that with effect from September 16, the customs duty of six annas per hundred pounds of tea exported by sea from Travancore to any port beyond the limits of British India. or to Aden has been enhanced and fixed at eight annas per hundred pounds.

The following are full particulars of Sale No. 15 :—

Teas with Export Rights

	1933.	1932.	1931.
Offered	22,781	27,900	27,710

,, Broken Pekoe ...	0-4-3 to 0-4-6
,, Pekoe	0-5-3 to 0-5-6

INDIAN TEA SALES.

London, Sept. 19.

There was keen bidding at the sale of Indian tea on Monday, when 23,293 packages were brought forward. Fine kinds were very firm and common grades were often ¼d. higher. Good mediums were also strong, but there was some irregularity in prices for lower medium teas. On Wednesday, when 22,473 packages were offered, competition was again brisk and general, and attractive invoices from Assam brought good prices. Rates for common and low medium descriptions were fully maintained at Monday's level.

Ceylon supplies on Tuesday amounted to 24,056 packages which met with a fair demand at previous rates. Quality in teas from the Uva district showed a decided improvement which was reflected in better prices. There was a good demand for teas for export.

Prices for common and medium descriptions at the Java were firm on rates ruling last week. Tippy teas, which were in request, sold readily. There was strong inquiry for teas suitable for export.

BEWARE FRAUD!
PROTECT YOURSELF BY USING A
SENTINAL CHEQUE WRITER
AT A SMALL COST—SECURITY IS ASSURED
AND YOUR BANK ACCOUNT GUARDED.
W. LESLIE & CO., CHOWRINGHEE. CALCUTTA.

The London Tea Brokers' Association's average figures for this week's sales, with the usual comparisons, are as follows:—

	This week.	Last week.	Corresponding sales, 1932.
	s. d.	s. d.	d.
N. India ...	1 5.50	1 3.90	10.61
S. India ...	11.24	11.12	6.34
Ceylon ...	1 4.31	1 3.80	8.48
Java ...	9.29	8.94	4.72

The Northern District averages are: Assam 1s. 7.76d. against 1s. 1.73d. at the corresponding sales last year; Darjeeling 2s. 0.25d. against 1s. 5.80d.; Dooars 1s. 0.35d., 6.38d. against; Cachar and Sylhet 9.98d. against 5.80d.

CEYLON TEA SALES

At the London auctions on September 19, 24,300 packages of Ceylon tea were submitted for sale.

There was a good demand. Prices were generally firm and in favour of sellers.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 10¾d., to-day's auction 9¾d. lb.; Common Broken Pekoe last auction 10¼d., to-day's auction 9¾d. lb.; Common Orange Pekoe last auction 12d., to-day's auction 11¾d. lb.; Common Broken Orange Pekoe last auction 11½d., to-day's auction 11d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 11½d., to-day's auction 11½d. lb.; Clean Common Broken Pekoe last auction 11½d., to-day's auction 11½d. lb.; Clean Common Orange Pekoe last auction 13d., to-day's auction 13d. lb.; Clean Common Broken Orange Pekoe last auction 12½d., to-day's auction 12¼d. lb.

(*Continued from page 805*).

The Yucca plant is said to be very easy to grow. Government evinces keen interest in its cultivation, which would result in considerable employment and profit for the agricultural industry.

The german oil industry has drawn up a programme for the extension of German oil borings, some 200 to 300 new borings, involving an expenditure of 50,000,000 marks. As the scheme will increase German oil output and further reduce imports of foreign oil, negotiations with the Government, for State aid, are already proceeding.

Reduction in Unemployment

Of the many measures, taken by the Government to combat unemployment, the latest have a marked bearing on industrial areas. No person can have a double employment. If the wages be inadequate, even then it is not permissible to employ the leisure time in augmenting one's income. As a corollary, only one person in a family should earn. Black labour is also to be stopped. If a person received doles he or she is not allowed a subsidiary occupation. These two measures are obviously popular. But, the shortening of hours to a 40 hour week is not so. The immediate effect of these measures is expected to remove unemployed from streets and registers. Unemployment may not obtrude a casual onlooker. But lower earnings of the labour population caused by shortened hours, will affect the sales of industrial goods. The equal earnings, caused by the veto of black labour and double employment, will, however, increase the demand for consumption goods.

The July total figure of 4,463,800 represents a decline of about 1,550,000 from January last, and of 935,000 from the corresponding month of last year. But the seasonal decline from January to July is about 1,000,000. The balance of 550,000 represents non-seasonal decrease, which is accounted for by 262,992 persons enrolled in the New Nazi Labour Crops, till the end of July. The numbers abandoning Labour exchanges on account of its uselessness, far outnumber those now joining it in the hope of privileged treatment under the new regime. Two other factors, contributing to the improvement, are the moral pressure on employers in East Prussia and the movement to favour purchases from local firms. Though the firms in big industrial areas lose work, they dare not lay off employees. The reduction in unemployed numbers is easily political or even philanthopical achievement, rather than an economic improvement.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

TRIPARTITE TALKS

All eyes are turned towards Bombay and Simla as regards the outcome of the tripartite discussions now proceeding between Indian, Japanese and Lancashire interests. The public are watching developments with wistful curiosity, not untinged with suspicion. While there is a general feeling that the subjects of discussion are of momentous significance, there is a certain lack of clarity in regard to the exact tenor of conversations and the *modus operandi*. It is, therefore, necessary to clarify the position. From Britain have arrived a delegation of textile representatives of Lancashire. The Japanese delegation is composed of two sections, the Government representatives and the industrial representatives. It will thus be seen that the Japanese contingent differs from that of Lancashire in that while the latter is only composed of non-official business representatives, the former has two sections, namely, official and non-official. There is also another important point of difference between the Japanese and British delegations, namely, the British delegates are concerned to discuss only the possibilities of a mutual arrangement as regards textiles between India and Lancashire; but Japan is interested in much more than textiles. The Indo-Japanese treaty is under notice for revokal. A new treaty, if possible, has to be entered into. Such a treaty will have to embrace a far wider field than mere textiles. The purpose, composition and objective of the two delegations being what they are, the plan to be adopted for the discussions will, naturally, be different in the two cases.

* * *

The official delegation on behalf of Japan arrived in Calcutta and proceeded straight to Simla. We believe that the members of this delegation are to be the guests of the Indian Government. This official delegation will hold discussions in Simla with the Government of India headed by Sir Joseph Bhore and Sir Frank Noyce on questions covered in the Indo-Japanese trade convention now about to sxpire and to be included in any agreement that may hereafter be concluded. These discussions are, therefore, between Government representatives on both sides and would embrace a far wider area than the textile industries. The Lancashire delegates as well as the Japanese delegates comprising the business representatives landed in Bombay; these non-official representatives of the two countries are to take part in talks with the representatives of the Indian textile industry. Such conversations are to originate in Bombay and have, in fact, originated in that centre. But, for certain practical reasons, the scene of the further negotiations amongst the non-official representatives is to be shifted to Simla. The main reason for this change in the scene is that the Government of India's representatives, who will take part in the deliberations with the representatives of the Japanese Government in Simla, are to be advised by a few selected, non-official business leaders; and some of the business leaders so chosen seem to be essential for the tripartite non-official discussion as regards the textile industry. For the sake of convenience, it has, therefore, been arranged that the next step of the triangular wrangle on the textile question should be in Simla. This means that two sets of talks will be proceeding in Simla as from this month-end—talks between official representatives of India and Japan as regards many trade matters in addition to textiles; and talks among the non-official representative of Lancashire, Japan and India in sole reference to the textile industry. The two discussions will proceed on parallel lines. If either the official or non-official negotiatiotors are able to arrive at an amicable settlement at an earlier stage, the successful outcome of the one will greatly promote the chances of the success of the other. The link between the two negotiations consists mainly in this fact. After this somewhat detailed explanation of the procedure to be adopted in regard to these trade talks, we hope that the public will be able to have a clear idea of the exact *modus operandi* so far as these official and non-official negotiations are concerned.

* * *

We may now duscuss some of the main points that are bound to arise in the course of discussion. There are in all five interests involved:

(1) The Indian textile interests who consider that Japan is a far greater enemy than Lancashire and who would be prepared to concede a point or two in favour of Lancashire if the latter would join in the dead-set against Japan.

(2) Lancashire cotton interests who now find that befriending India on the present occasion (in striking contrast to its attitude throughout the past decades) will promote its self-interest as against Japan, the new enemy.

(3) Japan who is extremely sore partly because of the hard and harsh things that have been said against her by Indian industrialists partly because of the colossal preference given against her in favour of British goods.

(4) The Indian cotton grower who is threatened with loss of the biggest foreign customer if Japan should carry out her resolution to boycott Indian cotton; and

(5) The Indian consumer who is vaguely somewhere in the picture all the time and on whose behalf it is necessary that no unholy alliance of the other vested interests is made possible.

* * *

In addition to the above, there are the forty miscellaneous industries which have applied for protection in the situation created by the tremendous depreciation of the Japanese currency. All the relevant facts in regard to such industries have been gathered and carefully sifted by Drs. Meek and Matthai. These two gentlemen, to whom the examination of related statistics was entrusted, were not concerned with making recommendations. It will be for the Commerce Member to make the final decisions when the stage arrives for action to be taken. Such time will arrive when the fate of the negotiations for a new Indo-Japanese treaty is known. Meantime, it is obvious that Japanese competition has caused havoc not only in the piecegoods market but in many other markets. Some manner of protection to industries in the process of disruption is an essential duty both on the part of the State as well of the public. It is only to be hoped that before damages are done beyond the limits of recovery, it should be possible to take remedial measures.

* * *

But to return to the scene in Simla. So far as the Indian cotton mill owners are concerned, we have had quite a few quarrels with them. We are not prepared to believe that there is nothing rotten in the State of Denmark. We are, on the other hand, convinced that our mills have not yet really understood the significance of the obligations that they should discharge to the public in return for the substantial protection that is offered to them. With the problem of reform and rationalisation, our mill-owners have made no worth-while progress. As the industry is situate to-day, a good percentage of mills will go to the wall even if more extreme protective

measures are adopted, unless reorganisation is taken on hand on a scientific basis, and with individual and personal interests subordinated to common interest. It is the multiplicity of managing agents and the small size of individual mills that stand in the way of any important attempt to rationalise the industry. If such individualism should persist, the older mills with antidiluvian machinery in the island of Bombay must necessarily be weeded out by the sheer process of the application of the law of the survival of the fittest. We do also believe that the time has come when an earnest attempt should be made to impose definite obligations in the case of protected industries. We are, therefore, amongst those who would miss no occasion when serious hints should be given to the mill industry that it should do all that is possible to *deserve* protection. To say this does not, however, mean that we would at all be a party to a policy of niggardly protection.

* * *

In spite of the idiosyncrasies of individual mill agents and in spite of a lack of real contribution by the mill industry for the strengthening of nationalism in this country, we must recognise that the Indian textile industry is, in many senses, a national industry. Domestic capital to the extent of over Rs. 30 crores has been sunk in it. An equal amount has been invested in the allied trades and industries. Over half the industrial labour in India is accounted for by the mill industry. The entire prosperity of many important centres and some provinces is dependent on the cotton mill industry. The country has too big a stake in textiles to allow the cotton mills to be wiped out in order to oblige the manufacturers of foreign countries. While criticising the Indian mills for such lack of efficient management as there may be, we must stand behind the mills in all measures that are necessary for preserving the mills intact. On this point Lancashire and Japan should have no doubts in their minds. It should not be difficult, for example, for Japan to understand that a policy of safeguarding domestic interests against disruptive effects of the competition by foreign rivals is a duty that the country owes in behalf of industrial growth. The Japanese Government and the Japanese people have never wavered in their allegiance in a policy of active and comprehensive protection to their industries. If they stand by their industries, why should they look with disfavour on a like attitude by the Indian Government and the Indian people. If the present official delegation from Japan were in the position of Sir Joseph Bhore, what would they do in the situation with which Sir Joseph is confronted? Would they say that the Indian industry is inefficient; the Japanese industry is efficient, and, therefore, the Japanese must wipe out the Indian industry? If patriotism is a virtue in Japan, it need not be a crime in India. This is the simple home-truth which the Japanese delegates must understand.

* * *

As for Lancashire, it has made fabulous wealth out of its trade with India. In return, it has given practically nothing to this country. On the other hand, half the bitterness in the economic sphere in past years is due to the hostility of Lancashire to the Indian cotton mill industry and to the way in which it used its influence with the India Office to impose inequitable shackles on the Indian industry. For what Lancashire has done in the past, it deserves no consideration whatsoever in the present situation. But it would be more graceful on the part of India to bury the dead past and view the problem with a full sense of realities. Even Lancashire must admit that India has treated its industry with a marked measure of generosity—in striking contrast to its own attitude of petty enmity. The Lancashire deputation to Ottawa asked for a maximum of 20 per cent. Imperial Preference for British piecegoods. The preference given to other British commodities at Ottawa was between 7½ per cent. and 10 per cent. If the Indian delegation had agreed to give 15 per cent. preference to Lancashire, the latter would have been vastly pleased. As against the 7½ per cent. and 10 per cent. preference given to all British commodities; as against the 15 per cent. which would have pleased Lancashire tremendously; and as against the 20 per cent. which Lancashire put forward as the maximum request, it is now given 50 per cent. preference. This is generosity with a vengeance. Lancashire must be told that this 50 per cent. preference should not be taken as a permanent measure. Lancashire must not get away with the idea that no change would be made or is contemplated in this regard. On the other hand, it is essential that the preference in favour of British cloth is brought down to a maximum of 15 per cent. Even after such a reduction, British cloth would have an extra preference of 5 to 7½ per cent. as compared with other British commodities.. But it should be prepared to make a return gesture. The days when Lancashire may take all that it can take from India and when it need give nothing in return are past and buried, and will never return. If Lancashire wants this additional preference, let its representatives agree that against any specified quota which India is prepared to give to them in piecegoods imports, they will be prepared to give us a specified quota in their purchase of cotton. The negotiations with Lancashire must definitely link up Indian cotton with British cloth on a clear-cut and definite quota basis.

* * *

Turning to Japan, the position has been extremely complicated by the many home truths, half-truths and un-truths that have been uttered. It has consistently been rubbed into Japan that she subsidises all her industries; that she sweats her labour; that she defies the international labour conventions; and that there is an unholy conspiracy on the part of her industrial, shipping and banking interests so as to facilitate the dumping of Japanese goods into India. Japan is also sore because Lancashire which wanted only 20 per cent. in Ottawa has been given 50 per cent. If Japan depreciated her currency, wherein is the sin, asks the Far Eastern Empire. Did not France depreciate her currency in the last decade? Did India put up special duties to counteract the effects of depreciated currencies in that decade? When Occidental countries played this game of watering their currencies, India needed no special protection. When an Oriental country adopts the same tactics, a hue and cry is raised. Is this fair, is there any meaning or logic in this?—asks Japan. We may straightaway answer some of these points in a way that should satisfy Japan. There is no evidence whatsoever that the Japanese Government subsidises her industries. Moreover, even if she wants to, she cannot subsidise all industries. The allegations of State subsidy have been urged without any conclusive evidence adduced. As for Japan's treatment of labour, our Indian millioners are not exactly the persons who can throw the first stone. By comparison with Indian standards, labour conditions in Japan are like unto Paradise. As for conspiracy between the various interests, is this a matter of which Japan should be ashamed? Is not the lack of it in India a matter of which our Indian industrialists should be ashamed?

* * *

The main point is that we must not rub Japan the wrong way. But Japan, too, must see reason. Here, as in the of Lancashire, a quota arrangement combined with minimum price (applicable to our cloth imports and Japan's cotton imports) would suit all interests, including the cotton—growers of this country.

REFLECTIONS ON THE CENSUS RETURNS

Census returns are but a quarry from which only laborious work can extract useful material. It is a store of information, the very vastness of which warns the student away from careful scrutiny. Nearly all

the newspapers and periodicals have pleaded in defence of a superficial notice that it is hopeless to deal with the census report within the available space and the time in which the census may be regarded as having a topical value. We would fain have reserved the report for a more careful scrutiny and comment, but the material placed at the disposal of the public by Dr. Hutton throws up one or two major issues to which a devotee to the study of economics may attempt to do justice, without waiting for a more detailed appraisal of the statistical material.

* * *

The most arresting fact revealed in the 1931 census is the increase in population to 352,837,778, an increase of 34 per cent. on the 1921 figures. Dr. Hutton has aptly pointed out that the increase in the last decade is equivalent to the whole population of countries like Italy or France. The rate, at which the population of India has grown, may be easily imagined from the fact that the increase since 1921 is 10.61 per cent. and 39 per cent. on the population of India 50 years ago. These figures compare with the increase in England and Wales since the last census of only 5.4 per cent. and 53.8 per cent. in the last 50 years, with an increase in the United States of 16 per cent. since the last census, of 18 per cent. in Ceylon, of 20 per cent. in Java and of 26 per cent. in the outer islands of the Netherlands India. Considered in terms of the area and density, the increase in population is 12 per cent. per square mile in 50 years. The total area covered by the census amounts to 1,800,000 square miles and the population inhabiting it to 353 million giving a density for the whole area of 195 persons per sq. mile. This density is naturally a variable factor appearing at the lowest at 6.5 per cent per sq. mile in Baluchistan, and at its highest at about 2,000 persons per sq. mile in the most thickly populated part in the South-west coast the general density of Cochin State, including both the thickly populated coastlands and the almost uninhabited islands being 814.2 persons per sq. mile and reaching in one village the amazing maximum found in any purely rural population of 4,000 persons to the sq. mile.

* * *

This vast increase in population owes little to immigration. Only 730,000 persons were born outside India as against 603,000 persons in 1921. And against this there has to be set off on account of emigration about 1 million persons who are estimated as having emigrated during the decade. The movements of population to an extent that may affect the census records have been confined to within the country. While in former times there had been an emigration of population from the States to British India, during the decade ending 1931 there has been a reversal of such movement. This is probably attributable to the fact that the States are less populated and have had more appreciable economic development than has fallen to the lot of the British Indian provinces. Assam has the most of the internal immigration, with 1.2 million during the period under review. Bikaner, which is popularly regarded as a source of emigration to British India, has actually had a considerable number of immigrants who account for half the increase in its population during the decade. There is also the trek to the urban areas. Dr. Hutton quotes a Canarese proverb "After ruin go to the city" as sufficiently expressive of the general disposition of the Indian towards town life. Whether or not the urban areas provide more opportunity for the rural population, it is certain that before the present depression had its full effects, there must have been a consistent immigration into the cities from the rural areas. Calcutta has increased by 12 per cent., Rangoon by 17 per cent., Madras by 23 per cent., Karachi by 23 per cent. and several other cities by 20 per cent. or a little over. Patna has increased by 33 per cent., Delhi City by 40 per cent., Bangalore City by 45 per cent., Nagpore by 48 per cent., Lahore by 53 per cent., Amritsar by 65 per cent. and Salem by 96 per cent.

* * *

The main economic issues that emerge from a perusal of the census returns are firstly, the terrific rate of increase in population and secondly, the tendency of urban population to undergo a higher rate of increase than the rural. As regards the former, it may be easily recognised that in India, the problem of wealth and population is imprisoned in a vicious circle. It is long since the Malthusian nightmare was set to rest by the discovery that increase in the standard of living tends to act as a check, rather than a stimulus, to the growth of population. There can be no doubt that the increase in the population of India is the bitterest fruit of her poverty. Faced with the decennial increase of 35 million, one would rather wish that famines and epidemics had a freer hand in the regulation of population. For it has been admitted that, but for the apalling death rate, the increase in population may have been more terrific than it is. The causes of the high death rate are the low physical stamina of the masses and the recurrence of famines and epidemics. The prevalence of unhealthy social customs has, no doubt, its place in the continuance of the low stamina of the people. Such customs are rightly regarded as the concern of the various communities; and the few experiments at legislative reform of undesirable social customs suggest that the remedy should be sought, rather in education, that in legal compulsion. Leaving this question aside, famines and epidemics seem to have had their place in preventing population from far exceeding the capacity of the country to sustain it. Dr. Hutton has observed that during the decade under review, India has been comparatively free from famines and that the devastating course of epidemics has been stayed by the hand of science and medicine. Thus the low physical stamina of the masses has been the only factor working against an increase in population with the result that in 1931 India is faced with the phenomenon of an increase of 35 million in the total population within a decade.

* * *

That this increase is undesirable in the present circumstances, few, we believe, will dispute. We recognise that growth of population in a country is not necessarily an evil. As a problem it is less embarassing and intractable than the fall in population experienced by the more advanced countries of the world. And we have also the case of Russia, which has included a substantial increase in the total population of the country as part of the spectacular Five Year Plan. For the Communist State holds that an increase in population need be viewed as a danger only by capitalist countries, where increase in wealth commensurate with increase in the inhabitants is deliberately frustrated by the parasitic activities of the higher classes. It might well be that with the same degree of intensive cultivation which some of the advanced countries of the world have been able to introduce, India would be able to sustain an even bigger population than is now considered to be a threat to the economic wellbeing of the country. But one has to take conditions as they are; and considering the prospects of economic amelioration in the immediate future, there can be no two opinions about the regrettable character of the present change in the population of our country. Thoughtful men must therefore, direct their attention to the means by which the present rate of increase might be stayed.

* * *

The checks to the growth of population have to be both negative and positive, direct and indirect. No one would, of course, suggest that the hand of science and hygiene should be stayed and epidemics and famines should be allowed to resume their help in the regulation of populatiin. If the view is sound

that an improvement in the standard and condition of living is a check on the growth of population then, the improvement in the health and welfare must be deemed to be a deterrent on increase of population. But at present it is valid to suggest that preventive and curative measures in regard to epidemics and the comparative freedom from famines have only reduced the death rate without any clearly discernible effect on the birth rate. This is only to be expected. For these measures barely save the livs of those who would have otherwise succumbed to the epidemic; and there is no factor working for that improvement in the standard of living which is regarded as a check on excessive fertility.

* * *

The lesson of the 1931 census is thus clear. If we are to avoid another disagreeable surprise, we have to ensure that the increase in the population resulting from the freedom from famines and epidemics is counteracted by a decrease in the birth rate. In so far as such decrease can inevitably follow from the improvement in economic well-being, it is the concern of those who direct the general economic policy. We need not say more about it in this context.

* * *

We can only consider here the questions which are more directly connected with the problem of population. We feel, and there is much in Dr. Hutton's report to strengthen such a feeling, that the question of population in India is to some extent a question of the distribution of population. It has been seen in the case of Cochin, and to a less degree in the case of Bengal, that the capacity of an agricultural area to maintain a population is more elastic thn that of the urban areas. For agricultural land can in the worst of conditions provide the barest necessities of existence. If the tendency to emigrate to urban areas could be encouraged in the future by more industrialisation, the improvement in the standard of living in agricultural areas may result in a positive check to the growth of population. This is, no doubt, reiterating the time-honoured demand for relieving the pressure of population on agriculture; but it will be seen that it is based not on the incapacity of agriculture to maintain the population but precisely the opposite to it.

* * *

And we have also to contrive the relief of congestion in agricultural areas without intensifying the crowding in the cities. Dr. Hutton is graphic in his description of the conditions of living in towns. Though we may be grateful that the misery of the destitute has not been increased by more adverse climatic conditions and that it is possible for people to live without a roof to sleep under, the phenomenon of houseless vagrants in cities is economically and aesthetically detestable. The seriousness of the position may be seen from the facts culled from the census report. "The density of Belfast County Borough, it is stated is 17,984 persons per sq. mile (1926) and the average density of a London County Borough (1931) is 37,568 persons to the sq. mile, a density which reaches its maximum in Southwark with 97,088 to the sq. mile. Leith (1931) has 35,000 persons per sq. mile and the Govan ward of Glasgow, its most densely populated in 1931, has 36,230. With these figures one may compare, the densities of Lahore with 10,913 persons to the sq. mile, of Peshwar City with 22,880 and of Calcutta with 36,265 ; while half a dozen towns in the United Provinces, including the city of Moradabad, show a municipal density of from 40,000 to 45,000, Bombay has 48,000, Delhi City (Municipality) has 58,278, and Sikandrabad, a small town in the United Provinces, has 63,552 persons per sq. mile. But if smaller units be taken the densities found are much higher."

* * *

An examination of population in relation to urban housing is even more distressing. In Delhi for instance, the average number of persons per 1,000 houses varies according to the ward from 399 to 629 it seems likely that most families get a census house to themselves.

* * *

Madras on the other hand has 877 persons per 100 houses, Rajahmundry 793, Mangalore 727, Madura 723, Vellore 709 and three more towns more than the maximum average of any ward in Delhi.

* * *

That not all the inhabitants of urban areas are industrial workers is a circumstance which has an obvious significance to the problem of distribution of population. It points to the fact that with the growth of opportunity in what we may call moderately urbanised areas, there might be a relief in both the highly urban and highly agricultural areas. In this respect, those parts of the country, which have prospects of securing a wide distribution of power through hydro-electric projects are more fortunately endowed for the solution of this bunch of embarassing problems. For that would facilitate industrialisation without urbanisation. And such industrialisation not only answers the economic needs but also satisfies the cultural aspirations of the Indian people.

* * *

In expressing the hope that India, or at least some parts of India, would be able to achieve industrialisation without urbanisation, we are not indulging in a merely fond fancy. The growth of the sugar and cotton mill industries in the last two years has shown that there is large scope for the expansion of industry without aggravating the overcrowding of towns. In the South especially, cotton mills have grown up in what were hitherto purely agricultural tracts. Sugar mills have of necessity to be situated near the fields. With the full development of the hydro-electric prospects now in progress and with the growth of industries liable to be worked on a cottage basis, it would be possible to find the means of relieving the congestion of population in rural and agricultural areas.

* * *

It is obvious that none of the measures mentioned will by themselves suffice to keep population in check. Much depends on the spread of education and the wider acceptance of birth control as a legitimate means of securing individual and national welfare. In this connection, Dr. Hutton pays a compliment to the South where, accordig to him, there is less prudery on this subject than among the more advanced countries of the world. But we believe that Dr. Hutton has been somewhat misled by the existence of birth control societies with an impress roll of leadership. We are not aware of any general progress in the acceptance of birth control in the South. Even if there has been, we are sure that birth control is being exercised by those classes which should be the last to do so. For one of the most potent arguments against birth control, and contendedness with one or two offspring, is that it tends to retard the number of the best children. It is a truth well-accepted as well among eugenists as among common folk that the best child of any marriage is more likely to be the third or the fourth, or even the fifth or the sixth, than the first or second. If at present birtn control is being practised or favourably regarded by the higher and educated classes it is a tendency to be discouraged rather than encouraged. We would welcome a campaign for the adoption of birth control by the working classes, among whom differences in fitness between one child and another may be presumed to be less than in the case of the higher classes. The problems presented by Dr. Hutton's able and masterly report are such as can be solved only by a wide interest therein; and we are glad to do our share in dispelling the notion that a census report is a matter of technical interest to a few faddists or a few specialists.

JUTE IN DOLDRUMS

Nothing makes us realise our utter helplessness in moving the Government of the country to take suitable measures to improve the economic condition of the masses more than the treatment meted out to jute. Ever since the latter part of the year 1929 when the price of jute for the first time in the present century came down to about Rs. 25 per bale, all sections of public opinion in Bengal have urged, upon both the Government of India and the Government of Bengal, the imperative necessity of saving the province from ruin by taking adequate steps to improve the price of this commodity. But, inspite of the urgency and importance of the problem, the authorities have displayed an almost callous attitude towards the distress of the poor cultivators of Bengal. The official attitude was, perhaps, unconciously betrayed by Sir Alexander Marr who glibly remarked at a conference of the various jute interests held at the Bengal National Chamber of Commerce that so far as the Government were aware there was no distress in the jute districts and that the cultivators only suffered from lack of cash.

* * *

It is, indeed, sad to reflect, in this connection, that the cotton mill industry of India is being given heavy protection at the expense of the poor consumers and even at the risk of imperilling friendly relations with a powerful neighbouring nation. If the steel industry which is controlled by only one firm wants protection, all it has to do is to approach the Tariff Board with a request to do so. But in spite of the fact that the jute agricultural industry is one with which the interests of the whole population of Bengal are inseparably bound, it has continued to be neglected. The reason is not difficult to find. The powerful cotton mill interests can make their voice felt not only in the press of the country but in the legislature. The poor jute cultivators though millions in number are an unorganised body with no large resources to engage champions to plead their case and carry on an intensive propaganda on their behalf. The result is that in spite of the fact that the production of jute is an absolute monopoly of this country and that the Government of India have been deriving considerable revenue from the export tax on jute, neither the Government of India nor the provincial government show any signs of realising that owing to the tragically low price for jute, the cultivators are faced with starvation and that the Governments concerned have a duty to perform beside the agriculturist.

* * *

Nothing can better illustrate the utter callousness of the Government towards this question than the fact that even the very modest recommendation of the Agricultural Commission that a central committee for jute should be constituted on the lines of the central cotton committee has not yet been given effect to by the Government of India. A conference of the different sections of the jute trade unanimously endorsed this recommendation. It has to be remembered, in this connection, that to get the powerful Clive Street interests to endorse a step likely to improve the condition of the jute growers is no small achievement.

P. & O. and BRITISH INDIA COMPANIES

(INCORPORATED IN ENGLAND)

MAIL AND PASSENGER SERVICES.

UNDER CONTRACT FOR THE CARRIAGE OF HIS MAJESTY'S MAILS.

TICKETS INTERCHANGEABLE.

ALL SAILINGS ARE LIABLE TO CANCELLATION OR DEVIATION WITHOUT NOTICE.

Sailings to Coast Ports in India and Burma, between India, Straits Settlements, Ceylon, Java, Hong Kong, China, Japan, Australia, New Zealand, West Indies, Mauritius, East and South Africa, Persian Gulf, Red Sea, Egypt, Mediterranean, Antwerp and London.

P. & O. Mail Service from Bombay to Marseilles and London—Weekly.

P. & O. Intermediate Service from Calcutta to London, Dundee and Continent—Monthly.

British Indian Service from Calcutta to Marseilles, London and Continent—Monthly.

British Indian Service from Bombay to London and Continent—Three weekly.

BRITISH INDIA COASTAL SAILINGS

FROM CALCUTTA TO

Rangoon direct—Sundays, Tuesdays and Fridays.

Straits *via* **Rangoon**—Fridays, also Sundays (Transhipping passengers.)

Chittagong to Akyab, Kyaukpyu and Rangoon—Every Monday.

Coromandel ports, Ceylon, Malabar Ports, Bombay & Karachi—Every three weeks with additional direct sailings to Bombay & Karachi—Thrice monthly.

Straits, China & Japan—Fortnightly.

Fremantle, Adelaide, Melbourne & Sydney—Monthly with additional sailings as required.

Mauritius *via* **Colombo**—About every four weeks as inducement offers.

FROM BOMBAY TO

Karachi—Direct on Wednesdays and on Thrusdays with English Mails.

Basra *via* **Karachi and Persian Gulf Ports**—Subsidiary Mail steamers leave on Wednesday *via* Karachi and Persian Gulf Ports and the Fast Mail on Thursdays, the latter calling at Karachi, Bushire and Mahomerah only.

Malabar Coast Ports, Ceylon, Coromandel Ports & Calcutta or Rangoon—As inducement offers, about once a fortnight.

East & South Africa—Fortnightly, calling Seychelles & Mozambique—Monthly.

FROM KARACHI TO

Bombay—Direct every Wednesday and on Thursday with English Mails.

Basra—Fast Mail *via* Bushire & Mahomerah only on Sundays at noon; subsidiary Mail *via* Persian Gulf Ports on Sundays.

Malabar Coast Ports, Tuticorin, Colombo, Madras Ports and Calcutta—About every three weeks with additional sailings as required & Rangoon as inducement offers about every fortnight. Frequent connection with the E. & A. Line steamers from Hongkong to Australia and New Zealand.

TERMS, RATES OF FREIGHT AND PASSAGES MAY BE ARRANGED WITH—

MACKINNON MACKENZIE & CO.

(KARACHI, BOMBAY AND CALCUTTA.)

16, STRAND ROAD CACLUTTA.

Telephone No. 5100. P. O. Box 163

The Government of Bengal, after three years of public agitation, recently appointed a committee of enquiry to examine the question. Although it was expected that this committee would submit its recommendation in time to enable the Government of Bengal to do something for the 1933-34 season crop, we have as yet heard nothing of the result of the labours of the Jute Enquiry Committee. In the meantime, the price of jute, after a temporary improvement in sympathy with the rise in American commodity markets, is back again to the lowest level touched during the last thirtyfour years. The cultivators, as a result of the present low prices, are faced with ruin and starvation. We are reliably informed that the zemindars have not been able to realise rents from their tenants this year.

* * *

If it is found possible to adopt a scheme of compulsory restriction of production for a commodity like tea, the cultivation of which is not confined to one country, we fail to understand what possible objection there can be to adopt a scheme for jute which is a hundred per cent. monopoly of India. The Government of Bengal lent their moral support to the jute mill industry in adopting a scheme for restricting output. But the irony of the whole question is that whilst those in charge of the jute mill industry are and have been making large profit by regulating their output, they are not prepared to lend their support to the adoption of any such scheme in the cultivation of jute; and the Government of the country are not prepared to proceed unless any scheme proposed receives the blessings of the jute mill industry.

* * *

The question that arises uppermost in the minds of all well-wishers of jute cultivation is: Can nothing be done to make the Government realise that their duty towards the jute cultivators does not end with distributing a few thousand pamphlets in the jute districts at the sowing time? In this connection, we are compelled to say that the popular representatives in the Legislative Council of Bengal have failed to do their part. Beyond putting a question or two, no concerted action has been taken to draw the attention of the Government to the seriousness of the situation. We suggest that as a last resort, a strong propaganda should be carried on amongst the electors in the jute districts to make their representatives realise their responsibility.

THE INDUSTRIAL AND PRUDENTIAL ASSURANCE COMPANY LIMITED

The Industrial and Prudential Assurance Company has completed the 20th year of its existence and has just published the results of its fourth quinquennial valuation of its assets and liabilities as on December 31, 1932. We are glad to note that it is growing from strength to strength and that it is one of the soundest Indian life offices. Both as regards the growth of New Business and as regards general soundness it is growing stronger and stronger year after year. The New Business of the Company has been increasing steadily though slowly from Rs. 45,34,750 in 1930 to Rs. 50,40,666 in 1931 and to Rs. 52,04,750 in 1932. The total business in force has increased to Rs. 2,23 lakhs in 1932.

* * *

The income side of the Revenue account shows a total premium income of Rs. 11.45 lakhs and an interest income of Rs. 1.82 lakhs. Another item of about Rs. 1.03 lakhs is shown under the heading "transferred from, the Investment Reserve Fund." In view of the fact that the market value of their investments as on December 31, 1932 was nearly Rs. 1½ lakhs in excess of the cost price at which they are shown in the Balance Sheet, the Directors have decided to decrease the investment reserve fund from Rs. 1,42,889 to Rs. 40,000 and to strengthen the life fund by the amount thus released. And it is this released amount that is shown as an income in the Revenue account. While we realise the necessity of a strong life fund, we would have been more satisfied had this been done through other sources such as reduction of expenditure, etc. Investments in general and particularly giltedge securities (which fill up more than 80 per cent. of the Company's assets) are liable to fluctuations as was experienced by us recently. As such a strong investment reserve fund will be quite handy in times of depression, it would be always better to accumulate such reserves rather than release them. The outgo of the Company includes total claims at Rs. 2.67 lakhs and management expenses at Rs. 3.30 lakhs. The life fund at the end of the year has increased by more than Rs. 8 lakhs to Rs. 37.27 lakhs.

* * *

The liabilities side of the Balance Sheet shows a total paid up capital of Rs. 2.19 lakhs; a life fund of Rs. 37.27 lakhs; a reserve fund of Rs. 1.07 lakhs; and investment reserve fund of Rs. 40,000 and outstanding claims to the extent of 1.29 lakhs (of which, we are told, Rs. 1.11 lakhs have since been paid). Coming to the assets side we find that out of the total assets of Rs. 42.69 lakhs, giltedge securities (including Municipal and Port Trust Bonds and Debentures) at Rs. 35.58 lakhs account for 83 per cent.; mortgages on real properties at Rs. 1.51 lakhs account for 3½ per cent.; policy loans at Rs. 2.93 lakhs fill up 7 per cent. and cash in the bank at Rs. 1.72 lakhs occupies 4 per cent.

* * *

It is clear that the Industrial and Prudential Assurance Company, like many of our leading life offices, is putting all or most of its eggs into one basket. This is in just contravention to the principles adopted by leading English and American life offices, which distribute their assets in a number of channels consistent with safety and high earning power. The practice of Indian life offices in investing almost all their assets in giltedge securities has so far proved both to be profitable and safe. But the circumstances have now changed and fresh investment in giltedge securities cannot yield a profitable rate of interest, especially in view of the high rate of interest assumed in the valuation of most of the Indian life offices. The acting president of the company, Mr. Velji Lukhamsi, has anticipated this difficulty in his presidential speech and has asked the question "Should life offices continue to invest their funds in Government or other giltedge securities only?" Our answer to this is "No". Life offices should distribute their assets in wider channels consistent with safety and higher earning power. At the same time, they should not forget the very sacred duty imposed on them as the custodians of the property of millions of policyholders.

* * *

Mortgages on first-class real properties to the extent of 20 to 25 per cent. of the assets may prove a good and interest-compensating investment, provided the properties and the mortgagors are properly chosen, the proportion of the loan advanced to the correct assessed value of the properties is well within the common accepted ratio of 50 to 60 per cent., and the properties periodically revalued and the needful changes effected. A small percentage of the assets may be invested in well-chosen and first-class equity shares; a portion of the assets may be invested in debentures and preference shares of first class industrials. There can be no denying the fact that if the distribution is wide, the rate of interest earned will be higher and the safety attained also more.

* * *

The Valuation Report of the Company's assets and liabilities as on December 31, 1932, is quite

satisfactory and has shown a surplus of Rs. 7,64,526, leaving a net necessary life fund of Rs. 37,27,298. The following table shows that the position of the Company shows progressive strength during successive valuations:

Valuation as at	Surplus disclosed Rs.	Bonus Declared	
		Whole life Rs. per thousand per annum	Endowment Rs. per thousand per annum
31-12-1917 ...	no surplus	nil.	nil.
31-12-1922 ...	1,15,300	7½	6
31-12-1927 ...	3,19,859	15	12½
31-12-1932 ...	7,64,526	22½	18

Out of this surplus, a sum of Rs. 6,60,648 has been allotted for distribution as profits to policyholders and the actuary has recommended a bonus of Rs. 22/8 per thousand per annum to Whole Life policyholders and of Rs. 18 per thousand per annum to Endowment policyholders. The increase in the bonus rates compared with those declared at the previous valuation is rather spectacular and we hope that the Directors and the Actuary concerned would have carefully considered all the necessary factors that are to be taken into account before the bonus rate of a life office is increased. We had to strike this note of warning particularly in view of the difficulty that is experienced in forecasting the future trend of interest rate. In conclusion we may say that the position of the company is quite sound and safe and we wish it all the success it deserves in the coming years.

MR. ROOSEVELT MAKES UP WITH RUSSIA

The report that the United States is likely to make up with the Soviet and resume diplomatic relations with the Russian Government affords hope of the return of reason in international economy. Careful observers have foretold long ago that the nations, which haughtily disdained to treat with the Soviet Government would before long be obliged to abandon that attitude for the sake of the valuable trade relations which Russia, with her improved economy, might be able to maintain with them. In the case of Great Britain the Anglo-Russian approchement was initiated by the Labour Government which was naturally lacking in the same antipathy to Communism as the Conservative or the Liberal governments. Attempts have been made more than once to unsettle the decisions of the Labour Government by inventing all manner of pretexts for such ruptures. The latest and the worst instance was the trial of the British engineers in Moscow which tempted the British Government to declare economic hostility against Russia. Happily, the atmosphere of the World Economic Conference and the circumstance that the principal leaders of the Soviet were present in London enabled Russia and Britain to come together and declare a truce as a prelude to a more complete and lasting trade agreement between the two countries. Apparently prejudice still rules strong; and compared to the expedition with which other trade agreements have been concluded during the last four or five months, it is inconceivable that the delay in this instance could have been due to the intrinsic difficulties of the problems that have been tackled. The British Trade Union Congress, which met at Brighton during Air Mail week, therefore, felt called upon to pass a resolution calling upon the British Government to expedite the process of concluding the Anglo-Russian trade treaty. How far this resolution will have effect on the Government, it is not easy to say.

* * *

In America, however, the fundamental commonsense of Mr. Roosevelt is triumphing over many a technical and practical difficulty. The president is at the moment, the subject of much derision in foreign countries, the common lot of all originators of new ideas in this commonplace world. But the fact that anticipations of a sensational breakdown in the recovery programme have been consistently falsified during the last three months should suffice to persuade the average man that there is more sense, and science, in the scheme of Mr. Roosevelt than his detractors are prepared to allow. The latest instance is his efforts to make up with the Soviet Government so that many of the internal problems will be easier of solution. Our Overseas columns gave publicity a long time ago to the proposal that the Reconstruction Finance Corporation should finance the sale of a large amount of American cotton on long-term credits to Russia. Considering that otherwise the problem of cotton stocks is well-nigh insoluble and that the exchange of cotton with Russia will be fruitful of many beneficial effects to Russo-American and World economy, it is not surprising that presi-

dent Roosevelt has brushed aside the objections of the fanatically-minded and decided to resume cordial political and economic relations with a country which has hitherto been regarded as an outcaste in international politics.

MRS. ANNIE BESANT

The passing of Mrs. Besant has brought the world to a re-cognition of the wonderfully dynamic personality, which it had wellnigh overlooked in the inevitable twilight of her life. In her younger days she had shaken the complacent orthodoxy of more than one religion; and agitated the placid politics of more than one country. An instinctive sympathy with the poor and the down-trodden drew her to the ranks of socialism in Britain. In the company of Charles Bradlaugh, she courted the indignities that in the long view constitute the best title to fame. Emotional, impressionable and imaginative, she soon found herself at the head, and in charge, of the Theosophical movement, which, in the rational view, is only one of the numerous expressions of revolt against sectarianism in all established religion. The eclecticism, which is of the essence of Theosophy, set her on the quest, of which the Gita is the Holy Grail. Mrs. Besant was from then a Hindu, to all intents and purposes, revealing the imperishable truths, that are the glory of Hinduism, to the most learned of Brahmin pandits. From a devout worshipper of Lord Krishna to the champion of India's freedom is by no means a far cry. She had earned the confidence and adoration of countless men and women; she had perfected a network of organisation throughout the country. She had encountered, and felt bitterly, the obstacles which foreign rule placed in the way of that cultural realisation of India, in which alone, according to her, the salvation of the world lay. The War afforded the opportunity, for which she had been looking instinctively, though unconsciously. And India learnt at the feet of the Master the technique of political agitation. To trace the word "Home Rule" to the dustiest volume is the work of an antiquarian. But every student of Indian politics will recognise that no one else, not even Mahatmaji, if he had belonged to an older generation, could have supplied such dynamic to the whole movement. Devotion to Hinduism and Home Rule brought Mrs. Besant to the lower and narrower plane of Indian public life. But she regarded the change as an exaltation; and if only for this tribute to her importance, India should cherish her name with a love and reverence, second only to what belong to the Mahatma. In the heat and friction of a too zealous and active life, animosities were, doubtless, often occasioned. Her own spiritual powers were not altogether on a par with her psychic powers. She had the defects of her qualities; and took the popular resentment against her later moderation somewhat ill.

She misinterpreted that resentment as ingratitude and often allowed herself through hasty expressions to widen the breach. And the Indian public had to see the sorry spectacle of the champion of Home Rule ranged against those who justly took her place at the head of the forces of Indian nationalism.

In her own sphere of Theosophy, Mrs. Besant had to put up with many a reverse. She had successfully lived down the odium that resulted from the protracted litigation connected with the charge of her wards; and unkind critics have even suggested that the motive behind her leadership of the Home Rule movement was to regain her lost popularity. Whatever that may be, she had emerged clear and resplendent from all the earlier eclipses. But in the evening of her life political obscurity coincided with the strange and unexpected leanings of her protege, whom she had long exhorted the world to regard as the New Messiah. Mr. Krishnamurti is the sincere exponent of a rational cult, which need evoke little opposition and can enthuse only those who develop an intellectual sympathy with his ways of thought. In his protest against all forms of institutional religion, he is pointing to what is, assuredly, the goal of an apparently unspiritual and intensely material generation. But the dispersion of the Star of the East, on which Mrs. Besant had lavished all the affection of an intensely emotional nature and the care of one, matchless in her gift for organisation, was an unkind dispensation. Be it said to the credit of Mrs. Besant, she bore it well. She never denied the correctness of the instinct which taught her to see in an unschooled boy of six or seven the founder of a new cult. But disappointments did not induce her willingly to retire from public activity. It is two years since even her inexhaustible energy was run out. And at the moment of her death, one is overpowered by the sense of the indebtedness which she has laid this vast continent under. She was, undoubtedly, a world figure. But she has let India claim her as her own.

FLOWERS OF SPEECH

GARNERED AND MADE UP-TO.DATE

By G. L. M.

Analogies, says the logician, are weak as an argument. Comparisons, says the rhetorician, while comparing, are odious. Yet the human mind is so constituted that it grasps comparisons more quickly than elaborate reasoning. Several distinguished speakers and writers therefore hit the nail on the head by apt and pithy comparisons, although others succeed thereby only in hitting their heads on the nail. Indeed, the temptation is so irresistible that when imagination fails and you cannot hit upon an apt comparison, you fall back on "anything." Literally is this true. Who has not heard people saying, "It was as frightful as anything" and so on? Now, nobody knows what this "anything" is; it is in fact everything. A thing can be both white and dark, good and bad, sweet and sour as "anything". When a person has to fall back upon this "anything", you can be pretty sure that his imagination is as bankrupt as anything or as that of British statesmanship.

If you can have artificial fruits (*e.g.*, tinned ones) preferred to fresh ones wherever "civilisation" spreads and also artificial flowers (*e.g.* of paper) which are to be seen and not smelt, to be admired but not to be touched, why can't we improve and modernise our flowers of speech? We are all in favour of scrapping old machines—even at the trifling cost of throwing a few thousand on the street; we all want to modernise everything, provided, of course, we are personally benefitted in this process of modernisation. Who does not want to be in the vanguard of progress so long as we progress to personal benefit and profit? Why can't we therefore rationalise our literature and make our comparisons quite up-to-date?

The old comparisons may or may not be odious; many of them are certainly obsolete. When we were at school and filled the blank "as dead as—" by Queen Anne, we knew precisely why Queen Anne was the most dead queen of England, although Einstein had not discovered his principle of relativity nor applied it to Death. But as an alternative, if we said "as dead as a church mouse," who could grasp its significance when only a few cranks, rich sinners and old women of both sexes go to church nowadays? This, altogether apart from the fact that the Muslim organisations and the Hindu Mahasabha would object to such a comparison as surreptitious inculcation of Christianity, violation of religious neutrality of the Government, breach of the Queen's proclamation etc. Literature, in such a contingency, might be reserved as a "special responsibility" for the Governor-General and Governors for the protection of minorities. Everything can be turned into a safeguard; nothing can prevent the progressive realisation of special responsibilities.

As accurate (or inaccurate?) as an *Indian Finance* forecast.
As indecisive as an Indian Liberal.
As prolific as an Indian politician's statements.
As politically inconsistent as Sir Hari Singh Gour.
As irresponsible as an absentee M.L.A. (or M.L.C.)
As spineless as a title-hunter.
As boring as a Government House garden-party.
As compulsory as attendance at a jury.
As punctual as a Director at a Board meeting.
As monotonous as a *Statesman* photograph of the Hooghly.
As stale as the head-lines of the daily press.
As refreshing as "Over a Cup of Tea" (in *Hindustan Times*.)
As uninterrupted as gold exports.
As inquisitive as the income-tax authority.
As vigilant as the C.I.D. in plain clothes.
As unenviable as a witness under cross-examination.
As busy as the police in a Congress procession.
As crowded as a foot-ball match.
As rash as a Calcutta bus-driver.
As uncertain as weather.
As undespendable as a weather report.
As tedious as accounts of other peoples' illnesses.
As restrictive as White Paper Safeguards.
As illusory as Popular Responsibility in the Hoare Constitution.
As hopeless as the prospects of an Indian Federation.
As useless as a telephone which is out of order.
As annoying as a wrong number on the 'phone.
As wide-spread as a world depression.
As incurable as the present trade slump.
As catastrophic as a fall in commodity prices.

It is, therefore, not only essential but imperative that a new harvest of flowers should be garnered or, if you will, a fresh garland of such flowers woven, as the old flowers are stale and withered. The task, in fact, is *as urgent as catching the Imperial Mail when you are going Home on furlough*. Here is a humble beginning, a list which is illustrative, but not exhaustive.

As frankly rude as Sir Samuel Hoare.
As hypocritical as Ramsay MacDonald.
As offensively honest as Winston Churchill.
As persistent as Lord Willingdon's refusal of interview to Gandhiji.
As twinly as Sapru-Jayakar.
As accomodating as an Indian Minister in the Montague Constitution.
As mysterious as operations on the N. W. Frontier.
As vague as a Government's explanatory communique.
As inscrutable as the ways of our Bureaucracy.
As uncertain as Gandhiji's next step.
As optimistic as Pandit Malaviya's appeal for funds.
As helpless as the Finance Member in the face of world conditions.
As self-complacent as a Budget speech.
As irrational as the classification of political prisoners.
As popular as a dead leader.
As regular as anniversary celebrations—in Bengal.
As frequent as the divorces of a film actress.
As noisy as a so-called silent demonstration.
As disturbing as a neighbour's loud-speaker.
As irritating as a taxi-horn at night.
As sudden as a failure of electric current.
As omni-competent in pretensions as an I.C.S.
As disastrous as the Indian Exchange policy.
As abortive as an international conference.
As fruitless as a Commission or Committee's Report.

(*Post Script.*—The Editor on perusal of this list of comparisons—*as formidable as the demands of communal leaders*—suggested that "*as witty as G.L.M.*" might be added. But the addition was declined by the author owing to his not being *as modest as Eavesdropper's references to his own writings*.)

CAST IRON PIPES
for Water Schemes

Extract from "RANGOON GAZETTE" on the AKYAB WATER SUPPLY SCHEME, Dated 25-4-1933.

"The Completion of a work of this magnitude in so brief a time will be a creditable achievement, and if not indeed a record, certainly an exceptional accomplishment involving a considerable amount of organisation and hard work by all concerned. The BENGAL IRON CO. supplied the bulk of the pipes used in one consignment, chartering a special steamer to do so".

The Contract comprised:—1,760 Tons—Sizes 5″ to 20″ diam, including specials the bulk of which was shipped within ten days of the receipt of the order.

The laying was carried out by Messrs. Clark & Greig Limited of Rangoon.

Clive Street Gossip

To Mrs. Annie Besant, the Head and Chief of the Theosophists, whose death occurred this week, I pay the reverent homage of one who, for a time, was a member of the Theosophiccal Society, and who, for all time, will continue to be, in spirit, a Theosophist. To Mrs. Besant, the creator of New India and founder and editor of the *New India,* I will,, for ever, remain beholden for the opportunity she gave me, in my college years, to dabble in journalism by accepting my contributions to the Literary Section of her triumphant paper. To Mrs. Besant, the friend of all in need, I feel under a never-repayable debt for the first leg-up in my career. Mrs. Besant, the politician, was a freak and an anti-climax. And to those like me who were bound to her by personal and family ties of spiritual kinship, the political episode in her life was almost as harsh as a bell tangled out of tune. Her general outlook embraced all that was permanent, eternal and fundamental in life ; and the brief spell of her political ambitions and manouvrings brought her, in the nature of the case, with whatever was temporary, trivial and terrestrial. All the same, if her intrusion into the dust and heat of mundane politics was regretted by many as inconsistent with the *role* that was assigned to her and as having inflicted harm on her repute in that *role,* Indian political life as such has benefitted vastly from the dynamic energy, country-wide awakening and far-flung and close-knit organisation that characterised, and ensued from, her planning and guiding of the Home Rule Movement. Hers was the loss in the contact with politics. Politics did gain by contact with her. But it is not Mrs. Besant, the politician, that I (and most others valuing spirit over matter) would like to cherish the memory of. It is Mrs. Besant, the finest blend of the human and the divine, that will ever remain a burning spot in our memory—a thrilling, ennobling and uplifting remembrance.

* * *

A generation ago, India suffered from two types of inferiority complex. The first was that Indian culture, tradition, social system and literature were puerile by Western standards. The second was that India had to learn everything from Western political institutions ; and Indians as men were far behind the Occidentals. The first brand of inferiority complex was banished by Mrs. Besant ; and the second by Mahatma Gandhi. Through their several and joint efforts, we, Indians, can now strut the world, with a proud mien and an erect head. India's problem of Swaraj is, in essence, the conquest of Inferiority Complex with which, for generations, we were afflicted. Most of this self-deprecatory bias has melted into thin air ; and the only people seeking to remind us of it and, if they had their way, to reinstate it are our moderate friends or National Liberals as they grandiloquently style themselves. A moderate may be defined as one who is modest as regards the claims of his countrymen for Swaraj and quite immodest as regards his own claims for all manner of offices under any form of administration, Swaraj or otherwise. A moderate has quite a superiority complex about himself but is constantly endeavouring to instil and inculcate inferiority complex in all others. In striking contrast to such denationalising and devitalising activity, Mrs. Besant and the Mahatma have ever held their head erect and taught each one of us to hold ours erect. From this point of view, the service which the two of them have rendered amounts to the very transformation of a nation-wide trait—the creation of a new national outlook—the enlarging of the entire nation's stature.

* * *

From matters of big import and wide significance, I must change the theme to a personal episode. And my excuse for narrating this is that it illustrates, most forcibly, the beneficent influence that Mrs. Besant was througout life.

I was, in my teens, one of the writers for the Literary Page in her *New India.* I used to speculate on what John Keats would have been if he had had a longer span of life, to compare the lyrical genius of Byron and Shelley, to comment on *Crescent Moon* and *Gitanjali* of Rabindranath Tagore. I was the first to introduce the study of the famous Bengalee Poet to South Indian readers. And in my review of *Crescent Moon,* I made the following remark: "If Wordsworth discovered the philosophy of childhood, and George Elliot analysed the psychology of childhood, it was left to Rabrindranath Tagore to sing the poetry of childhood". That sentence appealed to the Editor, Mrs. Besant, and she took, thereafter, a special interest in my literary career. When the late Maharaja of Darbhanga made a tour of South India, he was camping in Madras ; and while Mrs. Besant paid a call, he enquired if she could recommend someone to assist him in preparing a few speeches for delivery in that City. Mrs. Besant mentioned my name ; and, like the careful and thoughtful person she was, she remembered the number of my lowly house and the name of my obscure street and furnished them to the Maharaja. I was then in the M.A. class (post-graduate) ; and what was my surprise when, one fine morning, I received a gorgeous envelope, on opening which I found a letter requesting that I should call on the Maharaja ! In my *dhoti* and short coat (and no foot-wear), I marched into the bungalow where resided the North Indian magnate. To one, attired in a pink-coloured *dhoti* and a long-cloth shirt all unbuttoned and seated in the verandah next the portico, I addressed my first query.

"Can I see the Maharaja ?" I asked.

"What is your business with him" ? enquired the man in pink-coloured *dhoti.*

"Here is a letter", I replied, "in which the Maharaja has asked me to call on him".

"I am the Maharaja"—the pink-dhoti replied with an affability and smile which set me at ease.

BOMBAY— ORBES BUILDING, HOME STREE

But, almost directly, he startled me by asking: "Can you do it?"

"Do what?" I retorted, not without asperity. "You call me here. You do not state why you called me. And, yet, you ask me if I can do it".

The Maharaja saw the humour of the situation, laughed heartily, and narrated the incidents leading up to his writing for me.

"Now", he resumed, "can you do these speeches?"

I had heard of the fads and fancies of the Maharaja, as also of his profound convictions and sincere beliefs. And so, I enquired if what was wanted was a lot of eloquent stuff about *Sanatana Dharma,* its pristine purity etc., etc.; and if that was the need, I might, being verst in theosophy, Indian philosophy and Western philosophy, make an effort.

The Maharaja remained incredulous. Could this mere slip of a boy, barely out of college, deliver goods in the speechifying line, he wondered. As he was hesitating, I said: "Well, if I try and if you like the speech I produce, it is alright for you, I suppose. If you don't like it, what do you lose anyway? It is I that have lost some measure of my energy and time".

This reasoning clinched the matter. He gave me an advance copy of an address which a deputation was to present to him two days later. "Write a suitable reply"—he instructed.

I sat right in front of him on the other side of the table, got the requisite writing materials, and straightaway started on the work. In less than half an hour, the speecch was ready. The Maharaja read it; and as he turned page after page, there was, I could see, increasing surprise and pleasure in his face. At its conclusion, he turned to me and was generous enough to say: "This is good. Very good. Just what I want".

The fact is that just because he was so incredulous at the beginning the tolerable goodness of such performance as I was capable of in those years appeared to him to be extravagantly good. I was, thereafter, commissioned to write four speeches in all. Each one of them was responsible for a headier and headier premium on my stock in the Darbhanga Stock Exchange. The culmination was reached when the Maharaja asked me if I would join him as Private Secretary. The subsequent story need not be narrated here; but suffice to say that through the kindness of Mrs. Besant I was installed, when I was twentyone, in an office where the experience to be gathered was unique and versatile and under one who took me as a student and made a man of me. But for Mrs. Besant, I might today be teaching Algebra to thirty and odd students of the Fourth form of a mofussil school in South India. She gave me my first leg-up in the graceful way all her own; and I know she has, likewise, set on their feet hundreds of young men. It is as a gracious fairy that she will, ever, dominate my life. The Teacher of elders was the Godmother of youngsters.

* * *

After three weaks' stay in Simla, I returned to Calcutta this mid-week; and, to be sure, I am happy to be back in a city, the very atmosphere of which acts like a tonic on me. On the present occasion, Simla was positively unpleasant. Of the twentyone days I stayed there, we had only three clear, sunny days. Otherwise, it was wet, raining incessantly, foggy and depressing. I have never used an umbrella or a waterproof all my life; this meant that, even for short distances, I had to get into a rickshaw. To be dragged down slope and up hill by four ill-clad and ill-paid men makes one miserable. My stay, however, was quite an eventful one. I had long talks with Sir George Schuster, Sir Joseph Bhore and Sir Frank Noyce; and I feel assured in my mind that the negotiations with Japan are in the ablest hands. Both Sir Joseph and Sir Frank have a clear and comprehensive idea of the needs of the situation; they have tact, understanding, firmness and just outlook. There is, on all hands, a kind of scepticism that nothing could come out of the present talks. I do not share this pessimism. I believe that an arrangement, satisfactory to Japan and Lancashire on the one hand, and India's industrialists and agriculturists on the other, will be arrived at as a result of the labours of Sir Joseph and Sir Frank. India is well and worthily represented in this discussion which is truly of an epochal character. The status of this country has been immeasurably enhanced by a procedure in which it has been admitted that if other nations desire to fix up trade treaties with us, it is up to them to come to us *here* and discuss the proposals with our representatives. This is a great gesture for India's selfrespect—and all glory to Sir Joseph Bhore, India's first Indian Commerce Member. This is the proudest feather in his helmet. Even if the talks prove sterile, this feature is in itself of surpassing value. But, as I said, I do believe that the outcome of the important negotiations now proceeding would prove to be an even more resplendent plume.

* * *

The Reserve Bank Bill was, naturally, the absorbing topic of the session. I spoke, by request, to the Indian members of the Assembly in the committee room of the house; and I was glad to find that many of the speakers in the debate on the floor of the Assembly laid emphasis on a good many of the points I had made out in my address. The European Group requested me to have a talk with them; and, businesslike as they are, they came ready to the meeting with a number of questions to be put to me. The issues raised proved so important that I had to address them on two days instead of one as originally planned. I had rarely enjoyed speaking to an audience as I did on the occasion when I sat in the committee room of the European Group and endeavoured to answer the various questions addressed to me. This Group is made up of members, keen, imbued with a sense of duty, eager to gather all possible information, and well-organised. The party has its own paid Secretary and a secretariat staff. Notes of all proceedings are taken; and within a few hours after the meeting, the Secretary handed to me a typed copy of the proceedings for my correction. I do wish that the other Indian parties organise themselves on as efficient a basis and create for themselves a secretariat as helpful and handy. The present team in the European section is, indeed, extremely strong. Sir Leslie Hudson makes a dignified leader. Mr. F. E. James has established for himself a high repute as a forcible speaker. Mr. Ramsay Scott speaks with authority on all matters pertaining to industry. Finance and economics are special study of Mr. George Morgan. The Hon'ble Mr. Henderson is a host in himself so far as the Council of State is concerned. There is a pleasant distribution of labour and no one itches for an undue share of the limelight.

THE GATEWAY OF INDIA

(From Our Correspondent).

Bombay, September 20.

The week was crowded with events, connected with Delegations from Japan and Lancashire. The English and Indian industrialists were in conference for over an hour and a half on Monday, and again met on Tuesday and Wednesday. But, it is expected that the conference will continue for a few days more, before arriving at the largest measure of agreement, by which India might use more, and more, British manufactured cloth, without injuring her own mill industry.

But, the welcome address of Mr. Mody, Chairman of the Bombay Millowners' Association, and the reply of Sir William Clare Lees, Chairman of the British Mission, afford much food for thought. Mr. Mody voiced the opinion of India, when he said that one of the directions, in which Lancashire could give the most tangible proof of her anxiety to further India's interest, would be by the increasing employment of Indian cotton in the manufacturing of her cloth.

Sir William Clare Lees was, however, in fine form in his reply. Although he excused himself by saying that political questions were outside the scope of businessmen, harmony in Indo-British relations, resulting in facilities for the political progress of the country, would gratify Lancashire. If his forebears had been half so responsive to Indian aspirations, Lancashire need not have been in its present quandary. The expression of this sentiment is rendered possible by the fact that any advantage, sought by Lancashire, in India, is to be without injuring Indian interests. But, nowhere in his reply can be seen any indication of employing Indian cotton in Lancashire mills, except the bare mention of a belief that a great deal can be done. It is possible he has not been willing to commit himself, in anticipation of the result of endeavours, by Lancashire manufacturers, to find out fresh uses for Indian cotton. However, his statement that there are export markets in other parts of the British Empire, capable of interesting Indian manufacturers more than they do at present, has damped the spirit of those, interested in Indian cotton trade.

Opinion in informed quarters is that the British mission does not entertain hopes of consuming Indian cotton in large quantities. Our problem is to find a market for our cotton, as Japan is casting longing looks on Persia, China, Brazil, Turkey and New Guinea as its new sources of cotton supply. At present, since Japanese spinners voted for the boycott of Indian cotton, they are importing cotton from America. But, they are not sure of even this source of supply. The recovery plan of President Roosevelt may requisition an anti-dumping law, any moment, against Japanese goods. In that event, Japan would have to boycott American cotton, too. It is, perhaps, some such fear, that has induced Japan, already, to take steps for planting cotton in Manchoukuo, at its very threshold.

Last year, Japan used 1,600,000 bales of Indian cotton, as against 136,000 bales by France, 99,000 bales by Germany, and 97,000 bales by Italy. Who can substitute Japan as the biggest consumer of Indian cotton? Britain is not yet prepared to give the word. Instead, we are beholden to export markets, in other parts of the British Empire. India did not look forward to this specious piece of advice. The implications of following this advice are to augment our mills to such dimensions, as to absorb the whole of the outturn of our cotton. Then, India will have to organise a vast machinery to dispose of, our mill-cloth in other parts of the British Empire. The scramble for markets is best left to militant nations of the West. Marketing has been found, all the world over, to be more difficult, than production.

It is clearly the function of the Lancashire industry to buy the surplus cotton of India, manufacture suitable cloth out of it, and dispose it of, as best as the British industry can, in any part of the world, other than India. The English industrialists have got the requisite marketing machinery and the political influence in other parts of the British Empire and elsewhere, in such a measure as to ensure success. Indians do not hesitate to ask the British industrialists not to send cotton goods back to India, as they are already agreed to have a share in the Indian cloth market, without injuring Indian interests. When the Indian mill industry is three-quarters of a century old and has assumed a very important place in the economic life of the country, it is out of the question that Lancashire should produce cheaper cloth out of Indian cotton, and dump it on India.

Why should Lancashire not undertake to avert the disaster to the Indian cultivator, caused by the Japanese boycott, by filling the gap in the market for Indian cotton, and market the resulting cloth in Egypt, Kenya, Uganda, Tanganyka, other parts of the British Empire, Congo, Central and South America, and even Dutch East Indies. Unless British industrialists agree to take up Indian cotton and find a use for it as best they can, Indian opinion cannot be placated. To ask Indian mills to find fresh markets is as much as to say that Indian mills should absorb Indian cotton themselves.

Indian interests here are, however, equally keen on rubbing in, another aspect of trade relations between India and Lancashire. Most countries, depending on foreign trade, have now come to rely on quotas. An exporting country should be prepared to grant facilities for the importing country to send equivalent exports. Even small countries, like Finland, have seen the justice of adjusting trade balance with an exporting country like Britain. Col. Colville, Secretary of the Department of Overseas Trade, recently stated that the Anglo-Finnish trade left a favourable balance, roughly, of £7,000,000 to Finland. To remedy this disparity, Finland, voluntarily, completed negotiations for a new Anglo-Finnish Trade Treaty, and even held a "British Shopping Week", early this month, to encourage the sale of British goods. This is but one instance. Britain contracted similar treaties with the Scandinavian countries. France is adopting a similar course with regard to other foreign countries. It is, therefore, stoutly held here that Lancashire should agree at least to take as much Indian cotton, as Japan boycotted.

As expected last week, Mr. Mody extended an invitation to the Japanese Delegation to make it convenient, during their sojourn in Bombay, to meet the Indian millowners for an informal talk. The invitation was accepted. On Monday afternoon, three members of the Japanese Delegation were present at the Conference with the Indian millowners. The discussion lasted for 40 minutes. So far as is known at present, the procedure, to be followed when the actual conference takes place in Simla, was explained. The Japanese industrialists were not inclined to discuss any definite plans over the head of their Government representatives, now in Simla. But, some idea of their views has been gathered. They intend, perhaps, to press the renewal of the 1904 Treaty, or its revision, to the mutual advantage of India and Japan. It is also surmised that Japan is fully prepared for any eventuality. In the event of the failure of gaining their point, the Japanese hope that their boycott will so cripple Indian cotton-growers, and will so reduce the purchasing power of Indian consumers, that the luxury of buying from Manchester cannot be afforded. But, they seem to ignore the broad fact that the attendant agitation by agriculturists, about 80 per cent. of the total population of India, would compel ultimately any government to find ways and means for consuming cotton within the country, by encouraging nation-wide hand-spinning and hand-weaving, to the eternal detriment, both of Japan and Lancashire.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.

(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuons.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering:—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

OLYMPUS

(From Our Correspondent)

Simla: Aug. 20.

A strenuous Assembly session!—The Dwindling of Parties—Japanese Trade Talks—quota system much talked about—who will suffer for a textile quid pro quo?—Easier Settlement with Lancashire—will the Japanese impasse prove insoluble?

Oh, the end of a strenuous session! We are none the wiser nor the sadder for it. But the session has meant considerable labour to every body. Its one record is that Government sustained no defeat. In other Sessions Government could count on one or two divisions going against them but Session ended without even the observance of that formality!

The Session made one other record. It saw the history of King Amanulla repeated in our little 'parliament'. The "leaders", who went to Europe on a holiday at public expense, lost their party laurels. This was not confined to the Opposition groups. The infection spread all along the line and the worst sufferers were probably the office-bearers of the Groups that stand by Government.

The United India Group has told Sir George Schuster that they do not recognize Mr. Yamin Khan as their leader. This is only a clever way of recording their protest against the Finance Member putting Mr. Yamin Khan on to the Joint Committee on the Reserve Bank Bill. The Centre Party rallied round Mr. Sarma and Mr. Rajah and dethroned Raja Bahadur Krishnamacharya and Mr. Anklesaria both of whom were keen to exploit the party ticket to get on to the Committee.

Sir Hari Singh Gour lost his leadership of the Opposition so that the Nationalist Party has dwindled into an insignificant group. The last blow was dealt by Mr. C. S. Ranga Iyer whose speeches this session showed, despite seemingly strong verbiage, definite leanings towards the points-of-view of the Treasury Benches. He was the man to stand up and ask for withdrawal of resolutions which were not to the taste of the Government. And this counsel to his friends on the Opposition Bench would be tendered after he had worked himself up to apparent fury and platant rage. Some observers did think that his factics were only too palpable!

The Independents sat happy over their new-won promotion; but their acting leader, Sir Cowasji Jehangir, hardly showed any grit. He was always trying to be conciliatory and "statesmanlike". The result is the Opposition proved ineffective. It is a pity that Sir Abdur Rahim could not arrive in time for the Session for he would have imparted some strength to his party.

However, now that the Session is over, the interest in Simla will centre round Indo-Japanese discussions. I am told that the Japanese delegation is a very strong and representative body. They are quite prepared to put forward definite proposals and take their chance with the Government of India.

Sir Joseph Bhore and Mr. Stewart have been busy planning their attack on the Japanese case. They have spent a month in collecting statistics; but the problem remains whether there is enough of expert knowledge among the chief delegates from the Indian side to carry on the negotiations with skill and effect. And also whether the expert advisers of the Government of India would be able to make their voice understood. Mr. Clow is to give advice regarding labour and industrial matters. Mr. Burt is to represent the agriculturist point of view, while Dr. Meek is to be ready with his commercial statistics.

Though the Indian case may not have been drawn up with ability and care, the country may rest assured that it has strength and justice on its side. There is, no doubt, the threat of the boycott of India's raw materials by Japan, which has to a large extent been already carried out. Its immediate effects are very serious, almost disastrous to the well-being of the agriculturists. But with her face set towards a large expansion of her cotton mill industry and the ultimate self-sufficiency of the nation as a whole, India has no reason to barter away the well-being of her industries for the sake of temporary markets for her raw produce. But the immediate tasks also demand their share of the attention of the Government and the people; and that is why, in spite of the obvious solutions, India is obliged to treat with nations who are more dangerous as competitors than valuable as customers.

The position to-day, every one recognises, is a complicated one. Any settlement, that may be arrived at in regard to the market for cotton textiles in India, has to be related to the rest of the trade between the countries concerned. And obviously, a concession here will have to be balanced by a concession there. The difficulties indicated are present even in the obvious solution through a system of quotas. Quotas are the rage now, because they are, to some extent, a means of isolating one economic question from others which directly or indirectly impinge on it. And with the state of piecegoods market in India, perhaps the quota system will lend itself more easily. Hence it is, one hears so much of quotas in connection with the talks that are now going on between the Japanese trade delegation and the representatives of India and Lancashire. It is not known yet whether the allocation to each of the industrial interests will be made dependable on the state of prices. If they are, then the vexed question of the state of the yen exchanges will have to be considsred. Can Japan guarantee that she will appreriate the external value of the yen, or at least not to depreciate it and to consent to early stabilisation. In the absence of any such guarantee, the quotas will have to be on an absolute basis, more or less un-related to prices. It would still remain to ensure that in the anxiety to secure some sort of truce the interests of other industries would not be sacrificed. There is, however, little fear of this, as Japan is intent only on securing a wider market for her cotton goods in India.

All this speculation necessarily rests on the assumption that there is good faith among the parties who are negotiating at present in Simla. The more suspicious are prone to regard the negotiations here as a pure make-believe. For, though Japan may have a coparatively weak position as regards India, as regards Britain, she holds a strong position. If it is a question of open warfare in the Far Eastern markets, the odds are unquestionably against Britain. It is, therefore, quite likely, it is argued, that Japan and Britain might come to an agreement over the division of the spoils of India, using the present negotiations only as a means of flattering and thereby appeasing the nationalist sentiment in this country. In this connection, it is very significant that, contrary to the belief that the negotiations are initiated by the Government of India, the fact of the matter seems to be that they were taken on hand at the suggestion of the British Government. It is widely held in India that the time is not yet opportune for any trade agreement with Japan and that, at any rate, two years of experiments with a Safeguarding of Industries Act is a necessary preliminary to any understanding with the Far Eastern Empire. Very possibly, the experiment may find India independent of the Japanese market for cotton or at least strong enough to dictate her own terms to Japan.

The outlook at present is too nebulous to admit of any manner of fore-cast. Of this one could be sure, the Japanese delegates who are now at the Cecil Hotel are keen on knowing where they stand before the 10th of October, the date on which the Indo-Japanese Convention terminates.

HOW JAPAN PROTECTS HER INDUSTRIES

By J. RAMSAY SCOTT, M.L.A.

An examination of *The Import Tariff of Japan, 1933*, shows that Japan has a thorough and comprehensive Tariff, has prepared for all eventualities, such as dumping by foreign countries and bounties, and, in addition to her ordinary tariff, has placed a "Luxury" tax of 100% and 135% *ad valorem* on many articles. The importation of any article, which infringes patent rights or a trade mark, is prohibited. Let us examine her methods in dealing with the various problems of protecting her industries.

Bounties.—When imported articles benefit from a bounty in the exporting country, a duty, corresponding to the amount of such bounty, may be levied, in addition to the duty enumerated in the tariff.

Dumping.—When an important industry is in danger of being injuriously affected by the importation of articles for the purpose of dumping, after an investigation by the "Dumping Investigation Committee", a duty, not exceeding in amount their proper value, may be levied, for a specified period, in addition to the duties in the tariff. Goods, already imported and owned or in the possession of the Dumper, are also subject to the above duty.

Patent Rights and Trade Marks.—The importation of all articles, which infringe patent rights, designs, trade marks and copy rights, is prohibited.

Luxury Tax.—Those articles in the import tariff, in a table accompanying that law, are subject to an *ad valorem* duty of 100%, irrespective of the duties, mentioned in the tariff. Specific duties, as provided in one import Tariff, shall, however, be assessed at 135%. There are, however, certain exceptions, given in a list attached.

France and Italy.—There are special low rates for certain articles, imported from France and Italy.

In the Indian Tariff, there is no protection from a bounty, given by a foreign country. The Protection of Industries Act only became law in April, 1933, and has not been put into force yet. There is no prohibition of goods, bearing Trade Marks which infringe Indian Trade Marks, but action can be taken in a civil court. This is expensive, and the plaintiff has to prove that the trade mark is his by right of usage for a considerable number of years. It would be much simpler, if the Indian Government adopted Japanese methods, and then one of the complaints of Japanese unfair competition would be removed.

I need only give one instance, which has recently come to my notice, where Japanese goods bore the Trade Mark "Cawnpore Mail" and "Lucknow Mail", and were the counterpart of goods, made by, and bearing the trade mark of, "Cawnpore Mills" and "Lucknow Mills". In a similar case, the Japanese Government would have prohibited importation. The goods, which I have mentioned, were cotton hosiery; and I will now give an instance of how Japan dumps hosiery, and what would happen, if India attempted to introduce her goods into Japan.

The cost of this garment, manufactured of Indian cotton yarn, by Indian labour, is (per dozen) Rs. 4-11.

The weight of cotton in the garment is 3½ lbs. per dozen.

The Japanese price for garments, made to this sample, is slightly over 2 Yen per dozen; or at Rs. 78-8 per 100 Yen, the C. I. F. cost would be Re. 1-9, to which must be added the present duty of 25% or Rs. 6-8 and clearing charges, making a total cost F.O.B. Indian Port of (per dozen) Rs. 2.

We will now take the case of what would happen, if the Japanese price in Japan were Rs. 4-11 and India's export price were Rs. 2 per dozen, C.I.F. Japanese Port.

	Rs.	A.	P.
Cost C.I.F. Japanese Port (per dozen weighing 3½ lbs.)	2	0	0
Duty at Re. 1-5 per lb. (as per import tariff)	4	9	6
Luxury Tax 100% *ad valorem* ...	2	0	0
Total ...	8	9	6

In order to put the Indian manufacturer in India in a position to compete with the Japanese Importer, a tax of 200% would be required. It will, thus, be seen that the Indian Tariff is totally inadequate, and, even if hosiery were treated as cotton piece-goods, that the duty of 75% would not be sufficient. The facts, given above, have been verified from actual Japanese invoices and from the costs of several Indian manufacturers, who have shown me their invoices for cotton yarn, purchased from Indian Mills.

The Japanese deny the existence of subsidies to industries, but their Shipping under the "Ocean Lines Bounty Law, 1909", which replaced the "Navigation Bounty Act of 1896", has received the following subsidies :

AVERAGE ANNUAL GOVERNMENT SUBSIDY

	Yen.
Prior to 1928-29 ...	7,000,000
From 1930-31	11,000,000
To-day	15,000,000
Provided as follows :	
Trans-oceanic Services ...	8,500,000
Coasting and Near Seas Services	3,000,000
Government of Formosa ...	1,700,000
Government of Korea ...	900,000
South Seas Mandated Territories	700,000
North Sakhilin Administration	400,000
Kwantung Administration	35,000

Colonial Government also provided a further 4,000,000 Yen.

If it were not for these subsidies, Japanese Shipping would have suffered heavy losses in Post-War years, as, except in the boom years of 1915-18 and 1920, the subsidies have exceeded net earnings.

Other forms of assistance are Government advances up to 50% of the purchase price at 9% interest for the purchase of tramp vessels, under 15 years' old.

A guarantee of 50 yen per ton on 500,000 tons, taken over by the Kokusai Kisen Kaisa in 1920 by debentures at 6% later reduced to 3% redeemable 1928-49. In 1927, the controlling company failed, and Government took over.

A curious fact is that the bulk of Indian Cotton, imported by Japan, is turned into cloth, which goes to China; and the fact that China has boycotted Japanese cloth has meant that Japan does not require Indian Cotton at present, and has sufficient stocks and therefore the so-called boycott of Indian Cotton is merely the result of the law of supply and demand. The Japanese cloth, imported into India, contains over 80% of American Cotton.

The taxing of imported cotton, coming into India, decreases the protection given to Cloth, manufactured in India, and it is, therefore, in the best interests of both the cotton-grower and the manufacturer that the industry should be amply protected.

I can see no reason for Japan to complain; for, we are only doing what she has already done, and the duties, which we are proposing to put on, are only half of the duties which Japan has already imposed to protect her industries.

There is need for a thorough overhaul of the Tariff Classification and for a complete and comprehensive Tariff.

GREAT BRITAIN

T. U. C. AT BRIGHTON.

The Trades Union Congress at Brighton would seem to have given, for the moment, the quietus to the question of political dictatorship, over which The *Times* and Sir Stafford Cripps were alike agitated sometime ago. The average trade unionist in Britain has never been guilty of excessive interest in doctrinnaire socialism. He has always centred his attention on the material advantage of the Labour movement; and this explains not only the Labour landslide in the last election but also the English wage earner's awareness of the importance of the Empire. National vanity is also tickled by the argument that the movement is itself the expression of the traditional love of freedom of the English speaking peoples and that Great Britain will as ever be the home of political democracy. The cheers that greeted every condemnation of the idea of political dictatorship, now favoured by Sir Strafford Cripps, Mr. Cole and the other intellectuals of the labour party show clearly that there is still a vast gulf between leaders and rank and file in British Labour. One of the delegates dismissed the whole idea suggesting that "the workers in this country are not in the least interested in the philosophical fisticuffs of Sir Strafford Cripps and Mr. Citrine." He urged further:

> "The General Council may think that Sir Stafford, in advocating a dictatorship, is barking up the wrong tree, and the General Council, in listening to the advice of Mr. Citrine to emulate the ostrich by burying their heads in the sand, may be equally on the wrong track, but our members are quite apathetic about such subjects. We are concerned far more in what is happening in America regarding the industrial position."

But in his Presidential address Mr. Walkden had, however, given expression to a more considered view. His survey of the origin and growth of Fascism on the Continent clearly suggests that democracy has to guard itself from more threats from capitalism than from socialism. He began by saying that "the growth of the movement that calls itself Fascism in Italy and can be identified under other names and by shirts of different colours in other countries, is a significant fact." Wherever the movement appeared it possessed the same characteristics with the same identity of methods and objective. "The goal in each instance was political dictatorship, culminating in a state absolutism, which denied to free voluntary organised movement the right to exist." In his deliberate judgment organised labour was now faced with a determined effort, on the part of those, who had felt their power slipping away from them, to re-establish their dominance both in politics and in industry. In the industrial sphere, the challenge to their mastery came from trade unionism, in the sphere of politics from socialism and the labour party. Where Mr. Walkden shows himself to be possessed of more critical insight than most political writers, is in his statement that "democracy is assailed not because it has failed but because it has succeeded." Political dictatorships have arisen only in an attempt to stay its onward march and derived their strength and inspiration only from capitalists. In as much as each country has its own strong capitalist class, democratic government all the world over is equally threatened by the last desperate effort of the capitalist class to ensure that its predominance is not overthrown by a fuller application of the democratic principle. "Capitalism in this country", said Mr. Walkden, "has as much to lose by the triumph of democracy as it has elsewhere and capitalist interests now are plainly fighting for their lives. They perceive, perhaps more clearly than we do ourselves, that they are fighting to the last ditch." Let us not, therefore, warned nor Walkden, cherish an illusion of security.

The meaning of this address is plain; and that is that, though the rank and file of British labour may denounce the ideas of Mr. Walkden and Sir Strafford Cripps and Mr. Citrine's philosophical fisticuffs, democracy has as serious threats from capitalism as from those who seek to fight it. The deduction from this is that in the present stage of the class war it would be hopeless to seek to preserve the ordinary forms of democratic government. If then the spirit is the more important, there is no reason why labour should not range itself behind a socialist dictatorship, which experience as well as careful speculation show to be necessary to prevent a capitalist counter-revolution.

This theoretical problem apart, Mr. Walkden is with the rank and file of British labour in his demand that the British Government should explore the possibility of applying the Roosevelt programme to Great Britain. He urged in his speech that President Roosevelt's policy was a vindicating of the two principles of Trade Unionism (1) co-operation between employers and the unions and (2) a shorter working week coupled with the raising of wages.

> The world crisis to-day, concluded Mr. Walkden, was due, not to things that were natural and inevitable, but to things that were unnatural and remediable. Our civilisation was sinking, not through any visitation of pestilence or famine, but through lack of courage, lack of vision, and lack of the will to grapple with the problems arising from our very success in organising the production of material wealth.

BRITISH COAL IN 1932

The annual report of the Secretary for Mines dealing with the coal industry in 1932 reveals the depressing fact that the output in the British coal industry in that year year was 4.9 per cent. less than in 1931 and 19.1 per cent. than in 1929 and was the lowest recorded during the past 34 years, 1921, 1926 being obvious exceptions, as the industry during those years was affected by stoppages of considerable duration. The work at the pits was more irregular and employment suffered a further heavy reduction. But there is a little consolation in the thought that in most coal-producing countries abroad conditions were even more unfavourable. Prices were lower than in 1921; but considering the downward movement in coal prices abroad and in the general level of prices as a whole, coal prices should be deemed to have been well maintained. The output in Great Britain in 1932 was 208¾ million tons.

In Europe, excluding the Soviet Union, output fell from 595,000,000 tons in 1929 to approximately 451,000,000 tons in 1932. In the United States, output, including anthracite, fell by two-fifths.

Since the end of 1929 there has been a serious accumulation of stocks of coal and coke at the mines.

In Germany the output was 13,680,000 tons less than in 1931, in France 3,700,000 tons less, in Poland 9,280,000 tons less.

In the Soviet Union output rose approximately from 52,000,000 tons in 1931 to over 56,000,000 tons in 1932, including coal raised outside Europe.

Smaller Shipments Abroad

Altogether, shipments of British coal abroad during 1932, including foreign bunkers and the coal equivalent of coke and manufactured fuel fell by 4,500,000 tons, to 57,150,000 tons.

The decline in foreign coal cargo and bunker shipments was relatively heaviest at ports on the north-west coast, amounting to 19 per cent., compared with 1931. This was chiefly due to the impositions of the import duty by the Irish Free State.

Shipments were lower at the Humber ports (13 per cent.), at ports on the north-east coast (11 per cent.), and at the Bristol Channel ports (7 per cent.). At Scottish ports they were 10 per cent. higher, in spite of some loss of Irish trade at ports on the west coast.

Air Mail Week.

The average declared value of the exported coal was 13d. per ton f.o.b., the same as in 1931.

There were changes in the proportions of various qualities of coal and anthracite exported; and these tended to obscure the general downward movement in exprt prices which affected less the anthracite than the other kinds of coal. Perhaps the most distressing revelation of the report is the fall in the consumption at home. The coal available for this purpose was the lowest recorded in 32 years except in 1921 and 1926. The per capita consumption, leaving the above mentioned two years out of account, rarely fell below 75 cwt per annum in the post-war period. But in 1931 there was a fall of 69 cwt. and in 1932 there was further fall to 67 cwt. which is about 20 cwt. less than in 1913.

The figures of the Home Railway Traffic provide some encouraging reading in these days when one and all seem to strain for such evidences of trade recovery. The following table from the *Financial News* gives the trend of receipts per passenger, merchandise and coal for the past three weeks, comparison in each case being with the corresponding week of the previous year:

PASSENGERS

The shipping and engineering exhibition at Olympyia was the occasion for the expression of much heartening sentiment by the Earl of Athlone. It is interesting to learn from the Earl that last month was the best month of the year for the Clive shippingyard, orders for seven ships having been placed in August and five launched. The Earl encourages the hope that although the month's output was only a little over 9,000 tons the year's total might at least prove to be better than last year. The same is true of the Tyne and other shipyards. Other interesting facts about the shipping industry revealed by the Earl are that since the last exhibition the motor vessel has made great progress and that at the end of July there were over 75 per cent. tonnage of motor vessels under construction in the world than they were a year ago. It was left to Mr. R. F. Gibb, Chairman of the Union Castle Mail Steamship Co., to state without reserve that we have turned the corner of shipping depression and we are in for better times. It is expected that a small foretaste of the 1933 Naval building programme—an order for one convoy sloop—will shortly be announced by the Admiralty the whole of the 1931 and 1932 programmes have now been put in hand the remainder of the 1933 programme—four cruisers one leader and eight destroyers, three sloops, one coastal sloop and various small crafts—will be placed probably in February.

The Midland Bank's compilation of the new issues statistics is useful not only for estimating the trend of affairs in the city of London but also as a clue to the recovery of business conditions all over the world in as much as world industry is, to some estent, dependent upon the capacity and willingness of the London market to subscribe to new issues. So far as the month of August was concerned it was clearly a record month for new capital issues and this was due to the issue of £15,000 of the Canadian loan the total for the month was £21.2 million compared with £26 million and only £73,000 in August last year.

The following table shows the August figures for fifteen years, as well as the eight months' totals and those for each year ended August 31:—

	August	August 31 8 months to	August 31 Year to
	£	£	£
1919 ...	14,807,000	123,384,000	166,106,000
1920 ...	9,855,000	294,510,000	408,667,000
1921 ...	3,059,000	134,632,000	224,333,000
1922 ...	1,097,000	187,871,000	269,035,000

UNITED STATES OF AMERICA

RECAPITALISATION OF WEAKER BANKS

Mr. Ford, the bankers and the oil industry have held the stage during the week. The recalcitrance of the first mentioned towards the recovery programme has continued unabated. Though Mr. Ford's objections to the codes and all that they imply are understandable on ordinary grounds, yet no light has been afforded as to the motive and the incentive to the resistance which he is apparently determined to offer. He still maintains a stony silence. And it is rumoured that on his return to White House from his holiday cruise, President Roosevelt will invite Mr. Ford for

Air Mail Week

a personal consultation and conference. Opponents of the Recovery Administration are anxious to make out that the Government are already feeling a weakness in the knee and that, at the moment, they are only anxious to find out some face-saving device, by which Mr. Ford might be appeased and left in actual, if not public, control of his business. The chances are that Mr. Ford, too, is not militant enough to risk an open rupture with the Administration. General Johnson is prepared to confess that "it is Mr. Ford's move next." He is still hopeful that Mr. Ford will not violate the code but, if he does, the General says, "I shall have to do something". This modest caution has always characterised the public utterances of the Recovery Administrator. Even during those stages in which the upswing in business was both considerable and consistent, General Johnson made no tall claims for himself and for what he stood for. And there can be no doubt that, when he develops his Buy-Now-Under-The-Blue-Eagle-Campaign, he will have in it the weapon with which he can "crack" Mr. Ford, as he threatened to him some time ago. If is often forgotten that the big businessmen and the mass producer are more vulnerable to attack from customers than the ordinary average producer. If instead of Ford, the opponents of Government's campaign consisted of a hundred thousand small producers, the task of the Administration would have been far more difficult. It is probable that before long a settlement will be arrived at by which Mr. Ford would not be too rigidly compressed within the framework of the codes.

It would appear that the policy of General Johnson is more to isolate the danger spots and prevent the spread of infection than to deal with the diseased areas with expedition. In the case of the open shop, General Johnson made it clear that the motor industry is to stand alone and that no other industry will have the freedom to introduce similar provision in their codes. This is clearly meant to placate labour which has been roused by the threat of company union. The employers, are doubtless, attempting to revise the codes in their own favour; and there was fear at a stage that the Government might give in to the demands of capital. But the recent declaration of General Johnson makes it clear that the Government are determined to take their stand by labour and to protect its interests. Clearly, in the present campaign, the Administration has to derive all its strength from the labour forces and it is too much to expect that employers will, out of their free will, give the necessary co-operation to the Government.

The Oil Code

The oil industry, which is another of the chief worries of the Administration, is also settling down to the recovery collar. Mr. Harrold Ickes, the Secretary of the Interior and the dictator under the oil code, has formally fixed the production at 2,409,700 barrels and the allocations are to come into effect from the end of this week. The leaders of the oil industry are still opposed to a minimum regulation of prices but they have signified their approval to the setting up of machinery for this purpose. On September 7th, it was known that the allowance for the State of Texas has been reduced to 975,200 barrels daily. After a futile last-minute attempt at securing further delay in the operation of the oil code, the producers in Texas allowed the 25 per cent. cut and others are expected to follow, especially Oklahoma. Crude oil prices rose in various parts of the country at 1 per cent. per gallon in petrol prices which was initiated by the Standard Oil Co. of New Jersey was made effective throughout the United States on September 7th. The price rise was duly reflected in oil stocks in Wall Street. In answer to a threat of strike in the Iowan mines, General Johnson has sent out a draft code providing for a maximum of 36 hours a week and minimum wages of 3 dollar a day with instructions for immediate forwarding of complaints, if any. This is, perhaps, a sample of the way the Administration will deal with other recalcitrants; and it is an indication of the prevalent spirit that there are even talks of court action against Mr. Ford.

Tussle with Bankers

By far the worst tussle is probably with the bankers. Mr. Jones, the President of the Reconstruction Finance Co-operation has also joined the President in his appeal to the bankers to make liberal advances to firms that have come under the Blue Eagle. This has only had the effect of infuriating the bankers; for the implication of the appeal, they believe, is that advances are being wilfully withheld. And the bankers have thought it fit to make a counter-charge against the President by suggesting that the President is becoming painfully aware of the failure of his recovery Administration and is, therefore, out to seek a scapegoat. The impartial public will, in the long run, be an adequate and fair judge of these charges and counter-charges. But what is significant at the moment is that the bankers have not only declined to respond to Mr. Roosevelt's appeal, but they have passed a resolution condemning the Glass Deposit Insurance Scheme and urging the Administration to postpone its initiation. The resolution also recommends that a commission should be appointed immediately to draft new and less unacceptable proposals. If the questions that have been decided by the Glass Deposit Insurance Scheme are to be reopend, then, doubtless, the banking and th business world will be convulsed with numerous and embarassing and endless controversies. But it will be apparent to any politician in America that as the legislation concerned was passed by a practically unanimous Congress, there is not the ghost of a chance of the legislature consenting to go back upon its considered decision. If it should turn out that the scheme is not after all as sound as Congress supposed it to be, it only remains for the Administration to make the necessary changes as part of the administrative regulations inevitable in the execution of any piece of legislation.

R. F. C. to Relax Terms

But the attitude of the bankers, at the moment, is far from helpful towards such a development. As things stand, it seems very unlikely that the bankers would be persuaded to offer the President the Co-operation which he seeks and which is indispensable for the successful progress of the Recovery Administration. The Government are, therefore, obliged to find the means of circumventing the opposition offered by the bankeds and Mr. Roosevelt has formulated a scheme by which he could secure the desired expansion of credits to business firms. The Administration is endeavouring to introduce new provisions by which the R. F. C. will be able to carry out the recapitalisation of the weaker banks. Hitherto, the Corporation has naturally had very strict rules for placing funds in banks for purposes of recapitalising. And if a change is to be made, many banks, which were formerly not eligible to sell their stock to or receive loans from the Corporation, would from now have to be so. Under the old system, the very banks which really needed recapitalisation where the ones which were least able to satisfy the conditions laid down by the R. F. C. It is, therefore, proposed that the Corporation should allow banks to sell their preferred stock on much easier terms and even to borrow funds for recapitalisation purposes on the security of the stock. This change of policy will remove the chief obstacle to the recapitalisation of the weaker and therefore to their entry into the Deposit Insurance Scheme. The effect of this will be that the Government would be the owner of a large number of banks throughout the country and a great increase in available credit will have been made possible.

Air Mail Week.

Probably, several times the thousand million dollars usually mentioned would be required to effect the recapitalisation of the existing banks. With the execution of this scheme the Administration will have become independent of the banks for carrying out the liberalisation of credit in the country.

Business Trends

Business reports still show a slackening, though it is an exaggeration to say that they contain no threat to the Recovery programme as a whole.

Advance estimates in the Street indicate a decline in U. S. Steel's unfilled orders of something like 175,000 tons on the week. Figures of electric power production will not be published until after the holiday, but they are also expected to be less favourable than last week. The number of failures during August shows a slight increase of the figure for July.

The sales of F. W. Woolworth & Co., however, show an increase of 11.8 per cent. above the previous August, and other chain store sales are likely to show appreciable increases. But the extent to which these merely reflect price increases is unknown.

But there can be no questioning the Chevrolet sales report. During the first eight months 511,433 units have been sold, compared with 394,000 units during the whole of last year.

FRANCE

SIX MILLIARD DEFICIT

M. Lamouraux, Minister of the Budget, speaking at Boussac on August 27, said that the deficit, which faced France, was 6,000,000,000 francs, which was 2,500,000,000 francs more than the last deficit. In June, it was, however, expected that the deficit would only be 3,600,000,000 francs, which was set off by the compensatory extinction of debt by 3,500,000,000 francs.

France's tax receipts for July were, however, greater than those for July last year; the month's receipts amounted to 3,815,000,000 francs. But, the total recoveries, during the first seven months of the current year, were 1,040,000,000 francs below budget estimates. The Treasury position is, however, easy, as the country has confidence in the Government, which fact has enabled the Government to raise the loans, necessary to meet current requirements.

The Budget Minister stated that the idea of meeting the deficit by a capital levy was premature. But, the measures, he might take to remedy the situation completely, would be ready when the Chamber resumed. He was, however, sure that a new effort would be needed.

M. Marquet, one of the leaders of the New Socialists' Party, summed up the general feeling, not only for balancing the budget, but also for maintaining the gold standard without inflation. There is nothing, however, to indicate any danger to the gold standard, in the near future. The gold covering in the last week of August was 79.62 per cent. of the currency in circulation, and every week more gold arrived in France.

But, further borrowing is not favoured, as it would increase budget charges; and yet, the 1933 budget cannot be saved without further borrowing. The increase in the deficit was largely due to the reduction of tax on railway passenger tickets by 20 per cent., which caused a loss of 485,000,000 francs, and to the low level of revenue from direct taxes.

The omission, by the Budget Minister, to mention the programme of further reductions in national expenditure under the 1934 budget, invited popular agitation for Government economics. M. Palmade, former Budget Rapporteur and now French delegate at Geneva, averred that reduction of expenditure was the only possible solution, as any effort further to increase the revenue would be hypothetical or illusory.

The Federation of Radical and Radical-Socialist Republican committees of the Sarthe Department, M. Caillaux's own stronghold, passed a resolution *nem com* in the following terms: "Strongly moved by the justifiable complaints of the agricultural, industrial and commercial communities and struck by the abuses which have been reported to us, the Federation formally authorises the departmental senators and deputies to insist on complete budgetary equilibrium being realised by economies in the public services and by organic reforms, carried, if need be, to a transformation of the machinery of the State.

Pension Expenditure

The law, passed in March last year, required the number of officials, entitled to full pension at the age of 55, to be reduced to 100,000 from 300,000; and the pension age of the vast majority of officials to be raised to 60. The effect of this law showed itself this year. The number of officials, entitled to full pension, will, this year, only be 8,000 as against 16,000 under the old system. The annual savings, effected by the reforms of March last year, will reach some 500,000,000 francs by 1945 and nearly 600,000,000 by 1951. This measure of relief to the Exchequer is far too low for the existing state of the Treasury. Credits, necessary for the service of the pension liability, amounted to 11,685,000,000 francs for the current year, as against 3,800,000,000 francs in 1925 and 1,700,000,000 francs (at the present valuation) in 1914. Medical attention to pensioners, special allowances to totally disabled men and consumptives, and former soldiers' pensions were responsible for 2,320,000,000 francs of the current year's credits. The need for bringing pension rates more into ratio with the depreciated value of the franc was largely responsible for the increase in expenditure. Other factors were the general rises in pay of future pensioners and the increase in the number of State employees.

There is room for the reduction of the number of State employees and of the allowances to the civil service. A threatened strike by the civil service has had the effect of staying the recent cuts, for the time being. But, the popular feeling against abuses, as evidenced in the resolution of the Federation of the Radical and Radical-Socialist Republican committees of the Sarthe Department, will prevail in the end. Sentiment will, however, favour the continuance of adequate relief to the disabled and ex-soldiers, who, at the risk of their lives, protected the interests of the nation and the civilians, in particular.

Import Quota Policy

As from October 1, the distribution of the import quotas will be governed by the equivalent facilities, given by foreign countries to entries of French exports. Negotiations between France and importing foreign countries will, however, precede the fixation of the import quotas. The Government *communique* on the subject states: "In order to maintain traditional commercial currents to the greatest extent possible, one quarter of each quota will continue to be distributed according to the principles, hitherto applied. Following the example of certain countries, who consider that this practice is not in contradiction with the most-favoured-nation clause, the French Government proposes to resume, at least in principle, its liberty of action in the distribution of quotas."

French exporters evinced marked satisfaction with the announcement of the import quota policy, which they are humoured to interpret as an export policy, opening out fresh avenues for their trade. But, import firms see nothing but disaster in the new quota policy, to foreign exporters and French importers. Their fear that, if the import quota system

Air Mail Week

applied also to agricultural produce, markets for the French agricultural produce will be entirely closed, is groundless. When the policy aims against dumping of foreign goods on France, there need be no fear that the French agricultural produce would lose the domestic market.

French firms also foresee the incorporation of special clauses in the new agreements, to ensure the payment of accounts, due from customers abroad.

It was further stated that, in the coming commercial negotiations with foreign countries, special measures would be considered, with a view to remedy the crisis which exists, at present, in the lace and *tulle* industries of Calais, as well as the cloth industry of Belfort.

Franco-Portuguese Tension

At the end of 1932, Portuguese wines, being cheaper, inundated, as it were, France. The French Government applied the quota system, which ushered in a tariff war between the two countries. The result of this economic war is graphically described by the figures below:

French exports, in 1929, to Portugal	260,000,000 francs.
French exports, for the first six months of this year ...	58,000,000 francs.
Portuguese exports, in 1929, to France	213,000,000 francs.
Portuguese exports, for the first six months of this year ...	77,750,000 francs.

Portugal denounced, last May, the existing commercial treaty, which would expire on December 1.

Paris Bargees' strike

During the third week of August, French bargemen struck work. The bargees silently strung their boats, moored together by cables across the river at Conflaus St. Honorine. A force of 300 police "infantry" detachments of sailors from Cherbourg naval base and a squadron of police "cavalry" arrived on the scene. The Government force was greeted with jeers from the bargees, their wives and even the children, who were then enjoying together an early breakfast on board their craft. After much coaxing and cajoling, a delegation of bargees went ashore to discuss peace tems. On the safe return of the delegation to the boats, the terms were flatly rejected. When three naval tugs came within range of the barges, the boatmen and their wives stood with boat hooks and barge-poles, to resist the assault on their homes. Strong jets of water from hoses bowled over, and drove, the enemy to their cabins. The police then boarded the boats, and the freedom of the Seine was restored.

The barges plied between Paris and Belgian and Eastern frontiers. The strike was, however, due to the competition of Diesal-engined motor barges. The motor barge would appear to be an interloper. In 1924, it had only 3½ per cent. of the French barge traffic; and in 1921, it carried 315,000 tons of merchandise. But, in 1931,, the motor barges captured 24½ per cent. of the traffic, carrying 7,115,000 tons of merchandise. The motor barge is half as fast again as steam-tug haulage barge, drawing traction power from electric plants on Northern French waterways. The motor barge travels 227 miles and 64 locks, between Paris and Belgium, in 10 to 12 days, as against 16 to 18 days, taken by its adversary. The motor barge again carried on might traffic. The French bargees and their wives considered all this as unfair competition.

The Minister of Public Works, however, ended the strike, by giving a pledge to suppress night traffic and to apply the eight-hours law to the entire barge transport industry.

Franco-German Sipping War

In retaliation for the German plan to keep Germans from patronising the ships of foreign lines, French lines are waging a shipping war against German shipping concerns. Even the German announcement, during the last week of August, to abandon the project, could not bring the French campaign to an end. Americans, crossing the Atlantic by French liners, used to hold the so-called "open tickets" which entitled them to return by any ship of any line. The French companies have now informed their passengers that their tickets will not, hereafter, be available for return on German ships. French officials, however, do not see any reason to interfere.

GERMANY

NAZI FESTIVAL

August-September witnessed much lionising of Herr Hitler. The Chancellor and his party tore through space from one end of Germany to the other From the Tannenburg demonstration to that by the German Saar League at Ruedeshien on the Rhine on August 27, was one lap for the Nazi hero. Herr Hitler was met by 50,000 inhabitants of the Saar, whose cheery greeting he reciprocated with the cryptic message of an emphatic exclaim "back to Germany", By way of an answer to the recent tour of the Saar, and the subsequent interview to the Press, by M. Edward Deladier, the French Prime Minister and Minister of War, Chancellor Hitler declared: "We desire an understanding with France on all questions, but never will Germany renounce the Saar region, as the Saar region will never abandon Germany". In defence of the anti-German propaganda carried on in France, he vehemently exclaimed that those across the borders lied when saying that the German people were being terrorised and oppressed. He was any time willing to appeal again to the people and he was sure that five-sixths of the electorate would stand behind him. In the claim, he was correct. The German people has been so far frightened out of its wits that 80 per cent. at least would solidly vote for him, while the bulk of the rest would rather keep away from the polling booth lest it should draw the Nazi ire on it, than dare to vote against Hitler and his unions.

As if in verfication of this blatant claim, Nurenburg, which formerly showed a cold shoulder to Hitler in his obscure days, put on gay colours on September 1, to woo Nazi love. The opening of the Nazi Congress furnished the auspicious occasion. As though to give the specific Nazi touch, Nurenburg authorities claimed to have discovered in a raid on communist houses, typhus bacilli, enoughto cause terrible havoc amongst the populace during the Nazi

Air Mail Week

congress. This event supplied the requisite setting for Hitler to exhort the Nazi Movement not to rest on its oars until the poisoners of the German people had been wiped out.

In place of the proverbial field of the cloth of gold, the city draped itself in signs of Swastika, with pictures of the Chancellor in plenty, to relieve the monotony. Against this background, thousands of uniformed "Brown Shirts" thronged the streets. Hotels and boarding houses within a radius of 30 miles are reputed to be crowded with visitors to the Nazi festival. The Burgomaster welcomed Herr Hilter as a "knight without fear and without reproach," and presented him, on hehalf of the city, with the engraving by Albrecht Durer, entitled "Knight, Death and Devil," which symbolises Hilter as the destroyer of Marxism.

Hitler's proclamation recapitulated the evils of Marxism and declared that, at the beginning of the year, Germany escaped the Bolshevist terror by a hair's breadth. Besides, it threw sidelights on the end of democratic institutions when it declared that the nation's will would best be expressed through its best brains. In the wake of democratic institutions, federal states have perforce to follow, as the proclamation also declared that the German people and Nazism, and not the States, constituted the sole support of the Reich.

The deliberative side was eclipsed by the spectacular, with the promotion of Captain Goering, the Purssian Premier, to the rank of General, by President Von Hindenburg, in recognition of "services for the liberation of Germany". The rest of the show was militarist, Hitler's protest notwithstanding. Addressing the parade of 100,000 unarmed Storm Troopers in the Adolf Hitler Square (the old Market Place),prior to which their new standards were consecrated by touch with the blood-stained banner of the Munich Revolt of 1923, held in the hands of Herr Hitler, to the accompaniment of a salute of 101 guns, fired by the Reichwehr battery, the Chancellor declared that the world must not see in Nazi revolution the expression of a desire to win new laurels on the battle,eld. Germans were conscious that no future war could gain them more honour than what they had gained in the last war. The spectacle was nothing but a great and solemn acknowledgement of German unity.

Other dramatic events of the Nazi rally at Nuremberg were the reading, by Herr Roclim, Chief of Staff, with the background of the blood-stained flags of the Hitler-Lindendorff revolt, held by Storm Troopers, of the names of hundreds of Nazis who had fallen for the movement to the accompaniment of rolling drums while the audience stood silent. Herr Rudolf Hess, Deputy Chief of the Party, who opened the congress welcomed the 15,000 persons who attended it, and in particular, the representatives of the Mussolini Fascist Party whose presence was interpreted as proof of friendly Italo-German relations. The Austrian Nazi Leader, Herr Hofer, with his comrades who were concerned in his liberation from Innsbruck jail in Austria, a couple of days back was also present.

Nazi Pacifism

The declared pacificism of Hitler is as much open to question as his claim that the Nazi Revolution substituted honour faith and decency, in place of treason and perjury, is hollow, in the face of the disclosures regarding the Reichstag Fire, the treatment meted out to Prof. Einstein and other eminent persons, and the parading in public streets, of a girl with her head shaven. As for the abandonment of militarism by Nazi Germany, all evidences point to the contrary. The recent appointments, to the chair of Military science, of Prof. Ewald Bause, author of a handbook on "Military Science," a sort of "Child's Guide to War", is an illustration in point. The prefessor discussed the possibilities of bacteriological warfare and even went so far as to ask the Church to play its part in militarising the mind of the nation. He aims at the creation of an unshakable belief in the high ethical value of war. The deliberate fostering of warmindedness in Germans at school is in sorry contrast with the French elementary teachers' methods to impart to the French Children an anti-war mentality.

Debt Problems

Foreign creditors of Germany, who are being pushed from pillar to post in the matter of interest payments, resent deeply the *malafides of the Government* in prostituting their measure of leniency, in order to promote their own long full interests towards financing not only German rearming but also the imports of substantial quantities of munitions and raw materials. They insist on getting a fair deal. They have taken their standard, among other things, upon the increase in imports, five fold, during the first four months of this year, of old iron.

The recent visit of Mr. F. C. Tiarks, of Messrs. Henry Scrodder & Co., and Sir Edward Reid of Barring Bros.,, & Co., Ltd., London, to Berlin in order to confer with Dr. Schacht on problems of liquidating untransferable Reichmark scrips at a discount of not more than 50 per cent., is not all that it seems on the surface. They are not the representatives of the foreign or British holders of German bonds. But, it is to be surmised that they will not keep their eyes and ears shut, during their stay in Berlin, to true facts of the German incapacity to pay or the use to which Germany has put foreigners' money.

Quite in juxtaposition with the restiveness of Germany's foreign creditors is the announcement by Godfried Feder, the economic expert to the Nazi Party and Under Secretary in the Ministry of Economics, that the Government is concentrating its efforts on breaking "interest slavery". Addressing the recent convention of Co-operative Societies, Feder declared that it was madness to demand from Germany that she should bear the burden of the present high interest on 90 milliard marks of home and foreign debts. He also defended his widely discussed plans of creating on the home currency the so-called "Feder Money". His plea was that the

expansion of credit facilities was not tantamount to inflation.

Excluding debts under 5000 marks, the rediscount credit of the Reichsbank and the Credit of the gold discount Bank, Germany's total foreign debts on February 28, the latest date available, amounted to 23,300,000,000 marks. This amount showed a reduction of 561,000,000 marks on the previous five months. For the year February 28, 1933 to February 28, 1934 the interest service on these debts comes to to about 1,000,000,000 marks. The following items make up the figure:

Long term debts falling due after February 28, 1934 ...	10,265,000,000	marks.
Short-term debts due before February 28, 1934 ...	8,702,000,000	,,
Foreign investments, approximately	4,000,000,000	,,
Foreign investments, approximately in Government bonds	200,000,000	,,
Foreign investments, Small Credits	100,000,000	,,

The short-term and medium term debts of German communes amount to about 8 milliard Rm. As the local authorities cannot balance their budgets, debts are still accumulating. The Central Government's taxation policy in reducing the local revenue resources of municipalities, together with the burden of providing unemployment relief to persons, not covered by the insurance scheme is, to a large measure, responsible for the unbalanced budgets of the communes. The salaries and relief are paid out, thanks to the grants, however belatedly, the Central Government. But some towns have had to default in the matter of contracts, in spite of the incredibly low outlay on new enterprises. This default is in addition the failure to meet payments on debts services. The government has now to sanction grants, so that budgets may be balanced, and thus prevent the incurring of fresh debts. With the balancing of budgets, the question of conversion may effectively be taken up otherwise, State loans or loans with state guarantees alone can redeem local debts. Luckily, slack has kept the creditors, patient, if not easy. With the revival of trade, demands would become very insistent. One solution is to enable the Reichbank by a revision of the Reichsbank Act, to use public loans as cover for taking up a conversion loan for communal floating debts, if not for the national and the provincial. This matter is now under the serious consideration of the Government.

State Control of Banking

Dr. Schacht, President of the Reichsbank, opened the first meeting of the Savings Bank Committee of Enquiry. He said that the task before the Committee was to devise a machinery to take away, from private initiative, the lending and borrowing of capital and entrust the function to the State. Friction between the State and private initiative must not occur in the future.

Wilhelm Kettler, who has been charged by Hilter with the supervision of economic life, said that the Chancellor aimed at the decentralisation and elimination of unyeilding concerns, and the creation of banking institutions over which one man could take responsibility. This is in illustration of the "best brains" policy of the Nazi State.

Trade Situation

Signs are not wanting that the Nazi leaders have had to recognise that the anti-German propaganda is leading to a "world boycott of German trade". The increase in tariffs against German goods and rigidity of the German exchange restriction "which prevents the utilisation even of a concealed depreciation of the reichsmark for special purposes and depreciation of foreign currencies". Loss of personnel and foreign connections and foreign sentiment against German goods", have all combined to achieve the heavy decline in German exports. For the first seven months of this year Germany's favourable balance was Rm. 318,000,000 only against Rm. 666,000,000 in 1932, and over Rm. 1,200,000,000 in 1931. Imports have not only fallen relatively little, but also are rising. Imports of scrap iron, iron ore, copper, hides and certain machinery components have risen heavily; and imports of textiles, oil, timber, rubber and various constructional materials have increased.

The commercial counsellor to the Berlin Embassy says, regarding economic conditions during the period September 1932 to June 1933:

There are heavy deficits on all her public budgets, a capital market which is not in a fit state to finance a recovery, great unemployment, a bad foreign trade position, large foreign indebtedness which has driven her to adopt the expedients of standstill agreements and a transfer moratorium, and a currency which can only be kept stable by measures of this kind and by a severe foreign exchange control.

A fairly exhaustive catalogue of difficulties, oppressing Germany!

Profiting by the example set by England in her trade agreements with Scandinavian countries, the German Government seeks, by the exchange of import and export quotas, to control not only the amount, but also the direction of foreign trade. The most favoured nation clause will in future, be dropped, and bilateral commercial treaties will lay down maximum tariff rates for individual commodities.

Production

The Government's work plans is evidenced by the big important programme of the Railway companies and the huge increase in steel production in the Ruhr, amounting to about 65 percent since July of last year. The combination of heavy agricultural protection and a growingly exclusive consideration of the domestic demand for German goods, has contributed to the isolation of Germany. The expansion of wheat acreage, judging from the current harvest, is adequate enough to meet Germany's entire requirements. Hopes are entertained in achieving the same result as regards barley and oilseeds.

The possibilities of exploiting yucca fibre as a substitute for cotton and jute are now engaging the attention of the Government. Government experts conducted practical experiments which have so far proved that the yarn produced from the fibre of the yucca plant, is suitable for manufacturing packing threads, cordage carpets, sack-cloth and even linen.

ROAD TRAFFIC BILL

NEW LEGISLATION TO FAVOUR PEDESTRIANS

EFFECTS ON ACCIDENT INSURANCE

The road accidents of Great Britain are increasing year after year; and in the year 1932, 184,006 accidents took place involving the death of 6,667 persons and injury to 206,450 persons. As the number of mechanically-propelled vehicles is increasing year after year, the road accidents also increase, though not proportionately. Road accidents during the first six months of the current year, according to the statistics kept by the "National Safety First Association", show an increase of 3 per cent. compared with the corresponding period of last year. Information is not available as to how many persons out of these cases received compensation,. It is known however, that insurance companies have received 20,222 claims out of which 4,529 claims forming 22.4 per cent, were rejected. Thus it has been recognised by the government that the pedestrians suffer much on account of these heavy road tolls, and that the existing common law of negligence does not help them to claim and secure adequate compensation. Under the existing common law of England, the motorist is presumed to be innocent of any negligence until the injured person has proved him guilty; and the difficulty which the injured person has in producing witnesses to bear out his plea that the accident was not his fault, can well be imagined.

It is only to remove this hardship of the pedestrians and other victims of road accidents that this bill called "Road Traffic (Compensation for Accidents) Bill" has been introduced in Parliament. This bill of Lord Danesfort was referred to a select committee for enquiry and report. The Select Committee has already concluded its sittings and submitted their report to the House of Lords. The Committee stage of the bill was concluded in the House of Lords on 25th July, 1933 and the bill, as amended by the committee, is now before the government for consideration and enactment.

This bill deals mainly with the question of compensation for damages caused on the road by motor vehicles in cases where the injured person is a pedestrian, a pedal cyclist, on a horse drawn vehicle, or riding or leading a horse. It does not cover the case of damages where the injured person was in or on a motor vehicle. Under this bill three new principles, involving drastic change in the common law of negligence, have been embodied. They are (1) instead of the pedestrian having to prove it, negligence on the part of the motorist is assumed, unless the contrary is proved; (2) The defence of contributory negligence is eliminated, the defendant being exonerated only where the accident is wholly due to the fault of the pedestraian; (3) In the case of inevitable accident, that is, where no negligence is proved on the one side or the other, the motorist is made liable. The subsidiary proposal of the Committee is that if a child is killed in a motor accident its parent or guardian has the right to recover medical and funeral expenses.

The Committee realise that this will increase the number of claims and will present an increased difficulty in the settlement of disputed claims. They anticipate a considerable increase in the cost of the third party insurance. But they are of opinion that the principles, which the bill now embodies, are sound in themselves; and no evidence has been tendered to them to suggest that the cost of third party insurance would be prohibitive. They give the following reasons which necessitated them to recommend this drastic change in the prevailing law of negligence. (1) The number of increasing accidents year after year, and the gravity of the problem which the bill deals, will justify the recommended change in the law. (2) The Committee do realise that it may be a hardship on the motorist to be made to pay damages for an accident which was not attributable to his fault; but the right view to be taken is that the payment of compensation to innocent pedestrians who suffer injury is a duty, not so much of the individual motorist as of the motoring community as a whole. The motor vehicle is an instrument of danger to all and those who use it ought to be held responsible if hurt is caused to other users of the highway. (3) The Committee further points out several instances where the English common law in this respect has already been deviated from. It quotes several examples including cases under Workmen's Compensation Act to show that victims were able to claim compensation against second parties without proof of negligence. (4) Again it is stated by the Committee that 11 out of 13 foreign European countries assume negligence on the part of the motorist unless the contrary is proved.

The Committee, while approving the main lines on which the Bill has been drafted, recommend that it should be amended so as to follow with certain modifications the form of the sections in the "Air Navigation Act of 1920". As regards the defence of contributory negligence, this Bill departs from that part of the "Air Navigation Act" under which contributory negligence is a complete defence. But under this Bill, unless the accident is proved to be wholly due to the negligence of the pedestrian, he can recover compensation; but in computing the amount of damages the degree to which the negligence of such person contributed to the accident must be taken into account. The Committee have inserted a provision that the Act shall not come into force until six months after it is passed—this interval being necessary so that insurers may have time to work out the necessary effect upon the rates of premium.

It is no wonder that there is a strong resentment and disapproval of the bill among insurance circles. In almost all street accidents, the motorist will be deemed guilty until he proves himself to be innocent; and it will be a great hardship on insurance companies doing accident business to entertain their claims. The Motor Insurance Correspondent ("Petrol") of the *Post Magazine and Insurance Monitor* answers to the reasons adduced by the Committee as follows. If the number of accidents is increasing year after year, the first step should be to minimise the frequency, rather than to legislate in respect of their consequences. What is needed is something to check the trouble and not to make it more pleasant after it has occurred. The cases quoted by the committee to show that the common law of negligence has already been deviated from by the English courts, cannot be compared with the point at issue as the circumstances of those cases were entirely different. Precedents of sea and air

FEDERATION COMMITTEE ON RESERVE BANK BILL

A meeting of the Executive Committee of the Federation of Indian Chambers of Commerce and Industry was held in Calcutta at the rooms of the Bengal National Chamber of Commerce on 11th and 12th September, 1933. The Committee considered the proposals contained in the Reserve Bank Bill introduced in the Assembly last week by the Hon'ble the Finance Member, the proposals regarding the constitution of Railway Authority for the administration of the railways in India and matters regarding the Indo-Japanese Trade relations, and arrived at the decisions as contained in the following resolutions:

RESERVE BANK BILL

The Committee of the Federation, before carefully going through the provisions of the Reserve Bank of India Bill primarily based on the Report of the Reserve Bank Committee, desire to place on record that inspite of the undertaking given by the Secretary of State for India that representative Indian commercial opinion will be consulted in formulating proposals for the proposed Reserve Bank, no effort was made by either the Secretary of State for India or the Government of India to have representative Indian commercial opinion represented on the London Committee. The Committee of the Federation are of opinion:—

1. That while they would prefer a State Bank, a shareholrers bank may be acceptable, provided complete national control is assured and not less than 75% of the paid-up capital at any time is reserved to natural-born Indians.

2. That not less than ¾ths of the total number of Directors with voting power should be natural-born Indians.

3. That the four Directors proposed to be nominated by the Governor-General in Council should be nominated by the Governor-General on the advice of the Federal Government.

4. That the Governor and one Deputy Governor or two Deputy Governors should be appointed by the Governor-General from a panel elected by the Board.

5. That if only one Governor and one Deputy Governor be appointed at least one of them should be an Indian, and if one Governor and two Deputy Governors were appointed at least two of them should be Indians.

6. That the "first" Central Poard should be constituted by the Governor-General in Council and should hold office for one year, after which period the Board should seek re-elction. That th provision laid down in sub-clause 3, Clause XV, regarding consultations with the local Governments should be deleted and the appointment of these eight Directors should be made by the Governor-General in Council.

7. That the opening of the London Branch should be made obligatory as was provided in Clause 6 of the Bill of 1928.

8. That in order to enable the Reserve Bank to exert adequate influence on the credit situation of a predominantly agricultural country like India and to make the benefit of such an institution available to the country's agricultural advancement, it should be empowered to make loans and advances on the security of movable goods, merchandise and warehouse receipts as recommended by the Central Banking Enquiry Committee.

9. That it is not in the interest of India to have her currency based on, or linked to, sterling.

10. That in any event the exchange obligations to the Reserve Bank should not be fixed at the ratio of 1s. 6d. for a rupee, but that the rupee should immediately be delinked from sterling and be stabilised after wholesale prices in India have attained approximately the level of the year 1925-26, which means an increase over the present price-level by about 50%.

11. That an embargo on the export of gold should be put forthwith and that Government should make suitable arrangements for the purchase of gold.

12. That the legal minimum gold holdings, as provided in the Bill is inadequate and should be fixed at not less than the total gold holding in the combined Gold Standard and Paper Currency Reserves at the present moment.

13. That the proposal to grant the sole agency of the Reserve Bank to the Imperial Bank would be acceptable provided the tenure of the agreement is restricted to ten years and the total amounts of balances kept with the Bank and the rates of interest be regulated to less generous and more reasonable figures.

14. That in finally deciding upon the terms and conditions of the Agreement between the Reserve Bank and the Imperial Bank, due and adequate consideration should be given to the potential danger of a powerful Bank like the Imperial Bank to set at naught the credit policy of the Reserve Bank, and to the necessity of a harmonious growth and development of indigenous joint stock banking in the country.

15. That while the proposals have in general attempted to safeguard the Reserve Bank against political influences within the country, they subject the Reserve Bank in actual operation to political influences emanating from the Secretary of State and expressing themselves through the Governor-General.

16. That there should be provision for the recognition of indigenous bankers by the Reserve Bank as recommended by the Central Banking Enquiry Committee.

PROPOSED STATUTORY RAILWAY AUTHORITY

The Committee of the Federation have carefully considered the "Sketch proposals for the future administration of the Indian Railways", being the outcome of the deliberations of the Committee appointed by the Secretary of State to consider a scheme prepared by the latter in consultation with the Government of India; and while they regret that no facilities have been given for consultation of representative Indian commercial opinion, as should have been considered imperative in this case and that even the Committee in London had to consider the question with reference to a pre-determined scheme, the Committee of the Federation place on record their views on, and criticisms of, the various proposals as follows:—

1. That they accept the principle that the Railways should be administered on business principles, due regard being paid to the interests of agriculture, industry and trade, and that to ensure immunity of the day to day administraton from political interference the management of Railways should be entrusted to a Statutory Board, subject, as suggested in the Proposals, to the control of policy by the Federal Government.

2. That the Statutory Authority should be set up by an Act of the Indian Federal Legislature, if necessary, under provisions made to such effect by the Constitution Act, in pursuance of the model of the South African Act which provides that "subject to the authority of the Governor-General-in-Council the control and management of the railways, ports and harbours of the Union shall be exercised through a Board consisting of not more than three Commissioners, who shall be appointed by the Governor-General-in-Council, and a Minister of State, who shall be Chairman" and further enunciates that "the railways, ports and harbours of the Union shall be administered on business principles, due regard being had to the agricultural and industrial development within the Union and promotion by means of cheap transport, of the settlement of an agricultural and industrial population in the inland portions of all provinces of the Union".

3. That all the members of the Statutory Authority who should be whole-time servants of the Government, should be appointed by the Governor-General on the advice of the Federal Government, and should possess such special qualifications as are mentioned in the Proposal.

4. That the President of the Authority should be appointed by the Governor-General on the advice of the Federal Government and not in his discretion as suggested in the Proposals.

5. That of the members of the Statutory Authority, three should be appointed for 3 years and the remaining four for 4 years, provision being made for extension of the term thereafter and retirement by rotation. Subsequent terms should be three years.

6. That the Chief Commissioner who would be at the head of the Railway executive should be appointed by the Railway Authority, subject to the confirmation of the Governor-General and the Federal Government, and not of the former alone as suggested in the Proposals.

7. That in so far as it is essential to the exercise of control over the policy of the Railway by the Federal Legislature that the latter should have the right of discussing and voting on the Railway Budget, Revenue Estimates should be submitted annually to the Federal Government and through them to the Federal Legislature and subjected to the vote of the latter.

8. That the Proposal to subject the Railway Board to the superior authority of the Governor-General in the exercise of his special responsibilities in matters relating to the classification of posts in the Railway services on state-worked lines in British India and the methods of recruitment, qualifications for appointment to the service, conditions of service, etc., is seriously objectionable being calculated to perpetuate racialisation and communal distnctions in the Railway Services, and that therefore the Railway Authority should be subjected in such matters to the Federal Government.

Topical Extracts:

9. That the Public Service Commission should be consulted in the framing of rules to regulate the recruitment of, and in the making of appointments of, not only the superior Railway services but also of subordinate services, as far as practicable and that the rules in this regard must not make any distinctions on communal lines.

10. That any conflicts arising between Railways, Waterways and Roads as competitive means of transport should be referred for examination and report to a Commission consisting of one independent expert of experience and standing and two or more assessors who should be appointed by the Governor General on the advice of the Federal Government.

11. That the scheme implied in the Proposals is fundamentally inconsistent with ministerial responsibilites and concentrates so much power in the hands of the Governor-General in the exercise of his discretion and special responsibility that it gives sufficient grounds for apprehension that the present evils of the Railway administration arising from the irresponsibility of the same to British political influence and witnessed in such matters as racialisation of services, indifference of the Railways to the requirements of Indian industry, trade and agriculture and inadequate support given to the indigenous industries through purchase of stores, will continue even under the reformed constitution.

GOLD AND THE ECONOMIC OUTLOOK

"The Economic Outlook" is the title of an article contributed by Sir William Dampier to the September issue of the "Lloyds Bank Monthly Review". He discusses therein the monetary and economic policy of England since her suspension of the gold standard. Certain suggestions for the future are also offered.

The suspension of the gold standard was, according to Sir William, inevitable and represented the only way in which the break-up of the economic machinery could have manifested itself with the least harmful results. He does not, however, approve of the subsequent monetary policy adopted by the authorities. Though he applauds the War Loan Conversion operations yet he believes they have stuck too closely "to the traditions and technique of the pre-war gold standard game", at a time when these have ceased to be "adequate guides." In support of his view, he quotes the downward trend of sterling prices from November 1932 to April 1933.

"In our post-war world," he writes, "where monetary factors are the most important influences which control the economic machine, I do not believe that the old rules of the gold standard game are adequate guides for those in control of monetary policy, nor that the gold mentality of the City of London, useful as it is as one consideration in a more adventurous outlook, is a safe psychological atmosphere in which to develop that policy.

"Management" Inevitable

"Any action outside the strict rules of the gold standard game is stigmatised as 'manipulation' of currency. The fact is that, for good or evil, 'management' of our monetary affairs is inevitable nowadays.

"A 'cheap money policy' or a control of exchange speculation by the Exchange Equalisation Fund is clearly 'manipulation,' yet both are passed by our financial purists. All that is needed is to use the inevitable management as regards rates of interest and the exchanges so as to favour industrial expansion and a rise in wholesale prices rather than a fall."

Sir William makes a survey of important world events since the suspension of the gold standard by England. He pays particular attention to the differing views which led to the deadlock at the W.E.C. Naturally he comes to the consideration of future policy.

"Competitive Devaluation"

"If the sterling nations follow the United States and adopt a thorough policy of reflation in order to raise wholesale prices, there is danger that it may start, either automatically or wilfully, a competitive devaluation of currencies. A currency falling relatively to others is so effective and easy a means of protection that, once tasted, a desire for it grows, and one country after another may be drawn into the race till all forms of money become valueless.

On the other hand, though French wholesale gold prices have risen somewhat since the dollar became a paper currency, there is no certainty that this rise will continue. If gold countries are to maintain an effective standard, they must keep an open market in the metal. The Bank of England still buys gold, and even President Roosevelt, in the midst of his pronouncement in favour of raising prices, surprisingly said: "This is not the time to dissipate gold reserves." It is possible that the output from the mines may keep pace with the demand, but it is dangerous to rely for our measure of prices on the chance supply of one substance.

Movement of Money

"It is necessary clearly to distinguish the long-term tides of prices, each lasting perhaps for twenty, perhaps for two hundred years, from the short-term waves of the trade cycle. History shows that the tidal drift depends chiefly or entirely on the relative amount of money available, an increase in world-money bringing a rise in prices and, on the whole, prosperity, a shortage causing a fall in prices and economic adversity. But, put in monetary terms (other terms are possible), the short cycles of trade depend more on the velocity of circulation of money than on its quantity.

"Thus to increase the stock of credit is not enough alone to enable us to escape from a temporary depression—a movement of money, produced by renewed confidence, is necessary.

"Hence comes the justification of the recent insistence on public works as a means, not of absorbing all the unemployed (which is absurd), but of starting the trade cycle on the upward course.

"Attempts are being made to raise the prices of certain commodities by the restriction of production, or tariffs, or control of imports by quotas. Such measures may be useful as temporary expedients, and may produce indirect secondary effects on the turnover of money through their psychological influences. But, if the amount of money and its velocity of circulation remain unaltered, restriction, tariff, or quota cannot directly change the average level of prices. If some prices are raised, others must be lowered.

The Monetary Cure

"The real cure for our ills is monetary. . . . I am for a *via* media, a compromise between expansionist and contractionist policies. . . . In the trough of a depression, expansionist measures are necessary. Works, remunerative either economically or from the aspect of amenity, should be put in hand, though they should be stopped at once if any sign appears of a rise in sheltered wages. Possibly a lowering of income-tax might stimulate private enterprise. A subsidy to the railways, to be returned in lower transport charges ,might improve the amenity of the roads, and help trade. Cheap credit for housing might destroy the slums. Open market purchases of securities by the Bank of England would put up the price of Gilt-edged stocks, that is, lower the normal rate of interest, and thus encourage by cheap money the use of the currency and credit created."

Sir William adds that in order to give scope for sterling prices to rise, the foreign exchanges must remain free and uncontrolled.

Regarding long-term credit policy, he says, that irrespective of the restoration of the gold standard, the growing needs of industry must be satisfied by a sufficient expanding currency and credit system.

He concludes with the suggestion regarding the formation by joint stock banks of a financing corporation for new and infant industries. Scientific experts may be asked to advise them on the technical soundness of new ideas.

"By some such interlocking scheme," he adds, "new industries—necessary in times when old ones are depressed and savings super-abundant—might be helped into being."

TARIFFS & TRADE.

The following interesting article dealing with the effect of the British tariffs is taken from the Barclays Bank Monthly Review.

EFFECT OF THE TARIFFS

RESTRICTING OVERSEAS BUSINESS

Barclays Bank Monthly Review contains an important article on the effect of the British tariffs.

"Approximately eighteen months have passed since Great Britain adopted a protectionist policy. In November, 1931, when the question of this country's adverse international balance of payments was acute, the Abnormal Importations (Customs Duties) Act was passed with the object of preventing unusually large arrivals of certain classes of foreign manufactured goods. Three months later this measure was followed by the Import Duties Act, which imposed a general 10 per cent. duty on a wide range of commodities received from non-Empire countries, and provided machinery for applying higher rates in specific cases.

"The new policy has, therefore, been in operation for a sufficient time to enable some idea to be formed of its influence.

"The principal objective of a protectionist policy is to stimulate domestic trade, and all the indications point to the fact that there has been an improvement in industrial activity in recent months.

Factors in Home Activity

"It would be fallacious to attribute the whole of the improvement to the influence of the tariff, for many other factors have been operating to produce this result.

"It is safe to conclude that the introduction of protection in this country has led to some expansion in internal trade, while at the same time tending to restrict business with overseas markets.

"It is not easy to estimate the extent to which one movement has offset the other, especially as eighteen months

(*Continued on page 811*).

STATISTICAL INFORMATION

JOINT STOCK COMPANIES IN BENGAL.

During the month of August, 1933, twenty-seven new joint stock companies, limited by shares, with an aggregate authorised capital of Rs. 39,15,000, were registered under the Indian Companies Act (VII of 1913) in the Bengal Presidency. The respective details are given below:—

	Rs.
1 Banking	1,00,000
1 Investment and trust	6,00,000
9 Provident insurance	4,20,000
3 Chemicals and allied trades	4,50,000
1 Public service companies	2,00,000
1 Ice and aerated waters	1,50,000
4 Agencies (including Managing Agent Companies)	6,25,000
4 Other trading and manufacturing ...	2,70,000
1 Cotton mills	5,00,000
2 Sugar (*including jaggery*) manufacture ...	6,00,000
Total ...	39,15,000

TRADE OF CALCUTTA

There was a further improvement in the overseas import trade of Calcutta in private merchandise in August, 1933, the value advancing from Rs. 2.64 crores in the proceeding month to Rs. 3.21 crores against Rs. 3.12 crores in August, 1932. Exports, too, advanced from Rs. 4.89 crores to Rs. 5.95 crores against Rs. 4.55 crores in August, 1932.

Imports

A comparison of the values of the principal imports with the figures for August, 1932, is indicated below, the figures in brackets representing the increase or decrease as the case may be:—

	In lakhs of rupees.
Machinery & millwork	79 (+29)
Cotton goods	51 (−29)
Iron or steel	19 (+4)
Other metals	12 (−1)
Chemicals & chemical preparations (excluding chemical manures & medicines)	10 (−1)
Oils, mineral	9 (−6)
Wool	9 (+4)
Hardware	9 (level)
Paper & pasteboard	8 (level)
Electrical instruments	8 (+2)
Drugs & medicines	7 (+2)
Liquors	5 (level)
Sugar	5 (−2)
Betelnuts	5 (+2)
Tobacco	4 (+3)

The heavy rise in machinery and millwork was chiefly due to large imports of sugar machinery mostly from the United Kingdom. The total yardage of cotton piecegoods decreased from 39 millions to 23 millions, and the value receded from Rs. 61 lakhs to Rs. 33 lakhs. The heavy fall under cotton goods was chiefly due to lesser imports of coloured, printed and dyed goods. There was no importation of wheat.

Exports

The variations in the values of the principal exports as compared with the trade of August, 1932, are indicated below:—

	In lakhs of rupees.
Jute manufactures	216 (+6)
Tea	177 (+56)
Jute, raw	71 (+28)
Hides & skins	29 (+19)
Seeds (non-essential)	29 (+26)
Lac	9 (+2)
Pig iron	8 (+3)
Grain, pulse & flour	7 (−8)
Coal	3 (−1)

All the principal commodities on the export side showed an improvement with the exception of grain, pulse and flour and coal.

Direction of Exports

Raw jute and hides were largely shipped to Germany. The United Kingdom was the chief buyer of tea and manganese ore, and Japan of pig iron. Gunny cloth, lac and skins went mostly to the United States of America, and gunny bags to New Zealand. Rice, which formed the bulk of the trade under the head "Grain, pulse and flour," was chiefly shipped to the Union of South Africa.

TRADE OF MADRAS

The total value of imports from foreign countries into the Madras Presidency during August, 1933, was Rs. 1,16,52,986 against Rs. 1,33,62,397 in the corresponding period of the previous year showing a deficit of Rs. 17,09,411. The principal commodities that accounted for the deficit were:—Sugar 23 Dutch standard and above 2,482 tons, Rs. ,68,386 (−4,911 tons, −Rs. 5,67,089); Cotton twist and yarn 417,399 lb., Rs. 4,13,211 (−256,808 lb., −Rs. 1,66,992); piecegoods grey (unbleached) 2,416,131 yds., Rs. 3,82,501 (−1,643,633 yds., −Rs. 2,48,228); piecegoods, dyed or woven coloured goods 14,17,050 yds., Rs. 3,33,421 (−822,454 yds., −Rs. 1,47,826); artificial silk Rs. 2,45,684 (−Rs. 1,44,940); other articles Rs. 89,89,985 (−Rs. 66,74,430).

The total value of exports of Indian produce and manufactures from the Madras Presidency to foreign countries during August, 1933, was Rs. 2,37,894 against Rs. 1,80,05,874 in the corresponding period of the previous year showing an increase of Rs. 57,32,020. The principal commodities that contributed to the increase were:—coir (manufactured) excluding rope 2,722 tons, Rs. 7,98,191 (+1,247 tons, +Rs. 3,67,339); fruits and vegetables, dried, salted or preserved all sorts 525 tons, Rs. 6,63,862 (+338 tons, +Rs. 4,42,142); goat skins 129 tons, Rs. 2,80,052 (+107 tons, +Rs. 2,38,149); cow hides 1,111 tons, Rs. 21,54,234 (+402 tons, +Rs. 10,29,381); sheep skins 229 tons, Rs. 11,22,306 (+47 tons, +Rs. 2,46,961); castor oil seeds 9,809 tons, Rs. 12,37,788 (+9,100 tons, +Rs. 11,41,519); groundnuts 45,725 tons, Rs. 59,39,389 (+25,100 tons, +Rs. 22,43,220); Cotton raw 2,414 tons, Rs. 14,82,401 (+2,130 tons, +Rs. 12,93,656).

TRADE OF BURMA

The following is a report on the principal variations in the Foreign trade of the Province of Burma during the month of August, 1933, as compared with the corresponding period of 1932:—

The combined value of Imports and Exports was Rs. 202.63 lakhs as against Rs. 217.73 lakhs, showing a decrease of Rs. 15.10 lakhs.

Imports

The total value of merchandise decreased from Rs. 98.45 lakhs to Rs. 64.18 lakhs. The following were the principal articles which showed decreases, the value and the amount of decrease being noted against each:—

	Value Rs. lakhs.	Decrease Rs. lakhs.
Machinery, Millworks—		
Oils—Mineral—		
Fuel oil	0.06	2.20
Textiles—cotton manufacture—		
Blankets	0.44	1.18
Taxtiles—Piecegoods—		
White	4.53	8.12
Coloured	6.98	12.75
Wool manufacture—		
Piecegoods	0.57	1.39
Artificial Silk—		
Piecegoods made entirely of artificial silk	1.12	1.53

Exports

The total value of Indian merchandise recorded during the month was Rs. 138.45 lakhs as against Rs. 119.28, showing an increase of Rs. 19.17 lakhs. The following articles accounted for the increases, the value and the amount of increase being noted against each:—

	Value Rs. lakhs.	Increase Rs. lakhs.
Grain, Pulse and Flour—		
Rice	81.30	13.27
Metals and Ores—		
Tin ore	6.34	3.99
Paraffin Wax	15.53	6.74
Wood and Timber—		
Teakwood	6.36	4.43

The following articles showed decreases, the value and the amount of decrease being noted against each:—

	Value Rs. lakhs.	Decrease Rs. lakhs.
Mining Machinery, other sorts ..	1.51	1.50
Fodder, bran and pollards—		
Rice bran	3.98	1.22
Grain, Pulse and Flour—		
Paddy	0.06	5.82
Metals and Ores—		
Lead, Pig	10.27	1.62
Oil Cakes—		
Groundnut cake	1.11	1.94

TRADE OF PORT OKHA

The total import of merchandise at Port Okha during August, 1933, amounted to 1,364 tons valued Rs. 1,99,383 consisting of 21 tons G. P. sheets valued Rs. 4,249, 245 tons bleaching valued Rs. 21,630, 702 tons China valued Rs. 36,508 and machinery, etc., valued Rs. 44,912. The total export during the same period amounted to 2,519 tons consisting of 2,000 tons cement, 278 tons seeds, 241 tons cotton etc. The number of vessels that entered the Port was 8.

The total import during the corresponding period amounted to 8,846 tons valued Rs. 4,86,165 consisting of 499 tons sugar valued Rs. 12,250, 168 tons G. C. and G. P. sheets valued Rs. 23,481, 6,310 tons coal valued Rs. 95,580, and machinery, etc., valued Rs. 3,54,854. The total export during the same period amounted to 2,610 tons consistng of 2,310 tons cement and 300 tons seeds. The number of vessels that entered the Port was 6.

TRADE OF TANGANYIKA

The following are extracts from the Report by His Majesty's Government in the United Kingdom of Great Britain and Northern Ireland to the Council of the League of Nations on the Administration of the Tanganyika Territory for the year 1932:—

The trade of the Territory during the year under review can be said to have maintained a satisfactory level, having regard to the continued unfavourable world economic conditions and low commodity prices. The value of the total value of trade was approximately the same as that for the year 1931, decreased imports being balanced by increased exports. Since values in the former case were lower and in the latter remained, on the average, stationary, a slight increase in trade volume can be claimed.

Imports from India

The following were the principal commodities imported from British India (9.3 per cent. of total import trade) :—

Millet, wheat, rice flour, ghee, butter, other provisions, spices, garlic, onions, bricks and tiles, aluminium hollow-ware, cotton piecegoods—Kaneki, chaddar, and dhottis—blankets, cotton yarn, cotton thread, jute bags and sacks, jute piecegoods, boots and shoes, haberdashery, drugs and medicines, leather dressed, umbrellas, films for bioscopes and cinematographs.

(Continued from page 807).

cannot also be compared with road traffic as former are not yet so much traffic infested as land roads. He says "It is extremely difficult to see any analogy between an aeroplane which crashes on a housetop and a motor car which is unable to avoid a pedestrian who steps off the pavement without looking to see what is coming". Regarding the assumption of negligence on the part of the motorist by eleven other foreign countries, he aptly points out that the grant of licenses in those countries is much more strict than in England and that England should first stop the promiscuous grant of licences and issue them only after a strict examination. Lastly, if this Bill becomes law, the rates of motor assurance would have to be drastically overhauled ; and the motorist would have no cause to grumble at his insurers.

The effect of similar legislation in India cannot be easily foretold. In almost all insurance laws, India simply follows England, and if it were to do so in this respect also, there can be no doubt that insurance companies doing accident business in India will also feel the same difficulty and vexation which the English companies now anticipate.

WORLD'S BIGGEST CAR

The world's biggest and costliest car is made by the firm Bugatti Royale. It costs £6,000 and its engine is of 78 horse power, 12,760 c.c. The engine case measures 7 feet from radiator cap to wind screen ; the wheel base is 14 feet 2 inches and the track 5 feet 3 inches. There are three gears ; the first one is used to start the car, the second is the direct drive (equivalent to the top gear of a normal car) and gives a speed range from 2 to 90 miles per hour, while the third gear allows the attainment of any speed feasible on the road. A maximum speed of 120 miles per hour is possible. It seems 12 such cars have been made by the firm concerned.

MOTOR CARS OF THE WORLD

The "New York Times" says that on the 1st January, 1933, 33,568,295 motor cars were registered in the whole world and out of this 24,317,020 cars were registered in U. S. A. Thus for every five persons of the population U. S. A. has a motor car. Compared to the figure on 1st January, 1932, U. S. A. suffered a decline of 1,629,333 cars on 1st January 1933. The following table shows the number of cars registered in each country according to the ranks occupied by them :

U. S. A.	24,317,020
France	1,845,400
Great Britain	1,385,472
Canada	1,106,408
Germany	616,200
Australia	533,833
Italy	323,336
Argentine	307,947
New Zealand	190,547
Belgium	182,689
Spain	159,200

"SARADA."

(Continued from page 809).

ago both internal and external trade were at a very low level, but temporarily the benefit may well lie with the stimulation of domestic business.

"It is clear, however, that the aim of British policy should be to avoid placing any unnecessary obstacles in the way of an increase in our export trade, which, in the past, according to authoritative estimates, has been responsible for nearly 30 per cent. of our output of movable commodities, and which continues in a most unsatisfactory condition.

"No country, least of all Great Britain, will ever secure a full measure of prosperity if its policy is directed towards the attainment of national self-sufficiency, and the curtailment of its import and consequently of its export trade to a minimum will inevitably result in the general standard of being lower than would otherwise be obtainable. A return to full prosperity is dependent upon a revival of international trade, for there is no possibility of an improvement in purely domestic activity being sufficient to offset the contraction in external business, and it is because adequate steps have not yet been taken to deal with such fundamentally important questions as war debts, tariffs and other restrictions to trade, which have been largely the cause of the breakdown, that there appears to be little immediate prospect of a rapid and healthy recovery throughout the world.

Increased Exports Essential

"While in no way disparaging the improvement in domestic trade it is necessary to remember that a great increase in our exports is essential to our own prosperity and to the prosperity of the world at large.

"Therefore, any optimism arising from such satisfactory features as the reduction in unemployment must be severely tempered by a realisation of the fact that our exports are abnormally low and that little or nothing has been done to remove those obstacles to international trade which it is now universally recognised must be removed before overseas trade can again be built up to its former proportions and overseas investment resumed. A resumption of overseas lending by this country would greatly facilitate world recovery, and it may safely be assumed that because of our traditions and longer experience other nations will look to us for a lead in this matter.

"In a world where protectionist policies have been allowed to develop to such an extent that they threaten the whole basis of international trade, it is very desirable that this country should, as far as possible, refrain from adding to the existing barriers and endeavour to promote a movement in the opposite direction.

Bi-Lateral Treaties

"The failure at the World Economic Conference to make any real progress in the removal or reduction of these impediments would, for the time being, seem to preclude any mass attack on the problem, but it is unthinkable that all nations will be willing to accept the present position indefinitely, and, in the absence of multilateral agreements the much slower method of bi-lateral treaties may profitably be adopted by those countries which recognise the need for greater freedom of trade.

"Action along these lines will be largely an attempt to facilitate the normal working of economic laws, for, in the long run, international trade is only possible between countries which are prepared to buy as well as sell."

COMPANY REPORTS

HINGIR-RAMPUR COAL CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	4,29,400	Block (net) ...	4,58,758
Reserves ...	33,279	Coal ...	480
Debts ...	34,335	Stores & Tools ...	21,772
		Outstandings ...	9,694
		Cash and Deposits	6,310
Total ...	4,97,014	Total ...	4,97,014

Extracts from Directors' Report:

Report for the year ended 30th June, 1933.

After setting aside for Depreciation the sum of Rs. 13,396-12-3 the results of the year's working under review show a loss of Rs. 5,948-3-9 which has been written off by appropriation out of Reserve Fund.

The total raisings for the year amount to 19,478 tons of coal against 24,134 tons the previous year. Despatches for the year amount to 16,899 tons against 17,507 tons the previous year a decrease of only 608 tons. Although the decline in sales is small, further reductions had to be made in selling prices to meet competition.

In spite, however, of reduced earnings, the results of the year's working show an improvement over those of last year. This is due to having the benefit for the whole year of the more economical working from No. 6 Pit only, and also to still further economies being effected in the working of the mines.

Under the Articles of Association, two of the Directors, Sir Kikabhai Premchand, Kt., and Mr. R. C. Lowndes, retire by rotation, but are eligible and offer themselves for re-election.

Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E., and Mr. G. C. Phillips on proceeding out of India were granted leave of absence.—E. C. Reid, Kaikobad Cowasjjee Dinshaw, Kikabhai Premchand, R. C. Lowndes, Directors. Killick, Nixon & Co., Agents.

REWA COALFIELDS, LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	13,50,000	Block ...	10,22,300
Reserves ...	60,000	Coal ...	3,212
Debts ...	1,58,478	Stores ...	59,829
Profit & Loss ...	59,847	Outstandings ...	1,68,205
		Cash & Invests. ...	3,74,779
Total ...	16,28,325	Total ...	16,28,325

Extracts from Directors' Report:

Report for the half-year ended 30th June, 1933.

The working for the half-year shows a gross profit of Rs.1,39,231-4-4, to which has to be added the amount brought forward from last half-year, Rs. 10,621-1-9, making a total of Rs. 1,49,852-6-1 ; after providing for:—Depreciation Rs. 35,914-4-10, Reserve for Taxation and Managers' Commission Rs. 29,090-13, General Reserve Rs. 25,000, total Rs. 90,005-1-10, there remains a balance of Rs. 59,847-4-3, which is recommended to be dealt with as follows:—In payment, on application, of a dividend of annas six per share, or at the rate of 7½ per cent. per annum, free of income tax Rs. 50,625, leaving to be carried forward Rs. 9,222-4-3.

Output and despatches of all grades of coal for the past three half-years compare as follows:—

	Nett Output. Tons.	Despatches. Tons.
30th June, 1933 ...	114,786	116,752
31st December, 1932 ...	99,098	95,941
30th June, 1932 ...	117,289	117,125

Demand remains much below the output capacity of the Collieries and there is at present no indication of any improvement. Prices on the whole are on a lower level than for the previous half-year.—H. D. Townend, Janki Prasad, Brajendra Nath, P. C. Chaudhuri, E. L. Watts, Directors.

KATRAS JHERRIAH COAL CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	5,00,000	Block (net) ...	3,34,800

		Cash & Deposits ...	1,47,795
		Investments ...	3,10,487
Total ...	11,56,940	Total ...	11,56,940

Extracts from Director's Report:

Report for the half-year ended 31st July, 1933.

After writing off Rs. 13,445-14-3 for Depreciation there is a balance at the credit of Profit and Loss Account of Rs. 44,951-3-9 from which they recommend Dividend of 12 annas per share, Rs. 37,500, carry forward, Rs. 7,451-3-9.

Raisings and Despatches were lower than for the preceding half-year and lower selling prices were realised.

In view of the present state of the industry it has not been possible to proceed with working the Kankhoya field in which the Company has a considerable investment, both as principal shareholder of the Kankhoya Coal Co., Ltd., as well as for advances made to that Company for the payment of Royalties, etc. It has been considered desirable to utilize the Insurance Fund, now no longer required in writing down the value of these advances and consequently the sum of Rs. 33,000, part of the amount standing to the credit of the Insurance Fund, has been so utilized.—Andrew Yule & Co., Ld., Managing Agents.

ADJAI COLLIERIES, LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	5,25,000	Block (net) ...	6,07,126

		Stores ...	377
		Preliminary Exps.	876
		Outstandings ...	280
		Deposits ...	6,675
		Investments ...	1,000
		Profit & Loss ...	50,899
Total ...	6,67,506	Total ...	6,67,506

Extracts from Directors' Report:

There is a balance of Rs. 50,898-14-3 at the debit of Profit and Loss Account to be carried forward.

Owing to the continued depression in the industry the Company's Colliery remained closed during the half-year.

Mr. G. Morgan, C.I.E., M.L.A., being absent from Calcutta, has not signed the Report or Accounts.—J. H. S. Richardson, J. S. Ker, Directors.

DYER, MEAKIN & CO.,LD

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	18,00,000	Block (net) ...	8,94,175
Reserves ...	2,61,412	Stocks ...	4,59,375
Debts ...	2,73,301	Outstandings ...	2,40,138
Profit & Loss ...	75,037	Cash & Invests. ...	8,16,062
Total ...	24,09,750	Total ...	24,09,750

Extracts from Directors' Report:

The Accounts for the year 1932-33 show a profit, subject to Income Tax, of Rs. 1,03,819-15-6 ; to this sum has to be added the amount brought forward fro mlast year, which, after payment of Income Tax, left a balance of Rs. 16,216-11-7, bringing the total available for Income Tax and distribution to Rs. 1,20,036-11-1. Your Directors recommend the payment of a Final Dividend of 2½ per cent., which added to the Interim Dividend of 2½ per cent. already paid, will make a total Dividend of 4 per cent. free of Tax for the year 1932-33, absorbing, Rs. 72,000, leaving a balance of Rs. 48,036-11-1 ; from this amount there has to be provided in respect of Income Tax a sum of Rs. 20,000, leaving a balance, which the Directors propose should be carried forward to a Dividend Equalisation Reserve Fund, amounting to Rs. 28,036-11-1.

The Directors call special attention to the fact that during the year 1932-33 they have had to provide the sum of approximately Rs. 50,000 for distribution as Bonus to their late General Manager and to their Manager in Burma, both of whom retired during the year after giving over 40 years service to the Company; also to other members of the Staff who left the service of the Company during the past 12 months. These exceptional payments would otherwise have been available for distribution and represent the value of an additional 2¾ per cent. Dividend, but whilst forming a serious charge on the year under review, they are not likely to recur for many years to come.

During the year considerable economies have been made in the establishment, which should manifest themselves during 1933-34.

There has been a general decline in the sale of Draught Beer to Army Canteens, which has hitherto comprised the major portion of the Company's trade, but on the other hand, the Spirit sales from our Distilleries show a satisfactory increase at economic prices due to the reduction of duty. Also, there is every indication of the increasing popularity of Solan Bottled Beers, both in canteens and with the general public in India, which the Directors are taking every possible step to develop and in a much wider field than hereto.

One problem which is causing the Directors considerable concern is the question as to the advisability of vacating Solan and erecting in its place a new Brewery in British India.

Owing to the fact that the Solan Brewery is situated in an Indian State, the Company is liable to extra taxation, octroi charges and other demands; in addition to this, the freight rates over, the Simla-Kalka Railway form a very heavy charge on the costs of production and seriously hamper the trade with the general public.

Plans and estimates have been called for and the whole question will be carefully considered and studied in detail during the present year.

A further matter which is having the Directors' carefull consideration in view of the possible separation of Burma is the question whether it would be advisable to segregate the Burma business from India and to form two entirely distinct companies.

The Securities have been taken into the Accounts at Rs. 2,29,422-9, but the Auditors estimate their actual value on the 31st March, 1933, at Rs. 6,92,757-5, as per, their note on the Balance Sheet.

This latter sum coupled with the Cash at the Bankers and in hand, bring the total of the Company's liquid assets to Rs. 8,79,396-0-10, rnd may be taken as generally satisfactory.—E. S. McGown, A. G. P. McLaren, R. Wright, Directors.

BOMBAY STEAM NAVIGATION CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	16,00,000	Block (net)	...	86,87,711
Debentures	...	12,00,000	Stores & Spares	...	3,20,879
Reserve	...	15,66,551	Outstanding	...	2,12,334
Other Debts	...	12,49,242	Cash	...	92,443
Profit & Loss	...	3,62,938	Investments	...	11,15,364
Total	...	1,03,78,731	Total	...	1,03,78,731

Extracts from Directors' Report:

Report for the year ended 30th June, 1933.

The profit for the year under review amounted to Rs. 9,52,199-12-5. After setting aside Rs. 5,25,000 for depreciation on Steamers, Launches, Lighters, Boats, Buildings, Plant, etc., Rs. 6,260-7-4 to Renewals Account and Rs. 75,000 to Reserve Fund, and adding the their book value, there remains a balance of Rs. 3,53,737-5-1, which together with the amount of Rs. 9,200-13-10 brought forward from last year's account makes a total Rs. 3,62,968-2-11 which the Directors recommend to be disposed of as follows:—A Dividend of Rs. 15 per Preference Share for the year—less Income-tax Rs. 90,000, a Dividend of Rs. 13-12-0 per Ordinary Share, or at the rate of 5½ per cent. for the year, free of Income-tax Rs. 2,47,500, bonus to the Company's Staff Rs. 15,000, balance to be carried forward Rs. 10,433-2-11, total Rs. 3,62,938-2-11.

A small increase in the total earnings will be noticed for the year. Passenger traffic, however, shows a considerable decrease, due partly, of course, to the Company not having the benefit of Goa Exposition traffic as was the case last year, and partly to the depression in the Bombay Mill Industry and the closing on several Mills in the last six months of the year, which had its customary effect on this Company's passenger earnings, which depend largely on the regular travelling of mill-hands. This decrease was fortunately rather more than made up by an increase of Cargo earnings in the closing three months of the Company's year.

Expenses in the running of the steamers show a satisfactory decline, though the cost of working the cargo is naturally higher, due to the larger quantity of cargo handled. It is necessary this year to make provision for the balance of Income and Supar-tax due, about which the Directors advised the shareholders in their Report last year. In spite of this, however, the profit shown is almost identical with that of last year, enabling a similar dividend to be recommended.

With regard to the fleet, the s.s. *Bhadravati* duly arrived and has proved a useful addition to the Company's fleet since she has been on service. In consequence, the s.s. *Bahaduri*, as also the s.s. *Kalika*, have been sold for breaking up. The Directors have decided, as indicated last year, to replace two passenger vessels of the s.s. *Kamlavati* type by new vessels similar to the popular and economical s.s. *Hiravati*. These vessels, named s.s. *Chandravati* and *Prabhavati* are in course of construction and are expected to arrive in Bombay in the near future.

Insurance of the fleet for £480,241 has been placed for the current year.—E. C. Reid, Sir Fazulbhoy Currimbhoy, Sir Purshotamdas Thakurdas, F. E. Dinshaw, Anantrai P. Pattam, Sir Chunilal V. Mehta, R. C. Lowndes, Dr. S. D. Kias, The Hon'ble Sir Phiroze Sethna, Directors.
